Considering the following processes axial current + nucleon → vector current + nucleon, and axial current + pion → vector current + σ-meson, and making use of current algebra identities and the Regge model, an asymptotic expression is obtained for the axial-vector form factors of the nucleon and the pion. Though no definite power behavior can be found by means of the Regge model alone, it is possible to find, under suitable assumptions, generalized scaling relations among vector and axial vector form factors. The use of the Veneziano model in the pion case, fixes the asymptotic power behavior and thus, the pion scaling relations are obtained without further assumptions. (auth)

59357 POSSIBLE CONNECTION BETWEEN THE AMPLITUDES OF THE PROCESSES $e^+e^- \to 3\pi$, $\gamma\gamma \to 3\pi$, AND $\pi^0 \to 2\gamma$.

XUM

Terent'ev, M. V. JETP Lett. (USSR) (Engl. Transl.); 14: No. 2, 94-6(20 Jul 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 2, 140-3(20 Jul 1971).

The matrix elements of the processes $e^+e^- \rightarrow 3\pi$ and $\pi^0 \rightarrow 2\gamma$ are examined and the parameters obtained are related to the amplitude for $\gamma\gamma \rightarrow 3\pi$. (L.B.S.)

59358 POSSIBILITY OF OBSERVING QUASINUCLEAR MESON RESONANCES IN COLLIDING e^+e^- BEAMS. **Dal'karov, O. D.; Mandel'tsveig, V. B.; Khoze, V. A. JETP Lett. (USSR) (Engl. Transl.); 14: No. 2, 87-9(20 Jul 1971).**

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 2, 131-4(20 Jul 1971).

The mechanism for production of S(1727), S(1414), d(1855), and d(1382) quasinuclear meson resonances, corresponding to bound states of the $N\bar{N}$ system, from e^+e^- colliding-beam interactions is considered. It is pointed out that a correspondence should occur between the partial widths of the decays of the resonance and the cross sections for the annihilation in the same states. It is concluded that the colliding-beam experiment makes it possible to observe quasinuclear meson resonances, and also to obtain considerable information on the behavior of the electromagnetic form factors of the nucleon in the time-like region and concerning the mechanism of multiparticle production of pions. (L.B.S.)

59359 SYNCHROTRON MOTION WITH RADIATION REACTION. **Sen Gupta, N. D. (Tata Inst. of Fundamental Research, Bombay). Int. J. Theor. Phys.; 4: No. 5, 389-94(Sep 1971).**

It is shown that the longitudinal velocity of a charged particle moving in a uniform magnetic field, and obeying Dirac–Lorentz relativistic equation of motion with radiation reaction is constant. Suitable approximate methods, which give fairly accurate results, are used to obtain the expression for velocity and displacement along the transverse section. They describe the motion completely up to a correcting factor $1 + 0\{(e^3B/m^2c^4)^2\}$; $(e^3B/m^2c^4) \simeq 10^{-16}$ B for electrons, B in G. (auth)

59360 ALGORITHMS FOR THE γ-ALGEBRA OF ELECTROMAGNETIC FORM FACTORS. **Chisholm, J. S. R. (Univ. of Kent, Canterbury, Eng.). J. Comput. Phys.; 8: No. 1, 1-18(Aug 1971).**

The γ-algebra arising in the calculation of contributions from any allowable vertex part to the electromagnetic form factors is considered. Simple algorithms are established which enable any form factor contribution to be written down as a function of Chebyshev polynomials whose argument is $P = 2 - q^2$, where q is the photon 4-momentum. These algorithms are particularly suitable for use in computer programs for evaluating high-order vertex parts in perturbation theory. (auth)

59361 LARGE DEVIATIONS FROM THE SCALING LAW FOR THE PROTON FORM FACTOR IN THE TIMELIKE REGION. **Pfister, H. (Univ., Tuebingen, Ger.). Nucl. Phys.; B22: No. 1, 327-32(1970).**

Analytic continuation of the proton form factors G_M and G_E into the time-like region shows—independent of the special extrapolation technique—severe violations of the scaling law $G_E = G_M/\mu$, and favors the relation $G_E = G_M$ at the threshold for the process $e^+e^- \rightarrow p\bar{p}$. (auth)

59362 REMARKS ON PION PHOTOPRODUCTION. **Jackson, J. D.; Quigg, C. (Univ. of California, Berkeley). Nucl. Phys.; B22: No. 1, 301-16(1970).**

Some predictions for charged pion photoproduction implicit in a previous work are presented. These include extension of the pseudomodel to somewhat larger t-values and a discussion of photoproduction from a polarized target. Some remarks are also made on the predictions of gauge-invariant perturbation theory. (auth)

59363 DOES DUALITY HOLD IN CURRENT INTERACTIONS? Ezawa, Zyun F. (Tokyo Univ.). Phys. Rev. Lett.; 27: No. 16, 1092-5(18 Oct 1971).

Deep-inelastic electron-proton scattering is shown to be naturally interpreted in a field theory where the current is given by a bilinear form in some fields. It is proved that in such a theory the Compton-scattering amplitude is not saturated with the vector-dominance model and that the term which scales in the Bjorken limit does not obey Freund–Harari duality. (auth)

59364 PHOTOPRODUCTION OF e^+e^-, $\rho-\omega$ MIXING AND VECTOR DOMINANCE. Quinn, H. R.; Walsh, T. F. (Deutsches Elektronen-Synchrotron, Hamburg). Nucl. Phys.; B22: No. 2, 637-50(1970).

The $\rho-\omega$ mixing is discussed, in particular with respect to its possible effect on the invariant-mass spectrum of electron-positron pairs photoproduced off a nuclear target. It is found that with the order of magnitude of the mixing indicated by recent experiments, observing it in other processes would yield a significant effect on the e^+e^- photoproduction. The necessity for a consistent analysis of all channels in evaluating the mixing effect is emphasized. (auth)

59365 VECTOR-MESON DOMINANCE MODEL AND INELASTIC ELECTRON–PROTON SCATTERING. **Sullivan, J. D. (Weizmann Inst. of Science, Rehovoth, Israel. Univ. of Illinois, Urbana). Nucl. Phys.; B22: No. 2, 358-64(1970).**

The ambiguities of the vector-dominance model as applied to inelastic electron–proton scattering are discussed. The region $s \gg |q^2|$ seems to be the only region in which the model could, even in principle, be meaningful. The region closest to the pole, namely $q^2 \approx 0$, is of primary significance for testing the model. (auth)

59366 RADIATIVE CORRECTIONS TO INELASTIC e^-p SCATTERING. **Mackouse, E. M.; Schwarz, F. F. (Univ. of Texas, Austin). Nucl. Phys.; B22: No. 2, 423-8(1970).**

It is shown that the so called peaking approximation used in making radiative corrections is not applicable for inelastic e^-p scattering when the energy of the incoming electron is very high, in fact it is shown, that none of the formulas usually used for performing the radiative corrections to inelastic e^-p scattering is the result of a peaking approximation. The reason for the failure of the peaking approximation is explained and a method to improve the accuracy of the radiative corrections is proposed. (auth)

59367 EFFECT OF BARYON RESONANCE ADMIXTURES ON ELASTIC ELECTRON DEUTERON SCATTERING. **Williams, H. T.** (Univ., Erlangen, Ger.); **Arenhovel, H.; Miller, H. G.** Phys. Lett.; 36B: No. 4, 278-80(20 Sep 1971).

The deuteron form factors for elastic e-d scattering were calculated with the inclusion of baryon resonance admixtures in the deuteron wave function in the range $0.1 \leq q^2 \leq 50\ \mathrm{fm}^{-2}$ of the squared four momentum transfer. The inclusion of the resonance configurations leads to an increase of about 10% in the charge and of about 20 to 30% in the enhancement dipole form factor for $10 \leq q^2 \leq 20\ \mathrm{fm}^{-2}$. This enhancement stems mainly from the $\Delta(1236)-\Delta(1236)$ configuration. These findings seem to be consistent with recent experimental results. (auth)

59368 COMPTON EFFECT AND INDUCED COMPTON EFFECT IN CONSTANT ELECTROMAGNETIC FIELD. **Zhukovskii, V. Ch.; Kherrmann, I. (Moscow State Univ.). Yadern. Fiz.; 14: No. 1, 150-9(Jul 1971). (In Russian).**

The spectral and angular distribution for the Compton effect in a constant electromagnetic field is obtained. The possibility of existence of the induced Compton effect in the external field is proved, i.e., the emission of two photons, one of which is induced by the incident electromagnetic wave. In case of constant magnetic field, the deviation of the distribution obtained for the Compton effect from the Klein–Nishina formula as well as the behavior of the distribution for the induced Compton effect are discussed. The optimal region is shown where the observation of these effects is possible. (auth)

59369 BREMSSTRAHLUNG IN THE BACKWARD e^+e^- SCATTERING AS A MULTI-REGGE PROCESS. **Lipatov, L. N. (Ioffe Inst. of Physics and Tech., Leningrad). Yadern. Fiz.; 14: No. 1, 160-77(Jul 1971). (In Russian).**

It is shown that formulas for bremsstrahlung amplitudes in backward e^+e^- scattering at high energies $\sqrt{s} \gg m$ previously found permit a simple interpretation in terms of partial waves, $f_{l_1,l_2,\ldots,l_{n+1}}$, in the corresponding crossing channels. These partial waves have an infinite number of Regge poles whose residues are factorizable. The writing of the bremsstrahlung amplitudes as an expansion in the partial waves $f_{l_1\ldots l_{n+1}}$ makes it possible to construct an integral equation for the e^+e^- backward scattering cross section with the emission of an arbitrary number of γ quanta. (auth)

59370 TWO-PHOTON GENERATION MECHANISM IN THE COLLISION OF CHARGED PARTICLES. **Terent'ev, M. V. (Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 14: No. 1, 178-89(Jul 1971). (In Russian).**

A simple invariant method is given for calculation with logarithmic accuracy the production cross section asymptotics for a fixed effective mass value of the produced particles. The two-photon generation mechanism is considered. The main result is contained in the given formulas. A number of concrete examples are considered. A number of angular distributions are discussed and concrete estimates for the π^0-meson production reactions are given. (auth)

59371 DEEP INELASTIC HADRON PRODUCTION IN COLLIDING LEPTON BEAMS. **Choban, E. A.; Shekhter, V. M. (Ioffe Inst. of Physics and Tech., Leningrad). Yadern. Fiz.; 14: No. 1, 190-202(Jul 1971). (In Russian).**

Hadron production in colliding lepton beams is considered. The hadron state may be C-even or C-odd. In the first case the hadrons are produced by one virtual photon, in the second case they are produced by two photons. It is assumed that the process is deep inelastic, i.e., the photon virtual masses are large. Explicit expressions for the differential cross sections are obtained in two kinematical regions. In the first region the virtual masses of both the photons are of the same order of magnitude as the c.m. total energy, however, all the quantities are small compared with the colliding lepton energy. In the second region only one virtual mass has the order of the total energy and both the quantities may be near to the lepton energy; the mass of the second photon is assumed to be rather small. The differential cross section of the process ee → ee + hadrons is expressed in terms of the total cross sections of processes $e^-e^+ \to$ hadrons and $\gamma\gamma \to$ hadrons, allowing one in principle, to investigate the cross sections in the deep inelastic region. (auth)

59372 ELECTROMAGNETIC CORRECTIONS TO HIGH-ENERGY ELECTRON–HADRON SCATTERING. **Frankfurt, L. L. (Ioffe Inst. of Physics and Tech., Leningrad). Yadern. Fiz.; 14: No. 1, 203-10(Jul 1971). (In Russian).**

It is shown that at high energies, in a number of cases interesting in view of experiment, the contribution from radiational corrections to the electron–hadron scattering is suppressed. At low momentum transfers the two-photon-exchange contribution to the elastic $e^{\pm}N$ scattering is expressed in terms of the Compton scattering cross section known from the experiments on the electroproduction on proton (neutron). (auth)

59373 S-WAVE THRESHOLD AMPLITUDES OF NEUTRAL PION PHOTOPRODUCTION ON NUCLEONS AND THE PCAC HYPOTHESIS. **Govorkov, B. B.; Minarik, E. V. (Lebedev Inst. of Physics, Moscow). Yadern. Fiz.; 14: No. 2, 437-40 (Aug 1971). (In Russian).**

Experimental determination of the threshold amplitudes of the neutral pion photoproduction on nucleons $E_{0+}(p\pi^0)$ and $E_{0+}(n\pi^0)$ is analyzed. The experimental results are compared with the calculations corresponding to the PCAC hypothesis. The agreement obtained is treated as important in favor of the hypothesis. (auth)

59374 BREMSSTRAHLUNG IN THE e^+e^- BACKWARD SCATTERING AT HIGH ENERGIES. **Lipatov, L. N. (Ioffe Inst. of Physics and Tech., Leningrad). Yadern. Fiz.; 14: No. 2, 396-407(Aug 1971). (In Russian).**

The calculation of the bremsstrahlung cross sections for backward scattering in the double-logarithmic approximation is considered by means of the $e^+e^- \to e^+e^- + n\gamma$ scattering amplitudes previously obtained. It is shown that in spite of the cross section of each separate γ quanta emission normalized to the Born cross section of elastic e^+e^- scattering decrease with energy, the emission cross section for an arbitrary number of γ quanta normalized to the same cross section tends to the constant $\simeq 0.8$. (auth)

59375 BREMSSTRAHLUNG HADRON PRODUCTION IN COLLIDING ELECTRON–POSITRON BEAMS. **Altukhov, A. M. (Inst. of Nuclear Physics, Novosibirsk, USSR). Yadern. Fiz.; 14: No. 2, 391-5(Aug 1971). (In Russian).**

An approximate differential cross section is obtained depending on the effective mass of hadrons produced in colliding electron—positron beams by means of the bremsstrahlung mechanism. The obtained expression enables one to estimate the contribution to the total cross section from the whole interval of the hadron effective masses available at the given initial energy. (auth)

59376 POSSIBLE SCALING IN HADRON PRODUCTION IN ee AND e^+e^- COLLISIONS. **Shabel'skii, Yu. M. (Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 14: No. 2, 388-90(Aug 1971). (In Russian).**

It is shown that if the scaling is present in the hadron electroproduction, the Regge-pole theory predicts the scaling for the hadron production in ee and e^+e^- collisions. (auth)

59377 PRODUCTION OF NEUTRAL PSEUDOSCALAR MESONS IN REACTIONS $e^+ + e^- \to \pi^0(\eta^0X^0) + \gamma$. **Gakh, G. I. (Ukrainian Physical-Technical Inst., Kharkov). Yadern. Fiz.; 14: No. 2, 382-7(Aug 1971). (In Russian).**

The cross sections of reactions $e^+e^- \to \pi^0(\eta^0X^0) + \gamma$ in the region ω, ρ, and ϕ resonances were calculated using the vector meson dominance model. The cross sections of these reactions were calculated both with and without taking into account the $\eta - X^0$ mixing. The cases of the linear and quadratic mixing of the η and X^0 mesons are considered. The cross sections for reaction $e^+e^- \to \pi^0\gamma$ were calculated using the available upper limit for the $\phi \to \pi^0\gamma$ decay width. (auth)

59378 SCATTERING OF γ QUANTA BY NUCLEONS IN THE QUARK MODEL. Akhiezer, A. I.; Rekalo, M. P. (Physical-Technical Inst., Kharkov). JETP Lett. (USSR) (Engl. Transl.); 14: No. 3, 119-21(5 Aug 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 3, 181-4(5 Aug 1971).

The quark model is extended to the reactions $\gamma + N \to \gamma + N$. The total and differential cross sections for $\gamma + p \to \gamma + p$ and $\gamma + n \to \gamma + n$ interactions are calculated. (J.F.P.)

59379 DEUTERON ELECTROMAGNETIC FORM FACTOR. **Blankenbecler, R.; Gunion, J. F. (Stanford Univ., Calif.). Phys. Rev., D; 4: No. 3, 718-22(1 Aug 1971).**

A vector-mesonic correction to the deuteron form factors is considered which is analogous to the Glauber double-scattering process. This correction dominates the form factors at large momentum transfer. A fit to the static magnetic moment of the deuteron yields a satisfactory fit to the magnetic scattering at large momentum transfer. (auth)

59380 $\Delta I = 1$ MASS DIFFERENCES AND $\eta \to 3\pi$ DECAY. Schechter, J.; Ueda, Y. (Syracuse Univ., N. Y.). Phys. Rev., D; 4: No. 3, 733-42(1 Aug 1971).

The octet baryon $\Delta I = 1$ mass shifts, kaon electromagnetic mass shift, and $\eta \to 3\pi$ decay amplitude are all correlated in the framework of the linear SU(3) σ model. It is shown how this model provides a natural realization of the "tadpole" idea of Coleman and Glashow. An attempt is made to resolve the long-standing mystery associated with the $\eta \to 3\pi$ process, and the rare mode $\eta' \to 3\pi$ is also calculated. Finally, it is shown that the chiral-symmetry-breaking and isospin-nonconserving coefficients in the Lagrangian have the same order of magnitude. (auth)

59381 NONLEADING REGGE BEHAVIOR IN νW_2 AND THE POSSIBILITY OF FIXED POLES WITH POLYNOMIAL RESIDUES. Close, F. E.; Gunion, J. F. (Stanford Univ., Calif.). Phys. Rev., D; 4: No. 3, 742-56(1 Aug 1971).

Some of the theoretical arguments for the existence in Compton scattering of right-signatured fixed poles with polynomial residues are discussed. It is shown that if one could "switch off" the strong interactions, then a fixed pole with residue linear in q^2 (the photon mass squared) would be necessary for the consistency of the fixed-q^2 dispersion relation for νT_2 (whose absorptive part νW_2 is measured in inelastic electroproduction). It is shown that if the above conjecture is correct, then there must be some energy dependence in νW_2 over and above the conventional leading Regge form (Pomeranchukon plus $f - A_2$). Evidence is presented for the presence of such "nonleading behavior" in a similar process. In addition it is shown why the on-shell $\sigma_{tot}(\gamma p)$ could be compatible with the neglect of such a nonleading term. It is found that a fixed pole with polynomial residue and the correct $q^2 \to 0$ Thomson limit can be accommodated by the present data on νW_2 at large q^2. With the above assumptions on the fixed-pole behavior, the high-energy behavior of νW_2 is predicted and it is found that asymptotically it must fall to a value substantially less than its present maximum magnitude. (auth)

59382 HARD-MESON CURRENT-ALGEBRA CALCULATION OF THE $\gamma-3\pi$ AMPLITUDE. Miller, M. G. (Northeastern Univ., Boston). Phys. Rev., D; 4: No. 3, 769-71(1 Aug 1971).

The $\gamma + \pi \to \pi + \pi$ interaction is considered within the context of hard-meson current algebra and a model of PCAC (partially conserved axial-vector current) breakdown previously proposed. The form factor for this process is calculated and the $\gamma-3\pi$ coupling constant evaluated. The results are in agreement with experimental data. (auth)

59383 PRODUCTION OF SINGLE W BOSONS IN ELECTRON–POSITRON COLLIDING BEAMS. **Mikaelian, K. O.; Smith, J. (Univ. of New York, Stony Brook). Phys. Rev., D; 4: No. 3, 785-94(1 Aug 1971).**

The total cross section and angular and energy distributions of poistrons and single W bosons produced in electron–positron colliding beams are computed. The calculation of the total cross section includes all four lowest-order Feynman diagrams contributing to this process. For center-of-mass energies $E < 2M_W$(M_W = boson mass) it is found that the contribution of two of the diagrams is indeed negligible, but the presence of a pole in one of these diagrams invalidates all previous calculations of the total cross section for $E > 2M_W$. Total cross sections are given for three values of the boson's anomalous magnetic moment κ. A rather flat energy distribution of outgoing positrons and a slight peak in the high-energy region of the boson energy distribution are found. The angular distribution of positrons has a very sharp forward peak (in the direction of the initial positrons), while the bosons are distributed mostly in the backward direction. (auth)

59384 PARITY RULE AND HELICITY CONSERVATION IN ρ PHOTOPRODUCTION. Barmawi, M. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Rev., D; 4: No. 3, 861-70(1 Aug 1971).

The parity rule for natural- and unnatural-parity exchange is proved on the basis of the L–S scheme. The parity rule is shown to be a general feature of t-channel exchange processes. Experimental consequences of the parity rule are discussed. The s-channel helicity conservation in ρ^0 photoproduction is considered on the basis of the Regge-pole model with L–S coupling and general arguments from the complex-angular-momentum theory. It is found that the s-channel helicity conservation in ρ^0 photoproduction can be described by the coupling $L = \alpha - 2$, $S = 2$ with a multiplicative fixed pole at the nonsense wrong-signature point $\alpha = 1$. (auth)

59385 ρ-EXCHANGE CONTRIBUTION TO $\gamma n \rightarrow \rho^- p$. Levy, N. (DESY, Hamburg); Glueck, M.; Wagner, S. Phys. Rev., D; 4: No. 3, 874-82(1 Aug 1971).

The process $\gamma n \rightarrow \rho^- p$ is studied in the framework of Born approximation for the ρ exchange with two different procedures for gauge correction. The resulting differential cross section is very sensitive to the value of the magnetic moment of the ρ meson, μ_ρ. Comparison with the experimental results for photon energies $1.4 < E_\gamma < 2.5$ GeV enables an estimate of $\mu_\rho \approx 2\mu_{N_1}$ to be obtained, which, in the light of the necessary refinements of the crude model used here, is regarded as a lower limit. This result is consistent with theoretical predictions of μ_ρ, such as in the $q\bar{q}$ quark model or the $N\bar{N}$ Fermi-Yang model. The calculated density matrix provides a tool to discern the ρ-exchange contribution from the rest. (auth)

59386 HADRON ELECTRODYNAMICS IN THE RESONANCE MODEL: DEEP-INELASTIC e–p SCATTERING, e–e COLLIDING-BEAM PROCESSES, AND OTHER APPLICATIONS. Manassah, Jamal T.; Matsuda, Satoshi (Inst. for Advanced Study, Princeton, N. J.). Phys. Rev., D; 4: No. 3, 882-98(1 Aug 1971).

Within the framework of the resonance model, a well-defined gauge-invariant electromagnetic interaction is constructed for the composite hadrons, and the rules are given for the propagator and the current. The formalism is applied to deep-inelastic e–p scattering, and it is found that (a) the structure functions W_1 and νW_2 scale and (b) the theoretical and experimental curves agree remarkably well for $\omega > 1.5$. The photoabsorption cross section is also predicted to within 10% of the experimental value. In the colliding-beam processes, it is found that (a) the structure functions for $e^+ + e^- \rightarrow p +$ "anything" are connected with W_1 and W_2, (b) the cross section for $e^+ + e^- \rightarrow$ "anything" is larger than that for $e^+ + e^- \rightarrow \mu^+ + \mu^-$, and it decreases as s^{-2} for large s, and (c) the hadronic correction for the $ee \rightarrow ee\pi^+\pi^-$ rate is appreciable. Preliminary results are presented on extending the work to include weak interactions, and a structural theorem on the form of the currents is proved. All the results are derived analytically. (auth)

59387 SINGLE PARTICLE ELECTROPRODUCTION AT LARGE Q^2 AND THE ROLE OF WEE PARTONS. Roy, P. (Cornell Univ., Ithaca, N. Y.). Phys. Lett.; 36B: No. 6, 579-85 (18 Oct 1971).

A parton model is presented for single particle electroproductions with large electronic momentum-transfers. Two different asymptotic limits are discussed and related to two kinds of parton-mechanisms. Several testable predictions are made. (auth)

59388 ENERGY OF A TACHYON IN A MAGNETIC FIELD. Huberman, B. A. (Xerox Palo Alto Research Center, Palo Alto, Calif.). Phys. Lett.; 36B: No. 6, 573-4(18 Oct 1971).

The energy levels of a charged tachyon in a magnetic field are obtained and the restrictions imposed on the ground state level for a given magnetic field are discussed. The possibility of observing transitions between these magnetic energy levels is discussed. (auth)

59389 STUDY OF THE VERTICES $\pi^0\gamma\gamma$, $\eta\gamma\gamma$, AND $\eta'\gamma\gamma$ WITH ONE ALMOST REAL AND ONE HIGHLY VIRTUAL PHOTON. Parisi, J. (Univ., Paris); Kessler, P. Lett, Nuovo Cim.; 2: No. 15, 760-3(9 Oct 1971).

The experimental study of the $\pi^0\gamma\gamma$, $\eta\gamma\gamma$, and $\eta'\gamma\gamma$ vertices through collisions of one almost real photon and one highly virtual photon in electron–positron storage rings is suggested. It is shown that the background represented by the double-bremsstrahlung process can be made negligibly small by imposing certain requirements. It is also shown that the cross sections should be large enough to ensure reasonably high counting rates with a colliding-beam machine like DORIS (DESY-Hamberg), presently under construction, of beam energy ~3 GeV and luminosity $\sim(10^{32}-10^{33})$ $cm^{-2}\,s^{-1}$. (L.B.S.)

59390 ANGULAR CORRELATIONS OF THE DECAY PRODUCTS OF TWO HEAVY LEPTONS. Parisi, G. (CNEN, Frascati, Italy); Zirilli, F. Lett. Nuovo Cim.; 2: No. 15, 775-6(9 Oct 1971).

Asymmetry parameters of the decays of heavy leptons $X^\pm \rightarrow \pi^\pm\nu$, $X^\pm \rightarrow K^\pm\nu$, $X^\pm \rightarrow \mu^\pm\bar{\nu}\nu$, and $X^\pm \rightarrow e^\pm\nu\nu$, produced in colliding-beam $e^+ + e^- \rightarrow X^+ X^-$ interactions, are calculated. (L.B.S.)

59391 AXIAL VECTOR FORM FACTOR OF THE NUCLEON AND THE QUARK–PARTON MODEL. Kitani, K.; Tanabe, R.; Yoshii, H. (Tokyo Inst. of Tech.). Lett. Nuovo Cim.; 2: No. 15, 789-93(9 Oct 1971).

A relation between the threshold behavior of the deep inelastic electromagnetic structure function and the electromagnetic form factor of the nucleon was previously proposed by Bloom and Gilman Gilman. It is shown that under the Bloom–Gilman conjecture, the parton model gives the dipole form of the axial vector form factor $G_A(Q^2)$ and the mass relation $m_A \simeq \sqrt{2m_V}$. The behavior of the elastic electromagnetic form factor with Q^2 is also given. (L.B.S.)

Weak

59392 (ORO-3992-69) LOWER BOUND ON λ_+ IN K_{l3} DECAY. Acharya, R. (Texas Univ., Austin. Center for Particle Theory). Aug 1971. 8p. (CPT-118). Dep. NTIS.

A lower bound on λ_+ is derived under the assumption that the chiral SU(2) × SU(2) breaking correction term to the soft-pion theorem in K_{l3} decay is positive. Earlier estimates of phenomenological parameters are adopted, and $\lambda_+ \gtrsim 0.05$ is obtained. (auth)

59393 SELECTION RULES IN THE WEAK INTERACTIONS AND THEIR RELATION TO HADRONIC MESONS. Kim, Bjong-Ro. (Max-Planck-Institut fuer Physik und Astrophysik, Munich). Progr. Theor. Phys. (Kyoto); 46: No. 1, 198-210(Jul 1971).

In the framework of a model of weak interactions developed previously, selection rules in weak interactions are considered. The isospin selection rules $|\Delta I| = 1$ and $|\Delta I| = \frac{1}{2}$ are consequences of the model. The hadronic vector and axialvector mesons are classified into first and second class mesons similar to S. Weinberg's classification of first and second class currents, thus giving physical meaning to notions of first and second class currents. Conclusions are reached on the existence of second class currents. The relation of the electromagnetic currents of the hadrons to the vector part of the neutral weak currents of the hadrons is discussed. These two currents are assumed to be the same and it is concluded from this that the possible existence of the isotensor electromagnetic currents is directly related to the possible existence of $|\Delta I| = 2$ weak processes or to the possible existence of mesons with isospin 2. This assumption leads to an "extended" C.V.C. in the sense that the isospin relation between the electromagnetic and weak currents is not limited to the isovector but extended to the isoscalar and isotensor. (auth)

59394 SEMI-LEPTONIC PROCESS. Ogawa, Shuzo (Hiroshima Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 343-5(Jul 1971).

The similarity between the hadron and the nucleus as composite systems is investigated by examining the semileptonic process of hadrons in comparison with nuclear β-decay. Selection rules are obtained for interactions of the type $\nu(\bar{\nu}) + N \rightarrow$ one meson + one baryon + $l(\bar{l})$. (L.B.S.)

59395 LEPTON–BARYON RESONANCES AND DUALITY IN WEAK PROCESSES. Nakawaki, Yuji (Osaka Univ.); Saito, Takesi; Sakai, Yosiki; Tanikawa, Yasutaka. Progr. Theor. Phys. (Kyoto); 46: No. 1, 346-8(Jul 1971).

The theory of duality was previously proposed and the process $\nu + n \rightarrow \mu^- + p$ was studied by using the Veneziano model, in which the $\mu^- p$ resonance (T boson) was considered to lie on a Regge trajectory $\alpha_T(s)$. The existence of a $\mu^+ n$ resonance (T′ boson), lying on a Regge trajectory $\alpha_{T'}(\mu)$, is assumed and is introduced into the pervious model. It is shown that the new model reduces the energy dependence of quantities corresponding to the vector and axial-vector form factors. (L.B.S.)

59396 NONLEPTONIC DECAYS OF THE NEUTRAL K MESONS AND THE LEE–SUGAWARA SUM RULE. Kohara, Yoji; Nishijima, Kazuhiko (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 348-50(Jul 1971).

A simple set of selection rules for nonleptonic decays of the neutral K mesons is proposed, and it is shown that this new set of selection rules is equivalent to the Lee–Sugawara sum rule. (L.B.S.)

59397 APPLICATION OF ELEMENTARY PARTICLE TECHNIQUES TO PROBLEMS IN NUCLEAR WEAK INTERACTIONS. Frazier, John Melvin. Baltimore; Johns Hopkins Univ. (1971). 120p. University Microfilms Order No. 71-21,040.

Thesis.

The application of elementary particle techniques to strangeness conserving weak nuclear processes dates back to previous work. An extension of that work to several new problems is made. The field theoretical basis of the theory of weak processes is discussed, and the discussion is extended to strangeness-conserving weak nucleon processes; β-decay of the neutron, μ-capture in gaseous hydrogen, and γ-scattering off nucleons. Using the weak nucleon processes as a basis, quasielastic forward neutrino scattering off ^{27}Al and ^{56}Fe is investigated by means of the impulse approximation. Next the elementary particle treatment of three problems: μ-capture in ^{3}He, β-decay of R_2E, and radiative corrections to $O \rightarrow O$ β-transitions is carried out. (Diss. Abstr.)

59398 WEAK DECAYS OF THE Ω^- PARTICLE AND CURRENT ALGEBRA. Ram Mohan, Lakshminarayanapuram Ramdas. Lafayette, Ind.; Purdue Univ. (1971). 172p. University Microfilms Order No. 71-20,530.

Thesis.

The weak decays of the Ω^- particle are investigated in the framework of the current x current model of weak interactions, and the algebra of currents. Use is made of internal symmetries of elementary particles to generalize, and to extend, earlier calculations on hyperon decays to make predictions for the decays of the Ω^- particle. The weak currents and their form factors are determined by a combination of phenomenology and SU(6) symmetry applied in the static limit. This leads to predictions for the decay rates of the semileptonic decays of the Ω^- particle and reproduces the results obtained earlier. The nonleptonic decays are evaluated by using current algebra in the soft pion limit. The current algebra method reduces the problem to evaluating the matrix elements of the weak parity conserving current x current Hamiltonian between baryon states. The matrix element of the Hamiltonian between decuplet baryon states, the decuplet spurion, is evaluated by assuming that the matrix element is saturated by octet and decuplet single-particle intermediate states. With the simplest possible assumptions regarding the high energy behavior of the vector and axial-vector form factors of the baryons it is shown that the decuplet spurion exhibits octet dominance. Octet dominance arises due to a cancellation between the octet and the decuplet particle intermediate state contributions to the 27-plet part of the spurion. The p-wave decay amplitudes are obtained with baryon octet and decuplet spurion strengths as input. By assuming that the d-wave amplitudes for the decays $\Omega^- \rightarrow \Lambda K^-$, $\Xi\pi$ are given by the K*-pole model the predictions of the $\Delta T = \frac{1}{2}$ rule are obtained in the nonleptonic decays. The asymmetry parameter for $\Omega^- \rightarrow \Lambda K^-$ is predicted to be zero, and the $\Omega^- \rightarrow \Xi\pi$ decay modes are predicted to have a maximal ($\alpha \approx 1$) asymmetry parameter. It is pointed out that such a large asymmetry in the $\Xi\pi$ mode may allow a direct and unambiguous determination of the spin of the Ω^- particle from a measurement of the decay distributions by using the Lee and Yang inequalities in the averages of test functions over the decay distributions. The total decay rate for the nonleptonic decays agrees very well with experiment. The weak radiative decays $\Omega^- \rightarrow \Xi^-\gamma$ and $\Omega^- \rightarrow \Xi^{*-}\gamma$ were investigated in the pole approximation. Estimates for the decay rates and branching ratios to the corresponding pionic decay modes show that these radiative modes are the counterparts of the two-body weak radiative decays of the octet baryons. The predicted decay rates, however, are quite small and are comparable to the semileptonic decay rates. (Diss. Abstr.)

59399 LEPTONIC DECAYS OF MESONS. Silisteanu, Ion. Stud. Univ. Babes-Bolyai, Ser. Phys.; 16: No. 1, 15-19(1971).

New relations between transition amplitudes for leptonic decays of mesons and the mass of the soft-pion are obtained, which coincide with current-algebra and quark-model results of Iwasaki, Suzuki, and Sugawara. (L.B.S.)

59400 NUMERICAL SOLUTIONS OF THE KINETIC EQUATION FOR THE PASSAGE OF μ MESONS THROUGH MATTER. Kuz'mina, L. V. (Inst. of Applied Mathematics, Moscow). Chislennye Metody Mekh. Sploshnoi Sredy; 1: No. 1, 83-9(1970). (In Russian).

The energy losses at large, 10^5 to 10^8 MeV meson energies increase linearly with E. The kinetic equation with dimensionless depth and energy variables has been solved for the case, for which the μ meson flux had a clearly expressed gradual character. The problem was further examined under the boundary condition only a single meson with an energy of E_0 hits the layer. The solution was derived by approximation, using differential schemes; the results were compared with previous data. (TTT)

59401 TWO HIGH ENERGY PROCESSES INVOLVING DETECTED FINAL STATE PARTICLES. Landshoff, P. V.; Polkinghorne, J. C. (Cambridge Univ., Eng.). Nucl. Phys.; B33: No. 1, 221-38(1971).

Two processes are discussed: (a) semi-inclusive electroproduction experiments; (b) heavy-lepton pair production in hadronic collisions. The non-perturbative approach to the parton model is used to evaluate scaling properties and to consider extra contributions due to wee partons. These latter have not been previously discussed and are found to be important for process (b), but absent in process (a). Quantitative agreement is obtained for process (b), including an explanation of the observed shoulder in the differential cross section. (auth)

59402 PHOTON RADIATION DURING WEAK INTERACTION OF POLARIZED LEPTONS. Safronov, A. N. (Moscow State Univ.). Vestn. Mosk. Univ., Ser. III. Fiz. Astron.; 12: No. 2, 123-30(Mar-Apr 1971). (In Russian).

Within the framework of the theory of weak interactions, the properties of bremsstrahlung were investigated, along with neutrino annihilation of polarized leptons. This process forms photons which, in principle, may provide information concerning the vertex of the four-fermion interaction. Their angular and energy distribution, as well as the cross section behavior at large energies, depend strongly upon the polarization state of the initial particles. (tr-auth)

59403 NEW EXPERIMENTS IN NEUTRINO PHYSICS. Pontekorvo, B. Usp. Fiz. Nauk; 104: No. 1, 3-14(May 1971). (In Russian).

Certain questions drawn from present-day neutrino physics are explored. "Diagonal" and "non-diagonal" processes, stemming from the Hamiltonian, are of interest, but the nature of the former is still largely unknown. The possibility of neutrino sources other than pions and kaons is examined. Does the charge on a lepton persist, and is the mass of a neutrino really zero? As to the question "Is a neutrino–neutrino reaction possible?", it is concluded that such an interaction may occur in astrophysical, cosmic, and purely lepton processes. (30 references) (K.S.W.)

59404 NON-LOCAL EFFECTS IN THE DECAY OF POLARIZED MUONS. Pietschmann, H.; Stremnitzer, H. (Univ., Vienna). Nucl. Phys.; B22: No. 2, 493-6(1970).

The energy spectrum for electrons from the decay of polarized muons is calculated. V–A currents are assumed, but the interaction is not assumed to be local. The most general structure tensor is assumed to calculate the spectrum including terms up to the order $(m_e/m_\mu)^2$. (auth)

59405 VIOLATION OF THE $|\Delta I|$ absolute value = $\frac{1}{2}$ RULE IN NON-LEPTONIC DECAYS. Haan, Oswald; Stech, Berthold (Univ., Heidelberg). Nucl. Phys.; B22: No. 2, 448-60(1970).

Tree graph contributions to the non-leptonic decays are calculated. They give the correct order of magnitude for the $|\Delta I| = \frac{3}{2}$ amplitude; their contribution is, however, too large by roughly a factor 2. Since this result appears consistently in all accessible non-leptonic decays it is concluded that prominent parts of the non-leptonic amplitude as given by the tree-graph contributions are partially cancelled or suppressed by an unknown mechanism. (auth)

59406 COULOMB CORRECTIONS TO ADLER'S PCAC TEST IN NUCLEI. Nachtmann, O. (CERN, Geneva). Nucl. Phys.; B22: No. 2, 385-96(1970).

Coulomb corrections to the forward-inelastic neutrino cross section on nuclei are estimated, which, according to Adler's theorem, should be proportional to the pion cross section. An eikonal wave function is used for the muon in the final state. The pion is treated in a simple optical model also in the eikonal approximation. Corrections $\lessapprox 10\%$ are found for muon energy $E_2 \geq 1$ GeV and energy transfer $\nu \gtrapprox 0.5$ GeV in heavy nuclei. (auth)

59407 CERTAIN ASPECTS OF TWO-COMPONENT AND FOUR-COMPONENT THEORIES OF THE NEUTRINO FROM CONSIDERATION OF WEAK LEPTONIC AND SEMI-LEPTONIC PROCESSES. Kerimov, B. K.; Romanov, Yu. N. (Moscow

State Univ.). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 2, 57-61 (1970). (In Russian).

The results of an application of two- and four-component neutrino theories to weak leptonic (muon decay) and semileptonic processes are compared. It is shown that the predictions of these two theories are evidently inequivalent in the V−A variant of the relation of electron and muon currents and also muon and baryon currents. According to the four-component theory in contrast to the two-component theory the V + A interaction of electron and muon currents is responsible for the muon decay. (tr-auth)

59408 SUM RULES FOR CP-NONCONSERVING BBπ AMPLITUDES IN GLASHOW'S MODEL. Ram Mohan, L. R. (Purdue Univ., Lafayette, Ind.). Phys. Rev., D; 4: No. 3, 825-30(1 Aug 1971).

Current algebra was used to derive sum rules for the CP-nonconserving $\Delta S = 1$ and $\Delta S = 0$ nonleptonic transitions $B \to B'\pi$ in Glashow's model. Within the saturation scheme of Chiu, Schechter, and Ueda for the matrix elements of the weak current × current Hamiltonian between single baryon states, it is shown that the CP-nonconserving amplitudes do have octet dominance. The one-pion exchange contribution to the weak P- and T-violating nucleon–nucleon potential was calculated by relating the weak NNπ vertex to hyperon decay amplitudes. (auth)

59409 ONCE-SUBTRACTED DISPERSION RELATIONS, CURRENT ALGEBRA, AND NONLEPTONIC WEAK DECAYS OF HYPERONS. Sebastian, K. J. (Lowell Technological Inst., Mass.). Phys. Rev., D; 4: No. 3, 771-84(1 Aug 1971).

Nonleptonic weak decays of hyperons and the $K_1 \to 2\pi$ decay are carefully analyzed using current algebra, partial conservation of axial-vector current, and once-subtracted dispersion relations, a method suggested by Okubo, Mathur, and Marshak. The dispersion integral is calculated by assuming it to be saturated by the low-mass intermediate states of the nucleon octet, of the $\frac{3}{2}^+$ decuplet of $\Delta(1236)$, and of the $\frac{1}{2}^-$ SU_3 singlet $Y_0^*(1405)$, in the case of hyperon decays, and by the intermediate states of vector mesons and a possible 0^+ scalar-meson nonet, in the case of $K_1 \to 2\pi$ decay. The matrix element of the parity-violating weak Hamiltonian density between two baryons (which is required to evaluate the hyperon decay amplitudes) is related to the $K_1 \to 2\pi$ decay amplitude by the K_1 tadpole mechanism. With pseudovector SU_3-symmetric coupling among the nucleon and pseudoscalar-meson octets, a good fitting of all the hyperon decay amplitudes is obtained in terms of four parameters. It is also found that the corrections to the soft-pion values are very important not only for P-wave hyperon decay amplitudes, but also for S-wave amplitudes. They are also extremely important for $K_1 \to 2\pi$ decays. Furthermore, it is found that, contrary to the findings of Hara and Nambu, there is no evidence for the concept of a "universal parity-conserving spurion" in hyperon and $K_1 \to 2\pi$ weak decays. (auth)

59410 INTERMEDIATE BOSON. II. THEORETICAL MUON SPECTRA IN HIGH-ENERGY NEUTRINO EXPERIMENTS. Brown, R. W. (Brookhaven National Lab., Upton, N. Y. Case Western Reserve Univ., Cleveland); Hobbs, R. H.; Smith, J. Phys. Rev., D; 4: No. 3, 794-813(1 Aug 1971).

The theoretical angular and energy distributions are presented for the W boson, the "prompt" muon, and the decay muon in the reaction $\nu + Z \to Z + W + \mu$ with the subsequent fast decay $W \to \mu + \nu$. A discussion of the W's polarization is included. In particular, the deep-inelastic contributions to the incoherent production mode and the effect of the W's anomalous magnetic moment are considered. Emphasis is on the energies available at the National Accelerator Laboratory and corresponding attainable W-boson masses. (auth)

59411 NEW IMPROVED BOUNDS FOR K_{l3} PARAMETERS. Okubo, Susumu (Univ. of Rochester, N. Y.). Phys. Rev. D; 4: No. 3, 725-33(1 Aug 1971).

New exact bounds for derivatives of K_{l3} decay form factors $f_\pm(t)$ are obtained, provided that $\Delta(0)$, the propagator of the divergence of the strangeness-changing current at zero momentum, is known. Several estimates of $\Delta(0)$ are discussed, along with their experimental implications. (auth)

59412 $\pi^+ \to e^+(\mu^+)\nu e^+e^-$ DECAYS. Bardin, D. Yu.; Bilen'kii, S. M.; Mitsel'makher, G. V.; Shumeiko, N. M. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 14: No. 2, 427-36(Aug 1971). (In Russian).

The integral probability of the process $\pi^+ \to l^+\nu_l e^+e^-$ is calculated. It is shown that the investigation of the $\pi^+ \to e^+\nu_e e^+e^-$ decay at various detection thresholds of final charged particles allows one to get information on the γ parameter (the ratio of the axial form factor for the vector one in the $\pi^+ \to e^+\nu_e\gamma$ decay) on the π-meson electromagnetic radius and on the sign of the $\pi^0 \to \gamma\gamma$ amplitude. (auth)

59413 ANGULAR AND MOMENTUM DISTRIBUTIONS OF μ^+ MESONS FROM W^+-BOSON DECAY IN REACTION $\nu_\mu + Z \to \mu^- + Z + W^+$. Berkov, A. V.; Zhizhin, E. D.; Nikitin, Yu. P.; Shabalin, E. P. (Moscow Engineering-Physics Inst. Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 14: No. 2, 422-6(Aug 1971). (In Russian).

The calculations are presented of the double differential spectra of μ^+ mesons (or positrons) from the decay of the W^+-boson produced in reaction $\nu_\mu + Z \to \mu^- + W^+ + Z$. (auth)

59414 ANGULAR AND MOMENTUM DISTRIBUTIONS OF μ^- MESONS IN REACTION $\nu + Z \to \mu^- + W^+ + Z$. Zhizhin, E. D.; Nikitin, Yu. P.; Rozhnov, G. V.; Shabalin, E. P. (Moscow Engineering-Physics Inst. Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 14: No. 2, 420-1(Aug 1971). (In Russian).

The μ^--meson angular spectra, and double differential angular and momentum spectra are presented for the reaction $\nu_\mu + Z \to \mu^- + W^+ + Z$. The calculations are carried out in the mass interval $3 \leq m_W \leq 7$ GeV for the W-bosons produced on nucleons and Fe nuclei. (auth)

59415 ANGULAR AND MOMENTUM DISTRIBUTIONS OF μ^+ MESONS (OR POSITRONS) IN REACTIONS OF DIRECT PRODUCTION OF LEPTONIC PAIRS BY NEUTRINO BEAM IN ELECTROMAGNETIC FIELD OF NUCLEI AND NUCLEONS. Berkov, A. V.; Voronina, L. M.; Shabalin, E. P. Yadern. Fiz.; 14: No. 2, 416-19(Aug 1971). (In Russian).

The calculations are presented of the double differential spectra of $\mu^+(e^+)$ in reactions $\nu_\mu + Z \to \mu^+ + \mu^- + \nu_\mu + Z$ and $\nu_\mu + Z \to \mu^- + e^+ + \nu_e + Z$ in the electromagnetic field of nucleons and the Fe nucleus. (auth)

59416 INVESTIGATION OF THE TOTAL RADIATIVE CORRECTIONS TO THE RATIO G_β^V/G_μ IN THE MODEL WITH INTERMEDIATE VECTOR MESON. Manida, S. N. (Leningrad State Univ.). Yadern. Fiz.; 14: No. 2, 408-15(Aug 1971). (In Russian).

Radiative corrections to the β and μ decays are considered. In each order for the fine-structure constant α the diagrams are revealed giving the most nonuniversal contribution. The selected diagrams are summarized into the diagrams of the first order in the constant α with the total Green functions of the meson and photon and with the total vertex parts. (auth)

59417 ANALYSIS OF NEUTRINO EXPERIMENTS IN COSMIC RAYS. Volkova, L. V.; Zatsepin, G. T. (Lebedev Inst. of Physics, Moscow). Yadern. Fiz.; 14: No. 1, 211-20(Jul 1971). (In Russian).

The spectra of muons emerging from the cosmic ray neutrinos are calculated under different assumptions on the behavior of the total cross section of neutrino–nucleon interaction. The results of the neutrino experiments in cosmic rays do not contradict the assumption of an unlimited rise of the neutrino–nucleon interaction total cross section with the neutrino energy. However, due to large uncertainties in the experimental and calculated muon fluxes the results of the experiments can also agree with the assumption on the cut off of the linear increase of the cross section at the neutrino energy of some dozens or hundreds GeV. (auth)

59418 EFFECTIVE LAGRANGIAN OF NONLEPTONIC WEAK INTERACTIONS AND PARITY-NONCONSERVING NUCLEAR FORCES. Kapustnikov, A. A. (Dnepropetrovsk State Univ., USSR). Yadern. Fiz.; 14: No. 1, 221-5(Jul 1971). (In Russian).

Using the hypothesis on the right SU(3) invariance, the effective Lagrangian for nonleptonic weak interactions containing the $\Delta S = 0$ and $\Delta S = 1$ parts is constructed. According to the assumption, the parity conserving part is related to the strong interaction Lagrangian by the unitary transformation. The kind of the transformation operator is determined from relation to the Cabibbo theory. The application of this Lagrangian to the process $n + p \to d + \gamma$ is considered. (auth)

59419 SUGGESTION CONCERNING THE PRESENT ANOMALY IN RATE $(K_L \to \mu^+\mu^-)$ RATE $(K_L \to 2\gamma)$. Barshay, S. (Univ. of Copenhagen). Phys. Lett.; 36B: No. 6, 571-2(18 Oct 1971).

Christ and Lee have emphasized that if the recently reported preliminary measurement of the rate for $K_L \to \mu^+\mu^-$ indeed falls below a unitarity lower bound of 1.1×10^{-1} sec^{-1}, then the possible influence of CP noninvariance must be examined. Using a published specific model in which the CP-violating parameter ϵ was calculated, CP-violating rates were calculated for $K_L \to 2\gamma$ and $K_L \to \pi^+\pi^-\gamma$ to be about 2.6×10^4 sec^{-1} and 0.2×10^3 sec^{-1} respectively.

XUM

The implications for the rates for $K_L \rightarrow \mu^+\mu^-$ and $K_S \rightarrow \mu^+\mu^-$ are discussed. (auth)

59420 EXPLANATION FOR NONLEPTONIC DECAYS OF HYPERONS. Nagai, Y. E. (Michigan State Univ., East Lansing). Phys. Lett.; 36B: No. 6, 568-70(18 Oct 1971).

On the basis of Okubo's dispersion approach, the resonance contribution to the current algebra result for nonleptonic decays of hyperons is calculated via Regge theory. A four parameter best-fit solution to both s and p-wave amplitudes is found to be in very good agreement with experiment. The result provides a uniform explanation of puzzling features of previous work. (auth)

59421 (COO–2009-30) EQUIVALENCE OF REGGE AND OPTICAL MODELS. Hendry, Archibald W. (Indiana Univ., Bloomington. Dept. of Physics). [nd]. Contract AT(11-1)-2009. 25p. (CONF-710627-1). Dep. NTIS.

From Two body scattering at high energy conference; Argonne, Ill. (21 Jun 1971).

The equivalence of the Regge and optical models is discussed for scattering at intermediate energies. Surface scattering is also considered. (J.F.P.)

59422 (JINR–E2-6046) QUASIPOTENTIAL FORMALISM FOR THE TWO-PARTICLE SYSTEM WITH SPINS 0 AND ½. Garsevanishvili, V. R.; Goloskokov, S. V.; Matveev, V. A.; Slepchenko, L. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 13p. Dep. NTIS (U. S. Sales Only).

The quasipotential formalism for the particles with spins 0 and ½ was developed. The quasipotential equations for the scattering amplitude and the wave function were derived. (auth)

59423 CORRESPONDNCE BETWEEN THE THREE-TRIPLET MODEL AND THE QUARTET MODEL IN NONLEPTONIC HYPERON DECAYS. Murayama, Akihiro (Shizuoka Univ., Japan). Progr. Theor. Phys. (Kyoto); 46: No. 1, 338-40(Jul 1971).

It has been pointed out that in the quartet model, under the assumptions of the weak two-body interaction and additivity, the main properties of P-wave nonleptonic decays of hyperons are explained well by the two urbaryon transitions. It is shown that in the three-triplet model there exists a transition corresponding to the two-urbaryon transition in the quartet model, if baryons and mesons are mixed states of $SU(3)' \times SU(3)''$ and if the decay is caused by the (S or V) – (T or A) type weak potential between two urbaryons. (L.B.S.)

59424 EXPERIMENTAL VERIFICATION OF DISPERSION THEORY AND HIGH ENERGY SCATTERING. Lindenbaum, S. J. (Brookhaven National Lab., Upton, N. Y.). Fields Quanta; 1: No. 4, 255-93(Jul 1971).

A review is presented of the status of experiments to test forward dispersion relations. After discussing the relevance of these measurements, the apparatus is briefly described. This is followed by a description of exactly how the theory is tested. The second portion is devoted to the subject of the Pomeranchuk theorem and the recent total cross section data from Serpukhov. These results are compared with the extrapolations of experimental data. (auth)

59425 DISPERSION THEORY AND THE COMPLEX J-PLANE. Mandelstam, Stanley (Univ. of California, Berkeley). Fields Quanta; 1: No. 4, 295-343(Jul 1971).

Some of the basic ideas of dispersion theory are reviewed and examples of the successful applications of the theory in understanding elementary particle reactions are presented. The principles of Regge theory including phenomenological applications and the composite nature of Regge recurrences are discussed. Finally, the prospects for dynamical calculations based on dispersion relations and Regge theory are discussed. (auth)

59426 BOUND STATES AND MASS SPECTRA OF HADRONS IN THE QUARK MODEL. Animalu, A. O. E. (Drexel Univ., Philadelphia). Lett. Nuovo Cim.; 2: No. 14, 677-80(2 Oct 1971).

It is shown that under the supposition that quarks in hadrons are bound by pair excitations (gluons) of the type $P\bar{P}$, $N\bar{N}$, $\lambda\bar{\lambda}$ or integral multiples thereof, which make no contributions to the internal quantum numbers, but contribute integral multiples of $2m_P$, $2m_N$, $2m_\lambda$ respectively to the hadron mass (m_h), the mass spectra of all known hadrons can be explained by the principle of unitary isotopes. (L.B.S.)

59427 TRANSVERSE-MOMENTUM DISTRIBUTION OF PRODUCED SECONDARIES FROM STATISTICAL THERMODYNAMIC MODELS OF STRONG INTERACTIONS AT HIGH ENERGIES. Wayland, J. R. (Texas A and M Univ., College Station). Nuovo Cim.; 5A: No. 2, 273-4(21 Sep 1971).

The asymptotic form for the transverse-momentum (P_t) distribution of secondary particles determined by statistical thermodynamic models of high-energy interactions is limited to certain values of P_t. The complete form and its relation to the asymptotic relation are considered. (auth)

59428 SCALING LAW FOR DEEP-INELASTIC HADRONIC SCATTERING. Huang, Kerson; Segre, Gino (Massachusetts Inst. of Tech., Cambridge). Contract AT(30-1)-2098. Phys. Rev. Lett.; 27: No. 16, 1095-8(18 Oct 1971).

The dual-resonance model suggests a new scaling law for the inclusive reaction $A + B \rightarrow X +$ anything at fixed production angle in the cm frame at high energies. The prediction is that $s^{-1} \ln (d^2\sigma/dqd\Omega)_{cm}$ approaches, up to a multiplicative constant, a universal function independent of s. The form of the function is simple and explicitly given. In the quasi-elastic limit this function approaches that predicted for wide-angle elastic scattering by the Veneziano model. Agreement with experiments is good. (auth)

59429 PHENOMENOLOGICAL ANALYSIS OF PION CONSPIRACY MODELS. Brown, Nicholas Everett. San Diego, Calif.; Univ. of California (1971). 75p. University Microfilms Order No. 71-21,685.

Thesis.

For several years the suggestion of a conspiring pion has been used by various phenomenologists to explain the forward differential cross sections of charged pion photoproduction and nucleon-nucleon charge exchange scattering. However, the "classical" conspiracy model has encountered various experimental and theoretical difficulties. Two conspiracy models are exhibited which avoid these difficulties and are compared with other work in the field of Regge pole and cut phenomenology. Insofar as there are no generally accepted criteria by which the best of these many models can be determined, only relative conclusions can be drawn. (Diss. Abstr.)

59430 BREAKING OF SCALE INVARIANCE: REGGE TRAJECTORIES, AND DYONS. Bakesigaki, A.; Inomata, A. (State Univ. of New York, Albany). Lett. Nuovo Cim.; 2: No. 14, 697-700(2 Oct 1971).

A scheme for breaking of scale invariance that results in SO(4,1) is applied to the hadron viewed as a composite of dyons. On the basis of the resulting symmetry, without specifying the internal structure of the composite, a mass formula corresponding to Regge trajectories is derived, and a simple model for Salam's strong gravity is presented. An order-of-magnitude estimate is made of the dyon mass in a dyonium. (L.B.S.)

59431 GALILEAN INVARIANCE IN THE INFINITE MOMENTUM FRAME AND THE PARTON MODEL. Bouchiat, Cl.; Fayet, P.; Meyer, Ph. (Laboratoire de Physique Theorique et Hautes Energies, Orsay, France). Nucl. Phys.; B34: No. 1, 157-76(1971).

Field theory in the infinite momentum frame variables is used to derive the parton model, and to stress the implications of transverse Galilean and longitudinal Lorentz boost invariances. The elastic nucleon electromagnetic form factor and inelastic structure functions are expressed as density and correlation functions for partons in the transverse plane, in direct analogy with expressions of non-relativistic atomic physics. A connection is established between the transverse momentum cut-off and the q^2 dependence of the electromagnetic elastic form factor. The scaling law for the parton model is derived under conditions which appear in a rather transparent way. The corresponding sum rules are studied. A generalization of the Bjorken-Feynman scaling is obtained in the nonforward Compton scattering amplitude relevant to the two-photon correction in very high-energy electron-nucleon elastic scattering. (auth)

59432 LORENTZ-INVARIANT AND NON-INVARIANT MOMENTUM SPACE AND THERMODYNAMICS. Jabs, Arthur (Univ., Kiel). Nucl. Phys.; B34: No. 1, 177-88(1971).

It is demonstrated that the relations of thermodynamics can be obtained from the ordinary non-invariant but not from Srivastava's and Sudarshan's Lorentz-invariant momentum space. The relations refer to the extreme relativistic case where the thermodynamic Planck distribution is known to be correct. Therefore only the non-invariant momentum space is the legitimate representative of the statistical hypothesis, and the question of taking Lorentz-invariant or non-invariant momentum space in the statistical

XUM

model of high-energy interactions is to be reinterpreted as a statement about the transition-matrix element. (auth)

59433 ONE-LOOP AMPLITUDES IN THE MODEL OF NEVEU AND SCHWARZ. Goddard, P.; Waltz, R. E. (CERN, Geneva). Nucl. Phys.; B34: No. 1, 99-108(1971).

Dual one-loop amplitudes for external pions are constructed from the Born term of Neveu and Schwarz. Non-orientable diagrams are needed, although the model has SU(2) symmetry. The Pomeranchukon-like singularity now has intercept greater than one and there is also a negative G-parity isoscalar singularity with zero intercept generated by the same mechanism. The divergences can be removed by an extension of previous procedures. (auth)

59434 COMPLEX REGGE POLES. Barger, V. (Univ. of Wisconsin, Madison); Phillips, R. J. N. Contract AT(11-1)-881. Nucl. Phys.; B33: No. 1, 200-13(1971).

The practical consequences of introducing conjugate complex pairs of Regge poles, in place of the usual real boson Regge poles, are considered. A range of properties is discussed systematically. (auth)

59435 FUNCTIONAL APPROACH TO DUAL QUARK MODELS. Kaku, M.; Virasoro, M. A.; Yoshimura, M. (Univ. of California, Berkeley). Nucl. Phys.; B33: No. 1, 109-34(1971).

The usual N-point Veneziano amplitude can be obtained by summing over a large class of fishnet diagrams if one assumes a φ^4 interaction and suitable approximations. By adding fermion (quark) propagators along the edges of these fishnet diagrams, a natural generalization of this functional approach to include mesons and baryons without exotics is obtained, which smoothly extrapolates to the multiplicative model. By functionally integrating over a two-dimensional strip, creation and annihilation operators are introduced and solved for the generators of the conformal group. The mechanism to kill spin ghosts was not found. And because all functional integrations are difficult to perform, the amplitude is obtained by a perturbation series. Because the series in this approximation diverges, the renormalization scheme is also discussed. SU(3) breaking can be introduced in a natural way. (auth)

59436 TWO-PARTICLE CORRELATIONS IN HIGH ENERGY PRODUCTION EXPERIMENTS. Bassetto, A. (CERN, Geneva); Toller, M.; Sertorio, L. Nucl. Phys.; B34: No. 1, 1-40(1971).

One-particle and two-particle inclusive distributions are considered in the light of future production experiments at CERN Intersecting Storage Rings machine. The general properties of those models are discussed, which are based on factorized approximations to the production amplitudes and are in agreement with some general hypotheses like the Feynman scaling law. First the role of phase space arguments is clarified and the importance of detecting correlations in high energy production experiments as a hint for understanding the underlying dynamics is emphasized. Then two peculiar (and, in a sense, complementary) kinds of correlation in two-particle inclusive distributions are examined: the one coming from multiperipheral dynamics with Lorentz pole exchanges, the other due to "direct channel" resonances. Some general properties of inclusive distributions are expressed in terms of quantities which are suitable for direct measurement. (auth)

59437 SOME PROBLEMS WITH THE QUARK MODEL FOR ELEMENTARY PARTICLES. Dalitz, R. H. (Oxford Univ.). pp 343-80 of Methods and Problems of Theoretical Physics. /Bowcock, J. E. (ed.). New York; American Elsevier Publishing Co., Inc. (1970).

From Conference on methods and problems of theoretical physics; Birmingham, England (Jun 1967).

59438 NON-EXPONENTIAL DECAYS IN A LEE MODEL WITH SEVERAL UNSTABLE V-PARTICLES. Ruuskanen, P. V. (Univ. of Helsinki). Nucl. Phys.; B22: No. 1, 253-68(1970).

The time dependence of several closely located interfering unstable states using an extended Lee model and give a unified treatment of different decay laws which can arise depending on the parameters of the system. (auth)

59439 UNSTABLE PARTICLE AND A DUAL-CUT MODEL. Yang, Ying-chuan (National Tsing Hua Univ., Hsinchu, Taiwan). Nuovo Cim.; 5A: No. 3, 407-12(1 Oct 1971).

The unstable-particle solution was obtained from the Bethe–Salpeter equation. The solution is connected with a timelike potential, and is due to a continuous cut contribution. A dual-cut model is introduced, and the scattering amplitude is obtained by adding a series of dual-cut amplitudes to the dual-resonance amplitude. (auth)

59440 SELECTION RULES FOR REGGE CUTS. Finkelstein, J. (CERN, Geneva). Nuovo Cim.; 5A: No. 3, 413-20(1 Oct 1971).

The expectation that diagrams which generate Regge cuts must contain third double-spectral functions is combined with the requirements of exchange degeneracy to arrive at a selection rule for Regge cuts. This rule prohibits Regge–Regge cuts from contributing to KN scattering, and it is speculated that this prohibition might explain the observation that the K^+p total cross section is such a remarkably constant function of energy, and that the cross sections for KN and $\bar{K}N$ charge-exchange scattering rapidly become equal as the energy increases. (auth)

59441 DUAL-RESONANCE MODEL WITH UNEQUAL INTERCEPTS. Gordon, E. M.; Lam, C. S. (McGill Univ., Montreal). Nuovo Cim.; 5A: No. 3, 495-510(1 Oct 1971).

The dual-resonance operator formalism is extended to the case of unequal intercepts in all channels. By imposing factorization a parametrization of the Regge trajectories is obtained and a quark picture of the dual model is considered. Whereas some of the operators of the theory remain unchanged in the unequal-intercept case, others such as the gauge operator are modified. These modifications have effects that reinforce the quark interpretation of the dual-resonance amplitude. Ghost compensation on the first daughter trajectory is still valid providing certain conditions on the quark "masses" are satisfied. Finally, an $SU_{1,1}$ analysis of the N-point amplitude is displayed by coupling N "vertex fields", each with different $SU_{1,1}$ spin, to an $SU_{1,1}$ scalar. (auth)

59442 QUASIPOTENTIAL THEORY OF HIGH-ENERGY HADRON SCATTERING. Garsevanishvili, V. R.; Matveev, V. A.; Slepchenko, L. A.; Tavkhelidze, A. N. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Rev., D; 4: No. 3, 849-61(1 Aug 1971).

A quasipotential approach to the high-energy scattering of hadrons is developed. The consideration is based on the quasipotential equation for the scattering amplitude in quantum field theory, and on the physical assumption of the nonsingular character of hadron interactions at high energies. The results of the theoretical calculation are compared with experimental data on elastic nucleon–nucleon and isobar production processes. (auth)

59443 HARD-MESON CURRENT ALGEBRA AND THE BREAKDOWN OF PARTIAL CONSERVATION OF AXIAL-VECTOR CURRENT. Miller, M. G. (Northeastern Univ., Boston). Phys. Rev., D; 4: No. 3, 757-69(1 Aug 1971).

The Arnowitt–Friedman–Nath model of PCAC (partially conserved axial-vector current) breakdown which permits the two-body photon decays of π^0, η, and vector mesons is extended to the η' meson and to higher order. The model is required to satisfy a set of conditions, the most important of which is that it be consistent with SU(3) × SU(3) hard-meson current algebra. It is shown that if PCAC is no longer pole-dominated, then the general σ commutator, $[A_a^0, \partial_\mu A_b^\mu]$, cannot be pole-dominated either. In addition, the variation of the Lagrangian under chiral transformations will no longer be proportional to the divergence of the current. The model is used to calculate decay widths for the processes $\eta' \to \rho^0 + \gamma$, $\eta' \to 2\gamma$, $\omega \to 3\pi$, $\varphi \to 3\pi$, and $\eta \to 2\pi + \gamma$ with good success. (auth)

59444 INCLUSIVE PROCESSES AT LARGE TRANSFERRED MOMENTA. Abramovskii, V. A.; Kancheli, O. V.; Matinyan, S. G. (Inst. of Physics, Tbilissi, USSR). Phys. Lett.; 36B: No. 6, 565-7(18 Oct 1971).

A hadron inclusive process is considered in the case that the observed particle has a large transverse momentum $Q_\perp$. The "three particle optical-like theorem" is used. The process is determined by Regge cuts. The cross sections are shown to be of Orear type; the multiplicity of secondary particles $\sim Q_\perp$. (auth)

59445 RELATIVE IMPORTANCE OF DUAL LOOPS. Frampton, P. H. (CERN, Geneva). Phys. Lett.; 36B: No. 6, 591-2 (18 Oct 1971).

It is suggested that the size of a dual loop term is determined by the number of quark lines, rather than the power of g. This could explain the smallness of the triple-Pomeron vertex. (auth)

59446 PLANAR DUALITY CONSTRAINTS ON THE MULTIBODY MODEL. Boguta, J. (Univ., Bonn). Lett. Nuovo Cim.; 2: No. 15, 743-8(9 Oct 1971).

It is shown that general conditions can be formulated for the N-point function from which the N-point function and, by factorization, the four-point function with its desired zeros can be constructed.

From these conditions an isobaric model for the five-point function is constructed. (L.B.S.)

59447 ATOMS WITH MAGNETIC CHARGES AS MODELS OF HADRONS. Barut, A. O. (Univ. of Colorado, Boulder). pp 15-45 of Topics in Modern Physics. /Brittin, Wesley E. (ed.). Boulder, Colo.; Colorado Associated Univ. Press (1971).

The author presents evidence available so far concerning the assertion that the Kepler problem is once again the dynamical basis of the structure of matter, this time at the level of hadrons. Maybe nature repeats itself: from the weak classical gravitational potential energy $U_G = -(GMm/r)$, to the quantum mechanical electrostatic potential energy $U_e = -(1/4\pi\epsilon_0) \times (e^2/r)$, to the potential energy between two particles having both electric and magnetic charges (e and g) $U_g = -(e^2 + g^2)/(4\pi\epsilon_0 r)$, which is now a strong long-range Coulomb force. In each level a new feature manifests itself: quantum effects in the case of the H atom and magnetic charges in the case of very strong long-range force which may require new ways of handling the resultant quantum electrodynamics. Some answers are offered to the following two questions: (1) How does the new atomic physics look? (2) Can we reduce the nuclear forces, the problem of the constitution of nucleons and hadrons, and nuclei back to the symmetric electromagnetic origin? (auth)

59448 (JINR–E2-6025) COHERENT STATE METHOD AND THE QUARK MODEL. Bogolyubov, P. N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 16p. Dep. NTIS (U. S. Sales Only).

The connection of the coherent state method for the high-energy hadron scattering with the quark models is shown. (auth)

59449 CHIRAL INVARIANT LAGRANGIAN WITH MASSIVE GAUGE FIELDS: DECAYS OF SCALAR MESONS AND $\pi\pi$ SCATTERING. Suzuki, Tsuneo (Nagoya Univ., Japan); Uchida, Tomiyoshi; Hattori, Chuichiro. Progr. Theor. Phys. (Kyoto); 46: No. 1, 220-34(Jul 1971).

On the basis of a linear realization of chiral SW(2) symmetry, decay processes such as $\delta(966) \to \eta\pi$, $\sigma(730) \to 2\pi$, $\eta_V(1060) \to 2\pi$ and $K_V(1160) \to K\pi$ are discussed. It is shown that unless any derivative couplings are introduced, the generalized σ-model gives unacceptably large values for the decay widths. A model which incorporates massive chiral gauge fields, on the other hand, leads us to reasonable values. The latter model is found to yield Weinberg's results on π-π scattering lengths in the first order approximation. Corrections to his results are also given. (auth)

59450 FINITE ENERGY SUM RULES WITH $\pi\pi$ VENEZIANO AMPLITUDES. Selva, A. Della (Univ., Naples); Masperi, L. Progr. Theor. Phys. (Kyoto); 46: No. 1, 190-7(Jul 1971).

Veneziano amplitudes for $\pi\pi$ scattering are analyzed with regards to finite energy sum rules. It is shown that significant discrepancies may appear in the evaluation of FESR for real parts of non-forward scattering amplitudes. On the contrary, failure of FESR for the imaginary part of the amplitude only appears when the second daughter Regge pole is included. Possible phenomenological implications are discussed. (auth)

59451 PHYSICS OF A REGGE TRAJECTORY WITH A FINITE ASYMPTOTIC PHASE. Sivers, Dennis Wayne. Berkeley, Calif.; Univ. of California (1970). 37p. University Microfilms Order No. 71-20,910.
Thesis.

The hypothesis that the width of a resonance on a leading Regge trajectory is proportional to its mass is compared to the alternative that high-spin resonances become very stable. When the width grows with the mass, it is observed that the kinematics allow decay channels to have low orbital angular momentum. The dynamical implications of this observation are discussed. (Diss. Abstr.)

59452 SOME EXACT INEQUALITIES INVOLVING S AND P WAVES AND THEIR DERIVATIVES FOR πK SCATTERING. Ader, J. P.; Villani, A.; Zimerman, A. H. (Instituto de Fisica Teorica, Sao Paulo, Brazil). Nuovo Cim.; 5A: No. 2, 258-72 (21 Sep 1971).

Inequalities involving the S and P πK partial-wave amplitudes and their derivatives are obtained via the methods used in recent works on pion-pion scattering. (auth)

59453 RELATIVISTIC EIKONAL AMPLITUDE AND RADIATIVE CORRECTIONS. Islam, M. M. (Univ. of Connecticut, Storrs). Nuovo Cim.; 5A: No. 2, 315-44(21 Sep 1971).

A relativistic eikonal amplitude for the generalized ladder diagrams with radiative corrections to all orders is derived. The connection between this approach and the graphical analysis of infra-red divergence in quantum electrodynamics is explicitly exhibited. The discrepancy between the Lévy-Sucher formula and that of Schiff is resolved. Inclusion of radiative corrections due to nonsoft mesons at the vertices of a hard interaction is investigated, and the difference with results obtained previously is noted. (auth)

59454 LOCALISABILITY AND SINGLE-PARTICLE EXCHANGE AMPLITUDES. Rivers, R. J. (Imperial Coll. of Science and Tech., London). Nucl. Phys.; B34: No. 1, 92-8 (1971).

It is shown that if zero-width mesons on a single linear trajectory interact with scalar mesons via a strictly-localisable Hamiltonian, the single-particle exchange amplitude does not have Regge pole behavior. (auth)

59455 SOFT PION–PION SCATTERING TO FOURTH ORDER IN MOMENTA AND EFFECTIVE CHIRAL LAGRANGIANS. Cornwell, D. T.; Taylor, J. C. (Oxford Univ.). Nucl. Phys.; B34: No. 1, 117-24(1971).

The maximum amount of information is extracted from current algebra and PCAC about the off-shell $\pi\pi$ scattering amplitude. To fourth order in the momenta and the pion mass, the amplitude is determined up to four unknown coefficients (a general amplitude would contain nine). An effective, linear σ-model Lagrangian which reproduces these four parameters is described. The non-linear σ-model is able to reproduce only three of them, unless the constraint equation is generalized to include derivatives. (auth)

59456 SIX PION AMPLITUDE TO FOURTH ORDER IN MOMENTA. Cornwell, D. T. (Oxford Univ.). Nucl. Phys.; B34: No. 1, 125-35(1971).

The six pion function is determined to fourth order in momenta and the pion mass using a generalized non-linear sigma model. All arbitrariness in the amplitude is shown to come from the four pion vertex, namely four parameters (or only one if we wish for an algebraically dual form). (auth)

59457 REMOVAL OF THE DEGENERACY IN THE DUAL RESONANCE MODEL. Eguchi, Tohru (Tokyo Univ.). Nucl. Phys.; B34: No. 1, 237-52(1971).

A general formula is given which enables the trajectory shift of any of the non-spurious resonances states caused by one loop perturbation to be calculated. As immediate applications, the shift of the parent trajectory and the removal of two-fold degeneracy of the first daughter trajectory are explicitly shown. Further, a suggestion is given that the one loop perturbation would completely remove the degeneracies of daughter trajectories and the residual degeneracies would be only accidental, even though the degree of degeneracy increases exponentially with mass. (auth)

59458 CONSTRAINTS IMPOSED ON $\pi^0\pi^0$ S- AND D-WAVES BY ANALYTICITY, CROSSING, AND POSITIVITY. Common, A. K. (Univ. of Kent, Canterbury, Eng.); Pennington, M. R. Nucl. Phys.; B34: No. 1, 253-68(1971).

The consequences of combining the Balachandran–Nuyts crossing conditions with the moment representation for $\pi^0\pi^0 \to \pi^0\pi^0$ partial waves are investigated. It is found that the constraints obtained previously from just the positivity of these waves are made much tighter. (auth)

59459 LOWER BOUND ON AMPLITUDES BELOW THRESHOLD FOR $\pi^0\pi^0$ SCATTERING. Arai, Masahiko (Tokyo Univ.). Nucl. Phys.; B34: No. 1, 71-6(1971).

A formula which expresses a lower bound on the amplitude F(s,0,4-s) for $\pi^0\pi^0$ scattering below threshold is given by the use of unitarity, analyticity and crossing symmetry. For $4 \geq s \geq 3.82$, this formula gives $F(s,0,4-s) > -32$. (auth)

59460 PION REGGE TRAJECTORY. Capella, A. (Faculte des Sciences, Orsay, France). Nucl. Phys.; B22: No. 1, 225-34(1970).

It is assumed that the pion belongs to a M = 0 (non-conspiring) parent Regge trajectory and deduce the minimal t = 0 behavior of its Regge residues and the residues of its various daughters using only analyticity and factorization. It turns out that the pion trajectory decouples from any pair of identical particles at t = 0. It is shown that, if according to the usual soft pion philosophy, one can put $\alpha_\pi = 0$ at t = 0, the same t = 0 behavior is arrived at starting from simple physical considerations based on an analogy with an elementary pion exchange. This is in favor of the assumption above on the classification of the pion. (auth)

XUM

59461 DECAYS OF INTERFERING RESONANCES AND STATISTICAL TENSORS. Kotanski, A. (Jagellonian Univ., Krakow); Zalewski, K. Nucl. Phys.; B22: No. 1, 317-26(1970).

Statistical tensors are used to describe the angular decay distributions of interfering resonances both in single and double resonance production. The rules are given which enable one to find the relative parity of the interfering objects. The following examples are discussed in detail: the $\rho^0-\epsilon$ interference, the interference of the A_2 meson with a 2^- or 1^+ background, and the interference of the f^0 meson with a 0^+ background. (auth)

59462 VENEZIANO MODEL AND UNITARITY SUM RULES. Igi, K. (Tokyo Univ.); Storrow, J. K. Nucl. Phys.; B22: No. 2, 594-604(1970).

An attempt is made to place an additional constraint on the Veneziano-type model for $\pi\pi$ scattering by using a non-linear sum rule which incorporates unitarity. This sum rule, which was first derived by Arbad and Slansky, is called a unitarity sum rule (USR). Various uses of USRs are discussed, using the Veneziano model as an illustration. (auth)

59463 INFORMATION ON LOW-ENERGY $\pi\pi$ INTERACTION FROM ELASTIC PION–NUCLEON PHASE SHIFTS. Nielsen, H.; Petersen, J. Lyng; Pietarinen, E. (NORDITA, Copenhagen). Nucl. Phys.; B22: No. 2, 525-66(1970).

The well-known methods of partial-wave dispersion relations and backward amplitude dispersion relations for analyzing πN phase shifts with a view to obtain the low-energy $\pi\pi$ interaction have been modified by means of recent theories for performing analytic continuation of experimental data in order to obtain a unified model independent treatment. Good agreement between the two methods can be obtained only after a most important correction term has been taken into account, a fact which was overlooked in all previous applications of backward dispersion relations. First results of application of the FESR method for calculating a partial-wave amplitude in an extended region on the left-hand cut are presented. Results for the T = J = 1 $\pi\pi \rightarrow N\bar{N}$ interaction are in accordance with results of Höhler et al. Results for the T = J = 0 case are against a phase shift that resonates clearly below 900 MeV and in favor of the up-down or down-down solution. Some information on $\pi\pi$ d-waves is given. (auth)

59464 VENEZIANO MODEL FOR THE PROCESS $A_\mu\pi \rightarrow A_\mu\pi$. Csikor, F. (Eoetvoe Lorand Univ., Budapest). Yadern. Fiz.; 14: No. 1, 232-9(Jul 1971). (In Russian).

The Veneziano type amplitude is obtained for the process $A_\mu\pi \rightarrow A_\mu\pi$ for all invariant functions. The amplitude satisfies the PCAC equation. The on-mass-shell amplitudes obtained from it are correct up to the leading trajectory. The off-mass-shell amplitude has also the non-Regge behavior at high energies. It does not satisfy the FDGM sum rule if one assumes a general expression for the pion form factor. (auth)

59465 STUDY OF $n\bar{p}$ ANNIHILATION AT REST IN A DUAL MODEL FOR THE $\pi\pi\pi N\bar{N}$-FIVE POINT FUNCTION. Bender, I.; Rothe, Heinz J. (Univ., Heidelberg). Z. Phys.; 247: No. 2, 180-8(1971).

The annihilation of the $n\bar{p}$-system at rest into three pions is discussed within the framework of dual model for the $\pi\pi\pi N\bar{N}$-five point function obtained in previous work. It is shown that with suitable modifications the model is able to describe the experimental data. (auth)

59466 UNITARIZATION, CASTILLEJO–DALITZ–DYSON POLES, AND SCALAR COMPANIONS. Rockmore, Ronald (Rutgers–The State Univ., New Brunswick, N. J.). Phys. Rev., D; 4: No. 3, 900-2(1 Aug 1971).

It is shown how Castillejo–Dalitz–Dyson poles may be introduced into the effective-range formulas for scalar (I = J = 0) $\pi\pi$ and (I = J = $\frac{1}{2}$) $K\pi$ form factors derived from current algebra and a method of pole and cut dominance. The restriction to only two such poles leads to formulas characterized by four free parameters, one of which is conventionally fitted to the zero of the soft-meson s-wave amplitude. In the case of the s-wave $\pi\pi$ phase-shift fit, the remaining three parameters are fixed by requiring the 0^+ resonances, $\epsilon(750)$ and $\epsilon'(1060)$, and the experimentally observed value (in the up-up data) of $\delta_{00}(\pi\pi) \simeq \pi$ at 900 MeV as input. The resulting fit is nearly indistinguishable from the earlier two-parameter fit which uses only the ϵ, over the energy range from threshold to 800 MeV, and is very close to that of the unitarized Lovelace–Veneziano model from threshold to 1060 MeV, although the resonance parameters in the latter fit [$\epsilon(698)$ and $\epsilon'(911)$] differ somewhat. Considerably greater variation in fit is found in the case of the s-wave $K\pi$ phase shift; a qualitative fit to the up-up data of Antich et al. is obtained using $\kappa(900)$, $\kappa'(1600)$, and $\delta_0^{(\frac{1}{2})}(K\pi) \simeq \pi$ at 1000 MeV. (auth)

59467 ANTIBARYON–BARYON SCATTERING PROBLEM. Weiner, Richard M. (Indiana Univ., Bloomington). Phys. Rev., D; 4: No. 3, 813-25(1 Aug 1971).

The implications of the failure of duality in $\bar{B}B$ scattering are discussed in the framework of a quark model in which all quarks of the target interact simultaneously with all quarks in the projectile through two-body quark-antiquark interactions. It is assumed that the peculiarity of $\bar{B}B$ interactions, which at the particle level manifests itself through annihilation channels, is due to the strong $q\bar{q}$ interaction at the quark level which inhibits the presence of nonactive quarks (spectators) in the scattering process. This leads to the replacement of the additivity approach of quark amplitudes by factorization of quark amplitudes. Factorization of quark amplitudes implies, in general, nonfactorization of particle amplitudes and appearance of effects similar to cuts (dips versus peaks in the forward direction) due to the simultaneous exchange of natural and unnatural parity at the quark level. Exchange of exotic quantum numbers appears as a natural consequence of the model, without assuming the existence of exotic particles. It is, however, inhibited by the smallness of charge- and strangeness-exchange cross sections. This model should apply both for large- and small-angle scattering, the difference in these two regions manifesting itself only through different relations between the helicity amplitudes at the quark level. Predictions are made for quasielastic $\bar{B}B$ scattering at small and large momentum transfer. For the reactions where data exist, the agreement between the relations predicted by the model and experiment is satisfactory. (auth)

59468 IMPLICATIONS OF A CHARGE ASYMMETRY IN THE ω^0 DALITZ PLOT. Simmons, W. A.; Tuan, S. F. (Univ. of Hawaii, Honolulu). Phys. Rev., D; 4: No. 3, 663-9(1 Aug 1971).

The possible theoretical implications of the recent evidence for a charge asymmetry in the ω Dalitz plot are analyzed. In particular, the asymmetry is discussed in terms of theoretical models based on (a) the Okubo–Yuta background-interference effect, (b) an interfering mass-degenerate exotic resonance $\bar{\rho}^0(I^G = 1^-, J^{PC} = 1^{-+})$, and (c) C violation in $\rho^0 \rightarrow \pi^+\pi^-\pi^0$ decay with coherence of the ρ^0 and ω^0 production amplitudes. (auth)

59469 CURRENT ALGEBRA AND ANALYTICITY: BOOTSTRAPPING THE ρ AND σ WITH THE PION DECAY CONSTANT SETTING THE SCALE. Brown, Lowell S. (Univ. of Washington, Seattle); Goble, Robert L. Phys. Rev., D; 4: No. 3, 723-5(1 Aug 1971).

Simple one-parameter forms for the S and P waves of pion scattering that obey current-algebra constraints and allow for a resonance are constructed: The parameters are completely determined by solving self-consistently three subtracted forward dispersion relations in a region up to 1 GeV. Resonances for the ρ and σ are produced with the mass scale set by the pion decay constant, but the "exotic" T = 2 S wave is nonresonant. (auth)

59470 ISOBARIC FIVE-POINT FUNCTION AND $\bar{p}p \rightarrow 4\pi$ AT REST. Boguta, J. (Univ., Bonn). Lett. Nuovo Cim.; 2: No. 15, 764-8(9 Oct 1971).

A two-pole isobaric five-point amplitude A_5 was constructed which satisfies a set of planar duality constraints. It is shown that the A_5 amplitude constructed according to the requirements of factorization and anticyclical symmetry makes identical predictions for $\bar{p}p \rightarrow 4\pi$ in the intermediate-energy range as the dual model. (L.B.S.)

59471 (CEA-N-1456) SPIN AMPLITUDES IN SPIN-$\frac{1}{2}$ SCATTERING. Derem, Andre (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Aug 1971. 26p. (In French). Dep. NTIS (U. S. Sales Only).

The expression of the various spin amplitudes which are used in the $0^- + \frac{1}{2}^+ \rightarrow 0^- + \frac{1}{2}^+$ scattering is given for the case of four unequal particle masses. The transformation in the experimentally measured physical quantities that occurs when going from one set of amplitudes to another is examined. The determination of the phase of the amplitudes is briefly discussed. (France)

59472 (JINR-P2-6022) STATISTICAL RECONSTRUCTION OF INELASTIC π-N AND N-N INTERACTIONS IN THE SUPERHIGH ENERGY REGION. Barashenkov, V. S.; Eliseev, S. M.; Chigrinov, S. E. (Joint Inst. for Nuclear Research, Dubna (USSR)) 1971. 24p. (In Russian). Dep. NTIS (U. S. Sales Only).

Analytical approximations, which allow the characteristics of inelastic π-N and N-N interactions at high and superhigh energies to be reconstructed, are obtained by the Monte-Carlo method and taking into account the energy-momentum conservation law. (auth)

59473 POSITIVE WIDTH AND S-WAVE SCATTERING LENGTH IN $\pi\lambda$ SCATTERING IN VENEZIANO MODEL. Chowdhury, A. Roy; Roy, T. (Jadavpur Univ., Calcutta). Progr. Theor. Phys. (Kyoto); 46: No. 1, 332-3(Jul 1971).

The widths of baryon resonances of positive and negative parity are calculated for the $\pi\Lambda \rightarrow \pi\Lambda$ process. The S-wave scattering length for the $\pi\Lambda$ interaction is also calculated and found to be $\alpha_0 = -0.68$ fm. (L.B.S.)

59474 LOWER BOUNDS ON TOTAL CROSS-SECTIONS FOR MESON–BARYON SCATTERING AND THE MODIFIED POMERANCHUK THEOREM. Saleem, M. (Panjab Univ., Lahore); Mir, Khalid L.; Rafique, M. Progr. Theor. Phys. (Kyoto); 46: No. 1, 334-5(Jul 1971).

The Pomeranchuk theorem was previously modified to give results which are not inconsistent with Serpukhov data. Lower bounds on elastic and charge-exchange cross sections for πN and KN interactions are obtained using the modified Pomeranchuk theorem. (L.B.S.)

59475 ANALYSIS OF THE A_1 AND A_2 REGIONS IN THE REACTION $\pi^-p \rightarrow \pi^+\pi^+\pi^-p$ AT 5 GeV/c. Rinaudo, G. (Univ., Turin. Istituto Nazionale di Fisica Nucleare, Turin); Werbrouck, A. E.; Boeckmann, K.; (and others). Nuovo Cim.; 5A: No. 2, 239-57(21 Sep 1971).

By a thorough analysis of the moments of the angular distributions, evidence is obtained of a wide ($\approx$300 MeV) $\pi\rho$ threshold effect of $J^P = 1^+$, mainly S-wave. Other J^P assignments are improbable. This 1^+-state is produced peripherally, with ρ_{00} close to 1 in the Jackson system, and initial helicity more nearly conserved in the Jackson than in the c.m. helicity system. Evidence for interference between A_1^+ and A_2^+ is found. A detailed discussion of the method of analysis is presented. (auth)

59476 ENERGY DEPENDENT MULTICHANNEL M-MATRIX FITS TO THE AVAILABLE PARTIAL WAVE ANALYSES OF THE KN SYSTEM. Gupta, Madan Lal. Blacksburg, Va.; Virginia Polytechnic Inst. (1971). 193p. University Microfilms Order No. 71-19,344.

Thesis.

A detailed study is made of the available partial wave analyses on the $\bar{K}N$ scattering data with a view to facilitate a multichannel partial wave analysis over an extended momentum range. The scattering amplitudes from all the partial wave analyses to date are calculated and compared under a common set of conventions. Besides giving a comprehensive picture of the behavior of the scattering amplitudes over the momentum range 0 to 1400 MeV/c, this brings out those momentum regions and partial waves that should receive more attention in all future analyses. Further, the high-energy behavior of the $\bar{K}N$ scattering amplitudes is examined by making multichannel M-matrix fits to the best set of scattering amplitudes over the entire momentum range under consideration. Finally, the multichannel M-matrix fits are repeated on the low momentum (0 to 500 MeV/c) scattering amplitudes and parameters obtained that can be used as starting points in a multichannel partial wave analysis on the $\bar{K}N$ scattering data. (Diss. Abstr.)

59477 EMPIRICAL ANALYSIS OF THE DIFFERENCES AND SUMS OF THE KAON-NUCLEON ANGULAR DISTRIBUTIONS. **Matos, James E.** Madison, Wis.; Univ. of Wisconsin (1971). 172p. University Microfilms Order No. 71-16,885.

Thesis.

An empirical analysis of the differences and sums of the kaon-nucleon angular distributions is presented. The Regge pole model is used as a general framework for parameterizing and correlating the data, but the main objective is to obtain results which are model-independent. Analysis of the energy dependences of the differences and sums of the KN charge-exchange (CHEX) cross sections at high energy indicates that the ρ and A_2 are exchange degenerate. At low energies, however, contributions other than (ρ, A_2) exchange are important because the CHEX differences are substantial. The effective trajectory describing the energy dependence of this contribution is determined. The SU(3) CHEX sum rule is shown to work down to 1.25 GeV/c, and angular distributions for the reaction $\pi^-p \rightarrow \eta n$ at 1.6 and 2.3 GeV/c are predicted. Quantitative evidence is presented for the validity of the duality principle. Analysis of the sums of the $K^{\pm}p$ angular distributions gives an effective trajectory whose slope is consistent with the Pomeranchon slope of ~.4 $(\mathrm{GeV}/c)^{-2}$ deduced from high energy pp scattering data and the reaction $\gamma p \rightarrow \varphi p$. The differences of these angular distributions are quantitatively well described by the P-ω interference term, and the ω residue is fit well by the Bessel function J_0. Several zeros of β_ω in addition to the standard zero at $|t| \sim .2\ (\mathrm{GeV}/c)^2$ are predicted. The energy dependence of the first cross-over is determined empirically, and evidence for a second cross-over is presented. Recent data on the reaction $K_2^0p \rightarrow K_1^0p$ at 3 and 6 GeV/c are analyzed utilizing the inter-relation between the $K^{\pm}p$ elastic amplitudes and the regeneration amplitude. The difference between $d\sigma/dt$ $(K_2^0p \rightarrow K_1^0p)$ and the contribution of the ω nonflip amplitude is well represented by the ρ spin-flip contribution. The behavior of the predicted regeneration cross section at large $|t|$ constitutes further evidence for a Pomeranchuk slope of ~½. A technique is presented for examining the relative phase between the Pomeranchuk and ω amplitudes. (Diss. Abstr.)

59478 APPLICATION OF A UNITARIZED VENEZIANO MODEL TO THE REACTION $K^+n \rightarrow K^+\pi^-p$ AT 3 GeV/c. Buchner, K.; Dehm, G.; Goebel, G.; (and others) (Max-Planck-Institut fuer Physik und Astrophysik, Munich). Nucl. Phys.; B34: No. 1, 292-306(1971).

A unitarized Veneziano model for $K^+\pi^-$ elastic scattering is combined with the exchange of a Regge pion to describe the reaction $K^+n \rightarrow K^+\pi^-p$ at 3 GeV/c. The resulting distributions for the Kπ mass, the momentum transfer between the nucleons and the Kπ decay density matrix are compared with the experimental data. (auth)

59479 REACTION $\pi^-p \rightarrow \eta n$ AND UNIVERSALITY OF COMPLEX TRAJECTORIES. Zotov, N. P.; Tarasevich, S. V.; Tsarev, V. A. (Lebedev Inst. of Physics, Moscow). JETP Lett. (USSR) (Engl. Transl.); 14: No. 2, 79-81(20 Jul 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 2, 120-3(20 Jul 1971).

A parametrization based on assumptions of a complex Regge trajectory of the A_2 (at $t > 0$) and universality of the complex trajectory was used to analyze the experimental data on the reaction $\pi^-p \rightarrow \eta n$, and was found to satisfy the polarization and differential cross section data. (L.B.S.)

59480 APPLICATION OF A DUAL DIFFRACTIVE MODEL TO THE REACTION $\pi^+d \rightarrow d\pi^+\pi^+\pi^-$ AT 13 GeV/c. Paler, K.; Badewitz, R. C.; Barton, H. R. Jr.; (and others) (Purdue Univ., Lafayette, Ind.). Nucl. Phys.; B33: No. 1, 13-21(1971).

A dual diffractive model is applied to the reaction $\pi^+d \rightarrow d\pi^+\pi^+\pi^-p$ at 13 GeV/c. The model is based on that used to describe the reaction $K^-p \rightarrow K^-\pi^+\pi^-p$ at 10 GeV/c. For this π^+d reaction there are a smaller number of free or quasi free parameters, due to Bose-symmetry, than in the K^-p reaction. In addition, the basic assumption of the model, which is the dominance of a diffractive production mechanism, is well satisfied. Reasonable overall agreement is obtained at 13 GeV/c but the predicted energy dependence of this reaction is not in agreement with experimental data. (auth)

59481 INVARIANT AMPLITUDES OF PION–NUCLEON SCATTERING IN THE UNPHYSICAL REGION FOR $t \leq 4\mu^2$ AND HELICITY AMPLITUDES. Nielsen, H. (Univ. of Aarhus, Denmark). Nucl. Phys.; B33: No. 1, 152-64(1971).

Tables of pion-nucleon invariant amplitudes in the unphysical region $-25\mu^2 \lesssim t \leq 4\mu^2$ and $|\cos\theta_s| > 1$ are presented. The tabulated values were found from fixed t-dispersion relations and they are compared with results obtained by analytic continuation of the dispersive part for fixed energy. Finally, tables are given for the t-channel helicity amplitudes in the above mentioned interval. The system of units where $\hbar = c = \mu = 1$ was used. (auth)

59482 EXPERIMENTAL TEST OF SEMI-LOCAL DUALITY IN $K^-p \rightarrow \bar{K}^0n$ BACKWARD SCATTERING. Bricman, C.; Pagiola, E.; Schmid, C. (CERN, Geneva). Nucl. Phys.; B33: No. 1, 135-8(1971).

$K^-p \rightarrow \bar{K}^0n$ backward scattering is exotic at high energy and should exhibit a cancellation of the strong Y* resonances at low energies. Experiment shows that there is a semi-local cancellation between adjacent energy intervals (spaced by 1 GeV^2) rather than a local cancellation between parents and daughters. (auth)

59483 REGGE CUT CONTRIBUTIONS TO EXOTIC BOSON EXCHANGE CROSS SECTIONS. **Quigg, C. (State Univ. of New York, Stony Brook). Contract AT(30-1)-3668B. Nucl. Phys.; B34: No. 1, 77-91(1971).**

Explicit calculations of near-forward differential cross sections for the single-particle-exchange forbidden reactions $\bar{K}N \rightarrow K\Xi$, $K^-p \rightarrow \pi^+\Sigma^-$, and $\pi^-p \rightarrow K^+\Sigma^-$ are reported. The predictions are based upon an absorptive prescription for Regge cuts which satisfies s-u crossing. Characteristic properties of Regge-cut models are identified and suggestions are made for experimental studies. (auth)

XUM

59484 CALCULATIONS OF LOW ENERGY πd REACTIONS. Beder, Douglas S. (Univ. of British Columbia, Vancouver). Nucl. Phys.; B34: No. 1, 189-99(1971).

The impulse approximation is used to calculate differential cross sections at 40 and 60 MeV (lab K.E. of π^+) for the reactions $\pi^+d \rightarrow \pi^+d$ and $\pi^+d \rightarrow \pi^+np$. Comparison with experiment should be useful to further general understanding of π-nucleus processes, and therefore low-energy experiments in this unexplored area are encouraged. (auth)

59485 GENERALIZED POTENTIAL AND UNIQUENESS IN THE CALCULATION OF THE PION–NUCLEON P_{33} STATE. Engels, J.; Frank, V. (Univ., Karlsruhe, Ger.). Nucl. Phys.; B22: No. 2, 429-47(1970).

Two different iteration procedures are used to calculate the P_{33} phase shift of pion-nucleon scattering: a modified N/D method and the Newton–Kantorovich method. It is possible to find the correct generalized potential for the P_{33} partial wave amplitude from threshold up to $T_\pi = 870$ MeV without using the P_{33} phase shift. With this input the iterations converge exactly to the phase-shift analysis values only if two parameters are introduced. It turns out that the output phase shift is very sensitive to small variations in the potential. Since parameters have to be used it is concluded that in the usual N/D method a solution is only possible if one includes at least one CDD pole. (auth)

59486 DYNAMICAL MODEL FOR THE πN RESONANCE $S_{11}(1525)$. Gustafson, Goesta (NORDITA, Copenhagen). Nucl. Phys.; B22: No. 2, 605-24(1970).

A dispersion theoretic model is developed which explains the behavior of the $\pi N \rightarrow \eta N$ cross section and the loop in the Argand diagram for the S_{11} phase shift in πN scattering. It also explains the very strong energy dependence of the S_{11} amplitude below and close to the η-threshold. The amplitudes have a singularity below threshold at approximately 1420 MeV, on sheet IV. The phenomenon is mainly due to the exchange of a pair of π-mesons in a state with $I = J = 0$ in the channel $\eta N \rightarrow \eta N$. The same method should also be applicable to other reactions, and some general properties of scattering amplitudes close to an inelastic threshold are discussed. (auth)

59487 PARITY VIOLATION IN πN SCATTERING. McKellar, Bruce H. J.; Pick, Peter (Univ. of Sydney). Nucl. Phys.; B22: No. 2, 625-36(1970).

The possibility of detecting the $\Delta S = 0$ weak interaction by observing the longitudinal polarization of the recoil nucleon in πN scattering is considered. It is found that the longitudinal polarization is in the range 10^{-6} to 10^{-7}, which seems to be beyond the capabilities of the experimental techniques of the immediate future. (auth)

59488 CROSSING AND ISOSPIN SYMMETRIC DESCRIPTION OF THE $\bar{K}N$ $\pi\pi\bar{\Lambda}$ SYSTEM USING THE GENERALIZED VENEZIANO MODEL. Hoyer, P. (CERN, Geneva); Petersson, B.; Toernqvist, N. A. Nucl. Phys.; B22: No. 2, 497-511(1970).

The Veneziano five-point function model, applied previously to $K^-p \rightarrow \pi^-\pi^+\Lambda$, is used to describe four other reactions which are related to $K^-p \rightarrow \pi^-\pi^+\Lambda$ by crossing and isospin symmetry. It is found that with no new parameters a global description of the five different processes can be obtained. (auth)

59489 S- AND P-WAVE K^+p SCATTERING BELOW 600 MeV/c. Martin, B. R.; Thompson, G. D. (University Coll., London). Nucl. Phys.; B22: No. 1, 285-300(1970).

Values for the s-wave K^+p scattering length and curvature coefficient are obtained by extrapolating the low-energy amplitude to threshold using a parameteric form derived from a forward dispersion relation. In addition, a calculation of the p-wave scattering lengths from forward dispersion relation sum rules is presented. The calculations are performed in an iterative manner starting from the pure s-wave solution of Goldhaber et al. (auth)

59490 DUAL + POMERON ANALYSIS OF $K^\pm p \rightarrow K^\pm\pi^0p$. Kajantie, K.; Papageorgiou, S. (CERN, Geneva). Nucl. Phys.; B22: No. 1, 31-44(1970).

Data for $K^\pm p \rightarrow K^\pm\pi^0p$ are analyzed in terms of a model containing a dual five-point amplitude added to a model amplitude for the diffraction dissociation process $K^\pm p \rightarrow K^\pm N^*$. The magnitudes of these amplitudes are estimated by connecting them to those of previously analyzed $KN \rightarrow K\pi N$ reactions by isospin and by factorization, respectively. Clear evidence for a considerable (≈50% at 10 GeV/c) Pomeron contribution is found and a satisfactory overall description of the data is given. The reasons for the discrepancies on a detailed level are inherent to the model. (auth)

59491 FIT OF BARYON DECAY RATES WITHIN SU(3). Plane, D. E. (CERN, Geneva); Baillon, P.; Bricman, C.; (and others). Nucl. Phys.; B22: No. 1, 93-108(1970).

A test of the consistency between observed resonant amplitudes or decay rates for baryon resonances with SU(3) predictions was made. Coupling constants describing the decays are determined and predictions are given for decays into stable baryons and mesons. (auth)

59492 GENERALIZED VENEZIANO MODEL FOR $\pi^-p \rightarrow K^0\bar{K}^0n$. Collins, P. A.; Hartley, B. J.; Moore, R. W.; Moriarity, K. J. M. (Imperial Coll. of Science and Tech., London). Nucl. Phys.; B22: No. 1, 150-6(1970).

The model proposed by Petersson and Törnqvist is applied to the process $\pi^-p \rightarrow K^0\bar{K}^0n$ at 12 GeV/c. The results are compared with the data used by Chan et al. in an application of a double Regge model to this process. (auth)

59493 CONSISTENCY CONDITIONS BETWEEN SU(3) AND EXCHANGE DEGENERACY FOR MESON–BARYON SCATTERING. Rimpault, M.; Salin, Ph. (Faculte des Sciences, Bordeaux). Nucl. Phys.; B22: No. 1, 235-46(1970).

Non-exotic solutions for meson-baryon scattering amplitudes compatible with exact SU(3) symmetry and exchange degeneracy are presented and discussed. It is shown that there exist dual solutions, i.e. solutions which reproduce themselves under crossing from one channel to the others. The physical consequences predicted by these solutions are also investigated. (auth)

59494 ASYMPTOTICAL PROPERTIES OF THE $K_L^0 + p \rightarrow K_S^0 + p$ AMPLITUDE. Nguyen Van Hieu. Teor. Mat. Fiz.; 8: No. 3, 354-8(Sep 1971). (In Russian).

The relation between the real and imaginary parts of the amplitude of the reaction $K_L^0 + p \rightarrow K_S^0 + p$ at high energies ($s \rightarrow \infty$) and $t = 0$ is investigated. (auth)

59495 COMPLEX REGGE POLES IN πN BACKWARD SCATTERING. Gregorich, David T. (California State Coll., Los Angeles); Kaus, P.; Park, Robert T. Phys. Rev., D; 4: No. 3, 834-40(1 Aug 1971).

The structure of the pole-cut combination in πN backward scattering is represented by a complex N_α and Δ_δ pair. For negative u, these are not complex conjugate but rather each pair splits into a steep (normal) and a flat trajectory. There are no MacDowell partners and each steep trajectory would produce the usual baryon spectrum at positive u and the steep N_α is mainly responsible for the dips at $u \approx -0.2$ through wrong-signature nonsense zeros. The trajectories are generated by a D function which has a fixed cut with square-root singularity at the branch point. Excellent fits were obtained for πN elastic and charge-exchange differential cross sections in the backward direction. (auth)

59496 INELASTIC PION–NUCLEON INTERACTIONS WITH HIGH MULTIPLICITY AND THE ONE-PION EXCHANGE MODEL. Azimov, S. A.; Beter, E. V.; Gulyamov, U. G.; Lebin, A. Ya. (Inst. of Nuclear Physics, Tashkent). Yadern. Fiz.; 14: No. 1, 240-6(Jul 1971). (In Russian).

The model of one-pion exchange for inelastic collision $\pi + N \rightarrow n\pi + N$ with any (odd) number of secondary pions is proposed. The effective mass spectrum of the secondary pion system is obtained in the analytical form convenient for calculations. The comparison of calculation with the experimental data available at different initial energies shows a satisfactory agreement of the proposed model with the experiment. (auth)

59497 STRUCTURE OF SCATTERING AMPLITUDES AND INELASTIC PROCESS AMPLITUDES IN PRE-ASYMPTOTIC REGION. Anisovich, V. V.; Kistenev, Z. P.; Kobrinskii, M. N. (Inst. of High Energy Physics, Serpukhov, USSR). Yadern. Fiz.; 14: No. 2, 441-53(Aug 1971). (In Russian).

Arguments are given that the asymptotic regime in the angular distributions of the scattering processes must occur only at extremely high energies: $E_{l.s.} \gg 20$ GeV for the pion–nucleon collisions and at $E_{l.s.} \gg 100$ GeV for the nucleon–nucleon collisions. (auth)

59498 RECONSTRUCTION OF AMPLITUDES FOR PION–NUCLEON SCATTERING FROM EXPERIMENTAL DATA. Giffon, M.; Joseph, J.; Meyer, J. (Univ., Lyon). Nuovo Cim.; 5A: No. 3, 478-94(1 Oct 1971).

The possibility of using experimental data to reconstruct the energy and angular dependence of the amplitudes for pion–nucleon scattering without the use of any specific model is explored. It is shown that one can reasonably hope to solve this problem for the near forward scattering. (auth)

59499 ANALYSIS OF THE REACTION $\pi^+p \rightarrow \rho^0\Delta^{++}$ AT 11.7 GeV/c INCIDENT MOMENTUM. II. AN INTERPRETATION IN TERMS OF REGGE-POLE EXCHANGE. Maddock, R. O. (Univ. of Durham, Eng.); Pinter, G. F.; Caso, C.; (and others). Nuovo Cim.; 5A: No. 3, 457-77(1 Oct 1971).

A model-independent analysis is made to determine the relative contribution of natural and unnatural parity exchange in the reactions (1) $\pi^+p \rightarrow \rho^0\Delta^{++}$ at 11.7 GeV/c and (2) $\pi^-p \rightarrow \rho^0n$ at 11 GeV/c. A simple evasive Regge-pole model with only π-trajectory exchange was applied to the data of reaction (1) and then to the combined data of reactions (1) and (2). A satisfactory fit to the data is obtained. The parameters determined in fitting reaction (1) were used to make predictions for the same reaction at 8, 13.1 and 18.5 GeV/c. A comparison with experimental data at these momenta was made. Considering the severe nature of this test for the evasive model there is altogether satisfactory agreement between the predictions and the data. (auth)

59500 NEW TYPE OF BARYON RESONANCES. Dal'karov, O. D.; Kerbikov, B. O.; Mandel'tsveig, V. B.; Shapiro, I. S. JETP Lett. (USSR) (Engl. Transl.); 14: No. 3, 127-9(5 Aug 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 3, 191-4(5 Aug 1971).

A potential approach is used to investigate quasinuclear bound states of the $2N\overline{N}$ system. The energy spectrum and wave functions of this system are studied, and results of the calculation of the spectrum of levels for states with $I(J^P) = 3/2(5/2^+)$ are given. The binding energy is also calculated. It is concluded that sufficiently narrow bound quasinuclear states exist in the three-particle system $2N\overline{N}$. The quasinuclear model thus predicts a new type of baryon resonances. The results also make quite likely the hypothesis of the existence of quasinuclear systems of the type $2N2\overline{N}$, which could appear as boson resonances with isospin $I \leq 2$ and masses in the interval 2500 to 3500 MeV. (J.F.P.)

59501 EVIDENCE ON DUALITY AND EXCHANGE DEGENERACY FROM FINITE-ENERGY SUM RULES: $K^-n \rightarrow \pi^-\Lambda$ AND $\pi^+n \rightarrow K^+\Lambda$. Field, R. D. Jr.; Jackson, J. D. (Univ. of California, Berkeley). Phys. Rev., D; 4: No. 3, 693-709(1 Aug 1971).

Using finite-energy sum rules for the reactions $K^-n \rightarrow \pi^-\Lambda$ and $\pi^+n \rightarrow K^+\Lambda$, the effective "pole" parameters of the K^* and K^{**} Regge trajectories from a knowledge of the low-energy resonances and their couplings are determined. The resonance parameters and the D/(D + F) ratio for the $1/2^+$ baryon octet are varied somewhat to test the sensitivity of the high-energy predictions; $1/2^+$ octet couplings within the range of values found empirically in other reactions are preferred in our solution. It is found that the s-channel resonances in $K^-n \rightarrow \pi^-\Lambda$ do add in such a way as to produce predominantly real amplitudes at high energies as predicted by duality diagrams. It is found, however, that these predictions are not satisfied exactly. Although the phases of both A′ and B are small and independent of t for $|t| < 0.5$ $(GeV/c)^2$, the residues of the even- and odd-signature Regge poles are closely exchange-degenerate only for the B amplitudes, and not for the A′ amplitudes, thereby allowing an appreciable polarization for $K^-n \rightarrow \pi^-\Lambda$ as is observed experimentally. The Regge-pole parameters determined from the sum rules give a good fit to the reaction $K^-n \rightarrow \pi^-\Lambda$ over a wide range of energies, whereas they are unable to fit $\pi^+n \rightarrow K^+\Lambda$ at intermediate energies. Comparison of the resonance contributions to $K^-n \rightarrow \pi^-\Lambda$ and $\pi^+n \rightarrow K^+\Lambda$ shows that "peripheral" resonances dominate the sum rules in the first reaction, while "nonperipheral" states are important in the second. By supposing that "peripheral" resonances are dual to the leading Regge singularities in the t channel, while "nonperipheral" resonances are dual to lower-lying singularities, a rationale of why the simple model of two effective Regge poles is adequate for $K^-n \rightarrow \pi^-\Lambda$ even at intermediate energies, but inadequate there for $\pi^+n \rightarrow K^+\Lambda$ is obtained. (auth)

59502 ROTATION OF THE SYMMETRY AXIS IN K-π SCATTERING. Slater, W. E. (Univ. of California, Los Angeles). Phys. Rev., D; 4: No. 3, 709-17(1 Aug 1971).

The failure of the Treiman–Yang test of one-pion exchange in the reactions $K^+p \rightarrow K^0\pi^0\Delta^{++}$ and $K^+\pi^-\Delta^{++}$ for c.m. energies from 2.5 to 5.0 GeV is shown to have a simple dependence on t′. An empirical dynamic z axis with respect to which the K-meson angular distributions are independent of azimuth is found. This axis, which depends on t′, is seen to be equivalent to the axis of Donohue and Högaasen in the neighborhood of the $K^*(0.89)$. (auth)

59503 POLARIZATION IN $0^-1/2^+ \rightarrow 0^-1/2^+$ CHARGE AND HYPERCHARGE EXCHANGE REACTIONS AT INTERMEDIATE ENERGIES. O'Donovan, P. J. (Univ. of Colorado, Boulder. Arizona State Univ., Tempe). Lett. Nuovo Cim.; 2: No. 15, 737-42(9 Oct 1971).

Within the framework of Regge pole theory with strong exchange degeneracy and cuts, the leading nonasymptotic Regge contribution—double Regge-pole exchange—to meson-baryon single-charge and hypercharge exchange reactions is considered. It is found that the polarization predictions from double-Regge-pole exchange are correct provided that the f/d ratios of the vector–tensor couplings to the baryon octet are restricted to a certain range of values. (L.B.S.)

59504 DUAL STRUCTURE OF $\overline{K}N$ SCATTERING IN THE INTERMEDIATE ENERGY REGION. Fukugita, M. (Tokyo Univ.); Inami, T.; Kimura, Y. Phys. Lett.; 36B: No. 6, 575-8 (18 Oct 1971).

The "two component theory" of duality was tested by constructing the $I_t = 0$ and $I_t = 1$ combinations of the s-channel helicity amplitudes from the new $\overline{K}N$ partial wave solutions given in the form of the sum of nonresonating background and resonance parts. The background amplitudes have properties perfectly consistent with the Harari–Freund conjecture. The resonance amplitudes exhibit the t-dependence indicative that the Regge exchange picture, including the s-channel helicity nonflip and flip characters of the $\omega - f$ and $\rho - A_2$ exchanges, persists even at $p_L \approx 1.0$ GeV/c. (auth)

59505 (JINR–E2-6031) PHENOMENOLOGICAL STUDY OF INCLUSIVE SINGLE PARTICLE SPECTRA IN THE TRIPLE REGGE LIMIT. Ranft, G.; Ranft, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 23p. Dep. NTIS (U. S. Sales Only).

Inclusive single particle spectra of $\pi^\pm$, $K^\pm$, p and $\overline{p}$ produced in pp collisions at 14.25, 19.2, 24 and 70 GeV/c are studied with the triple Regge formula. Good fits are obtained indicating that this formula describes well the S, M* and t-dependence of these data. The Regge parameters obtained in the fit differ however from the ones expected from two-body reactions and change only slightly in the expected sense with increasing primary energy. It is argued therefore that no conclusion regarding the physical significance of the triple Regge term should be drawn from the success of such fits at present energies. (auth)

59506 (JINR–E15-5905) DETERMINATION OF THE NEUTRON–NEUTRON SCATTERING LENGTH FROM A KINEMATICALLY COMPLETE EXPERIMENT WITH THE REACTION $^3H(t,n\,^4He)n$. Kuehn, B.; Kumpf, H.; Parzhitskii, S.; Tesch, S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1971. 23p. Dep. NTIS (U. S. Sales Only).

In a two-dimensional measurement the energies of the alpha particle and one neutron from the reaction $^3H(t,n^4He)n$ were analyzed. The angles were chosen so as to observe the n–n final state interaction near zero relative energy of the two neutrons. From a comparison of the data with Born approximation a value $a_{nn} = (-15.0 \pm 1.0)$ fm for the $^1S_0$ scattering length was obtained. Analogous experiments with the mirror reaction $^3He(^3He,p^4He)$ and with $^3He(t,p^4He)$ yielded $a_{pp} = (-7.6 \pm 0.6)$ fm and $a_{np}^{s} = (-21 \pm 3)$ fm for the singlet scattering lengths. Their agreement with known values demonstrates the possibility of obtaining a reliable value of a_{nn}. (auth)

59507 (ORNL–4673) CALCULATION OF THE NUCLEON- AND PION-INDUCED STAR AND FLUX DISTRIBUTIONS FROM 400-GeV PROTON INTERACTIONS IN IRON. Santoro, R. T.; Gabriel, T. A. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 27p. Dep. NTIS.

Monte Carlo calculations were made to estimate the nucleon- and pion-induced star and flux distributions from the interactions of 400-GeV protons in iron. Laterally integrated and radially dependent star distributions as a function of depth in the iron are presented. Omnidirectional nucleon and charged-pion fluxes and energy-dependent flux distributions are also included. (auth)

59508 (ORNL-tr-2514) INTERACTION OF HIGH-ENERGY RADIATION WITH MATTER. Barashenkov, V. S.; Sobolevskii, N. M.; Toneev, V. D. (Joint Inst. for Nuclear Research, Dubna (USSR)). Translated for Oak Ridge National Lab., Tenn., from report JINR–P2-5719. 11p. Dep. NTIS.

Effective cross sections are calculated for the elastic scattering of 1-GeV protons on oxygen-16. (J.F.P.)

59510 NEW DEFINITION OF THE THREE-BODY SEPARABLE POTENTIAL AND ITS APPLICATION TO THE THREE-NUCLEON SYSTEM. **Oryu, Shinsho (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 350-2(Jul 1971).**

A new three-body separable potential is proposed as is applied to quasi-elastic and inelastic scattering. The results for the scattering amplitudes are in good agreement with the exact theory. (L.B.S.)

59511 FLAT PROTON SPECTRUM AND ITS IMPLICATIONS. Hwa, Rudolph C.; Lam, C. S. **(State Univ. of New York, Stony Brook). Contract AT(30-1)-3668B. Phys. Rev. Lett.; 27: No. 16, 1098-1101(18 Oct 1971).**

The longitudinal momentum distribution of the final detected proton in pp inclusive reactions is flat for energies ranging from 20 to 1500 GeV. How this can be understood in the diffractive model and how this information provides a way for calculating the average multiplicity and the pion longitudinal momentum distributions in pp inclusive reactions are shown. No arbitrary parameter is used. The agreement with experiment is remarkably good. (auth)

59512 MULTIPARTICLE PRODUCTION MODEL WITH CHARGE CONSERVATION. **Ballestrero, A.; Giovannini, A.; Nulman, R.; Predazzi, E. (Univ., Turin. Istituto Nazionale di Fisica Nucleare, Turin). Nuovo Cim.; 5A: No. 2, 197-223 (21 Sep 1971).**

A charge conservation model is discussed which is the generalization of a model proposed earlier. This model, which at the present stage is, inherently, a mechanism for multiple production of soft particles, is compared with experiments. Within the expected limitations of applicability, the model gives rather encouraging results. (auth)

59513 EXTENSION OF THE CHOU-YANG MODEL TO INCLUDE SPIN. **Konig, Edward. New York; City Univ. of New York (1971). 88p. University Microfilms Order No. 71-20,944.**
Thesis.

A model for the elastic scattering of protons by protons proposed by Chou and Yang is extended in a natural way to include spin, the eikonal becoming an operator in spin space. The extended model predicts that the differential cross section for elastic scattering at infinite energies has structure similar to that observed at current energies, but that no true zeroes occur in the cross section at the position of the "breaks." The structure is due to one or more of the five amplitudes for proton-proton scattering rising abruptly from a true zero. (Diss. Abstr.)

59514 ANALYSIS OF DEUTERON REACTIONS USING AMPLITUDES WITH ANOMALOUS THRESHOLDS. **Hicks, Harry Richard. Urbana, Ill.; Univ. of Illinois (1971). 101p. University Microfilms Order No. 71-21,140.**
Thesis.

Various models for relating the amplitude for $X_1 + d \rightarrow X_2 + d$ to the amplitude for $X_1 + N \rightarrow X_2 + N$ are compared. Traditional methods are either static models or involve a 3-momentum integral (folded models). In both cases, some assumption is made regarding the energy of the nucleon subreaction. In the former case an assumption is also made about the 3-momentum of the nucleon reaction. Various such prescriptions for energies near d*, i.e., N* + N, enhancements are tested. These kinematically ambiguous models are then compared to the box graph model (BGM) which is derived using dispersion relations. The BGM has other defects but no kinematic ambiguity. It is theoretically interesting because for these reactions there is a dramatic singularity structure. Using the Hulthén wave function and an impulse model with a simple rescattering prescription, it is found that two of the models agree to within 2% for any physical situation—a BGM and a folded model. From this it is concluded that in a folded model the best energy prescription is to put the spectator nucleon on the mass-shell. The $\gamma + p \rightarrow \eta + p$ was reanalyzed, and no evidence was found for any resonances other than the $S_{11}(1530)$ below $k_{LAB} = 1$ GeV/c. This result is used in analyzing $\gamma + d \rightarrow \eta + d$. The theoretical fit for this reaction is very model dependent. The data are best fit with the 2 models which agree. The ω exchange and S_{11} contributions are found to be present. (Diss. Abstr.)

59515 INVESTIGATION OF CHARGE-SYMMETRY-BREAKING IN THE LAMBDA-NUCLEON INTERACTION. **Sullivan, Edmund Joseph Jr. Kingston, Rhode Island; Univ. of Rhode Island (1970). 130p. University Microfilms Order No. 71-21,836.**
Thesis.

In an attempt to delimit the size of a phenomenological charge-symmetry-breaking (CSB) term in the lambda-nucleon (Λ-N) interaction, S-wave, separable, rank-2 potentials are employed in fitting 2-, 3- and 4-baryon hypernuclear data. Rank-2 potentials allow a study of the effects of short-range N-N and Λ-N repulsions upon the Λ-N CSB singlet and triplet interaction strengths. In addition, a new rank-1 approximation to rank-2 potentials was developed and is applied to the same data. This approximation, called the UPAA, is closely related to the unitary pole approximation. The UPAA is seen to be reasonably accurate in many of the calculations of the structure of ${}_{\Lambda}H^3$ performed in this investigation. Large numbers of good χ^2 fits to the low energy Λ-p scattering data are obtained, which cover a range of scattering length ratios $1 \lesssim a_s/a_t \lesssim 5$. These potentials are then required to fit the Λ-separation energy in ${}_{\Lambda}H^3$ (which is labeled as B_{Λ}) by exact solution, and be consistent with partial information concerning the phenomenological CSB effect in ${}_{\Lambda}He^4$ and ${}_{\Lambda}H^4$. Isospin mixing in ${}_{\Lambda}H^3$ is explicitly included. Prior to the ${}_{\Lambda}H^3$ calculation, an independent analysis was performed in order to provide an effective N-N interaction which is consistent with the ${}^1So$ phase shift, the deuteron binding energy and charge form factor and the singlet and triplet effective range parameters. The results of the analysis indicate that CSB can cover a large range of values and still be consistent with the experimental data. The CSB strength can be expressed as a percentage of the total Λ-p interaction. The range of magnitudes of CSB singlet (0-23%) and triplet (0-14%) found is strongly correlated with the range of values allowed for B_{Λ} and a_s/a_t by existing data. Comparison with some results of prior calculations, which used purely attractive potentials, suggests that the repulsive Λ-N interaction tends to reduce the CSB interaction strengths needed to fit the data. Two results of these prior calculations persist in the present analysis: Isospin mixing in ${}_{\Lambda}He^3$ sometimes produces significant adjustments of CSB strengths. Also, the Λ-N CSB term producing the mass splitting between ${}_{\Lambda}He^4$ and ${}_{\Lambda}H^4$ includes, for a large proportion of the data fits, large cancellations between singlet and triplet Λ-N CSB potentials. (Diss. Abstr.)

59516 CALCULATION OF THE PION-NUCLEUS OPTICAL POTENTAL. **Dover, C. B. (Institut de Physique Nucleaire, Orsay, France); Ballot, J. L.; Lemmer, R. H. Lett. Nuovo Cim.; 2: No. 14, 715-18(2 Oct 1971).**

The two-nucleon absorption and dispersion corrections to the pion-nucleus optical potential are evaluated using realistic nucleon-nucleon potentials which fit NN phase shifts and the properties of the deuteron. The results are compared with the empirical potential obtained by Krell and Ericson. (L.B.S.)

59517 SEPARABLE POTENTIALS IN TWO-, THREE-, AND INFINITE-NUCLEON SYSTEMS. **Serduke, Franklin James David. Davis, Calif.; Univ. of California (1970). 179p. University Microfilms Order No. 71-20,408.**
Thesis.

Separable potentials are a calculationally convenient manner of representing the two-nucleon data. A formalism is presented for the application of such potentials to nuclear calculations. Existing "realistic" separable potentials are shown to saturate nuclear matter at too large a density with too much binding. This result and a determination of the deuteron properties for these potentials indicate that they all fail to provide an adequate representation of the simultaneously bound and coupled ${}^3S_1$-${}^3D_1$ state. Some even fail to bind the deuteron properly; noteworthy among these is the Tabakin potential which predicts a deuteron binding energy of 1.183 MeV. The shortcoming common to all existing "realistic" separable potentials is their weak tensor force; the cause of this deficiency is uncovered and is shown to be correctable. Using a newly constructed set of "model" potentials, it is found that the tensor force is critically important in determining the nuclear matter saturation properties for a given nucleon-nucleon interaction. It is demonstrated contrary to a popularly held view, that "equivalent" local and separable potentials do predict nearly identical binding energies for a model trinucleon. The neglect of the S′ component of the triton's ground state is shown to be a poor and unreliable approximation for determining the binding energy. Off-shell effects in a spin-dependent three-nucleon bound state are found to be small for a set of potentials which have a large variation in their off-shell scattering amplitudes. (Diss. Abstr.)

59518 BINDING ENERGY OF THE SINGLET DEUTERON. **Hare, M. G.; Papini, G. (Univ. of Saskatchewan, Regina). Nucl. Phys.; B34: No. 1, 200-8(1971).**

A method recently developed by the authors to calculate nuclear binding energies is here applied to the singlet state neutron–proton pair, and indicates that the system is unbound. The method makes use of once subtracted dispersion relations for the mass-energy form factors for the separate nucleons and the singlet deuteron, using the sidewise approach, and it assumes threshold dominance. The binding energy is calculated in terms of electromagnetic effects and the effects of the breakup of the singlet deuteron. This last contribution is found to dominate the results. (auth)

59519 PREDICTIONS FOR ELASTIC AND INELASTIC NUCLEON–NUCLEUS CROSS SECTIONS AT HIGH ENERGIES. **Trefil, J. S. (Univ. of Virginia, Charlottesville). Nucl. Phys.; B34: No. 1, 109-16(1971).**

The effect of intermediate resonance production on particle-nucleus cross sections is discussed for particle energies in the energy range up to 1 TeV. It is shown that from present cosmic ray data in pp inelastic cross sections, a decrease in the total and inelastic cross sections for p-nucleus scattering of less than 10% can be expected in this energy range provided that σ_{pp} is constant. Effects of increases in σ_{pp} are discussed. It is shown that the decrease in the inelastic cross section is much smaller, and hence the inelastic cross section cannot be used to probe the high mass hadron spectrum. (auth)

59520 USE OF NNγ DATA FOR NN PHASE SHIFTS. McGuire, J. H. (McGill Univ., Montreal). Nucl. Phys.; B33: No. 1, 281-4 (1971).

Nucleon–nucleon bremsstrahlung data in the soft photon region may be used in fitting the elastic NN phase shifts. Such data provides information about elastic phase shifts over a range of energies. A simple illustration of the usefulness of the NNγ data is provided at 99 MeV where there is a discrepancy between theory and experiment. (auth)

59521 MULTIBARYON RESONANCES WITH B > 5 IN THE MODEL WITH EXCHANGE Δ–N INTERACTION. Karmanov, V. A. (Moscow Engineering Physics Inst.). JETP Lett. (USSR) (Engl. Transl.); 14: No. 2, 84-7(20 Jul 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 2, 127-31(20 Jul 1971).

Multibaryon resonances consisting of the Δ isobar and A nucleons are considered in a model with Δ–N exchange potential. The interaction of the Δ isobar with $4 < A < 16$ nuclei is investigated using the Schroedinger equation. It is found that the attraction between the Δ and the nucleus is not sufficient for the formation of the bound state, and therefore the probability for existence of resonances in the system (ΔAN) with $A > 4$ is low. (L.B.S.)

59522 MASS SPECTRUM OF (Λp) FROM THE REACTION $K^-d \to \pi^-\Lambda p$. Kudryavtsev, A. E. JETP Lett. (USSR) (Engl. Transl.); 14: No. 2, 90-1(20 Jul 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 14: No. 2, 134-7(20 Jul 1971).

The mass spectra of the Λp system from the reaction $K^-d \to \pi^-\Lambda p$ at rest is investigated near the 2130 MeV region. An attempt is made to explain the maximum located at the threshold of the $\Lambda p \to \Sigma N$ reaction as being due to the interaction in the final state. It is concluded that to describe the 2130-MeV peak in the (Λp) mass spectra there is no need to introduce a (Λp) resonance; an estimate of the $\Sigma N \to \Lambda p$ reaction amplitude based on the study of the entire Λp mass spectrum shows that the $\Lambda p \to \Sigma N$ amplitude at threshold has the same order of magnitude as the Λp elastic scattering length. (L.B.S.)

59523 ELASTIC AND SINGLE-CHARGE-EXCHANGE SCATTERING OF PIONS BY CARBON NUCLEI. **Bjoernenak, K. (Univ., Trondheim, Norway); Finjord, J.; Osland, P.; Reitan, A. Nucl. Phys.; B22: No. 1, 179-88(1970).**

The differential cross sections for the reactions $^{12}C(\pi^-,\pi^-)^{12}C$ and $^{13}C(\pi^+,\pi^0)^{13}N$ are calculated in the Glauber approximation for pions with kinetic energies in the 180 MeV region. It is found that the first terms in the Glauber expansion are not convergent, due to the large pion–nucleon resonance amplitude. The Fermi motion of the nucleons in the target nucleus and the exchange terms due to the anti-symmetry of the nuclear wave function have a large influence on the results. (auth)

59524 SIMPLE RELATIONS AMONG MULTIPLE SCATTERING AMPLITUDES IN LIGHT NUCLEI. **Friar, J. L. (Univ. of Washington, Seattle); Dean, N. W. Nucl. Phys.; B22: No. 2, 567-72(1970).**

It is shown that the amplitudes for multiple scattering in nuclei with $A \leq 4$ are related in a very simple way. It is therefore possible to calculate explicitly the contribution of double and triple scattering to the $\pi^{\pm\,4}$He total cross section if the $\pi^{\pm\,3}$He and $\pi^{\pm}$p total cross sections are also known, without the need of fitting the differential cross sections. These contributions contain information about Regge cuts as well as the nuclear structure. (auth)

59525 EVALUATION OF THE LOW-ENERGY ΣN INTERACTION PARAMETERS: POSSIBLE EXISTENCE OF ΣN VIRTUAL BOUND STATE. Gell, Yakov; Alexander, Gideon; Stumer, Iuliu (Tel Aviv Univ., Ramat Aviv, Israel). Nucl. Phys.; B22: No. 2, 583-93(1970).

The low-energy ΣN interaction parameters was evaluated in a fit to the existing experimental data using the K-reaction-matrix formalism. Using these parameters the behavior of the elastic Λp scattering below the ΣN threshold is studied. (auth)

59526 BINDING ENERGY OF THE DEUTERON. Hare, M. G.; Papini, G. (Univ. of Saskatchewan, Regina, Can.). Phys. Rev., D; 4: No. 3, 684-93(1 Aug 1971).

The binding energy of the deuteron is written in terms of once-subtracted, sidewise dispersion relations for the mass-energy form factors of the neutron, proton, and deuteron. The threshold region is assumed to dominate, and accordingly a cutoff is introduced into the dispersion integrals. This cutoff is, however, related to the proton–neutron mass difference δM, so that no free parameter exists in the work. The binding energy B is reproduced for a cutoff value corresponding to $\delta M \sim 1.7$ MeV, this being the δM calculated by Pagels. Both electromagnetic effects and the deuteron breakup into an S-wave, triplet-state nucleon pair are considered for contributions to B. No realistic estimate was made of the effect on the result of π mesons in the intermediate-state expansion. The two-nucleon-state contribution dominates the results, accounting for approximately 90% of B at the experimental value of 2.2 MeV. (auth)

59527 TWO-QUANTUM RADIATIONAL CAPTURE OF A SLOW NEUTRON BY A PROTON. Grechukhin, D. P. (Inst. of Atomic Energy, Moscow). Yadern. Fiz.; 14: No. 1, 109-19 (Jul 1971). (In Russian).

Two-quantum capture of a slow neutron by a proton with transition from the triplet S state of the np system to the bound (deuteron) state is considered. The cross section of the process is more than the cross section for capture with emission of one M1 or E2 quantum and is comparable with the cross section for production of the electron–positron pair at the E0 transition of the system. Angular and spectral distributions of the emitted quanta are obtained. At the neutron energy $E_0 = 0.025$ eV the two-quantum capture cross section is $\sigma_{\gamma\gamma}^{1\to 1} \simeq 1.2 \cdot 10^{-32}$ cm^2, that is near the limit accessible to the present experimental technique. Application of the obtained estimate of the two-quantum capture cross sections to the reactions $^2H_1 + n \to {}^3H_1 + \gamma_1 + \gamma_2$ and $^3He_2 + n \to {}^4He_2 + \gamma_1 + \gamma_2$ results in the quantities of about 10^{-31} and 10^{-30} cm^2, while the one-quantum capture cross sections in these cases are $5 \cdot 10^{-28}$ and 10^{-28} cm^2, respectively. Thus, in the neutron capture reactions on nuclei $^2H_1$ and $^3He_2$ the background ratio of the two-quantum process to the one-quantum capture is essentially better than in usual nuclear transitions where it is of the order of magnitude of 10^{-6}–10^{-5}. (auth)

59528 METHOD TO CALCULATE AMPLITUDES FOR SCATTERING OF FAST PARTICLES ON NUCLEI. **Gurvits, S. A.; Marinov, M. S. Yadern. Fiz.; 14: No. 1, 120-30(Jul 1971). (In Russian).**

A method to calculate amplitudes for interaction of particles with nuclei based on the relativistic Feynman graphs in momentum representation is considered. The relation to the Glauber approach is shown. Techniques of the calculations with account of the particle spins are presented. The case of the three–nucleon target nucleus is investigated in detail. (auth)

Particle Invariance Principles and Symmetries

59529 DOUBLE-PEAKED LOG TAN½ θ DISTRIBUTIONS AND THEIR RELATION TO FIREBALLS. Zgrablich, G. (Univ. Nacional de Cuyo, San Luis, Argentina). Phys. Rev., D; 4: No. 3, 871-4(1 Aug 1971).

The double-peaked feature of the log tan½ θ distribution of secondary particles in a cosmic-ray jet is predicted not only by the two-fireball model, but also by a number of other phenomenological and empirical models. It is shown that in these models there is also a simple explanation for the occurrence of the two peaks, namely, the independence of $p_{||}$ from p_t in the c.m. system. Infi-

XUM

nite-fireball models do not lead to the double-peaked distribution even when two groups (or clouds) of fireballs are considered. (auth)

General

59530 GROUP THEORY AND THEORETICAL PHYSICS. Lipkin, H. J. (Weizmann Inst. of Science, Rehovoth, Israel. Argonne National Lab., Ill.). pp 381-99 of Methods and Problems of Theoretical Physics. /Bowcock, J. E. (ed.). New York; American Elsevier Publishing Co., Inc. (1970).

From Conference on methods and problems of theoretical physics; Birmingham, England (Jun 1967).

59531 GROUP DEFORMATIONS AND RELATIVITY. Rogozhin, Yu. A. (Inst. of Physics and Energetics, Obninsk, USSR). Int. J. Theor. Phys.; 4: No. 5, 361-88(Sep 1971).

A theory of deformation (homeomorphism but non-isomorphism) of topological groups is developed. In particular, a theory of deformation of subgroups structure is considered. The whole formalism is based on conceptions of holonomicity and relative geometry. A field is postulated to deform the symmetry group of a free physical system. It is shown that the classical fields deform the Poincare group. Thanks to this fact, gravitation appears as space-time curvature (non-holonomicity of the Lorentz subgroup mapping); and electromagnetism reveals itself by space–time torsion (non-holonomicity of the translation subgroup mapping). From physically evident premises it follows that space–time also has a torsion in the rotating and accelerated systems of reference. (auth)

59532 REMARKS ON LIGHTLIKE CONTINUOUS SPIN AND SPACELIKE REPRESENTATIONS OF THE POINCARE GROUP. Chakrabarti, A. (Ecole Polytechnique, Paris). J. Math. Phys. (N. Y.); 12: No. 9, 1813-22(Sep 1971).

Certain classes of unitary representations of the lightlike continuous spin and the spacelike cases are constructed. The generators in these representations involve operators forming the "intrinsic" algebras (i.e., commuting with the orbital parts) E_3 and O(3,1) for $P^2 = 0$ and $P^2 < 0$, respectively. The parallel construction for $P^2 > 0$ involving an intrinsic O_4 algebra is indicated. Equivalence relations with certain other forms are given through a unitary transformation. The physical significance of the "translation" generators of E_3 is brought out in terms of the projections of W orthogonal to P. Corresponding results for the $O_{(3,1)}$ and $O_{(4)}$ algebras are given. For the continuous-spin case, these operators are shown to provide a basis with extremely simple transformation properties, related to a certain symmetric toplike behavior even under Lorentz transformations. With a view to future use, the matrix elements of W on the energy-rotation basis are calculated in a unified manner for all the three cases, $P^2 \lesseqgtr 0$. A deformation formula leading from zero-mass continuous-spin representations to spacelike ones is studied. Certain types of nonunitary representations are briefly introduced at the end. (auth)

59533 LORENTZ BASIS OF THE POINCARE GROUP. II. Chakrabarti, A. (Ecole Polytechnique, Paris). J. Math. Phys. (N. Y.); 12: No. 9, 1822-40(Sep 1971).

The transformation coefficients connecting the momentum and Lorentz bases of the unitary representations of the Poincaré group are derived for timelike, lightlike, and spacelike momenta ($P^2 \gtreqless 0$) and for arbitrary spin (i.e., for general values of W^2) in each case. (auth)

59534 BOSON CALCULUS FOR THE ORTHOGONAL AND SYMPLECTIC GROUPS. Lohe, M. A.; Hurst, C. A. (Univ. of Adelaide). J. Math. Phys. (N. Y.); 12: No. 9, 1882-9(Sep 1971).

The boson calculus as used for U(n) cannot be applied directly to O(n) and Sp(n). Modifications are made to boson operators, in order to obtain new operators which enable explicit states of irreducible representations of O(n) and Sp(n) to be constructed. Calculations for O(3) and O(4) show how these operators permit a greater simplicity, and reveal more fully the group structure than has previously been the case. (auth)

59535 DECOMPOSITION SO(p,1) ⊃ SO(p − 1,1) FOR MOST DEGENERATE REPRESENTATIONS. Boyer, Charles P.; Ardalan, Farhad (Pennsylvania State Univ., University Park, Pa.). J. Math. Phys. (N. Y.); 12: No. 10, 2070-5(Oct 1971).

The problem of decomposing the matrix elements for degenerate representations of SO(p,1) according to the noncompact subgroup SO(p − 1,1) is discussed. The overlap functions which obtain this decomposition are calculated explicitly and their properties are used to discuss the SO(p,1) generalized Regge expansion. (auth)

59536 REPRESENTATIONS OF O(3). Tripathy, Kishor C. (Inst. of Theoretical Physics, Goteborg). J. Math. Phys. (N. Y.); 12: No. 10, 2136-43(Oct 1971).

The various classes of local irreducible representations (both finite- and infinite-dimensional) of O(3) realized on a linear complex vector space are analyzed. The well-known finite-dimensional unitary representations are obtained when the scalar product is positive definite. The infinite-dimensional representations are realized on an indefinite metric space. The possible applications of these new classes of representations are briefly discussed. (auth)

59537 CHARACTERISTIC IDENTITIES FOR GENERATORS OF GL(n), O(n) AND Sp(n). Green, H. S. (Univ. of Adelaide). J. Math. Phys. (N. Y.); 12: No. 10, 2106-13(Oct 1971).

A hierarchy of tensor identities, satisfied by the generators of the general linear group GL(n), is obtained in terms of two different sets of invariants. An application to the identification of irreducible representations and the decomposition of reducible representations is described. Similar results are obtained for the generators of orthogonal, pseudo-orthogonal, and symplectic groups. (auth)

59538 VECTOR OPERATORS AND A POLYNOMIAL IDENTITY FOR SO(n). Bracken, A. J.; Green, H. S. (Univ. of Adelaide). J. Math. Phys. (N. Y.); 12: No. 10, 2099-2106(Oct 1971).

It is shown that if α denotes an n × n antisymmetric matrix of operators α_{pq}, p, q = 1, 2, . . . , n, which satisfy the commutation relations characteristic of the Lie algebra of SO(n), then α satisfies an nth degree polynomial identity. A method is presented for determining the form of this polynomial for any value of n. An indication is given of the simple significance of this identity with regard to the problem of resolving an arbitrary n-vector operator into n components, each of which is a vector shift operator for the invariants of the SO(n) Lie algebra. (auth)

Applications (Electromagnetic and Weak)

59539 POSSIBLE MECHANISM FOR CP NONCONSERVATION. Biedenharn, L. C. (Duke Univ., Durham, N. C.); Han, M. Y.; van Dam, H. Lett. Nuovo Cim.; 2: No. 14, 730-3(2 Oct 1971).

It was recently shown that the iterated Dirac equations allows two qualitatively distinct factorizations into first-order equations. The discrete symmetry properties of the stigma operator appearing in one of the equations are discussed, and a possible mechanism for CP nonconservation is obtained. (L.B.S.)

59540 CP-INVARIANCE VIOLATION AS A SECOND-ORDER WEAK EFFECT. Lane, Kenneth; Chodos, Alan (Univ. of Pennsylvania, Philadelphia). Phys. Rev. Lett.; 27: No. 14, 966-9 (4 Oct 1971).

In an attempt to make second-order weak interactions finite, the usual current-times-current theory was modified by the introduction of nonpolynomial functions $\exp[f\varphi^\dagger\varphi]$ of a scalar field φ. Choosing the various minor coupling constants f to be complex leads naturally to the appearance of CP-invariance violation in $O(G^2)$. The model is used to study the $K^0-\bar{K}^0$ system and find $\eta_{+-} \cong \eta_{00}$, which is consistent with recent preliminary experimental results. (auth)

59541 BREAKING NAMBU–GOLDSTONE CHIRAL SYMMETRIES. Li, Ling-fong; Pagels, Heinz (Rockefeller Univ., New York). Contract AT(30-1)-4204. Phys. Rev. Lett.; 27: No. 16, 1089-92(18 Oct 1971).

It is established that the nonanalytic behavior of some matrix elements in perturbation theory about a chiral symmetry implies that they can be calculated exactly to leading order in chiral breaking. For other matrix elements, analytic to leading order, the hypothesis of threshold dominance in the chiral limit is established. As an application of this idea one calculates to leading order in chiral breaking, the seven baryon–octet mass differences in terms of one parameter. .(auth)

59542 ASPECTS OF CONFORMAL SYMMETRY AND CHIRALITY. Ellis, John (Cambridge Univ., Eng.). Nucl. Phys.; B22: No. 2, 478-92(1970).

Two simple Lagrangian models combining conformal symmetry and current algebra are exhibited. Either both symmetries are realized linearly, or both symmetries are realized in the Goldstone manner. The scalar isoscaler to pseudoscalar meson couplings differ from those obtained by naive low-energy theorems: $g_{\sigma\pi\pi}/g_{\sigma N\bar{N}} \approx m_\sigma^2/2m_N$. It is argued that a Lagrangian term violating conformal symmetry but invariant under SU(2) × SU(2) is necessary. If one identifies conformal and SU(3) × SU(3) breaking Lagrangian terms, acceptable relations between masses and coupling constants are obtained. The prediction of the Goldstone type realization of conformal symmetry for scalar meson production in the process $e^-e^+ \rightarrow (\phi) \rightarrow \pi^-\pi^+\gamma$ is discussed. (auth)

59543 T INVARIANCE AND THE UNITARITY LIMIT IN $K_L^0 \rightarrow \mu^+\mu^-$. Chen, H. H. (Univ. of California, Irvine); Lee, S. Y. Phys. Rev., D; 4: No. 3, 903-5(1 Aug 1971).

The role of T invariance in the unitarity (lower) limit of the decay $K_L^0 \rightarrow \mu^+\mu^-$ is examined. It is noted that the assumption of T invariance is necessary only insofar as ϵ, the CP-violating parameter in the neutral K system, is nonzero. Because of the smallness of this parameter, a chance cancellation appears unlikely. Therefore, the unitarity (lower) limit for $K_L^0 \rightarrow \mu^+\mu^-$ can be decreased only (with the above exception) by including in the unitarity sum intermediate states other than the two-photon state (e.g., three-pion states). (auth)

59544 NEUTRAL KAON DECAYS INTO MUON PAIRS AND THE VIOLATION OF CP INVARIANCE. Martin, B. R. (University Coll., London); de Rafael, E.; Smith, J.; Uy, Z. E. S. Phys. Rev., D; 4: No. 3, 913-15(1 Aug 1971).

Some implications of nonconservation of CP invariance for $K_L \rightarrow \mu^+\mu^-$ are discussed with reference to a recent experimental result on this decay. (auth)

59545 ASYMMETRY IN THE ASYMPTOTIC IDENTIFICATION. Uzes, C. A. (Univ. of Georgia, Athens). Nuovo Cim.; 5A: No. 3, 345-56(1 Oct 1971).

The compatibility of the notion of an internal symmetry group with the asymptotic identification for an electromagnetic part of the non-Abelian gauge field is investigated on the classical level. It is shown that the asymptotic identification would restrict, without the necessity of violating local gauge invariance, internal symmetry transformations to those which commute with the generator of electromagnetic gauge transformations. Local gauge transformations would be restricted in the same way in the region of definability of the gauge field's electromagnetic part. Based upon these restrictions, a model for the structure of the gauge field's sources and interactions is conjectured in order to illustrate how the known SU_2 and SU_3 dynamical symmetry and internal particle labeling schemes might arise from a local gauge theory employing an asymptotic identification. (auth)

Applications (Strong)

59546 CLASSIFICATION AND MASS FORMULAS FOR MESONS IN THE LADDER U(6,6) SYMMETRY. Drenska, S.; Ivanov, M.; Nikolov, A.; Vaklev, J. (Inst. of Physics, Sofia). Compt. Rend. Acad. Bulg. Sci.; 24: No. 4, 443-5(1971).

A previous idea of classifying hadrons by means of ladder U(6,6) series is modified and generalized. The meson ladder B = 0 is considered. The rung (6,6*) is identified with the meson 36-plet, which reduces to two Schwinger nonets called fundamental states. The rest of the meson states are obtained from a given rule. The isotopical multiplets of rungs (6,6*) and (21,21*) are arranged in a table. The table also included the masses of the predicted particles calculated from the mass formulas obtained. (J.F.P.)

59547 THEORY OF GRAVITY IN THE FRAMEWORK OF THE LORENTZ COVARIANT AND SECOND QUANTIZED FORMALISM. Sato, Shigeo (Rikkyo Univ., Tokyo). Progr. Theor. Phys. (Kyoto); 46: No. 1, 282-96(Jul 1971).

On the basis of the remark that the gravitational interaction really acts with the binding energy, the emphasis is laid on the necessity of treating the gravitational interaction by the method of particle physics irrespective of the general relativity. Accordingly, the interaction of a massless particle with spin 2 (graviton) is investigated by using the method which has been applied to the reformulation of quantum electrodynamics by the present author. As a result, the theory of gravitational interaction can be formulated in an unambiguous manner, in which the interaction of gravitational field with the binding potential is successfully derived. The rotation of the perihelion is calculated by taking into account higher order corrections to the gravitational interaction, and a value which is about 8% smaller than the result of general relativity is obtained. This is exactly the value expected by Dicke and Goldenberg from their measurement of the solar oblateness. As regards the behavior of the photon in the gravitational field, the theory reveals some features different from general relativity. This difference, which concerns the universality of the coupling constant in our theory, will be tested by more precise experiments about the gravitational deflection of light or by experiments about the change of light velocity in the gravitational field. (auth)

59548 BARYON MASS AND ELECTROMAGNETIC INTERACTIONS IN O(4,2) x SU(3). Monsma, William Brink. Boulder, Colo.; Univ. of Colorado (1971). 122p. University Microfilms Order No. 71-21,610.
Thesis.

Earlier work describing baryons by the group O(4,2) is extended to include the SU(3) classification scheme. The simplest possible group is used, O(4,2) × SU(3). The representations used are formed from a particular representation of O(4,2) and from the octet and decuplet representations of SU(3). It is found that these two structures are contained in a single irreducible representation of O(4,2) × SU(3) × SU(3). This representation space includes all observed baryon states, with the possible exception of some SU(3)-singlet states. The postulates of the theory include an infinite-component wave equation, a conserved probability current, and a conserved electric current. From these are derived formulas for the mass and the electromagnetic form factors. Finally, from this mass formula, the Okubo mass formula is derived. (Diss. Abstr.)

59549 DUALITY AND REPRESENTATION MIXING IN THE NON-CHIRAL U(6) × U(6). Horwitz, L. P. (Univ. of Denver). Nucl. Phys.; B34: No. 1, 136-56(1971).

Using a classification of baryons and mesons in mixed representations of the non-chiral U(6) × U(6), it is shown that a simple construction analogous to duality diagrams reproduces all of the predictions of the duality diagrams for MM, MB and BB reactions (with some additional weakly allowed inelastic MB processes), but provides predictions for the energy dependence of $B\bar{B}$ amplitudes as well. The U(6) × U(6) formulation provides a natural interpretation for the application of "annihilation" criteria, accounting, for example, for stronger energy dependence in π^-p than in π^+p total cross sections, and predicting stronger energy dependence in $p\bar{\Xi}^+(10 + 27)$ than in $p\Xi^+(27)$. Results are also given for multiparticle processes. (auth)

59550 SIGMA COMMUTATOR AND FEATURES OF (8,8) SYMMETRY BREAKING. Brehm, J. J. (Univ. of Massachusetts, Amherst). Nucl. Phys.; B34: No. 1, 269-91(1971).

The Gell-Mann–Oakes–Renner model of SU(3) × SU(3) breaking provides a pion sigma commutator σ^{jk} which has no isospin T = 2 component. Because of this and especially in view of recent evidence that this model is not experimentally confirmed in meson–baryon scattering, another model employing (8,8) breaking is considered. A hamiltonian of the Barnes–Isham form is adopted and the operators are developed for use in an analysis of the pion-to-pion matrix element of σ^{jk}. Estimates are made of the parameters of this model, and the T = 0 and 2 form factors of the matrix element are examined by means of a hard pion formalism adapted to analytic function methods. The T = 0 and 2 s-wave $\pi\pi$ phase shifts are extracted. It is shown that the (8,8) model, analyzed in this way, provides an unsatisfactory description of the existing data on these phase shifts. The data identify the reason for this failure to be that the T = 2 component of σ^{jk} is too large in the (8,8) model. The outlook for other alternatives is discussed. (auth)

59551 REALIZATION OF CHIRAL SYMMETRY IN THE MESON STATES THROUGH SU(4) ⊗ O(3). Boldrighini, C.; Buccella, F.; Celeghini, E.; Sorace, E.; Triolo, L. (CERN, Geneva). Nucl. Phys.; B22: No. 2, 651-7(1970).

A saturation scheme is proposed for the equations $[X_a(h), X_b(h)] = i\epsilon_{abc}T_c$, $[X_a(h), [X_b(h), m^2]] = \frac{1}{3}\delta_{ab}[X_c(h), [X_c(h), m^2]]$, within the lower meson states, which belong to the 15 L = 0, 1 representations of SU(4) ⊗ O(3). With the introduction of two mixing parameters the chiral couplings of these particles are derived in reasonable agreement with experiment. In particular the helicity properties of A_1 and B decays come out correctly. (auth)

59552 PROPOSED METHOD FOR A SEARCH FOR C VIOLATION VIA ρ^0 INTERFERENCE IN ω DECAY. Abrams, G. S.; Goldhaber, G.; Hall, B. H. (Univ. of California, Berkeley). Phys. Rev., D; 4: No. 3, 647-52(1 Aug 1971).

A method is suggested to search for the existence of a C-violating transition in ρ^0 decay. The method requires a simultaneous analysis of both the usual ρ^0 decay channel $\pi^+\pi^-$, and the G-violating channel $\pi^+\pi^-\pi^0$. The $\pi^+\pi^-$ mass distribution is used to determine the kinematic regions of coherence of the ρ^0 and ω production amplitudes and the relative $\rho-\omega$ production phase. It is shown that one may then use the $\omega \rightarrow \pi^+\pi^-\pi^0$ Dalitz plot as an analyzer of the isospin of the 3π final state from ρ^0 decay via a generalized asymmetry analysis of the ω Dalitz plot for data samples in which $\rho-\omega$ coherence is observed. A general discussion of the effects of the $\rho \rightarrow 3\pi$ decay mode upon the ω is presented, with emphasis on the search for the isospin-conserving, C-violating decay mode. The relation of the $\rho-\omega$ interference method to other methods to search for C violation is also discussed. (auth)

59553 SPINOR HYPERPLANE FIELD THEORY. **Ardalan, Farhad.** University Park, Pa.; Pennsylvania State Univ. (1970). 90p. University Microfilms Order No. 71-21,717.
Thesis.

A field theory capable of describing an infinite number of half integer spin particles is developed, by extending the domain of definition of the fields from the Minkowski space, R^4, to a homogeneous space of the Poincaré group, $R^4 \times H^3$; where H^3 consists of the set of time-like unit 4-vectors normal to the space-like hyperplanes associated with the position measurements. The differential equation for the fields has an infinite number of nonparallel linear trajectories for its time-like mass spectrum. The space-like and light-like solutions are avoided as a consequence of the requirement of existence of the conserved quantities of the theory. A variational principle is used and a local conserved current is constructed, leading to the form factors for the lowest-lying state, which agree qualitatively with the proton form factors. Micro-causality is satisfied provided the solutions of the field equation form a complete set. The completeness problem is briefly considered. (Diss. Abstr.)

59554 SUPERHEAVY ELEMENTS AND AN UPPER LIMIT TO THE ELECTRIC FIELD STRENGTH. **Rafelski, Johann; Fulcher, Lewis P.; Greiner, Walter** (Univ., Frankfurt am Main). Phys. Rev. Lett.; 27: No. 14, 958-61(4 Oct 1971).

An upper limit to the electric field strength, such as that of the nonlinear electrodynamics of Born and Infeld [Proc. Roy. Soc., Ser. A, 144: 425(1934)], leads to dramatic differences in the energy eigenvalues and wave functions of atomic electrons bound to superheavy nuclei. For example, the $1s_{1/2}$ energy level joins the lower continuum at Z = 215 instead of Z = 174, the value obtained when Maxwell's equations are used to determine the electric field. (auth)

59555 MASSIVE VECTOR MESONS WITH GAUGE-INVARIANT LAGRANGIAN. **Heskia, S.** (London Univ.). Nuovo Cim.; 5A: No. 2, 305-14(21 Sep 1971).

It is shown that the compensating quantity, or the connection Γ^{A}_{Br}, which parallel translates simultaneously the field and antifield $\psi_A = \psi_\alpha / \psi^*_\alpha$ to the neighboring event has the desired feature of having a tensor $\Gamma^{\alpha}_{\beta \cdot r}$ as its subconnection, so that the latter's linear transformation law makes it possible to construct a gauge-invariant mass term for the gauge field $A^{(a)}_r$ that stems from $\Gamma^{\alpha}_{\beta \cdot r} = igA^{(a)}_r T^{\alpha}_{(a)\beta \cdot}$. It is further postulated that the expansion coefficient of the subconnection $\Gamma^{\alpha}_{\beta r}$ stands for the electromagnetic component of the non-Abelian gauge field. (auth)

59556 (IPP-6/95) TACHYON MECHANICS AND CLASSICAL TUNNEL EFFECT. **Wimmel, H. K.** (Institut fuer Plasmaphysik, G.m.b.H., Garching (West Germany)). May 1971. 43p. Dep. NTIS (U. S. Sales Only).

A model mechanics is established for classical, charged, point tachyons, with omission of Cerenkov radiation. The principle of relativity provides that several observables, e.g. electric charge, momentum, and energy of tachyons, do not show the usual Lorentz covariance, but transform as "metascalars", "metavectors", etc.; Lorentz covariant quantities are associable with them, but the signs of some of these are not observable. A critical survey of tachyon kinematics and of "supraluminal reference frames" is given. In tachyon dynamics it follows from the principle of relativity that the sign of the observable kinetic energy is Lorentz invariant, while the sign of the observable electric charge is not. Any reinterpretation of negative energies is neither required nor possible. Classical tachyons may undergo pseudocreation and pseudoannihilation, which differ from ordinary creation and annihilation in that their world points depend on the frame of reference. Closed world lines may occur. Tachyons show a classical tunnel effect, which is discussed in detail. Classical tachyon mechanics may be useful for developing a Maxwell-Vlasov theory of tachyon plasmas. (auth)

59557 NEW METHOD OF QUANTIZATION FOR VARIOUS FIELDS. I. GENERAL FORMULATION. **Yamada, Mitsuru** (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 256-81(Jul 1971).

A method of quantization which is applicable to finite and infinite component fields with arbitrary mass spectra, is proposed. It is based on analyticity of the propagators, and has no recourse to the canonical formalism. Causality and the relativistic covariance are manifest from the outset. It appears that, according to this method, a local field theory is possible by starting not with Lagrangians but with analytic propagators. Various properties related to complex poles of the propagators are briefly discussed. (auth)

59558 CONSISTENCY BETWEEN LAGRANGE AND HAMILTONIAN FORMALISMS IN QUANTUM MECHANICS. CASE OF NON-RELATIVISTIC VELOCITY-DEPENDENT POTENTIAL. **Sugano, Reiji** (Osaka City Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 297-307(Jul 1971).

Consistency between the Lagrangian and the Hamiltonian formalisms in the quantum mechanics is investigated for the type of Lagrangian $L = \frac{1}{2}\dot{q}_i g_{ij}(q)\dot{q}_j - v(q)$ as an extension of a previous paper. The variations δq_i and $\delta \dot{q}_i$ should be considered as q-numbers. When the Lagrangian can be transformed into the standard form $L = \frac{1}{2}\dot{Q}^2_\alpha - V(Q)$, the commutation relations of δq_i and $\delta \dot{q}_i$ with q_j and $\dot{q}_j$ are found with the help of Q-coordinate system. It is shown that using the commutation relations, the variation principle leads to the same equation of motion as the canonical equation of motion which is obtained in the previous paper. (auth)

59559 GENERALIZATION OF QUANTUM FIELD THEORY ON THE BASIS OF FUNCTION MANIFOLD. **Azuma, Shuko** (Fukusima Univ., Japan). Progr. Theor. Phys. (Kyoto); 46: No. 1, 308-31(Jul 1971).

A function manifold can be regarded as a unity of space-time and matter. Based on this circumstance an attempt is made to generalize the local quantum field theory to quantum field theory on a function manifold. A Lagrangian theory for the interacting Dirac and vector gauge fields is studied as a definite model theory. A c-number field on the manifold is equivalent to a composite of certain basic quanta, so that these composite systems can be dealt with in place of space-time functions in the local theory. It is shown that the interaction has a non-local feature. Furthermore, in place of an algebraic self-consistent mass equation for elementary particles of a local field theory, a self-consistent integral mass eigenvalue equation is obtained for the composite fields representing an elementary particle. Owing to these properties it is shown that perhaps the difficulty of the ultraviolet divergence will principally be overcome. (auth)

59560 HIGH-FIELD ELECTRON g -2 MEASUREMENT. **Wesley, John C.; Rich, Arthur** (Univ. of Michigan, Ann Arbor). Phys. Rev., A; 4: No. 4, 1341-63(Oct 1971).

The g-factor anomaly of the free electron was measured to an accuracy of ±3 ppM (68% confidence level). The method (a refinement of that used by Wilkinson and Crane in 1963) is based on a direct observation of the difference between the spin precession and cyclotron frequencies of 100-keV electrons confined in a precisely measured magnetic mirror trap. An order of magnitude increase in precision over the Wilkinson-Crane experiment was achieved by (a) a tenfold increase in the magnitude of the magnetic field (to 1 kG), and (b) a tenfold reduction in the relative depth of the magnetic trap (to 60 ppM). An extensive series of tests for systematic effects at the 1-ppM level was also carried out. With $a = \frac{1}{2}(g-2)$, we find $a_{expt}(e^-) = (1{,}159{,}657.7 \pm 3.5) \times 10^{-9}$. The difference between this result and the current theoretical expression for a, as calculated through second order in the fine-structure constant α, is $a_{expt}(e^-) - [0.5(\alpha/\pi) - 0.32848(\alpha/\pi^2] = (1.68 \pm 0.33)(\alpha/\pi)^3$. In the above, $\alpha^{-1} = 137.03608 \pm 0.00026$ was used, as recently recommended by Taylor, Parker, and Langenberg. The uncertainty in the coefficient is the rms sum of our experimental error and the uncertainty in α^{-1}. In this form, the result can be interpreted as an experimental determination of the sixth-order quantum-electrodynamic contribution to the anomaly. Current estimates of this quantity are $1.49(\alpha/\pi)^3$. (auth)

59561 PARASTATISTICS WITH VARIABLE NUMBERS OF PARTICLES. **Stolt, R. H.; Taylor, J. R.** (Univ. of Colorado, Boulder). Nuovo Cim.; 5A: No. 2, 185-96(21 Sep 1971).

The properties of two possible first-quantized theories for a variable number of identical paraparticles are examined. In one (the "ray" theory), states are described by vectors in a Fock space constructed as the direct sum of the fixed-particle "ray" Hilbert spaces; in the other (the "generalized-ray" theory), the Fock space is constructed from the "generalized ray" Hilbert spaces. The "ray" theory, which is equivalent to the second-quantized parafield theory, appears to be consistent with all reasonable physical requirements. However, it is shown that the "generalized-ray" theory cannot consistently describe systems in which the particle numbers can vary. This is achieved by showing that an absolute selection rule derived previously in the "generalized ray" framework prohibits the creation and destruction of particles. (auth)

59562 CONTINUOUS MEDIUM DEFORMATION FIELD IN MINKOWSKI SPACE-TIME. **Maugin, G. (Princeton Univ., N. J.). Compt. Rend., Ser. A; 273: No. 1, 65-8(5 Jul 1971). (In French).**

Some properties of continuous medium deformations in a Minkowski space-time are stated. (France)

59563 WAVE MECHANICAL INTERPRETATION OF FREE QUANTIZED FIELDS WITH THE HELP OF CLIFFORD ALGEBRAS AND AN OUTLINE FOR A WAVE MECHANICAL THEORY OF INTERACTIONS. **Sutter, Erich Erwin. Riverside, Calif.; Univ. of California (1970). 213p. University Microfilms Order No. 71-20,262.**

Thesis.

The formalism for the theory of free quantized fields is reinterpreted with the help of Clifford algebras. The creation and annihilation operators are considered as elementary c-number fields that satisfy the free field equations. Their commutator is identified with the scalar product of these fields which is defined by the expression for the classical charge. The commutation relations then represent the equivalence relations which can be postulated in the tensor algebra over the space of free fields in order to define the Clifford algebra. The interpretation of the field theoretical commutation relations as equivalence relations in a tensor algebra has two important consequences: The operator formalism of quantized free fields appears to be just a method for the calculation of wave mechanical quantities. Concepts like the creation and annihilation operators and the vacuum state are only auxiliary devices for these calculations and can be eliminated. The symmetry of the Clifford algebra equivalence relations is determined by the symmetry of the charge expression with respect to the exchange of the field with its complex conjugate. It follows that the fields with a symmetric charge expression lead to Fermi statistics whereas antisymmetric charge expressions are related to Bose statistics. The Clifford algebra formalism thus not only allows one to describe both types of statistics, but also relates them to the symmetry of a wave mechanical quantity. In this way a close relation is established between the theory of the free quantized scalar, spinor, vector and electromagnetic fields and a wave mechanical theory. The properties of the various free wave functions are studied from the representation theoretical point of view. The knowledge of this wave mechanical groundwork and its relation to quantum field theory makes it possible to propose a wave mechanical approach to interactions which is completely finite. A Lagrangian theory of this type is outlined for the case of quantum electrodynamics. It is clear, however, that the approach is not restricted to this area and might be of particular interest, e.g., in the handling of interactions which lead to nonrenormalizable quantum field theories. The new approach to quantum electrodynamics leads to coupled integral equations. With help of the proper boundary conditions these equations can be solved by iteration. If the terms of the iterative expansion are represented by diagrams with the help of the usual Feynman rules, one obtains graphs which differ from Feynman graphs in two ways: they cannot contain any closed loops and the same external line can occur more than once. To the lowest nonvanishing order the matrix elements for Compton and Coulomb scattering are the same as in quantum field theory. A preliminary investigation shows that besides the absence of divergent diagrams in the wave mechanical approach the two theories will most likely also be in good agreement when contributions up to the fourth order in the coupling constant are considered. (Diss. Abstr.)

59564 RENORMALIZED FIELD PRODUCT, BJORKEN LIMIT, WARD IDENTITY, AND THE STATIC MODEL. **Bui-Duy, Q. (Univ. of Montreal). Nuovo Cim.; 5A: No. 2, 224-38 (21 Sep 1971).**

The point-source static model is used to study renormalized field products at small distances. The field has an anomalous dimension which varies with the coupling constant. The singularity of the field product at short distances is traced to the Haag phenomenon and the infinite self-mass. The exact Bjorken limit is calculated, and the subtracted Ward identity is examined. If either the effective equal-time commutator or the analytic continuation in the coupling constant is postulated, the subtractions are unambiguously determined. (auth)

59565 BOUNDS ON THE ELASTIC AMPLITUDE IN NON-LOCALIZABLE FIELD THEORIES. **Fainberg, V. Ya. (Max-Planck-Institut fuer Physik und Astrophysik, Munich); Iofa, M. Z. Nuovo Cim.; 5A: No. 2, 275-96(21 Sep 1971).**

The relation is established between the properties of the elastic amplitude F(S,Z) at high energies and the properties of the vacuum expectation values (VEV) in a class of essentially nonlocalizable field theories in which the growth of VEV's in the momentum space is bounded by $\exp [B\|p\|^{2\alpha}]$, $\alpha > 1/2$, and in which it is possible to prove the cluster decomposition properties for the truncated Wightman functions. The following bounds are established on the partial-wave amplitudes: $|\overline{f_1(S)}| < C' \exp [AS^{\alpha} - C_1(l/S)]$. These bounds lead to the Greenberg-Low-type bounds on the elastic amplitude: $|\bar{F}(S, \cos\theta)| < CS^{2+2\alpha}$, and to the analyticity of the amplitude $\bar{F}(S,Z)$ in the Lehmann-type ellipse. The bounds on the partial-wave amplitudes are derived by making use of the cluster properties of the truncated Wightmann functions which reflect the short-range nature of the force between the particles. (auth)

59566 EQUAL-TIME CHARGE-CURRENT COMMUTATOR IN QUANTUM ELECTRODYNAMICS. **Pradhan, T. (Saha Inst. of Nuclear Physics, Calcutta). Lett. Nuovo Cim.; 2: No. 14, 724-6(2 Oct 1971).**

It is shown that the coefficient of the derivative delta-function in the one-electron expectation value of the equal-time charge-current commutator is different from the corresponding coefficient in the vacuum expectation value of this commutator which is known to be a quadratically divergent quantity. It is concluded that the equal-time charge-current commutator is a q-number if it is proportional to derivative of a delta-function. (L.B.S.)

59567 INEQUIVALENCE OF REPRESENTATIONS OF COMMUTATION RELATIONS OBTAINED BY ORTHOGONAL TRANSFORMATIONS IN FIELD THEORY. **Bose, S. K.; Henneberger, W. C. (Southern Illinois Univ., Carbondale). J. Phys., A (London); 4: No. 5, 646-8(Sep 1971).**

It is shown that, except under very special conditions, orthogonal transformations on the field coordinates of a Bose-Einstein field cannot be represented as transformations in the Hilbert space of the boson field. The proof is restricted to rotations which are products of commuting rotations in two-dimensional subspaces. (auth)

59568 REGULARIZATION OF THREE-VERTEX FEYNMAN DIAGRAMS PRODUCED BY THREE-POINT SUPERGRAPHS. **Fanchiotti, H.; Garcia Canal, C. A.; Girotti, H.; Vucetich, H. (Universidad Nacional, La Plata). Nucl. Phys.; B34: No. 1, 307-16(1971).**

The infinity suppression mechanism of the ultraviolet divergences of quantum field theory provided by a non-polynomial interaction Lagrangian is analyzed in connection with some non-hadronic reactions and compared with the usual method of analytic regularization. The action of the three-point supergraph is studied in this context. It is shown that, as a consequence of the action of "gravity," the propagators become regularized and an average over the regularization parameter replaces the limiting process characteristic of the analytic regularization method. It is found that the resulting "gravity"-modified amplitudes associated with three-vertex Feynman diagrams can be decomposed as a sum of terms of different order in the minor coupling constant. Possible detectable changes induced by the presence of massless "gravitons" on some relevant leptonic processes are also investigated. (auth)

59569 EIKONAL FORMULATION IN NEUTRAL SCALAR FIELD THEORY. **Dittrich, Walter (Univ., Tuebingen, Ger.). Nucl. Phys.; B34: No. 1, 227-36(1971).**

A detailed study is presented of the eikonal approximation in a field theory with interaction Lagrangian $L' = -\frac{1}{2}g\psi^2\phi$. Eikonal propagators are obtained in a prescribed external field and used to evaluate a certain subclass of Feynman diagrams. Contrary to QED it is not possible to generate a bound state spectrum by an infinite mass limit. The problem is approached using Schwinger's functional methods. (auth)

59570 FIELD THEORY OF SPIN-TWO MESONS AND AN EQUIVALENCE THEOREM. **Horvath, Z. (Roland Eoetvoes Univ., Budapest). Nucl. Phys.; B33: No. 1, 214-20(1971).**

The LSZ formulation of the theory of spin-two particles is discussed. The influence of the properties of the tensor current on the superfluous components of the interpolating field is studied. By means of the asymptotic condition it is shown that one can always construct a spin-two tensor field which satisfies all the subsidiary conditions without changing the S-matrix and the four-momentum operator. (auth)

59571 RENORMALIZATION OF MASSLESS YANG-MILLS FIELDS. **Hooft, G.'t (Univ. of Utrecht). Nucl. Phys.; B33: No. 1, 173-99(1971).**

The problem of renormalization of gauge fields is studied. It is observed that the use of non-gauge invariant regulator fields

XUM

is not excluded provided that in the limit of high regulator mass gauge invariance can be restored by means of a finite number of counter-terms in the Lagrangian. Massless Yang–Mills fields can be treated in this manner, and appear to be renormalizable in the usual sense. Consistency of the method is proved for diagrams with non-overlapping divergencies by means of gauge invariant regulators, which however, cannot be interpreted in terms of regulator fields. Assuming consistency the S-matrix is shown to be unitary in any order of the coupling constant. A restriction must be made: no local, parity-changing transformations must be contained in the underlying gauge group. The interactions must conserve parity. (auth)

59572 INTERPRETATION OF ANOMALIES IN WARD IDENTITIES. Kummer, W.; Schweda, M. (Oesterreichische Akademie der Wissenschaften, Vienna. Technische Hochschule, Vienna). Nucl. Phys.; B22: No. 2, 412-22(1970).

While the occurrence of anomalies in the perturbation theoretical treatment of certain generalized Ward identities is by now a generally recognized fact, the non-trivial question is still open, how certain n-point functions which appear in these relations, should be connected with observable quantities. As a first step the problem is simplified by allowing only one "foreign" operator in a simple renormalizable field theory, i.e. a local combination of field operators which is not contained among the quantities, rendered finite automatically by the renormalization of the S-matrix. It is found from examples that some counter-terms must be present and therefore as an extreme possibility the cancellation of all anomalies by appropriate counter-terms is conjectured, although this is paid for in certain cases by the appearance of singularities in the redefined matrix elements of the foreign operators. (auth)

59573 STRONG CORRELATION BETWEEN THE CHERENKOV EFFECT AND CERTAIN PROPERTIES OF THE PHOTON-TACHYONS OF THE DISAPPEARING FRESNEL WAVE. Vigoureux, J. M. (Reims Univ.). Compt. Rend., Ser. B; 272: No. 24, 1336-9(14 Jun 1971). (In French).

A strong formal analogy between the coherence relation of the Cherenkov effect and Fresnel's total reflection laws is presented. This analogy together with previous results demonstrate the relation between this effect and that of absorption–emission of momentum–energy quanta in the disappearing Fresnel wave considered previously for free electrons and atomic dipole transitions. A strong analogy is also demonstrated between the Cherenkov effect associated with charged particles moving in a medium and the disappearing wave phenomena occurring between two plane interfaces. (France)

59574 INVARIANT PERTURBATION THEORY FOR NONLINEAR CHIRAL LAGRANGIAN. Slavnov, A. A.; Faddeev, L. D. (Mathematics Inst., Moscow). Teor. Mat. Fiz.; 8: No. 3, 297-307(Sep 1971). (In Russian).

The perturbation theory for nonlinear chiral Lagrangians is constructed in terms of invariant quantities which do not depend upon parametrization. (auth)

59575 SOME PROPERTIES OF THE LEE MODEL. I. Dadashev, L. A. (Inst. of Physics, Baku, USSR). Teor. Mat. Fiz.; 8: No. 3, 308-23(Sep 1971). (In Russian).

The Lee model with the Hamiltonian introduced previously is considered. The explicit dependence of the resolvent on τ matrices is found, and it is shown that the problem of expansion of the resolvent over normal products can be reduced to that of the inversion of a certain operator depending on Bose operators only. On the basis of the formula obtained qualitative conclusions about the spectrum of the Hamiltonian can be drawn. (auth)

59576 VACUUM DEGENERATION FOR A CHARGED SCALAR FIELD WITH THE SELF-INTERACTION $H' = g\int(\varphi^* \varphi)^2 dx$ IN THE CASE OF ONE SPATIAL DEGREE OF FREEDOM. Zastavenko, L. G. (Joint Inst. for Nuclear Research, Dubna, USSR). Teor. Mat. Fiz.; 8: No. 3, 335-42(Sep 1971). (In Russian).

The vacuum degeneration is studied in the quantum theory of a charged scalar field with the self-interaction $H' = g\int(\varphi^* \varphi)^2 dx$ in the case of one spatial degree of freedom. Besides the Goldstone particle with the rest mass equal to zero, there is another particle with the nonzero rest mass, which decays into an even number of particles with zero rest mass. The impossibility of the decay into an odd number of particles is connected with the existence of a motion integral of the parity type; the particles with the zero and nonzero rest mass belong to the eigenvalues of this integral equal to +1 and −1 respectively. (auth)

59577 THREE-DIMENSIONAL COVARIANT FORMULATION OF THE THREE-BODY PROBLEM IN QUANTUM FIELD THEORY. Vinogradov, V. M. (Joint Inst. for Nuclear Research, Dubna, USSR). Teor. Mat. Fiz.; 8: No. 3, 343-53(Sep 1971). (In Russian).

On the basis of the three-dimensional formulation of quantum field theory the relativistic analog of the Faddeev equations for the scattering amplitude is obtained. The system satisfies the three-body unitarity and the correspondence principle. (auth)

59578 CONNECTION AND QUANTUM FIELD THEORY IN A CURVED SPACE–TIME. Geronimi, Christian. Compt. Rend., Ser. A; 272: No. 26, 1764-6(28 Jun 1971). (In French).

The introduction of a connection relative to the Lie algebra of the P(4) Poincare group allows the Schroedinger scheme to be generalized. (France)

59579 REGGE CUTS AND THE EIKONAL APPROXIMATION IN FIELD THEORY. II. Nicoletopoulos, P.; Prevost, M. A. L. (Univ. Libre, Brussels). Nuovo Cim.; 5A: No. 3, 357-91(1 Oct 1971).

The mechanisms responsible for obfuscating the true eikonal content of individual Feynman graphs are examined. These complications originate in each case from a class of intermediate states which cancel ultimately upon summation of the relevant criss-crossed sets. All fractions of the eikonal stem from nonleading behavior of nonplanar graphs. The characterization of intermediate states leads in a natural way to a counting procedure which accounts for all the eikonal contributions of criss-crossed ladder plus Born exchange iterations in ϕ^3 theory. (auth)

59580 GENERALIZATION OF THE COOK FORMALISM FOR FOCK SPACE. Schroeck, F. E. Jr. (Florida Atlantic Univ., Boca Raton). J. Math. Phys. (N. Y.); 12: No. 9, 1849-57(Sep 1971).

The Cook formalism for Fock space is extended by finding additional properties of the creation and annihilation operators and by giving a rigorous definition of the second-quantized form for n-body operators (for any n). Properties of these second-quantized operators are given, including an expansion in terms of the creation and annihilation operators. (auth)

59581 CONVERGENT EXPANSION FOR THE RESOLVENT OF: φ^4: $_{1+1}$. Federbush, Paul (Univ. of Michigan, Ann Arbor). J. Math. Phys. (N. Y.); 12: No. 10, 2050-1(Oct 1971).

For the model theory, $N + \lambda\int: \varphi^4: dx$ in a box, a convergent expansion of the resolvent is exhibited. This also provides another proof of boundedness below for the model. (auth)

59582 COVARIANT DERIVATIVES OF INFINITE-DIMENSIONAL FIELDS. Bender, Carl M. (Massachusetts Inst. of Tech., Cambridge); Griffiths, David J. J. Math. Phys. (N. Y.); 12: No. 10, 2151-6(Oct 1971).

It is shown that a field which transforms irreducibly under the homogeneous Lorentz group admits four kinds of covariant derivatives–gradient, divergence, and two species of curl. These derivatives are constructed explicitly for both finite- and infinite-dimensional representations. Physical applications are discussed. (auth)

59583 BILOCAL FIELD OPERATOR DESCRIBING AN ARBITRARY TWO-PARTICLE STATE BY MEANS OF ONE-PARTICLE STATES. Lukierski, J. (Univ., Wroclaw). Lett. Nuovo Cim.; 2: No. 15, 784-8(9 Oct 1971).

A model of quantized free bilocal field is proposed for describing an extended particle with infinite extension, but with one-particle states having identical parametrization as the two-particle state. (L.B.S.)

59584 DIFFERENTIAL LIE AND TEST RELATIVISTIC PARTICLES. Sokol'skii, A. A. (Belorussian State Univ., Minsk). Vestsi Akad. Navuk BSSR, Ser. Fiz.-Mat. Navuk; No. 2, 118-21(1969). (In Russian).

The question of the inference from the principle of least action of covariant equations of motion for a relativistic test particle is studied. With the help of differentials Lie equations were obtained correct for arbitrary affine transfer. A number of special cases were examined. (tr-auth)

Thesis.

XUM

The predictions of a linear theory of gravitation recently proposed by S. Deser and B. Laurent (DLT) are investigated. After reviewing their formulation of the theory, and the point-mass solution which to first order gives the same results for the four tests as general relativity (GR), the nature of the Schwarzschild singularity in DLT is examined and found much more serious than in GR. Next two possible schemes are considered for coupling the DLT field to matter. The first reproduces the GR behavior of all nongravitational objects and fields; the second is fully linear. Both agree to first order in the field $\phi_{\mu\nu}$. It is shown that the second coupling scheme no longer predicts that light follows null geodesics of the effective metric, and later it is also shown (by means of kinetic theory) that, as currently formulated, it does not predict an isotropic pressure (perfect fluid property) for an ideal gas. Next a Lagrangian is derived for a perfect fluid and static, spherically-symmetric solutions are sought. Using the first coupling scheme the equations can be solved only for weak fields; the solution is given up to second order. With the second coupling scheme one can go further; but as remarked above, an ideal gas is not a perfect fluid in this scheme. In both cases $1/r^3$ terms appear in the exterior effective metric. These are shown not to affect the predictions for the four tests until second order, well beyond current technological ability to detect. Then an idealized nonstatic model is considered, namely a pressure-free shell undergoing gravitational collapse. It was hoped to answer the question of whether a Schwarzschild singularity (or an infinite-density singularity) forms; however, it was not possible to proceed far enough, in the time available. The velocity of the shell for a time exceeds c, the gravitational velocity (but not the speed of light). The shell does fall inside its Schwarzschild radius; but whether it remains there long enough for a singularity to form one does not know. One digresses to discuss kinetic theory in general relativity, partly to lay the groundwork for the kinetic theory in DLT, but also in the hope that a manifestly covariant formulation could be presented, in this there was failure, although some of the problems were clarified. Also a derivation of a general rate of formation of binary stars (or analogous astrophysical configurations) through the mechanism of three-body gravitational interaction is included. Comparison with observation indicates that this three-body mechanism could not have been the dominant one for the formation of binaries during any galactic epoch. However, a mechanism is suggested for planetary capture of asteroids, with an inner satellite serving as the third body, that might explain the origin of Jupiter's outer moonlets. (Diss. Abstr.)

59586 SUPPLEMENTARY TRIVIAL EQUATIONS IN THE PENROSE-NEWMAN FORMALISM. **Herrera, Alfredo; Papapetrou, Achille (Univ., Paris). Compt. Rend., Ser. A; 272: No. 26, 1756-9(28 Jun 1971). (In French).**

It has already been demonstrated that certain identities permit, within the Newman–Penrose formalism, the separation of the field equations into principal, supplementary, and trivial equations. An incomplete discussion (A. Papapetrou, Ann. Inst. Henri Poincare, 13, 1970, p. 271) demonstrated the existence of at least one trivial equation. This discussion is completed taking into account all the identities; five trivial equations are obtained. (France)

59587 SOLUTIONS OF THE GRAVITATIONAL–SCALAR FIELD SYSTEM. **Higbie, James Howard. Waltham, Mass.; Brandeis Univ. (1971). 170p. University Microfilms Order No. 71-20,332.**

Thesis.

The system gravitation–electromagnetic field–massless scalar field is considered. The electromagnetic field is the ordinary minimally-coupled one. The gravitational and scalar fields considered are of three types: ordinary scalar field minimally coupled to Einstein gravitation, conformally-invariant scalar field nonminimally coupled to Einstein gravitation, and Brans-Dicke gravitation with its associated scalar field. A spherical thin-shell distribution of "dust" with bare mass m_0, electric charge e, and (except in the Brans-Dicke case) scalar charge f, but no macroscopic pressure terms or Poincaré-type forces provides a realistic particle-like source for the fields involved. The initial-value problem is solved for initial-value data appropriate to a particle-like solution. Thus a class of spherically symmetric initially static solutions are obtained. The presence of the scalar charge on the source gives rise to unexpected behavior of these solutions. In particular for a given set of source parameters m_0, e, f and isotropic coordinate radius ϵ, either zero, one, two or perhaps more solutions may exist. They may be separated into a branch of normal solutions which go over into the $f = 0$ solutions as $f \rightarrow 0$, and a branch of anomalous solutions which go over into an essential singularity as $f \rightarrow 0$. For m_0 and f fixed and $e = 0$ there is no point limit $\epsilon \rightarrow 0$. Because of the absence of the scalar charge in the source, none of this behavior occurs in the Brans-Dicke case. For $e \neq 0$ however some unusual behavior occurs which is not the result of the scalar source charge and consequently is present in all three cases: Certain ranges of source parameters, roughly given by $m_0 < 2\kappa^{-1/2} e$, do not give rise to any solutions. A consequence of this is that nontrivial static solutions do not exist for $\infty > \epsilon > 0$. For $f = e = 0$, the $\epsilon \rightarrow 0$ limit yields a static and flat-exterior solution, both in Einstein and Brans-Dicke theory. In the Einstein case the dressed mass vanishes as $\epsilon^{1/2}$ and the invariant radius remains nonzero $\sim m_0$. In the Brans-Dicke case however, the dressed mass vanishes faster than $\epsilon^{1/2}$ and the invariant radius vanishes as well. A point particle with only gravitational interactions might be said to vanish more thoroughly in Brans-Dicke theory therefore, and in this sense it could be called more "Machian" than general relativity. Nontrivial particle-like solutions are next sought, by requiring the solutions to be static with $\epsilon < \infty$ and nonflat exterior. For all three cases, it is found that the only such solution is one with Reissner-Nordstrom exterior and vanishing exterior scalar field. The scalar charge (or Brans-Dicke coupling constant ω) has no exterior effect in these solutions, although in the Brans-Dicke case a renormalization of κ is required which results in a slight change of the mass for a given charge. The scalar charge (or ω) does affect the invariant radius and the possible range of m_0, however. The fact that no particle-like solutions exist with nonvanishing exterior scalar field could be used to argue that sources of the massless scalar field do not exist in nature. (Diss. Abstr.)

59588 COORDINATE-FREE RELATIVITY. **Hudgin, Richard Henry. Stanford Calif.; Stanford Univ. (1970). 130p. University Microfilms Order No. 71-12,923.**

Thesis.

Physicists have many assumptions which, because of the extreme simplifications they allow, go unchallenged and unexplored. One of the most neglected is the coordinate system. How convenient to have a 1-1 continuous, twice differentiable map of the universe onto 4-space! A Riemannian metric and geodesic motion further restrict the generality and are the starting point for many theories. If one is to believe Mach's principle in its most general form—that the properties of matter and energy are determined by the matter-energy distribution in the universe—then the validity of a coordinate system description with its usual nice properties should be a result of the theory, not an axiom. This is one goal. With these ideas in mind, the purpose is twofold: first, to axiomatize Riemannian geometry independently of a coordinate system and second, to point out the natural generalizations of a Riemannian manifold which reveal themselves. In place of a coordinate system, the set $P = \{i, j, k, \ldots\}$ of all test particles and their communication functions ϕ_{ij} is postulated. Physically, one is assuming a real, ordered parametrization of a test particle's experience. (Proper time would be an example in special relativity.) The $\phi_{ji}(s_i) = s_j$ is a function of i's time s_i and, physically, is interpreted as the soonest arrival time s_j of a signal sent from particle i at s_i to particle j. One could imagine light pulses going from particle to particle. This communication function between test particles was used previously in a treatise on kinematic relativity, and some of the properties of the communication function in general relativity were also investigated. In neither case, however, was the concern with generalizing the coordinate system. The problem now is to formulate axioms which correlate the communication functions of all the test particles in such a way that Riemannian geometry emerges. It should be stressed that nowhere in the axioms are the terms metric, geodesic, or coordinate patch used. These are derived concepts. Possible generalizations are discussed which will look like a Riemannian manifold over large distances and times, but which fall apart over short intervals. The mathematical apparatus required to replace the coordinate system and to deal with the generalizations is not broached, but the hope is that future developments will soon resolve this question. (Diss. Abstr.)

59589 NOTE ON NEUTRINO-GRAVITATIONAL FIELDS WITH POSITIVE ENERGY DENSITY. **Griffiths, J. B.; Newing, R. A. (University Coll. of North Wales, Bangor). J. Phys., A (London); 4: No. 5, L81-2(Sep 1971).**

Neutrino-gravitational fields with positive energy density are considered. A special case of these fields appeared to introduce some complications. It is shown here that this case may be removed by a simple transformation. (auth)

59590 SIMPLE RELATIVISTIC THEORY OF GRAVITATION. **Coleman, C. J. (Imperial Coll. of Science and Tech., London). J. Phys., A (London); 4: No. 5, 611-16(Sep 1971).**

It is shown that a particular theory with a Lorentz-invariant scalar potential ϕ and a simple gravitational metric involving ϕ

XUM

leads to the same results for the three Einstein tests as General Relativity. (auth)

59591 GENERALIZED FIELD EQUATIONS IN GENERAL RELATIVITY. Tupper, B. O. J. (Univ. of New Brunswick, Fredericton); Phillips, G. W. J. Phys., A (London); 4: No. 5, 597-610(Sep 1971).

Generalizations of Einstein's field equations in general relativity are derived by considering variational principles in which the components of an ennuple, or tetrad, are the quantities which undergo variation. The conservation law for the field equations is established and the weak field approximations discussed. The equations are solved by the method developed in a previous article (1970). Many solutions are obtained, all of which are inferior to the Schwarzschild solution. (auth)

59592 STUDY OF GENERAL RELATIVITY IN CANONICAL FORM. Klotz, Frederick S. Syracuse, N. Y.; Syracuse Univ. (1970). 116p. University Microfilms Order No. 71-21,524. Thesis.

The positivity and constraint relations that arise when the theory of general relativity is put in canonical form are examined. These restrictions are viewed as an indication that the original canonical variables are not appropriate for the theory, and by means of a canonical transformation new dynamical variables it is sought to introduce which are not subject to such conditions. When canonical variables must obey inequalities such as the positivity conditions, the "good" phase space generators of transformations that preserve these inequalities constitute the most natural dynamical variables for the theory. It is shown that when all canonical variables are chosen so as to satisfy the "good" criterion, the original inequalities disappear from the canonical formalism. These ideas are applied to a model theory based on the Lagrangian for the Kasner solutions to the field equations of general relativity. The use of "good" variables has the additional advantage of substantially simplifying the form of the Hamiltonian, and the dynamical equations reduce essentially to those of a massless free particle in two dimensions. But when the analogous canonical transformation in general relativity is performed, it is found that, although the positivity conditions no longer appear, the form of the constraints becomes more complicated. One can, however, simplify and remove the constraints by introducing quantities with a direct co-ordinate independent geometrical significance as canonical variables. The most convenient such quantities are scalars. Three phase space functions are explicitly constructed at each point of the manifold which behave as scalars under transformations involving the spatial co-ordinates only. One can think of these scalars as defining an intrinsic co-ordinate system on each t = constant hypersurface. With the spatial intrinsic co-ordinates of the t = constant hypersurfaces of the manifold as canonical variables, the spatial constraints are reduced to simple algebraic equations which one can solve and eliminate. One may treat the remaining constraints in a similar manner by introducing an intrinsic time variable separately in the canonical set. Alternately, with the much more complicated intrinsic co-ordinates of the entire manifold as canonical variables, all the constraints are reduced to simple algebraic equations which one can solve and eliminate. In this way a constraint free form for the canonical field equations of general relativity is found. Finally, the meaning of these results for the quantization program is discussed. (Diss. Abstr.)

59593 SOME REMARKS ON THE NEWMAN-PENROSE FORMALISM. Papapetrou, Achille (Paris Univ.). Compt. Rend., Ser. A; 272: No. 23, 1537-40(7 Jun 1971). (In French).

Expressions obtained for the gravitational field using classical theory are compared with those developed in the Newman–Penrose formalism. (France)

59594 CAUCHY PROBLEM FOR THE NONLINEAR BOLTZMANN EQUATION IN GENERAL RELATIVITY. Bancel, Daniel (Paris Univ.). Compt. Rend., Ser. A; 272: No. 25, 1685-8(21 Jun 1971). (In French).

The Cauchy problem is studied for the nonlinear Boltzmann equation in the framework of the general relativity. A local theorem of existence and unicity is demonstrated using energy inequalities in Sobolev-type weighted spaces. (France)

59595 SINGULARITY IN THE GENERAL THEORY OF RELATIVITY. Maldybaeva, E. Ya. (Inst. of Astrophysics, Dushanbe, USSR). Dokl. Akad. Nauk Tadzh. SSR; 14: No. 6, 18-21(1971). (In Russian).

The nature of the divergence in the general theory of relativity was explored. In the nonstationary field the existence of causality is equivalent to the presence of paradoxes in the dynamic theory of infinite systems constructed on the principle of causality. The initial hypersurface is proposed as uncharacteristic. The Hamiltonian formalism serves to express the principle of causality. The inference concerning the inevitability of singularity belongs to the general problem of Kosh, the erection of which is confirmed in cosmology. (K.S.W.)

59596 ON THE EQUIVALENCE OF GRAVITATIONAL RED SHIFT AND TEMPERATURE SHIFT IN THE MOESSBAUER EFFECT. Gupta, G. P.; Lal, K. C. (Lucknow Univ., India). Phys. Lett.; 36A: No. 5, 421-2(27 Sep 1971).

An expression for the Moessbauer fractional energy shift for an atomic oscillator was derived on the basis of the equivalence principle and is shown to be identical with those derived previously. (auth)

59597 TWO RELATIVISTIC MATTER DISTRIBUTIONS OF RADIAL SYMMETRY. Kuchowicz, B. (Univ., Warsaw). Indian J. Pure Appl. Math.; 2: No. 2, 297-300(Apr 1971).

Two new solutions of Einstein's field equations are obtained, one in canonical Schwarzschild coordinates and the other in isotropic coordinates. The metric tensor components and matter density are expressed in terms of simple elementary functions and their derivatives. (auth)

59598 TRAJECTORIES EQUATIONS IN A SPACE WITH A NONRIEMANNIAN CONNECTION. Clerc, Rene-Louis (Univ., Toulouse). Compt. Rend., Ser. A; 272: No. 26, 1760-3(28 Jun 1971). (In French).

As a continuation of a previous work (Comptes rendus, 272, serie A, 1971 p. 1145), the nonsymmetrical connection used is determined as a function of the independent variables $g_{\alpha\beta}$ and $S^{\alpha}_{\beta\gamma}$. The conservation identities are stated and the equations for the current lines are deduced from them; they resemble those of an electromagnetic field but have certain mass independent terms; such terms can be related to the effect of inertial spin. (France)

59599 QUANTIZATION OF PARTICLES IN THE EXTERNAL GRAVITATIONAL FIELD. Vilkovyskii, G. A. (All-Union Scientific Research Inst. of Phycial-Technical and Radiotechnical Measurements, Moscow). Teor. Mat. Fiz.; 8: No. 3, 359 68 (Sep 1971). (In Russian).

The quasiclassical approximation for the quantum particle in the external gravitational field is studied. The ambiguity in the quantum Hamiltonian is discussed in this connection. Feynman quantization of the particle in the external gravitational field is performed. (auth)

59600 GENERAL FORMULATION OF THE TETRAD VARIATIONAL PRINCIPLE OF EINSTEIN'S GRAVITATIONAL THEORY. Davis, W. R. (North Carolina State Univ., Raleigh). Nuovo Cim.; 5B: No. 2, 153-64(11 Oct 1971).

It is shown that a form of the tetrad variational principle of Einstein's gravitational theory exists that is more general than the formulation given by Møller. This formulation includes, in addition to the usual field equations, the further field equations $\gamma_k^{ji} + \gamma_k^{ij} = 0$ (where γ_{ijk} is the associated tensor to the Ricci coefficients of rotation) that determine the tetrad field as defining a Riemannian space–time. It is pointed out that the more general treatment provides an appropriate starting point for the anholonomic formulation of Einstein's theory which, accordingly, is discussed briefly in this context. Finally, the modified tensorial tetrad superpotentials following for the holonomic and anholonomic forms of the general variational principle are considered. (auth)

59601 MASSIVE AND MASS-LESS YANG–MILLS AND GRAVITATIONAL FIELDS. van Dam, H.; Veltman, M. (Univ., Utrecht). Nucl. Phys.; B22: No. 2, 397-411(1970).

Massive and massless Yang–Mills and gravitational fields are considered. It is found that there is a discrete difference between the zero-mass theories and the very small, but non-zero mass theories. In the case of gravitation, comparison of massive and massless theories with experiment, in particular the perihelion movement of Mercury, leads to exclusion of the massive theory. It is concluded that the graviton mass must be rigorously zero. (auth)

59602 TRAPPED SURFACES AND THE DEVELOPMENT OF SINGULARITIES. Pajerski, David Walter (California State Coll., California, Pa.); Newman, Ezra T. J. Math. Phys. (N. Y.); 12: No. 9, 1929-37(Sep 1971).

The study of singularities in general relativity was given a strong impetus by a topological approach due to Penrose and others, and powerful theorems concerning their existence have been developed. In particular a theorem by Penrose states that under certain conditions the existence of a trapped surface in a

XUM

space—time guarantees that singularities will develop. Using the spin coefficient formalism one generalizes from the Schwarzschild solution, and the existence of a wide class of solutions possessing such trapped surfaces is proven by displaying the solutions to terms linear in a certain null coordinate. Then, using an asymptotic procedure, the method is generalized to include a class of solutions possessing "asymptotically trapped surfaces." (auth)

59603 QUADRATIC LAGRANGIANS IN GENERAL RELATIVITY. **Folomeshkin, V. N. (Inst. of High Energy Physics, Serpukhov, USSR).** Commun. Math. Phys.; 22: No. 2, 115-20 (1971).

The solutions of the general relativity equations with quadratic Lagrangians $R_{iklm}R^{iklm}$, $R_{ik}R^{ik}$, R^2 are studied. It is shown that nontrivial Euclidian (at $r \rightarrow \infty$) solution of the theory equations does not exist when $T \neq 0$ (T is a trace of the energy-momentum tensor of matter). The Schwarzschild solution is not an external part of a total solution when $T \neq 0$. Under condition $T = T = 0$ Lagrangians $R_{iklm}R^{iklm}$, $R_{ik}R^{ik}$ lead to the identical field equations, so there exist the only quadratic Lagrangian and the only field equations. This equation has a solution with an external part being a standard Schwarzschild solution for the statical spherically symmetric case. (auth)

59604 SOURCES AND DETECTION OF GRAVITATIONAL RADIATION OF HIGH FREQUENCY. **Halpern, L. (Univ. of Brussels).** Nature (London) Phys. Sci.; 233: No. 36, 18(6 Sep 1971).

Reference is made to recent experimental work from which evidence was obtained for pulses of gravitational radiation of intensity far exceeding all expectations. This work was designed to detect radiation in the low frequency domain, of the order of kilocycles, where quantum phenomena are not observable. There was no apparent justification to recommend experimental work concerned with high frequency, as such radiation would be of far too low intensity. It was argued previously, however, that new results in the low frequency domain have altered the situation so that even the detection of radiation of high frequency should be seriously considered. Such experimental work would be of interest even if it turned out that no gravitational radiation exists in the domain that can be covered. (UK)

59605 OBSERVABLE EFFECTS OF TORSION IN SPACE—TIME. **Ponomariev, V. N. (Univ., Warsaw).** Bull. Acad. Pol. Sci., Ser. Sci., Math., Astron. Phys.; 19: No. 6, 545-50 (1971).

The simplest and the most natural generalization of Einstein's theory, based on the assumption of nonvanishing torsion, is considered. The possibility of taking a manifold with torsion as a model of space—time was put forward previously. It is shown that the tensor of torsion has an influence on the geodetic lines under the assumption that the connection is metric. The effect of torsion on the perihelion motion of the orbits of planets and on bending of rays of light is considered. (auth)

59606 RADIATION SCATTERING IN EINSTEIN—MAXWELL THEORY. **Couch, W. E. (Univ. of Pittsburgh); Hallidy, W. H.** J. Math. Phys. (N. Y.); 12: No. 10, 2170-5(Oct 1971).

A linearized Einstein—Maxwell field composed of a mass monopole, a radiating mass quadrupole, a Coulomb field, and radiating electromagnetic dipole and quadrupole fields is examined to second order. If the first-order radiation is a pulse of finite duration, then the only second-order radiation present after the pulse has turned off is due to interactions involving the mass monopole. All other interactions contributing to the second order produce no such scattered radiation. At third order, the dipole—dipole-mass interaction is found to give rise to scattered radiation. (auth)

59607 GRAVITATIONAL WAVE ASTRONOMY: AN INTERIM SURVEY. **Fellgett, P. B. (Univ. of Reading, Eng.); Sciama, D. W.** Radio Electron. Eng.; 41: No. 8, 391-7(Sep 1971).

The concept of gravitational radiation is introduced and the experiments of Weber are described. The magnitude and nature of the phenomenon are discussed in the light of Einstein's theory of relativity. The basic theory of a detector is developed and the means of realization are indicated. Investigations are proceeding along these and parallel lines in many parts of the world, but no definitive results have yet been reported. (auth) (UK)

59608 RIEMANNIAN STRUCTURE OF SPACE—TIME AS A CONSEQUENCE OF A MEASUREMENT METHOD. **Castagnino, Mario A. (Univ., Buenos Aires).** J. Math. Phys. (N. Y.); 12: No. 10, 2203-11(Oct 1971).

Following a previous graphical method it is shown analytically that if the space—time paths of all particles and light pulses are known one can deduce the connection and the metric of the space—time manifold. Specifically if such space—time paths fulfill some reasonable physical hypotheses, it is proved that space—time is a Riemannian manifold. To reach this conclusion a new definition of parallelism is introduced, based only on ideal experiments. This parallelism is entirely different from the ordinary parallel transfers, if the manifold is non-Riemannian; therefore it opens new ways of modifying gravitational theory. (auth)

Scattering Theory

59609 (KFKI-71-39) ON THE USE OF NEGATIVE TIME-LIKE STATES. **Szego, K. (Magyar Tudomanyos Akademia Kozponti Fizikai Kutato Intezete, Budapest).** [1970]. 15p. Dep. NTIS (U. S. Sales Only).

It is shown that the analytic continuation of the quasi-elastic scattering amplitude into the different channels can lead to negative energy time-like states. Its advantages and difficulties are discussed. (auth)

59610 GENERALIZED EIKONAL APPROXIMATION, IMPACT PHASE AVERAGING, AND MULTIPLE HARD COLLISIONS. **Hahn, Yukap (Univ. of Connecticut, Storrs).** Nucl. Phys.; B34: No. 1, 209-26(1971).

The phase averaging procedure is developed in detail to give a systematic treatment of the high-energy scattering amplitudes in the eikonal approximation. Close connection between the eikonal approximation and the phase averaging is stressed. A generalized form of the propagator modification is proposed which approximately incorporates all the quadratic terms in the internal line momenta; amplitudes of the Glauber-type, in which the impact phases are evaluated along the average momentum, are shown to follow as special cases. In an attempt to improve the eikonal approximation at large angles, the amplitudes with double-hard collisions are derived, where the role of propagators is emphasized. Extensions of the formalism to relativistic case of scalar particle-scalar coupling are considered only in the generalized ladder approximation. Essential differences between the symmetrized and the DWBA amplitudes are pointed out. (auth)

59611 SIGNATURE, FACTORISATION, AND UNITARITY IN THE MULTI-REGGE MODEL. **Halliday, I. G. (Imperial Coll. of Science and Tech., London).** Nucl. Phys.; B33: No. 1, 285-302 (1971).

It is shown by continuation from the Symanzik region that the $2 \rightarrow 4$ multi-Regge amplitude in ϕ^3 perturbation theory factorises into signature terms and vertex terms. By using the implied normal threshold structure it is shown how the $2 \rightarrow 4$ particle unitarity equation becomes an identity if the $2 \rightarrow 4$ and $2 \rightarrow 3$ unitarity equations are satisfied at high energies. This solves a long standing problem in the multi-peripheral bootstrap. (auth)

59612 RASSEYANIE, REAKTSII I RASPADY V NERELYATIVISTSKOI KVANTOVOI MEKHANIKE. (Scattering, Reactions, and Disintegrations in Nonrelativistic Mechanics). **Baz, A. I.; Zel'dovich, Ya. B.; Perelomov, A. M.** Moscow; Izdatel'stvo Nauka Glavnaya Redaktsiya Fiziko-Matematicheskoi Literatury (1971). 544p.

Problems in quantum mechanics are considered, as they relate to atomic and nuclear processes, and the attempt is made to fill the gap between the textbook and the original literature. Discrete and continuous spectra, analytical properties of wave functions, and the quasi-classical approach are described. Several chapters deal with the quasi-stationary state, multichannel systems, and the three-body problem. Other topics considered of importance are quasi-classical properties of a degenerate Fermi gas, the Green's function of the Schroedinger equation, unstable systems, and threshold phenomena. (K.S.W.)

59617 CONFIGURATION-SPACE VIEW OF HIGH-ENERGY SCATTERING. Brandt, Richard A. (New York Univ., N. Y.). Phys. Rev., D; 4: No. 2, 444-50(15 Jul 1971).

The amplitude for the reaction $A + C \to B + D$ is considered, where A and B are scalar currents and C and D are on-shell scalar particles. Scaling behavior and Regge behavior are assumed, and these behaviors are implemented on integral representations with suitable spectral functions. It is shown that the leading light-cone singularity determines the trajectory function and thus provides a configuration-space view of high-energy behavior. (L.B.S.)

59618 TWO-REGGEON EXCHANGE CONTRIBUTIONS TO HADRON SCATTERING AMPLITUDES AT HIGH ENERGY. Quigg, Chris. Berkeley, Calif.; Univ. of California (1970). 191p. University Microfilms Order No. 71-20,888.

Thesis.

Regge cuts are discussed from a phenomenological point of view. Some attempts to derive amplitudes with Regge cuts are reviewed. A phenomenological amplitude for the Regge cut from two-Regge exchange is written down in a form that manifestly satisfies s-u crossing. The amplitude is formulated in terms of s-channel helicity partial-wave amplitudes, so the Reggeization of s-channel helicity amplitudes is discussed as a technical simplification. Implications of Regge cuts for various duality-breaking schemes (and vice versa) are summarized. Brief remarks are made on two-Reggeon cuts and exotic exchange. These include model calculations of the $(P' + \rho) \otimes (P' + \rho)$ cut in $\pi\pi$ scattering, and of the single-meson-exchange "forbidden" reaction $K^-p \to K^+\Xi$. (Diss. Abstr. Int., B)

59619 MULTIVARIABLE EXPANSION OF SCATTERING AMPLITUDES, CROSSING SYMMETRY OF PARTIAL WAVES, AND TESTS OF VARIOUS CROSSING SYMMETRIC MODELS. Modjtehedzadeh, Mohammed. Syracuse, N. Y.; Syracuse Univ. (1970). 130p. University Microfilms Order No. 71-21,525.

Thesis.

Double partial wave expansion of the scattering amplitude of spinless particles was extended to include particles with arbitrary mass and spin assignment. Expansion is quasidiagonal in angular momentum and displays the correct threshold and pseudo-threshold behavior of the partial wave amplitudes. Together with the crossing symmetry requirement, this expansion yields an infinite array of finite dimensional crossing relations for the partial waves. This expansion is further generalized to the cases of multiparticle scattering processes. Multivariable expansion of the scattering amplitude was obtained. Special applications of the four- and five-particle scattering processes were made and for the case of four particle scattering previous results are obtained. The tests of various crossing symmetric models are considered. Three models suggested previously were investigated by making use of Balachandran–Blackmon inequalities. It was shown that some sub-set of values for the parameters of the above mentioned models can be selected in which Balachandran–Blackmon inequalities are satisfied. (Diss. Abstr. Int., B)

59620 UNIFORMIZATION IN A SOLUBLE PARTIAL WAVE MODEL. Choudhary, A. R.; Jones, R. B. (Queen Mary Coll., London). Nucl. Phys.; B22: No. 2, 343-57(1970).

A non-relativistic partial wave model based on elastic unitarity and a simple left-hand cut is studied. Although the usual N/D method leads to singular integral equations, the model can be solved exactly in terms of hypergeometric functions by use of a differential equation technique. This differential equation approach also reveals the existence of a manifold of other functions which solve the basic discontinuity relations without, however, obeying dispersion relations. Since the model is marginally singular, the exact solutions give examples of amplitudes of non-integer CDD class. Furthermore, the amplitude can be globally uniformized by use of the elliptic modular function. Because of this circumstance, a comparison can be made of approximation schemes which differ by their treatment of the underlying Riemann surface. The conclusion is that the exact solution of the model is best approximated in terms of the uniformizing variable, a procedure which maintains the correct Riemann surface at each stage of approximation. (auth)

59621 EXTRAPOLATION OF SCATTERING AMPLITUDES. IV. EXTRAPOLATION OFF A PART OF THE BOUNDARY TO THE REST OF THE BOUNDARY. Presnajder, P. (Comenius Univ., Bratislava); Pisut, J. Nucl. Phys.; B22: No. 2, 365-84 (1970).

The problem of extrapolating an amplitude (or a form factor) off a part of the boundary of the analyticity region to the rest of the boundary is considered. To obtain a stable procedure the extrapolation is made to average values over an arc on the boundary. In defining the average value weight functions analytic in the analyticity region of the amplitude are introduced. The expression for the average value is then simply obtained from the Cauchy theorem applied to the product of the weight function and the amplitude. The optimal weight functions (corresponding to a given arc) are found for cases of simply and doubly connected analyticity regions. For the latter case (in appendix C) the optimal solution to the problem of extrapolation to points inside the analyticity region is also presented. (auth)

59622 KIRKWOOD–SALTZBURG EQUATIONS FOR THE COEFFICIENT FUNCTIONS OF SCATTERING MATRIX. Petrina, D. Ya.; Skripnik, V. I. (Theoretical Physics Inst., Moscow). Teor. Mat. Fiz.; 8: No. 3, 369-80(Sep 1971). (In Russian).

The system of equations of the Kirkwood–Saltzburg type is deduced for the coefficient functions of scattering matrix in the Euclidean region. It is proved that the solutions of the equations for coefficient functions at infinite volume exist for the models of real scalar field with bounded nonlinear Lagrangians. The analogies between the Euclidean quantum field theory and statistical mechanics are investigated. (auth)

59623 L-WAVE INVERSE SCATTERING PROBLEM. Corbella, Oscar D. (Univ. Nacional, Cordoba, Argentina). J. Math. Phys. (N. Y.); 12: No. 9, 1873-82(Sep 1971).

The inverse scattering problem for the Schrödinger equation is considered. Under certain restrictions on some of the odd derivatives of the potential, one obtains expressions for the values of the potential and its derivatives at the origin, as functions of the phase shift and bound state data for any fixed partial wave. Closed expressions for the first coefficients of the expansion of the potential are obtained. (auth)

59624 ASYMPTOTIC FORM OF THE THREE-PARTICLE SCATTERING WAVEFUNCTION FOR FREE INCIDENT PARTICLES. Nuttall, J. (Texas A and M Univ., College Station). J. Math. Phys. (N. Y.); 12: No. 9, 1896-9(Sep 1971).

It is shown that second-order multiple scattering terms lead, in some directions, to an anomalous term in the asymptotic form of the wavefunction for three free incident particles, which falls off as the inverse second power of distance. The boundary of the region in which this occurs is given, together with the form of the wavefunction near this boundary. (auth)

59625 ZEROS OF DUAL RESONANT AMPLITUDES. D'Adda, A. (Univ., Turin); Sciuto, S.; D'Auria, R.; Gliozzi, F. Nuovo Cim.; 5A: No. 3, 421-32(1 Oct 1971).

Large classes of zeros of multiparticle dual resonant amplitudes are found by fully exploiting the linear relations, first introduced by Plahte, that relate amplitudes correspondingly to different orderings of the external particles. Their connection with duality as well as their generalization to amplitudes with excited particles are discussed. Moreover, at least for the five-point function, the zeros are shown to be a consequence of a larger symmetry than the cyclical one. (auth)

59626 REMARKS ON THE EXISTENCE OF SOLUTIONS OF THE TWO-PARTICLE LIPPMANN–SCHWINGER EQUATION. II. Shastry, C. S.; Rajagopal, A. K. (Louisiana State Univ., Baton Rouge). J. Math. Phys. (N. Y.); 12: No. 10, 2195-8(Oct 1971).

The following is proven: The kernel $K_s^{(l)}$ corresponding to the lth partial wave of the modified partial wave Lippmann–Schwinger equation having symmetric kernel $K_s = V^{½}G_0^+V^{½}$ belongs to the Hilbert–Schmidt (L^2) class for spherically symmetric potential V such that $V(r) \to r^{-\delta}$, $\delta < 2$ as $r \to 0$; $V(r) \to r^{-\eta}$, $\eta > 1$ as $r \to \infty$. For $V(r) = g/r^{\alpha}$, $1 < \alpha < 2$, the kernel K_s of the modified Lipmann–Schwinger equation satisfies $\mathrm{Tr}\{(K_s^{\dagger})^m K_s^m\} < \infty$, if $\alpha > 1 + 1/m$, $m = 2, 3, \cdots$. The above results are valid even for

XUM

positive real energy. It is also shown that for potentials for which both K_s and the kernel $K = G_0^+V$ of the usual Lippmann–Schwinger equation belong to L^2 class, the corresponding off-shell two-particle T matrix $\langle k|T(E + i\epsilon)|k'\rangle$ has a unique limit as $\epsilon \to 0$, $E > 0$. Some important consequences of these results are discussed. (auth)

59627 STRUCTURE OF THE GENERALIZED VENEZIANO AMPLITUDES. I. RADON TRANSFORMS. Wu, Alfred C. T. (Univ. of Michigan, Ann Arbor). J. Math. Phys. (N. Y.); 12: No. 10, 2035-6(Oct 1971).

The (tree-graph) generalized Veneziano amplitudes are shown to be boundary values of a new class of generalized hypergeometric functions having the property that they are Radon transforms of products of linear forms. (auth)

59628 STRUCTURE OF THE GENERALIZED VENEZIANO AMPLITUDES. II. POSSIBLE GROUP THEORETIC CONTENT. Wu, Alfred C. T. (Univ. of Michigan, Ann Arbor). J. Math. Phys. (N. Y.); 12: No. 10, 2036-9(Oct 1971).

An attempt is made to generalize a previous result that the beta function (being adopted as a Veneziano formula for four-particle processes) appears as the kernel (in the integral) of the irreducible representation (in the Mellin-transformed space) of the group of 2 × 2 unimodular triangular matrices. It is shown that with a modified multiplier in the Gel'fand–Naimark prescription for the representation of the group of $(n + 1) \times (n + 1)$ unimodular triangular matrices, the (tree-graph) generalized Veneziano amplitude for $(n + 3)$-particle processes is recovered by a limiting procedure. (auth)

59629 EIKONAL APPROXIMATION AND THE MANDELSTAM DIAGRAM. Islam, M. M. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Lett.; 36B: No. 6, 586-90(18 Oct 1971).

Cheng and Wu's argument that the eikonal approximation fails for the Mandelstam diagram with a Regge pole and a single-particle exchange is shown not to be valid when form factors are included in the single-particle exchange. The failure of the eikonal approximation for this diagram then appears in a completely different way. (auth)

59630 ANOTHER BOUND ON THE ABSORPTIVE PART OF ELASTIC SCATTERING AMPLITUDES. Savit, R. (Stanford Univ., Calif.); Blankenbecler, R.; Einhorn, M. B. J. Math. Phys. (N. Y.); 12: No. 10, 2092-8(Oct 1971).

Via Lagrange multipliers for inequality constraints, an upper bound on the absorptive part of the elastic scattering amplitudes is derived assuming unitarity, a fixed total and elastic cross section, and the condition that the partial waves decrease monotonically with increasing angular momentum. Numerical results are given. (auth)

59631 T MATRIX FOR THE HULTHEN POTENTIAL. Bahethi, O. P.; Guda, M. G. (State Univ. of New York, Buffalo). J. Math. Phys. (N. Y.); 12: No. 10, 2076-80(Oct 1971).

A closed-form expression for the s wave part of the Hulthén potential's T matrix is derived. This expression is used to obtain a simpler result for the terms in the Weinberg series for the T matrix than the results given previously. (auth)

59632 (CONF-711002) PROCEEDINGS [OF] THIRD INTERNATIONAL SYMPOSIUM ON RESEARCH MATERIALS FOR NUCLEAR MEASUREMENTS, GATLINBURG, TENNESSEE, OCTOBER 5–8, 1971. (Oak Ridge National Lab., Tenn.). 322p. Dep. NTIS.

Separate abstracts are prepared for 24 papers. (C.E.S.)

For abstracts of individual papers see: 57345, 57498, 57649–57651, 57723, 57724, 57863, 58179–58184, 58346, 59633–59640, and 59670.

59633 (CONF-711002–, pp 39-46) PREPARATION OF SELF-SUPPORTING, METALLIC FOILS OF ISOTOPIC CHROMIUM. Kuehn, P. R.; O'Donnell, F. R.; Kobisk, E. H. (Oak Ridge National Lab., Tenn.). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

The chromium isotopes ^{50}Cr, ^{52}Cr, ^{53}Cr, and ^{54}Cr are desired as self-supporting foils (targets) for nuclear research. Since the cost of isotopic chromium ranges from \$0.50 to \$4.00/mg and the supply is limited; dependability and material recovery without contamination are important considerations in any process used to form such self-supporting foils. Electrodeposition has proven to be ideally suited for target fabrication using these separated isotopes, since unused chromium can be salvaged with minor loss through simple chemical processing. In addition, targets prepared by this technique are structurally strong, uniform in thickness, and sufficiently pure for most nuclear applications. (auth)

59634 (CONF-711002–, pp 59-69) PREPARATION OF ACTINIDE METAL TARGETS USING SPECIAL CASTING TECHNIQUES. Conner, William V. (Dow Chemical Co., Golden, Colo. Rocky Flats Div.). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Preparation of actinide metal targets produced by reduction of oxides is described. The reduction process produces a button which is rolled or cast to the desired thickness. Casting is the preferred method because less scrap is generated. Tilt-pour casting and injection casting methods are described. (J.R.D.)

59635 (CONF-711002–, pp 91-100) TECHNIQUES USED AT HARWELL IN THE PREPARATION OF STABLE AND ACTIVE NUCLIDE TARGETS. Glover, K. M.; Rogers, F. J. G.; Tuplin, T. A. (Atomic Energy Research Establishment, Harwell (England)). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Preparation of stable isotope and radioisotope targets by cold rolling and vacuum evaporation is described. These techniques are supplemented by die compaction, electroplating, and paint-on deposition. (J.R.D.)

59636 (CONF-711002–, pp 101-7) PREPARATION OF ISOTOPIC ACCELERATOR TARGETS. Heagney, J. M. (Washington Univ., Seattle). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Fabrication of targets using small quantities of isotopic material is discussed. Fabrication methods involving rolling, electrodeposition, and vacuum evaporation are described. Storage of methods for foils are also described. (J.R.D.)

59637 (CONF-711002–, pp 109-15) PREPARATION OF ISOTOPE TARGETS BY HEAVY-ION SPUTTERING. Sletten, Geirr; Knudsen, Per (Copenhagen Univ. (Denmark)). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Information and data are presented which show that heavy ion sputtering is an excellent technique for producing isotope targets of refractory metals and oxides from the point of view of isotope economy. The quality of sputtered targets with respect to uniformity and purity is good, and, in many cases, no alternative method exists for producing such target materials. (auth)

59638 (CONF-711002–, pp 116-21) PREPARATION OF TARGETS OF ALPHA-RADIOACTIVE ISOTOPES. Sletten, Geirr (Copenhagen Univ. (Denmark)). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

A vacuum evaporation technique for deposition of radiation target materials on selected metallic substrates is described. Optimum substrate-target combinations are discussed for Ra, U, Np, Am, La, and Pu targets. (J.R.D.)

59639 (CONF-711002–, pp 134-43) SPECIAL TECHNIQUES IN TARGET PREPARATION FOR CHALK RIVER NUCLEAR PHYSICS EXPERIMENTS. Gallant, J. L. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Techniques for preparation of very thin films are described along with methods of preparing flat surface foils. Methods are also described for preparation of ^{1}H, ^{2}H, and ^{3}H targets, fabrication of ^{14}C targets, and preparation of films used to determine the energy loss of heavy ions in solids. (J.R.D.)

59640 (CONF-711002–, pp 272-82) ASSAY OF SAMPLES FOR NUCLEAR MEASUREMENTS BY PHYSICAL METHODS. Moret, H.; Verheyen, F. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Of the physical methods of assay, vacuum weighing appears to be the best method to obtain accurate definition of the total mass of foils and deposited layers. However, chemical and isotopic analysis is needed to arrive at the quantity to be measured, i.e., the number of atoms of a specific isotope. Vacuum weighing is a

XUM

complicated operation needing accurate definition of the environment (ultrahigh vacuum) and careful study of all parameters which might affect the mass measurements or have an influence on their interpretation. Other methods described have respective inherent advantages, such as selectivity (x-ray fluorescence), point-to-point measurement (alpha-absorption, electron-probe, densitometry, interferometry, stylus), speed of operation (in particular stylus), and inexpensive equipment (alpha-absorption, interferometry, weighing in air). They all require, however, calibration or reference samples. Interferometry and stylus techniques need calibration since the density of the sample must be measured. Reference samples can be provided through standardization by chemical methods, counting, and evaporation and weighing in vacuum. Major effort is required to arrive at a satisfactory coverage for all samples considering variations in thickness and in the variety of materials of layers and backings required by researchers. For the methods discussed, however, such a study would open the way to superior sample definition. (auth)

59641 (LA-4753) MEDIUM-ENERGY PHYSICS PROGRAM. Quarterly Status Report for the Period Ending July 31, 1971. Dunn, Eleanor D. (comp.) (Los Alamos Scientific Lab., N. Mex.). Sep 1971. Contract W-7405-eng-36. 62p. Dep. NTIS.

The summary of research covers the accelerator structures, the RF power systems, accelerator control and instrumentation, accelerator physics, the experimental area, LAMPF scheduling and facility construction, physics research, and LAMPF users group. A list of research proposals is included. (J.F.P.)

59642 (LA-DC-12795) NUCLEAR CHEMISTRY PROGRAM FOR THE LOS ALAMOS MESON PHYSICS FACILITY. Dropesky, B. J. (Los Alamos Scientific Lab., N. Mex.). [1971]. 4p. (CONF-710911-4). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

In the program outlined the high-intensity pion beams will be used for nuclear chemical investigations of the mechanisms of reactions with complex nuclei, including spallation, fission, fragmentation, and charge-exchange. Also studied will be the interactions induced in complex nuclei by the capture of negative muons. The nuclear spectroscopy of new or little-studied nuclear species produced by proton spallation will be studied to increase understanding of the nuclear structure and mass surface. (J.F.P.)

59643 (ORNL-TM-3523) FAILURE OF ALUMINUM TUBING IN THE ORNL 86-INCH CYCLOTRON. King, R. T.; Long, E. L. Jr. Skidmore, M. R.; Beaver, J. E. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 17p. Dep. NTIS.

A metallographic study of an internally pressurized 1100 aluminum water coolant tube of the ORNL 86-in. cyclotron beam extraction system which fails periodically as a result of 22.5 MeV proton bombardment is described. The ion bombardment creates displacement damage and deposits hydrogen gas which forms bubbles in the tube wall. Accelerated erosion of the tube and failure occur in the region where the bubbles are observed. (auth)

59644 (RHEL/R-222) INTERNATIONAL SURVEY OF THE OPERATION OF DC ELECTROSTATIC PARTICLE SEPARATORS. Davies, K. H. (Rutherford High Energy Lab., Chilton (England)). Jan 1971. 19p. Dep. NTIS (U. S. Sales Only). UK 25p.

During a recent tour of accelerator laboratories in the USA the opportunity was taken to find out the operating techniques in use at Brookhaven, Argonne, and Berkeley, to compare them with those in use at the Rutherford Laboratory. A visit was also made to CERN to establish the techniques in use there. A questionnaire was prepared and this was completed by discussion at each of the laboratories visited. (auth)

59645 (SLAC-Trans-134) BEAM EXPANSION AND INCREASE OF THE AMMAN-RITSON LUMINOSITY LIMIT BY COUPLING AND UNDAMPING OF BETATRON OSCILLATIONS. Ripken, G. (Deutsches Elektronen-Synchrotron, Hamburg (West Germany)). Translated for Stanford Linear Accelerator Center, Calif., from report DESY-H-5-70/7. 57p. Dep. NTIS.

A method for expanding the beam cross section in a storage ring by coupling the betatron oscillations and damping the synchrotron oscillations is described. (auth)

59646 ARRANGEMENT FOR INVESTIGATION OF DIRECT NUCLEAR REACTIONS PRODUCED BY ELECTRONS AND GAMMA QUANTA WITH ENERGIES UP TO 300 MeV. Egiyan, K. Sh.; Bochek, G. L.; Grishaev, I. A.; (and others) (Inst. of Physics, Erevan). Izv. Akad. Nauk Arm. SSR, Ser. Fiz.; 5: 381-91(1970). (In Russian).

The description and experimental characteristics of the arrangement designed for investigation of direct nuclear reactions produced by electrons and γ quanta with energies up to 300 MeV on the 300-MeV kharkov linear accelerator are given. The peculiarities of the arrangement due to the pulsed operation of the electron linear accelerator are pointed out. (auth)

59647 MODIFIED SCALAR POTENTIAL IN BOUNDARY-VALUE PROBLEMS IN MAGNETOSTATICS. Doinikov, N. I.; Simakov, A. S. Sov. Phys.-Tech. Phys. (Engl. Transl.); 16: No. 4, 658-60(Oct 1971).

Translated from Zh. Tekh. Fiz.; 41: No. 4, 835-8(Apr 1971).

A modified scalar potential is constructed in three-dimensional form for isotopic media and it is used to formulate a number of interesting practical boundary value problems; methods of solution are indicated. (M.O.W.)

59648 TRANSFORMER FOR ACCELERATOR TUBE. Lisin, V. N.; Kiselev, O. A.; Shtuchkin, N. N. Russian Patent 270,914. 12 May 1970. Filed 2 Jun 1969. (In Russian).

The transformer is composed of a sectional magnetic channel in a tank of oil. Toroidal cores are formed each having a winding and an accelerator tube with a cathode and a grounded anode. Schematic diagrams are included. (J.F.P.)

59649 DEVICE FOR CONNECTING THE GENERATOR TUBE WITH THE RESONANCE SYSTEM OF A SYNCHROCYCLOTRON. Abrosimov, N. K.; Dmitriev, S. P.; Kulikov, A. V.; (and others) (to Physical-Technical Inst.). Russian Patent 270,131. 8 May 1970. Filed 28 May 1969. (In Russian).

The device described is composed of waveguide feeders for which means are given to increase the reliability of excitation in the resonance system and to dampen the transverse oscillations on the electrode. A diagram is shown. (J.F.P.)

59650 PARTICLE ACCELERATORS. Bird, J. R. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). Aust. Phys.; 133-7(Sep 1971).

A brief review of developments in the field of particle accelerators is presented, primarily with respect to funding, techniques and applications. The trend of pulsed neutron beam use in nuclear energy developments is summarized. It is noted that greater accuracy in parameters for fast reactor problems is required. Online computers in conjunction with the new generation accelerators are producing improved data in the neutron energy region, and effective international methods for distribution of cross-section data have been augmented. (Australia)

59651 STUDY OF A SYSTEM OF FORMATION OF THE BRAKING RADIATION BEAM OF A MEDICAL BETATRON OF B5M-25 TYPE. Kozlov, A. P.; Bazhanov, E. B.; Dimov, V. I.; Ershov, A. T.; Terpugov, V. G. (Research Inst. of Oncology, Leningrad). Vop. Onkol.; 17: No. 6, 48-53(1971). (In Russian).

The basic characteristics of a system for formation of the bremsstrahlung beam of a new medical betatron of the B5M-25 type with a nominal energy of 25 MeV are studied. It is demonstrated that a dosimeter DIM-60 could be practically used as a monitor of the high-energy bremsstrahlung. (auth)

59652 STOCHASTICITY IN MANY DIMENSIONAL NONLINEAR OSCILLATING SYSTEMS. Chirikov, B.V. (Inst. of Nuclear Physics, Novosibirsk, USSR); Keil, E.; Sessler, A. M. J. Statist. Phys.; 3: No. 3, 307-21(Autumn 1971).

Mathematical models which replicate the essential elements determining the dynamical behavior of particle motion in a storage ring are studied. Qualitative analytic estimates of the stochasticity limit of one- and many-dimensional nonlinear oscillating systems are derived using the overlapping of first-order resonances as a criterion for stochasticity. Computational results obtained with several very simple transformations are compared with the analytic estimates. Numerical studies significantly below the stochasticity limit of a many-dimensional nonlinear system reveal an example of a very slow instability, the first, to be the best of our knowledge. (auth)

59653 ENERGY CONTROL AND MONITORING SYSTEM FOR A TANDEM VAN DE GRAAFF. Brookshier, W. K.; Wallace, J. R.; Langsdorf, A. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 2, 101-9 (Apr 1971).

A system that makes use of the conventional means of controlling the terminal voltage of an electrostatic accelerator (FN Tandem) by shunt current from corona points is described. The voltage is sensed with a beam-deflector system or a generating-voltmeter signal, or a combination of the two methods. The electronic design

XUM

differs considerably from previous designs, the emphasis being placed upon functional simplicity, reliability, and ease of operation. The performance results are indicative of the use of SF_6 as a filling gas. (auth)

59654 CAMAC SYSTEMS AT LAMPF. Machen, D. R.; Biswell, L. R. (Los Alamos Scientific Lab., N. Mex.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 2, 63-4(Apr 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The computer-based data system to be installed at LAMPF and the use of CAMAC for interfacing are briefly described. (R.W.R.)

59655 NAL CAMAC ACCELERATOR CONTROL. Klaisner, L. A. (National Accelerator Lab., Batavia, Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 2, 61-2 (Apr 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The control system for the National Accelerator Laboratory's Booster Synchrotron is compatible with the CAMAC standard; this use represents the first application of this standard to a large process control system. Parts of the system are installed and have operated successfully. (auth)

59656 PROPORTIONAL WIRE CHAMBER ELECTRONICS SYSTEM UTILIZING CAMAC. Bertolucci, B.; Carman, R.; Faust, J.; Horelick, D.; Pellegrin, J.-L. (Stanford Univ., Calif.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 2, 53-60(Apr 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A system of electronics to be used with a proportional-wire-chamber hodoscope is described. The system, which uses CAMAC packaging and data-handling philosophy, consists of octo (8-channel) wire signal amplifiers, octo 4-bit per wire latch modules, gate fanout modules, crate controllers, and two types of data processor-interface units to the SDS 9300 computer. System operation is explained, and each component is described. (auth)

59657 ACTIVATION OF THE CONCRETE SHIELD OF THE OIYaI SYNCHROCYCLOTRON BY SCATTERED RADIATION. Zaitsev, L. N.; Kimel, L. R.; Sidorin, V. P. This paper was summarized in At. Energ. (USSR); 29: No. 5, 368-9(Nov 1970) as paper No. 445/5853. (In Russian).

Full copy of this paper is held by DTIE.

Analysis shows that the greatest hazard from radioactivation of the concrete shielding at the JINR synchrocyclotron is presented by the formation of the radioactive ^{24}Na (half-life, 15 h) and ^{56}Mn (half-life, 2.6 h) nuclei, which are generated as a result of neutron capture by the ^{23}Na and ^{55}Mn nuclei in concrete. Specimens of the concrete used for experimental investigations were irradiated for about 130 h in the "hard" spectrum of scattered radiation of the JINR synchrocyclotron. The induced activity spectra were measured by means of a γ-spectrometer with a 38 × 30 mm NaI(Tl) crystal. Two total-absorption peaks with energies of 1.37 and 2.75 MeV from ^{24}Na, and a 0.845 MeV peak from ^{56}Mn can be separated in these spectra. In order to determine the effect of boron-containing additions on the degree of shield activation, the dose rate was measured at the surface of blocks made of ordinary and boron-containing concrete (boron content, 15 kg/m^3). The measurements were performed by means of a portable scintillation γ-radiometer. (W.H.K.)

59658 YALE–NAL CAMAC SYSTEM. Dhawan, Satish (Yale Univ., New Haven). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 2, 65-7(Apr 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A data acquisition system for high-energy physics experiments is described; it is in accordance with the specifications of EUR 4100e and EUR 4600e. This is a multicrate system using branch highway and type A crate controllers. Most of the components are commercially available. (auth)

59659 CROSSED-FIELD ELECTRON INJECTOR FOR AN ELECTRON ACCELERATOR. Hogg, Harold A. (to United States Atomic Energy Commission). U. S. Patent 3,593,058. 13 Jul 1971. Filed 17 Mar 1970.

An electron injector wherein a stream of electrons is emitted from a gridded thermionic emitter into a region between two electrodes is described. An electric field alternating at a microwave frequency is applied between the electrodes, and the electron stream leaves the thermionic emitter parallel to this field. A steady magnetic field is applied across the region in a direction that is transverse to the electric field. The combined effects of the microwave electric field and the steady magnetic field on the electron stream are such that the stream becomes focused into a bunch that follows a quasi-cycloidal orbit in which the electrons strike a secondary emitter from which an amplified bunch of electrons is emitted to follow a similar orbit, to be further focused into a bunch and to strike another secondary emitter. This process is repeated until the desired intensity is achieved whereupon the final bunch of electrons is injected into an electron accelerator during the final orbit. (auth)

59660 VALVE AND PULSE-WIDTH-MODULATED DATA LINK USING INFRARED LIGHT TO CONTROL AND MONITOR POWER SUPPLY FOR MODULATOR FOR HIGH-ENERGY LINEAR ACCELERATOR. Witkover, Richard L. (to United States Atomic Energy Commission). U. S. Patent 3,590,250. 29 Jun 1971. Filed 6 Jun 1969.

A method and apparatus for transmitting information across a high-voltage interface by light pulse-width modulation for remotely monitoring, controlling and/or energizing high-voltage apparatus are described. (auth)

59661 PERFORMANCE OF CLINICAL LINEAR ACCELERATOR. Fujita, Hyota; Suzuki, Toshimitsu; Uetomi, Isamu; Machida, Kenji; Kanzawa, Hiroshi (Mitsubishi Electric Corp., Amagasaki, Japan). Mitsubishi Denki Giho: 45: No. 5, 660-72(May 1971). (In Japanese).

The ML-15 M II Linac put on the market recently has an electron beam energy of 15 MeV and is capable of being used for electron beam treatment as well as X-ray treatment, thus the scope of application is being enlarged a great deal. A magnetron is usually used for a high frequency source, but the new apparatus is provided with a Mitsubishi klystron PV-2012 W so as to facilitate multi-step changeover of energy. In addition, the output dose has been stabilized. (auth) (Japan)

59662 NEW POWER SUPPLY EQUIPMENT IN THE IMPROVEMENT PROGRAM FOR THE 28-GeV CERN PROTON SYNCHROTRON AT GENEVA. Stirba, Alois; Vau, Guenter (Siemens Aktiengesellschaft, Erlangen, Ger.). Siemens Rev.: 38: No. 6, 243-7(Jun 1971).

In the course of a recent extension program a number of new power supplies became necessary for the 28-GeV proton synchrotron which has been in operation since 1959. A brief description of the mode of operation of the proton synchrotron is followed by an account of the many severe requirements to be met by such power supplies, taking as an example the pulse power supply for the ring magnets. (auth)

59663 NEW POWER SUPPLY SYSTEM FOR THE MAIN RING MAGNETS OF THE 28-GeV CERN PROTON SYNCHROTRON AT GENEVA. Vau, Guenter (Siemens Aktiengesellschaft, Erlangen, Ger.). Siemens Rev.: 38: No. 6, 247-53(Jun 1971).

The technical solution chosen for the pulsed power supply to the ring magnets of the 28-GeV proton synchrotron which has a peak power of 95 MVA is described. The mode of operation and the main technical specifications are described, emphasis being laid on the developments and special technical designs involved. An account is also given of the experience gained in two years of pulse duty with more than 23 million pulses. (auth)

59664 ACCELERATOR INSTRUMENTATION AND CONTROL SYSTEM USING CAMAC. Klaisner, L. A.; Stephenson, J. M. Jr. (National Accelerator Lab., Batavia, Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 299-301(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The 8-GeV Booster Synchrotron, presently under construction at the National Accelerator Laboratory, is controlled by a computer-based system, which has been implemented using the CAMAC Standard for data handling systems. The design philosophy and the hardware for the control system are described. (auth)

59665 PROGRAMMABLE DATA ACQUISITION INTERFACE. Hamilton, C. C.; Hiebert, J. C.; Rogers, R. C. (Texas A and M Univ., College Station). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 302-6(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

An on-line system for data acquisition and analysis was recently placed in operation to support the research programs at the Texas A&M University Variable Energy Cyclotron facility. The system consists of an IBM 7094 computer and a programmable experiment–computer interface unit. The interface is a logical extension of the computer system, which ensures hardware and software compatibility. (auth)

59666 USE OF A TIME-SHARED, ON-LINE COMPUTER TO SUPPORT BASIC AND APPLIED RADIATION RESEARCH. Powell, J. E.; Phillips, A. R.; Kefauver, H. L. (Sandia Labs., Albuquerque, N. Mex.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 307-11(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The Sandia Data Acquisition and Display System (DADS) is being used in a time-shared, real-time mode to support basic and applied radiation research. Five remote terminals provide computer access for experiments such as electron beam diagnostics, fast neutron spectrum measurements, static and dynamic reactor fuels testing, and neutron-damage studies on solid-state electronic components. The system has substantially increased radiation facility and experimenter efficiency. A description of the DADS is given, and its utility is demonstrated by discussing some of the experiments that are currently interfaced to the system. (auth)

59667 USE OF ARRAYS SMALLER THAN IMPLIED BY THE RANGE OF DESCRIPTORS FOR MULTIPARAMETER PULSE HEIGHT ANALYSIS. Hensley, D. C.; Goodman, C. D. (Oak Ridge National Lab., Tenn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 312-16(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A program for use with multiparameter pulse height analysis is described. The main purpose of the program is to permit reasonably rapid accumulation of data into arrays that are much smaller than implied by the range of descriptors. In addition, the method readily permits the use of descriptors that exceed the bit capacity of the computer word. Any grouping of zero and nonzero channels, as is observed in most real spectra, is especially exploited. In many cases, the data can be retained in a packed array in core memory until the actual number of nonzero channels becomes almost as large as the allotted core-memory space, at which time the array is transferred to another space in core (where it will be transferred onto disc as a background operation), the core array is reinitialized, and the data acquisition is continued. With this procedure, multichannel arrays as large as the available disc memory can be stored on disc without the data acquisition suffering from the very slow random access time of the disc. Methods of data handling and the resulting effective counting rates are discussed. (auth)

59668 SYSTEM FOR MULTIPARAMETER PULSE HEIGHT ANALYSIS WITH REPEATED USE OF A SINGLE, FAST ADC. Goodman, C. D. (Oak Ridge National Lab., Tenn.); Ludemann, C. A.; Hensley, D. C.; Kurz, R.; Anderson, E. W. IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 323-6 (Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

In many nuclear physics experiments an event consists of correlated output pulses from several radiation detectors. Each separate output pulse is called a parameter; multiparameter experiments are considered. A system in which a single ADC is interfaced to a general purpose computer is discussed. Multiparameter experiments are handled by storing the several pulses in analog stretchers and using the ADC repeatedly to digitize the several pulses in sequence. This approach is made practical by the availability of a very fast ADC. The system includes features that give it unusual flexibility for handling complicated time relationships among the pulses. The use of one rather than several ADC's makes the system simpler, more compact, and less expensive than multiple-ADC systems. Provisions are included for evaluating counting loss due to dead time of the system for random or nonrandom event distributions. The data transfer logic incorporates the facility for including digital information from devices in addition to the ADC in each event datum. (auth)

59669 (CEA-R-4172) DEVELOPMENT OF ^{242}Cm–Be AND ^{238}Pu–Be NEUTRON SOURCES. Brachet, Guy; Vasseur, Claude (Commissariat a l'Energie Atomique, Bruyeres-le-Chatel (France). Centre d'Etudes). Apr 1971. 11p. (In French). Dep. NTIS (U. S. Sales Only).

The preparation of ^{242}Cm–Be and ^{238}Pu–Be neutron sources is described. (R.W.R.)

59670 (CONF-711002–, pp 166-80) TRITIUM-CONTAINING TARGETS FOR HIGH-YIELD NEUTRON GENERATORS. O'Donnell, F. R.; Adair, H. L. (Oak Ridge National Lab., Tenn.). Oct 1971.

From third international symposium on research materials for nuclear measurements; Gatlinburg, Tenn. (5 Oct 1971).

Large-area erbium tritide targets have been fabricated and used for producing intense neutron fields. Neutron yields were generally in the expected range with most targets producing maximum yields to $>10^{13}$ n/sec. Target life was less than desired, but long enough for the user to perform the desired experiments. One titanium tritide target was prepared and found superior to all the erbium tritide targets tested. Fabrication parameters and equipment design are described, but no correlation was found between fabrication parameters and the operational performance of the targets. Tritium sorption was best started at temperatures in excess of 400°C and pressures in excess of 300 torr. Once the problem of substrate surface contamination was solved, successful targets were routinely fabricated. Radiation levels in excess of 10 R/hr at the target surface were used as an indication of acceptable target preparation. Small, laboratory scale targets fabricated simultaneously with the large HENRE targets were used to give an indication of the large target's performance. (auth)

59671 (IFA-DNBR-3) PROGRAM FOR THE COMPUTING OF THE SCATTERING CROSS-SECTIONS IN HEAVY WATER. Gheorghe, D.; Rapeanu, S.; Stefan, H. (Institutul de Fizica Atomica, Bucharest (Romania)). 1971. 21p. Dep. NTIS (U. S. Sales Only).

The RIVA code is given for the double differential scattering cross sections for neutron scattering by heavy water, the scattering matrix, and the integrated cross section for various temperatures. (J.F.P.)

59672 (KFKI-71-45) CORRELATION TECHNIQUE AT PULSED NEUTRON SOURCES. Kroo, N.; Pellionisz, P. (Magyar Tudomanyos Akademia Kozponti Fizikai Kutato Intezete, Budapest). [1970]. 14p. Dep. NTIS (U. S. Sales Only).

It is shown that the correlation technique can be applied at pulsed reactors so that white ingoing neutron beams can be used and the whole two-dimensional scattering spectrum can be evaluated by data processing by correlation. The principles of the method and a simple error analysis are given. (auth)

59673 (LFEN-NI.-51-a) INTRODUCTION TO THE STUDY OF THE PROBLEM OF SCATTERING OF SLOW NEUTRONS BY CONDENSED MATTER. Carvalho, Frederico Gama (Junta de Energia Nuclear, Sacavem (Portugal). Laboratorio de Fisica e Engenharia Nucleares). 1969. 29p. (In Portuguese). Dep. NTIS (U. S. Sales Only).

The general equations of transport and scattering are presented. The equations for scattering by a free nucleon and the integral equation for scattering by a particle system are derived. The effective cross section $\sigma(E_0 \to E, \vec{k}_0 \to \vec{k})$ is considered. (J.S.R.)

59674 SPECTRA OF FAST NEUTRONS FROM WATER PULSED WITH 14-MeV NEUTRONS. Stelts, Marion L.; Anderson, John D.; Hansen, Luisa F.; Plechaty, Ernest F.; Wong, Calvin (Univ. of California, Livermore). Nucl. Sci. Eng.; 46: No. 1, 53-60(Oct 1971).

The validity of the neutron Monte Carlo transport code, SORS, was established for the transport of fast neutrons through water by comparing the measured time spectra of neutrons from spherical water targets of 1.0 and 1.8 mean-free-paths radii with the calculations. The energy degradation and spatial spreading of a beam of 14-MeV neutrons through a thickness of water comparable to the thickness of a human body were calculated for use in the design of experiments to treat cancer tumors with 14-MeV neutron beams. For use in shielding applications, further calculations have also been made of the transport of neutrons from an isotropic source of 14-MeV neutrons located at the center of spherical water shields having radii from 0.5 to 7.0 mfp. (auth)

59675 DISCRETE SN NUMERICAL METHOD IN NEUTRON TRANSPORT THEORY. Pavelescu, M. (Inst. of Atomic Physics, Bucharest). Stud. Cercet. Fiz.; 23: No. 3, 327-51(1971). (In Rumanian).

The multigroup approach to the Boltzmann Equation is used for solving the neutron transport problem: difference equations and the discrete SN method are presented. The discrete SN (DSN) equations are then studied: integration on the space variable, fundamental assumptions in the DSN approximation, and comparison between DSNG and SNG are included. The solution of the difference equations is then taken up. After the boundary conditions and an outline of the numerical procedure are given, inner iteration, source calculation, and outer iteration are discussed. (R.W.R.)

59676 INSTALLATION OF THE NEUTRON-GENERATOR NA-2 IN THE NUCLEAR RESEARCH INSTITUTE OF CZECHOSLOVAK ACADEMY OF SCIENCES. Tomaskova, Lenka; Hendlinger, Evzen (Radiologicka Dozimetrie UJV CSAV, Prague). Radioisotopy; 11: No. 5, 787-93(1970). (In Czech).

In the Nuclear Research Institute of Czechoslovak Academy of Sciences the installation of the Hungarian 14-MeV neutron-generator was accomplished. The main characteristics of the generator, shielding, and possibilities of its application are described. (auth)

59677 USE OF VARIATIONAL VARIABLE BOUNDARY FUNCTIONALS FOR CONSTRUCTING APPROXIMATION METHODS FOR NEUTRON TRANSPORT THEORY. Slesarev, I. S.; Sirotkin, A. M. Zh. Vychisl. Mat. i Mat. Fiz.; 11: No. 2, 529-34(Mar-Apr 1971). (In Russian).

The variational approach to the construction of a finite-difference solution to the neutron transport equation is investigated. This was aided by the formulation of a series of algorithms using the simplest class of trial functions. The variational formulation of the problem furnishes a "criterion of optimization" of the finite-difference network for the purpose of refining the evaluation of the desired neutron field functional. Numerical examples of a solution to the neutron physics problem are worked out. An equation with the essential finite-difference methods is presented. (tr-auth)

59678 EFFECT OF INTERMOLECULAR FORCES ON THE NEUTRON SCATTERING SPECTRUM OF SIMPLE FLUIDS. Cohen, Herschel. Tallahassee; Florida State Univ. (1970). 112p. University Microfilms Order No. 71-18,355.

Thesis.

The theory of thermal neutron scattering is concisely reviewed using both the Born approximation and transition probability to obtain the scattering equations. It is demonstrated that the scattering spectrum of simple fluids is quite generally derived using a linear response formulation of the scattering problem. The unity and enhancement of physical insight gained by such an approach is discussed. The scattering spectrum is identified as the translational fluctuations of the target system at equilibrium. The formal result for the scattering spectrum is investigated for the cases of ideal and real gases at moderate densities to obtain forms amenable to calculation valid in the classical limit. These forms were considered using both unsymmetrized and symmetrized bases and were shown to reduce to the unsymmetrized result for temperatures and particle masses of interest. Further research based on the technique employed or extensions thereof are discussed. (Diss. Abstr. Int., B)

59679 PROPAGATION OF SOUND WAVES AND NEUTRON WAVES IN BOUNDED PLANE GEOMETRY. Cassell, J. S.; Williams, M. M. R. (London Univ.). J. Quant. Spectrosc. Radiative Transfer; 11: No. 6, 987-1006(Jun 1971).

From Symposium on the application of transport theory; Oxford, England (1 Sep 1970).

Integral equations are formulated for neutron-wave propagation parallel to the faces of a slab and sound wave propagation in a gas confined between parallel plates. The main physical differences arise from the different conditions satisfied by the particle distribution functions at the boundaries of the systems, i.e., neutrons can pass through a boundary unhindered while gas atoms are reflected from it. By specializing to simple diffuse reflection for gas atoms and using very crude separable kernel scattering models, it was possible to obtain by the methods of generalized analytic functions approximate expressions for the discrete eigenvalues, i.e., the propagating modes. These eigenvalues are shown to depend upon the frequency of the wave and the transverse dimensions of the system. However, because of the boundary conditions, results for neutrons and gas atoms show some interesting differences. (auth)

59680 METHOD FOR COMBINING THE LOWER- AND HIGHER-ORDER DISCRETE-ORDINATE APPROXIMATION TO THE TRANSPORT EQUATION. Takahashi, Hiroshi (Brookhaven National Lab., Upton, N. Y.). J. Quant. Spectrosc. Radiative Transfer; 11: No. 6, 963-72(Jun 1971).

From Symposium on the application of transport theory; Oxford, England (1 Sep 1970).

A method for combining lower order, S_n, and higher order, S_N, discrete ordinate approximations that apply to the regions in which the fluxes are weakly anisotropic and strongly anisotropic is studied. These are combined by calculating the anisotropic flux in one region from the fluxes in the other region. This is done for positive and negative directional cosine using interpolation and extrapolation methods. A sample calculation using the one-dimensional UO_2-H_2O core and control slab lattice is performed. The results indicate that this method works well provided the interpolated and extrapolated fluxes are accurate. The extension of this method to multi-dimensional geometry is also discussed and it is shown that there is no difficulty in principle. (auth) (UK)

59681 DIFFRACTION POLARIZATION OF NEUTRONS IN A POLARIZED CRYSTAL. Korennaya, L. N. (Belorussian State Univ., Minsk). Sov. Phys.-Solid State (Engl. Transl.); 13: No. 3, 727-30(Sep 1971).

Translated from Fiz. Tverd. Tela; 13: No. 3, 880-4(Mar 1971).

The propagation of a coherent neutron wave through a magnetized specimen with polarized nuclei is examined. It turns out that the refractive index of the neutrons in the magnetized target is determined by the mean magnetic field produced by the electrons in the target. The diffraction polarization of neutrons is examined. It is shown that the wavelength change of the radiation in the medium enables polarization of an initially unpolarized neutron beam by purely magnetic scattering. (auth)

59682 SOME ANALYTICAL METHODS IN NEUTRON TRANSPORT THEORY. Corngold, Noel (California Inst. of Tech., Pasadena). J. Quant. Spectrosc. Radiative Transfer; 11: No. 6, 851-68(Jun 1971).

From Symposium on the application of transport theory; Oxford, England (1 Sep 1970).

Some distinctive features of neutron transport theory are discussed. The linearized transport equation is similar to those met in theories of gas dynamics and radiative transfer. The analytical techniques that have been most successful in analyzing the neutron equation are described. Among these are the method of separated solutions (in space and angle coordinates), and the construction of velocity-dependent collision models. (auth) (UK)

59683 FUNDAMENTAL EIGENVALUES OF THE LINEAR TRANSPORT EQUATION. Mika, Janusz (Inst. of Nuclear Research, Otwock, Poland). J. Quant. Spectrosc. Radiative Transfer; 11: No. 6, 879-91(Jun 1971).

From Symposium on the application of transport theory; Oxford, England (1 Sep 1970).

In neutronic applications of the linear transport theory, an important role is played by two parameters characterizing a given reactor system. The fundamental time constant α, which is an eigenvalue of the transport operator with the largest real part, and the constant γ which is the number with the largest absolute value such that if the fission neutron source in the transport equation is multiplied by $1/\gamma$ then the equation has a solution. It follows from the physical reasons that both α and γ should be real and the corresponding eigenfunctions nonnegative. This fact has also been confirmed theoretically in many important cases. An auxiliary eigenvalue problem for the neutron transport equation is considered leading to a convenient method of calculating the constants α and γ and the corresponding eigenfunctions. The properties of the fundamental solution to the auxiliary eigenvalue problem are shown to be such that the proposed calculational method is well convergent. (auth) (UK)

59684 NUMERICAL METHODS APPLIED TO PROBLEMS OF NEUTRON TRANSPORT. Askew, J. R. (Atomic Energy Establishment, Winfrith, Eng.). J. Quant. Spectrosc. Radiative Transfer; 11: No. 6, 905-19(Jun 1971).

From Symposium on the application of transport theory; Oxford, England (1 Sep 1970).

Numerical methods applied to problems of neutron transport are reviewed, with emphasis upon those less widely used in other fields. The treatment of the energy variable is discussed followed by collision probability, discrete ordinate and Monte Carlo methods. An attempt is made to identify possible improvements to existing approximations. (auth) (UK)

59685 TEMPERATURE DEPENDENCE OF NEUTRON INELASTIC SCATTERING FROM WATER. Esch, Louis James. Troy, N. Y.; Rensselaer Polytechnic Inst. (1971). 235p. University Microfilms Order No. 71-19,879.

Thesis.

The neutron inelastic scattering properties of water were measured at temperatures of 27 C, 170 C, and 270 C by using neutrons with incident energies ranging from 0.04 eV to 0.632 eV at scattering angles of 10, 14, 25, 40, 60, 90, 120, and 150 degrees. A pulsed source of partially thermalized neutrons was provided by the RPI Linear Electron Accelerator (LINAC), an electron-to-neutron converter, and a thin moderator. The LINAC was phased with a high-speed neutron chopper to select the desired neutron-energy from the moderator leakage spectrum. The incident and scattered neutron energies were determined by time-of-flight techniques, including multichannel analyzers and an on-line computer. The scattered neutron time-of-flight distribution was converted to the double differential scattering cross section, $d^2\sigma/dEd\Omega$, by using other measured integral values of angular distribution and total cross section for water as an internal normalization. The scattering law $S(\alpha,\beta)$ was also derived from the data. The experimental resolution function was measured. The conditions of experimental resolution thus determined, as well as the conditions of multiple scattering and absorption in the sample, were imposed on various theoretical models by means of a Monte Carlo computer program. The adjusted models were compared with data. Comparisons of these results with various theoretical models indicate that the best model is one developed here in which the water scattering system is considered as consisting of aggregates of icelike structures with temperature dependent sizes, diffusing with a temperature-dependent diffusion constant. The energy levels of the molecules bound in the clusters are represented by a multi-Gaussian frequency distribution that varies with temperature. The internal vibrations of the individual water molecules are represented by delta functions. (Diss. Abstr. Int., B)

59686 THERMAL NEUTRONS. DISTRIBUTION OF LIFETIMES. Goded, F. (Escuela Tecnica Superior de Ingenieros Industriales, Madrid). Nuovo Cim., 4B: No. 1, 73-87(11 Jul 1971).

To distinguish between neutrons of the same energy a convenient property to use should be their chronological age T measured from the moment the neutron enters into a given system. A method to derive the neutrons' density N(r,T) when dealing with the thermal group is presented. This method is later applied to the problem of a nonmultiplicative infinite homogeneous medium where there is a planar source of thermal neutrons of constant strength S neutrons/$cm^2 \cdot s$ at $x = 0$. The neutron density N(x,T) as well as the total density $n_\beta(T) = \int_0^\infty N(x,T)dx = (S/2v) \exp[-\Sigma_a vT]$ are found. Using a simple model it is proved that the total density $n_\beta(T)$ already obtained is the correct one. Later the solution N(x,T) is derived again using an entirely different approach which provides a better insight into the problem. The neutron density N(x,T) as well as the total density $n_\beta(T)$ for the specific cases of light and heavy water are briefly described and the corresponding curves plotted. Although actual reactors, i.e. multiplicative mediums of finite size are not dealt with, it is clear that these more interesting situations from the practical point of view could be treated by the same method in order to get their neutron densities, N(r,T) and $n_\beta(T)$. (auth)

59687 NOTE ON THE DETERMINATION OF NEUTRON DIFFUSION CONSTANTS. Aleksandrov, L.; Stanolov, A.; Khristov, V. This paper was summarized in At. Energ. (USSR); 29: No. 4, 283-4(Oct 1970) as paper No. 431/5651. (In Russian).

The difficulties associated with the determination of neutron diffusion constants by approximation methods are discussed. A method for the determination of the diffusion constants is proposed and applied to a hydrogen–aluminum lattice. A method for estimating the accuracy of the technique is suggested. (J.W.R.)

59688 REACTOR KINETIC CALIBRATION OF NEUTRON SOURCES AND ITS COMPARISON WITH BATH METHODS. Breitenhuber, L.; Kindl, P. (Institut fuer Kernphysik, Graz, Austria). Atomkernenergie; 18: No. 1, 20-4(Aug 1971).

The neutron source strength (RaD–Be, $5 \cdot 10^4$ n/s) has been obtained from the linear increase of the power of the ARGONAUT reactor utilizing a measurement of the adjoint flux ratio with uranium. The knowledge of resonance absorption and fast leakage (Littler) is circumvented by these concepts. A second reactor method is based on the power at which the source absorption balances the source neutrons. The results agree within 2% with data from a water and boric acid bath measurement. The flux distribution had been obtained by a small BF_3-counter whose absolute calibration was performed by fission track counting in mica and macrofol. A 6-group diffusion calculation is in good agreement with the observed spatial flux dependence. (auth)

59689 RIVA–BUTLER'S CODE. Rapeanu, S.; Gheorghe, D.; Stefan, H. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 5, 587-90(1971).

The Butler model for neutron scattering in heavy water is discussed. The basis of the RIVA code, which makes use of the Butler formalism in the Koppel–Young approximation, is described. The RIVA code calculates the double-differential scattering cross section, the total cross section, and the scattering matrix for thermal energies. (J.W.R.)

59690 STUDY OF FORMATION OF NEUTRON BEAMS FROM ISOTOPE NEUTRON SOURCES. Ponomarev, E. G.; Tyufyakov, N. D.; Shtan, A. S.; Yaskevich, V. S. Tr. Vses. Nauch.-Issled. Inst. Radiats. Tekh.; No. 5, 98-103(1970). (In Russian).

Experimental studies were performed on the influence of individual factors on beam characteristics. The measurements were performed in a water tank (1000 mm diameter, 1200 mm high) with two sources (^{238}Pu + Be and ^{252}Cf) having different fast-neutron energy spectra. In order to reduce the perturbations of the neutron flux, the source and collimator holders were made of organic glass, while the collimators themselves were made of paper soaked in paraffin or of steel pipe with a wall thickness of 0.1 mm. Neutron flux measurements were performed using indium foils as well as a scintillation counter with an LiI (Eu) single crystal enriched to 90% ^{6}Li (crystal diameter 30 mm, thickness 4.4 mm). (JPRS)

59691 (LA-DC-12958) DISPERSION RELATIONS FOR NUCLEAR STRUCTURE PHYSICS. Kisslinger, Leonard S. (Carnegie-Mellon Univ., Pittsburgh, Pa. Los Alamos Scientific Lab., N. Mex.). [1971]. 4p. (CONF-710911-5). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

Forward dispersion relations are used to explore the effects of the unphysical cuts and to investigate techniques for including them in neutron–deuteron elastic scattering. Fixed-energy dispersion relations are used in a preliminary survey of the same data to find the spectroscopic factors, making full use of the angular distribution. The purpose of this survey was to gain information about the effects of the cuts and the possibility of taking them into account by a conformal mapping procedure. (J.F.P.)

59692 (ORO-1316-99) NUCLEAR PHYSICS. Progress Report. Phillips, G. C. (Rice Univ., Houston, Tex.). [31 Mar 1971]. Contract AT(40-1)-1316. 13p. Dep. NTIS.

The research summarized covers neutron reactions, multiparticle break-up experiments and few-nucleon problems, polarization studies, and nuclear theory. A list of publications is included. (J.F.P.)

59693 (ORO-1316-100) NUCLEAR STRUCTURE AT INTERMEDIATE ENERGIES. Progress Report. Phillips, G. C. (Rice Univ., Houston, Tex.). [31 Mar 1971]. Contract AT(40-1)-1316. 17p. Dep. NTIS.

The summary of research on nuclear structure at intermediate energies includes proton and π^+ and π^- reactions and nuclear theory. A list of publications is included. (J.F.P.)

59694 CHARGE-EXCHANGE AND/OR KNOCKOUT SPECTATOR POLES IN THE REACTION D(^{3}He,tp)p. Warner, R. E. (Oberlin Coll., Ohio); Ball, G. C.; Davies, W. G.; Ferguson, A. J.; Forster, J. S. Phys. Rev. Lett.; 27: No. 14, 961-4(4 Oct 1971).

Intense spectator-proton peaks were observed in the reaction D(^{3}He,tp)p. Their shapes were well fitted by plane-wave Born-approximation calculations, assuming either knockout or ^{3}He–n quasi-elastic scattering accompanied by charge exchange to be the mechanism. Their intensities relative to the quasi-elastic peaks from D(^{3}He,^{3}Hep)n were correctly predicted by charge-exchange calculations, but only when an unrealistic mixture of exchange forces was used. All direct knockout calculations gave relative intensities at least ten times too small. (auth)

59695 POLARIZATION TRANSFER IN THE REACTION T(p,n)^{3}He AT 0° FOR E_p IN THE RANGE 3 TO 16 MeV. Donoghue, T. R.; Haight, R. C.; Lawrence, G. P.; (and others) (Los Alamos Scientific Lab., N. Mex.). Phys. Rev. Lett.; 27: No. 14, 947-9 (4 Oct 1971).

The polarization of the neutrons was measured for the reaction T(p,n)^{3}He at 0° for conditions where the incident beam is transversely polarized. The neutrons were observed to be highly polarized in the same direction as the incident proton spin, with values of the polarization transfer coefficient $K_y^y(0°)$ ranging from +0.39 to +0.83. R-matrix calculations using published ^{4}He level parameters of Werntz and Meyerhof [Nucl. Phys., A121: 38(1968)] do not agree well with these measurements. (auth)

59696 NEUTRON–PROTON AND NEUTRON–CARBON SCATTERING AMPLITUDES. Koester, L.; Nistler, W. (Technische Univ., Munich). Phys. Rev. Lett.; 27: No. 14, 956-8(4 Oct 1971).

Measurements of the n–p and n–C coherent atomic scattering amplitudes are described. The results, $\alpha_H = -3.740 \pm 0.003$ fm and $\alpha_C = 6.6648 \pm 0.003$ fm, were obtained by reflection measurements on seventeen various liquid mirrors with the neutron gravity refractometer, for which a more accurate method of evaluation is given. The mirrors were composed of the elements hydrogen, carbon, and chlorine. The atomic scattering amplitude of chlorine was found to be $\alpha_{Cl} = 9.580 \pm 0.002$ fm. The new α_H is of importance for describing the n–p system. (auth)

59697 IZOTOPY. III. BIBLIOGRAFIYA SPRAVOCHNYE TABLITSY. (Isotopes. III. Bibliographies and Reference Tables). Selinov, I. P. Moscow; Izdatel'stvo Nauka (1970). 256p.

Over 10,000 references are tabulated in this volume, pertaining to the stable and radioactive isotope data of the first two volumes (NSA 25: 20264), the references are grouped according to the year of publication from 1896 to 1969. Substantial appendices contain a chart of the Periodic System and Atomic Nuclei and tables of atomic masses (29 pp, to ^{257}Fm), the elementary particles, and fundamental physical constants. (K.S.W.)

59698 DISPERSIVE APPROACH TO THE ^{4}He(γ,d)d REACTION. Erdas, F. (Univ., Cagliari, Italy); Pompei, A.; Quarati, P.; Mosconi, B. Nucl. Phys.; A174: No. 3, 657-67(1971).

The dispersive approach is applied to the reaction ^{4}He(γ,d)d. The transition matrix element, which includes final-state interactions, is deduced as a solution of the Omnes–Muskhelishvili integral equation. The d–d phase shift used contains a resonance due to a supposed 2^+, T = 0 state in ^{4}He at about 33 MeV excitation energy. The cross section calculated reproduces quite well the experimental results in the interval 0 to 10 MeV relative energy of the final deuterons; this result confirms the existence of the supposed state in ^{4}He. (auth)

59699 COINCIDENCE STUDY OF THE REACTION ^{2}H(d,dp)n. Corey, B. E. (Oberlin Coll., Ohio); Warner, R. E.; Bercaw, R. W. Nucl. Phys.; A174: No. 3, 468-84(1971).

Absolute coincidence cross sections were measured for the reaction ^{2}H(d,dp)n at E_d = 20.7 MeV. Strong peaks were observed centered at the minimum neutron laboratory energies. Their shapes were well fitted by PWBA calculations using both zero- and finite-range transition potentials, and by the PWBA modified by including the final p–n interaction. These calculations suggested the importance of both the simple spectator process and more complex mechanisms. DWBA calculations gave poorer fits. No conclusive evidence for unbound ^{3}He levels was obtained. (auth)

59700 VECTOR AND TENSOR ANALYSING POWERS OF THE D(d,p)T AND D(d,n)^{3}He REACTIONS AT 10.0 AND 11.5 MeV. Grueebler, W.; Koenig, V.; White, R. E.; (and others) (Eidgenoessische Technische Hochschule, Zurich). Phys. Lett.; 36B: No. 4, 337-8(20 Sep 1971).

The analyzing powers iT_{11}, T_{20}, T_{21}, T_{22} of the D(d,n)^{3}He reaction between 90° and 160° c.m. are compared with those of the D(d,p)T reaction at 10.0 and 11.5 MeV. Differences are observed for T_{20}, but no differences outside the experimental error exist for iT_{11}, T_{21} or T_{22}. (auth)

59701 CHARGE ASYMMETRIC POTENTIALS AND THE THREE NUCLEON SYSTEM. Okamoto, K.; Pask, C. (Univ. of New South Wales, Kensington, Australia). Phys. Lett.; 36B: No. 4, 317-20(20 Sep 1971).

The effects of charge asymmetric potentials, derived using meson mixings and photon-pion exchange, on the binding energy difference of ^{3}H and ^{3}He and on the n–n and p–p scattering lengths are investigated. (auth)

59702 EFFECTS OF THE NEUTRON PICKUP PROCESS ON ^{3}He(p,pd)p QUASI-FREE SCATTERING. Epstein, M. B.

XUM

(California State Coll., Los Angeles); Slaus, I.; Shannon, D.; (and others). Phys. Lett.; 36B: No. 4, 305-6(20 Sep 1971).

Anomalies in the QFS enhancement in the ^{3}He(p,pd)p reaction have been observed. The effects of the coherent addition of the ^{3}He(p,d)pp $l = 0$ neutron pickup mechanism to the QFS amplitude have been investigated and this calculation qualitatively reproduces the basic features of the data. (auth)

59703 DOUBLE SCATTERING IN THE COMPTON EFFECT BY LIGHT NUCLEI. Alimov, A. D. (Inst. of Nuclear Physics, Tashkent). Dokl. Akad. Nauk Uzb. SSR; No. 9, 25-6(1970). (In Russian).

The double-scattering contribution was studied in Compton scattering of gamma quanta by a deuteron and a carbon nucleus. Calculation of Glauber's term may give information on the "shadow" effect of scattering on the angular dependence of the cross section, especially at high energies. Nonrelativistic approximations were made in order to avoid cumbersome computations associated with particle spin. The contribution from double scattering for the reaction $\gamma + {}^4\text{He} \rightarrow \gamma + {}^4\text{He}$ lay within the limits 18 to 22%. This suggests that the large number of nucleons increased the "shadowing" effect in scattering. (K.S.W.)

59704 COMPARISON OF THE BRUECKNER AND JASTROW METHODS IN ELECTRON SCATTERING. Ciofi Degli Atti, C. (Istituto Superiore di Sanita, Rome); Kallio, A. Phys. Lett.; 36B: No. 5, 433-6(4 Oct 1971).
NSA

It is shown that Brueckner and Jastrow correlations give very similar results for the charge form factor, density and radius of ^{4}He nucleus. (auth)

59705 T($\vec{\text{d}}$,n)^{4}He REACTION WITH POLARIZED DEUTERONS AT ENERGIES ABOVE THE 107-keV RESONANCE. Grunder, H.; Gleyvod, R.; Lietz, G.; (and others) (Univ., Basel). Helv. Phys. Acta; 44: No. 5, 662-78(15 Aug 1971). (In German).

A source of polarized deuterons, producing a 0.2 μA beam characterized by $P_{33} = .60$ and located on the high potential terminal of a 1-MeV cascade generator, is described. The analysing power of the T(d,n)^{4}He reaction for deuteron tensor and vector polarization at energies of 0.2, 0.6, 0.8 and 1 MeV has been measured. Fits to the data using Legendre polynomials were employed in conjunction with an analysis in terms of the reaction-matrix in order to obtain information about the elements contributing to the reaction. At energies above the 107 keV $\frac{3}{2}^+$-resonance the s-wave element with $J^\pi = \frac{1}{2}^+$ as well as p-wave elements become significant. (auth)

59706 COMPOUND NUCLEUS FORMATION IN REACTION ^{3}H(d,n)^{4}He FOR DEUTERONS OF LOW ENERGY. Sieminski, M.; Wilhelmi, Z.; Zupranski, P. (Inst. of Nuclear Research, Warsaw. Univ., Warsaw). Acta Phys. Pol.; B2: No. 4, 503-14(Jul-Aug 1971).

The results of measurements of the total and differential cross sections and of neutron polarization are analyzed in terms of a compound-nucleus contribution. The analysis performed seems to point to existence in ^{5}He of a positive-parity state $\frac{5}{2}^+$ at an excitation energy of about 20 MeV. (auth)

59707 BINDING ENERGY OF ^{3}H AND n–d DOUBLET SCATTERING LENGTH WITH A RANK-FOUR SEPARABLE POTENTIAL. Dabrowski, J.; Sworzecka, M. (Univ., Warsaw. International Centre for Theoretical Physics, Trieste, Italy). Acta Phys. Pol.; B2: No. 4, 395-422(Jul-Aug 1971).

Separable charge-independent nucleon–nucleon potentials containing an attraction and a hard-shell repulsion in the $^1S_0$ state and the Yamaguchi tensor interaction in the $^3S_1 + {}^3D_1$ state are used to calculate the ^{3}H ground-state energy, E_T, and the n–d doublet scattering length, ^2a. The potential that gives the best fit to the nucleon–nucleon data yields $E_T = -8.81$ MeV, $^2a = 0.58$ Fm. All results fall on the Phillips line. A derivation of the system of coupled integral equations for the bound state and for the scattering problem for an arbitrary rank potential acting in the $^1S_0$ and $^3S_1 + {}^3D_1$ states is also given. (auth)

Nuclear Properties and Reactions, $6 \leq A \leq 19$

59708 (BNWL-B-109) NEUTRON SPECTRA FROM (α,n) REACTIONS IN PLUTONIUM COMPOUNDS CALCULATED FROM HAUSER–FESHBACH REACTION THEORY. Lessor, D. L.; Schenter, R. E. (Battelle Pacific Northwest Labs., Richland, Wash.). Jun 1971. Contract AT(45-1)-1830. 39p. Dep. NTIS.

A sequence of computer programs was developed to calculate the yield and energy spectrum of neutrons from (α,n) reactions in materials having an alpha emitter in intimate contact with an (α,n) reacting nuclide. Alpha particle fluxes were calculated from emitter concentrations, alpha-decay lifetimes, and charged-particle stopping power of the material medium. Experimental (α,n) total cross sections were used where available, with branching ratios to final excitation states and angular distributions calculated from Hauser–Feshbach theory and optical-model penetrabilities. The neutron spectrum in PuO_2 and PuC with natural ^{17}O, ^{18}O, and ^{13}C isotopic composition was calculated for ^{238,239,240}Pu. (auth)

59709 (LA-DC-12389) NEW MEASUREMENTS OF (π^+,2p) REACTIONS ON LIGHT NUCLEI. Amato, J.; Burman, R. L.; Macek, R.; Oostens, J.; Shlaer, W. (Los Alamos Scientific Lab., N. Mex.); Arthur, E.; Sobottka, S. (Virginia Univ., Charlottesville); Lam, W.; Barnes, P. (Carnegie-Mellon Univ., Pittsburgh, Pa.); Fessenden, P.; (and others) (Oregon State Univ., Corvallis). [1971]. 4p. (CONF-710911-1). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna (USSR).

Preliminary results of measurements of the (π^+,2p) reaction on lithium-6, nitrogen-14 and oxygen-16 at 70 MeV are presented. The excitation spectra are shown for these reactions. (J.F.P.)

59710 (LA-DC-12781) CROSS SECTIONS FOR (π^+,p) REACTIONS ON ^{9}Be, ^{12}C, AND ^{16}O. Amato, J.; Burman, R.; Macek, R.; Oostens, J.; Shlaer, W. (Los Alamos Scientific Lab., N. Mex.); Arthur, E.; Sobottka, S. (Virginia Univ., Charlottesville); Lam, W. C. (Carnegie-Mellon Univ., Pittsburgh, Pa.). [1971]. 4p. (CONF-710911-3). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

Upper limits were measured on (π^+,p) cross sections for beryllium-9, carbon-12, and oxygen-16 at 70 MeV. The excitation energy spectra are also shown. (J.F.P.)

59711 (UCLA-10-P-18-32) ON THE (p,^{4}He) REACTION MECHANISMS IN LIGHT NUCLEI. DeVries, Ralph M. (California Univ., Los Angeles. Dept. of Physics). Apr 1971. Contract AT(11-1)-Gen-10. 130p. Dep. NTIS.

The reactions (p,He-4) on beryllium-9 and boron-11 were measured. The angular distributions and differential cross sections are given. More than one mechanism seems to contribute to the measured cross sections. The triton pick-up and heavy particle pick-up mechanisms seem to be the most important. A coherent addition of these reaction amplitudes can reproduce the data reasonably well. (J.F.P.)

59712 PION–NUCLEUS SCATTERING FROM 120 MeV to 1200 MeV. Kohmura, Toshitake (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 46: No. 1, 167-72(Jul 1971).

The angular distribution and total cross section for pion-^{12}C scattering are analyzed in the energy region from 120 MeV to 1200 MeV. Phase shifts for pion-nucleon scattering are used in the Glauber type of analysis for high energy scattering. A nuclear form factor in a Gaussian form for ^{12}C, which gives an appropriate mean square of nuclear orbital radius $\langle r^2 \rangle$, is shown to reproduce the experimental data very well. (auth)

59713 COULOMB-NUCLEAR INTERFERENCE IN $\pi^- - {}^{12}$C ELASTIC SCATTERING. Binon, F.; Bobyr, V.; Duteil, P.; (and others) (Institut Interuniversitaire des Sciences Nucleaires, Mons, Belg. Institut de Physique Nucleaire, Orsay, France). Nucl. Phys.; B33: No. 1, 42-60(1971).

The $\pi^- - {}^{12}$C elastic differential cross sections were measured at three kinetic energies around the ($\frac{3}{2}$, $\frac{3}{2}$) pion–nucleon resonance, namely 120, 180 and 260 MeV, in the small-angle region $[t \leq 18\,000\ (\text{MeV}/c)^2]$ where the interference between Coulomb and nuclear amplitudes is most pronounced. An expression for the relative phase between Coulomb and nuclear amplitudes was derived which takes into account a variation linear in t of the nuclear phase. Using this formula, the real part of the forward nuclear amplitude was deduced from the data at each energy. The results are in good agreement with the predictions of pion–nucleus forward dispersion relations. The nuclear phase seems to vary significantly at 260 MeV. (auth)

59714 SELECTIVE POPULATION OF HIGHLY EXCITED STATES SEEN IN THE REACTION ^{12}C(^{16}O,p)^{27}Al. Cosman, E. R.; Sperduto, A.; Moore, W. H.; Chin, T. N.; Cormier, T. M.

(Massachusetts Inst. of Tech., Cambridge). Contract AT(30-1)-2098. Phys. Rev. Lett.; 27: No. 16, 1074-7(18 Oct 1971).

The reaction $^{12}C(^{16}O,p)^{27}Al$ was studied at $E_{lab}(^{16}O) = 36$ and 60 MeV with high resolution. Narrow levels of ^{27}Al were seen in the region of $E_x = 13$ to 20 MeV in both measurements, and their locations suggest that the reaction is selectively sampling high-spin states in the region of the yrast line. (auth)

59715 $K^\pi = 1^+$ ROTATIONAL BAND IN ^{18}F. Rolfs, C.; Trautvetter, H. P.; Azuma, R. E.; Litherland, A. E. (Univ. of Toronto). Phys. Rev. Lett.; 27: No. 15, 1007-10(11 Oct 1971).

The 5298- and 6567-keV states in ^{18}F were studied by the reaction $^{14}N(\alpha,\gamma)^{18}F$. Spin assignments are made of $J^\pi = 4^+$ and 5^+, respectively. The energy and spin sequence of the 1702- (1^+), 2524- (2^+), 3358- (3^+), 5298- (4^+), and 6567-keV (5^+) states, as well as enhanced E2 strengths of the γ transitions between these states, show that these states can be considered to be members of a predominantly four-particle–two-hole $K^\pi = 1^+$ rotational band. A comparison between existing theories is given. (auth)

59716 EXPERIMENTAL DETERMINATION OF THE ^{12}Be GROUND-STATE MASS. Howard, Hillard H.; Stokes, Richard H.; Erkkila, B. H. (Los Alamos Scientific Lab., N. Mex.). Phys. Rev. Lett.; 27: No. 16, 1086-9(18 Oct 1971).

The ground-state mass of ^{12}Be was measured using the reaction $^7Li(^7Li,2p)^{12}Be$ in a kinematically complete experiment. The mass excess was determined to be 24.95 ± 0.10 MeV. An excited state of ^{12}Be is identified at an excitation energy of 0.81 ± 0.10 MeV. (auth)

59717 EVIDENCE FOR QUARTET STATES IN ^{20}Ne. Middleton, R.; Garrett, J. D.; Fortune, H. T. (Univ. of Pennsylvania, Philadelphia). Phys. Rev. Lett.; 27: No. 14, 950-2(4 Oct 1971).

Evidence from angular distributions and excitation functions for the reaction $^{12}C(^{12}C,\alpha)^{20}Ne$ suggests the identification of the 7.20-MeV 0^+ and 7.83-MeV 2^+ states in ^{20}Ne with the [220] quartet configuration—i.e., two sd-shell α particles outside a ^{12}C core. It appears that these states are populated via a "semidirect" mechanism that proceeds through the formation of doorway states in the incident channel. (auth)

59718 PRODUCTION OF THREE ^4He NUCLEI BY THE DIRECT INTERACTION OF ^6Li WITH ^6Li. Gadeken, L. L.; Norbeck, E. (Univ. of Iowa, Iowa City). Phys. Rev. Lett.; 27: No. 14, 952-6(4 Oct 1971).

The production of three ^4He nuclei directly, as well as via intermediate ^8Be states, was observed for the reaction $^6Li + {}^6Li$ at bombarding energies between 2.0 and 13.0 MeV. The large peaks attributed to direct effects in the energy spectra were fitted using a simple model that assumed an $\alpha + d$ cluster structure for the ^6Li nuclei and an interaction potential acting only between the deuterons. (auth)

59719 LIFETIME MEASUREMENTS OF THE EXCITED STATES IN ^{19}Ne AND ^{23}Mg. Itahashi, Takahisa; Shibata, Tokushi; Wakatsuki, Tetsuo (Osaka Univ.). J. Phys. Soc. Jap.; 31: No. 4, 961-6(Oct 1971).

$^{19}F(p,n)^{19}Ne$, $^{16}O(\alpha,n)^{19}Ne$, and $^{23}Na(p,n)^{23}Mg$ endothermic reactions have been used to determine the mean lives of the 1508 and 1536 keV states in ^{19}Ne and the 451 keV state in ^{23}Mg by the Doppler shift attenuation method. The results are $\tau = (1.4^{+0.5}_{-0.6}) \times 10^{-12}$ sec, $\tau = (2.8^{+1.8}_{-1.6}) \times 10^{-14}$ sec, and $\tau = (3.6^{+9.1}_{-2.4}) \times 10^{-12}$ sec, respectively. From the measurement of gamma-ray energies, the accurate energies of the excited states have been determined. (auth)

59720 ANALYSIS OF THE 14.1 MeV NEUTRON SCATTERING FROM ^{11}B. Ottaviani, P. L.; Zuffi, L. (CNEN, Bologna). Lett. Nuovo Cim.; 1: No. 26, 1114-17(26 Jun 1971).

The angular distributions for 14.1-MeV neutrons scattered from the first five states of ^{11}B are analyzed by using unified-model wave functions in a coupled-channels calculation. The matrix elements of the interaction potential that are involved in the calculations are assumed to be those of a nonspherical optical-model potential when dealing with states belonging to the same intrinsic configuration and as being those of a two-body effective potential when dealing with states belonging to different intrinsic configurations. (R.W.R.)

59721 $^9Be(d,\alpha_0)^7Li$ (GROUND STATE) AND $^9Be(d,\alpha_1)^7Li^*$ (470 keV) REACTIONS IN THE 0.9- TO 2.2-MeV ENERGY RANGE. Saganek, A.; Sledzinska, I.; Turos, A.; Wilhelmi, Z.; Zwieglinski, B. (Univ., Warsaw. Inst. of Nuclear Research, Warsaw). Acta Phys. Pol.; B2: No. 4, 473-88(Jul-Aug 1971).

Angular distributions and total cross sections for $^9Be(d,\alpha_0)^7Li$ (ground state) and $^9Be(d,\alpha_1)^7Li^*$ (470 keV) reactions were measured over the angular range from 15° to 165° (lab) in 100-keV steps. A detailed description of the experimental technique is given. The observed behavior of angular distributions does not allow univocal determination of the dominating reaction mechanism. The revealed features of the reactions in question indicate that these reactions may proceed through overlapping opposite-parity levels of the compound nucleus ^{11}B, and one of them is probably centered at the excitation energy $E_k \approx 17.3$ MeV. However, direct pick-up and heavy-particle stripping may be responsible as well. (auth)

59722 ENERGY DEPENDENCE OF POLARIZATION IN $^9Be(d,p)^{10}Be$ REACTION. Kozlowski, M. (Univ., Warsaw). Acta Phys. Pol.; B2: No. 4, 515-19(Jul-Aug 1971).

The polarization of protons from the reaction $^9Be(d,p)^{10}Be$ is analyzed. It is shown that the predictions based on the invariance of the density matrix under the exchange of distorted waves (when $p_d r_d = p_d r_d$) are in qualitative agreement with the experimental data. The usefulness of the DWBA for the describing of the polarization in the energy range 2 to 10 MeV is also discussed. (auth)

59723 SHELL-MODEL DATA FROM A REALISTIC N–N INTERACTION. III. SELF-CONSISTENT STARTING ENERGIES. Irvine, J. M.; Pucknell, V. F. E. (Univ. of Manchester, Eng.). Nucl. Phys.; A174: No. 3, 634-40(1971).

It is shown that the inclusion of higher-order corrections in the Goldstone expansion together with a self-consistent treatment of the starting energy leads to improved values for the ground-state binding energies in ^{60}O and ^{40}Ca. At the same time, excellent agreement is obtained between the calculated and experimental single-particle energies. Using these calculated single-particle energies and reaction matrix elements in a RPA calculation leads to an improved description of the negative-parity states in these nuclei. (auth)

59724 REACTION MATRIX THEORY FOR CLUSTER STATES IN LIGHT NUCLEI. II. CLUSTERING DEPENDENCE OF THE EFFECTIVE INTERACTION. Bando, Hiroharu; Nagata, Sinobu; Yamamoto, Yasuo (Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1515-26(May 1971).

The states with triangular and linear-chain configurations of three α clusters in ^{12}C are treated by the reaction-matrix theory on the basis of a realistic nuclear force. Clustering dependence of the G matrix is found to be essential for clusterization. It also brings on a change of effective interaction between the two configurations, which has a role in reducing the excitation energy of the linear-chain state. Its origin is mainly in the triplet even state tensor force. (auth)

59725 BINDING ENERGIES OF ALPHA-PARTICLE NUCLEI. Sood, P. C.; Joshi, P. C. (Banaras Hindu Univ., India). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1697-8(May 1971).

Examination of the $\alpha-\alpha$ interaction (in analogy with the nucleon–nucleon interaction) shows that the ratio of the intra α to the inter α (residual) binding energy of alpha-particle nuclei approaches a constant value; this behavior indicates an asymptotic saturation of the residual binding energy. If a 2α structure is assumed to have zero binding, a least-squares fit to the residual binding energy $(B.E.)_\alpha$ yields $(B.E.)_\alpha = (7.315 \pm 0.122)(N_\alpha - 2)$ MeV. If an effective α number $N_\alpha^{eff} = N_\alpha - 2$ is defined, it may be stated that the residual binding energy per effective α is a constant. It is shown that the $\alpha-\alpha$ force saturates in going from the unbound system for $N_\alpha = 2$ to the 3α nucleus ^{12}C and, thereafter, except for a minimum for ^{20}Ne (explainable in terms of the geometrical arrangement of various alphas), the curve shows little fluctuation; this behavior is in contrast to that of the binding-energy-per-nucleon curve, which shows distinct subshell structure. The saturation values in both cases are very nearly the same. (R.W.R.)

59726 VARIATIONAL CALCULATION OF ^{16}O IN THE α-PARTICLE MODEL. Mendez V., Rosa Ma. (UNAM, Mexico City); Seligman, T. H. Phys. Lett.; 36B: No. 4, 307-8(20 Sep 1971).

The low lying 0^+ states of ^{16}O are investigated in the α-particle model using a recent $\alpha-\alpha$ potential. Variational methods are employed and a translationally invariant harmonic oscillator basis is used, including 40 states up to 10 quanta. (auth)

59727 ELASTIC SCATTERING OF 1 GeV PROTONS FROM ^{12}C USING THE α-PARTICLE MODEL. Ahmad, I. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Lett.; 36B: No. 4, 301-4(20 Sep 1971).

Glauber multiple scattering theory is applied to study the elastic scattering of 1 GeV protons on ^{12}C using the α-particle model. Under some approximations it is shown that the model gives a reasonably good account of the experimental data. (auth)

59728 SHAPE MIXING IN ^{24}Ne. Khadkikar, S. B.; Nair, S. C. K.; Pandya, S. P. (International Centre for Theoretical

XUM

Physics, Trieste, Italy). Phys. Lett.; 36B: No. 4, 290-2(20 Sep 1971).

It is possible to understand the apparent non-rotational feature of the spectrum of ^{24}Ne by mixing the nearly degenerate prolate and oblate Hartree-Fock solutions in a projection calculation provided the important particle-hole excitations in both states are also included. (auth)

59729 HIGH-ENERGY ELECTRON AND PROTON SCATTERING AND DEFORMATION OF ^{12}C NUCLEUS. Ciofi Degli Atti, C.; Guardiola, R. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Lett.; 36B: No. 4, 287-9(20 Sep 1971).

It is shown that the deformed nuclear model recently used to interpret the high-energy proton scattering from ^{12}C is unable to explain the high-energy electron scattering from the same nucleus. (auth)

59730 RADIATIVE PION CAPTURE IN ^{12}C. Skupsky, S. (Argonne National Lab., Ill. Univ. of Chicago). Phys. Lett.; 36B: No. 4, 271-4(20 Sep 1971).

Transition rates for the reaction π^- (at rest) + ^{12}C (ground) → γ + ^{12}B (even parity) have been computed in the impulse approximation with Cohen-Kurath wave functions for the nuclear states involved. The two available experiments disagree by a factor of 5 in the ground-state transition rate. The calculated rates agree closely with the results of Bistirlich et al. (auth)

59731 MAGNETIC ANALYSIS OF THE REACTIONS ^{7}Li(^{3}He,d)^{8}Be AND ^{7}Li(^{3}He,t)^{7}Be. Piluso, C. J.; Spear, R. H.; Carter, K. W.; Kean, D. C.; Barker, F. C. (Australian National Univ., Canberra). Aust. J. Phys.; 24: 459-69(Aug 1971).

The reactions ^{7}Li(^{3}He,d)^{8}Be and ^{7}Li(^{3}He,t)^{7}Be have been studied at a bombarding energy of 15 MeV. Energy spectra of deuterons and tritons were measured at laboratory angles of 10° and 25° using a broad-range magnetic spectrograph. In the range of excitation energies from 0 to 18 MeV in ^{8}Be, no evidence was found for the existence of previously unreported narrow states that are suggested by systematics and simple models. The measured position and width of the 2.9 MeV 2^+ level of ^{8}Be are in good agreement with values obtained previously from the reaction ^{9}Be(p,d)^{8}Be, suggesting that the broad 2^+ states at higher excitation energies have little 1p-1h character. The deuteron spectra in the neighborhood of the 16.6 and 16.9 MeV levels of ^{8}Be show interference effects which agree well with shell model predictions. The width of the 4.55 MeV $\frac{7}{2}^-$ level of ^{7}Be was found to be 175 ± 7 keV, which differs considerably from the previously reported value. (auth)

59732 FURTHER STRUCTURE IN THE GIANT RESONANCE REGION OF ^{12}C. Ward-Smith, D. F. (Univ. of Melbourne). Aust. J. Phys.; 24: 453-8(Aug 1971).

A calculation has been made of the dipole states of ^{12}C which, in addition to structure centered around 22 and 25.5 MeV in the giant resonance region, predicts further structure at about 30 MeV. The wavefunction of this state shows that it is basically the main giant resonance state coupled to the 0^+ second excited low-lying state in ^{12}C at 7.65 MeV. This result is in agreement with the recent suggestion of Owen and Spicer. In showing this to be so, a particular form for the coupling Hamiltonian has been adopted which shows the insensitivity of the results to matrix elements of the low-lying states. It is suggested that this may indicate how calculations using the experimental energy values for the low-lying excited states together with various forms for the wavefunctions of these states can all give results which are in agreement with experiment. (auth)

59733 CROSS SECTIONS FOR THE PRODUCTION OF BERYLLIUM ISOTOPES FROM THE 880 MeV ALPHA-PARTICLE BOMBARDMENT OF CARBON. Lestringuez, J.; Raisbeck, G. M.; Yiou, F.; Bernas, R. (CNRS, Orsay, France). Phys. Lett.; 36B: No. 4, 331-6(20 Sep 1971).

The cross sections for the production of ^{9}Be and ^{10}Be from the 880 MeV α-particle bombardment of carbon have been measured to be 10.6 ± 1.7 and 6.5 ± 1.4 mb. These values are essentially twice the high-energy proton cross sections. It is shown that the effect of the interstellar helium on the distribution of beryllium isotopes in cosmic rays is thus less important than had been anticipated. (auth)

59734 (γ,α) REACTION EXPERIMENT. Abe, Ken (Tohoku Univ., Sendai); Tsubota, Hiroaki; Kawamura, Nobuaki. Kakuriken Kenkyu Hokoku; 3: No. 1, 56-9(Oct 1970). (In Japanese).

The (γ,α) reactions for C (polyethylene), C + O (cellophane) and Be targets were studied. It was found that the inverse bias voltage giving the best discriminating capability differed sharply from detector to detector, even for the same types. At present, the greatest problem in the (γ,α) reaction experiment is: how far can a reaction chamber be advanced? In the present work, the reaction chamber was set inside a concrete wall behind BOM, and shielded with Pb bricks. Pulse-height spectra were tentatively obtained from C. C + O and Be targets under this shielding condition showed that the results are satisfactory. (Japan)

59735 NEUTRON-^{8}Be FINAL-STATE INTERACTION IN THE BREAKUP OF ^{9}Be. Jeremie, H. (Univ. of Montreal). Can. J. Phys.; 49: 2085-8(1 Aug 1971).

The shape of a peak in the ^{9}Be(p,p′)^{9}Be* → ^{8}Be + n reaction, as measured by Spencer et al., was calculated according to final-state interaction theory using the effective-range approximation. The value of the neutron-^{8}Be scattering length thus obtained is $|a_n - {}^8\mathrm{Be}| = 40^{+10}_{-5}$ fm corresponding to a relative excitation energy of 14.5 ± 5 keV. (auth) (Canada)

59736 STUDY OF NUCLEI BY ELECTRON SCATTERING. Torizuka, Yoshiharu; Kimura, Motoharu; Kojima, Yuzo; Oyamada, Masayuki; Nakahara, Kazuo (Tohoku Univ., Sendai). Kakuriken Kenkyu Hokoku; 3: No. 1, 1-33(Oct 1970). (In Japanese).

Studies on excited states of ^{12}C, ^{16}O, ^{20}Ne, ^{24}Mg and ^{28}Si were carried out. Experimental results of ^{40}Ca obtained previously were analyzed in detail. A scattering experiment was performed to separate longitudinal components of shape factor from transverse components in the excited states of ^{12}C. The results were compared with theoretical results according to the independent particle model given by de Forest, and good agreement was obtained. It was impossible to distinguish between one-particle excitation and quasielastic scattering in this excitation energy range. Measurements were extended to the higher momentum transfer (q) region, and the results showed a discrepancy between the experiment and the shape factor of 2^- state at 20.6 MeV calculated from the 1p-1h model. The shape factors of second 1^+ and first 3^+ levels with intermediate coupling model had the same q dependence as the experiment, and the absolute values were in agreement with the experiment. Cross sections for peaks at 13.1, 15.3, 18.6 and 19.1 MeV of ^{16}O were observed, and longitudinal components were separated from transverse components. All the peaks show complex q dependence, and mixing of levels was considered. Elastic scattering and inelastic scattering at 1.63, 4.25 and 5.6 MeV levels of ^{20}Ne were observed. The result of elastic scattering was analyzed with charge distribution of shell model. The charge distribution of ^{20}Ne was investigated with a rigid body model. Reduced transition probabilities were obtained for ^{24}Mg. Transition probabilities for low-lying states of ^{40}Ca were successfully explained by the shell model. (Japan)

59737 INVESTIGATION OF THE ^{6}Li($\vec{d},\alpha$)^{4}He REACTION WITH POLARIZED DEUTERONS. Neff, R.; Huber, P; Naegele, H. P.; Rudin, H.; Seiler, F. (Univ., Basel). Helv. Phys. Acta; 44: No. 5, 679-91(15 Aug 1971). (In German).

The vector and tensor analyzing power of the ^{6}Li(d,α)^{4}He-reaction for polarized incident deuterons have been measured at 400, 600, 800 and 960 keV mean deuteron energies. The four independent components $A_y(\vartheta)$, $A_{zz}(\vartheta)$, $A_{xx}(\vartheta)-A_{yy}(\vartheta)$ and $A_{xz}(\vartheta)$ are fitted by the appropriate associated Legendre functions. It is shown that the results can be explained by the assumption of three states with $J^\pi = 2^+$, 4^+ and 0^+. (auth)

Nuclear Properties and Reactions, $20 \leq A \leq 89$

59738 (JINR-P1-6029) ANGULAR DISTRIBUTION OF LOW-ENERGY NEUTRONS FROM NUCLEAR μ-CAPTURE IN SULFUR AND CALCIUM. Voitkovska, I.; Evseev, V. S.; Kozlovski, T.; Nikolina, A. A.; Roganov, V. S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1971. 15p. (In Russian). Dep. NTIS (U. S. Sales Only).

The dependence of the coefficient of asymmetry B (in the angular distribution of neutrons from the nuclear μ^--capture in sulfur and calcium) on the energy of recoil protons in the range of 2.5 + 10 MeV (sulfur) and 2 + 17 MeV (calcium) is measured by the method of the meson spin precession in the magnetic field. The values of B are close to zero which does not contradict the up-to-date models of nuclear capture. (auth)

59739 (ORNL-TM-3591) ELASTIC SCATTERING OF 40-MeV PROTONS FROM ^{48}Ti, $^{\mathrm{nat}}$Cr, AND ^{64}Zn: TABULATED DIFFERENTIAL CROSS SECTIONS. Dickens, J. K.; Gross, E. E.; Perey,

F. G.; Van der Woude, A.; Zucker, A. (Oak Ridge National Lab., Tenn.). 7 Oct 1971. 9p. Dep. NTIS.

Numerical values of differential cross sections for elastic scattering of 40-MeV protons from targets of ^{48}Ti, ^{nat}Cr, and ^{64}Zn for scattering angles between 10 and 145 degrees are reported in tabular form. (auth)

59740 POSSIBILITY OF TWO-PROTON AND TWO-NEUTRON RADIOACTIVE DECAY FROM MANY-PARTICLE ISOMERIC STATES OF NUCLEI. Gol'danskii, V. I.; Peker, L. K. (Inst. of Chemical Physics, Moscow. Inst. of Metrology, Moscow). JETP Lett. (USSR) (Engl. Transl.); 13: No. 10, 412-14(20 May 1971).

Translated from Zh. Eksp. Teor. Fiz., Pis'ma Red.; 13: No. 10, 577-8(20 May 1971).

Possible three- and four-particle isomers with large angular momenta for spherical nuclei with even A are considered, and the question of the probability of observing two-proton decay of such many-particle isomers is analyzed. The following examples of two-proton decay are presented: ^{47m}Fe($^{17}/_{2}{}^{-}$) → ^{45}Cr*($^{3}/_{2}{}^{+}$), ^{82m}Mo(16^{+}) → ^{80}Zr(0^{+}), ^{96}Cd(16^{+}) → ^{94}Pd(0^{+}), ^{106}Te(12^{+}) → ^{104}Sn(0^{+}), and ^{108}Te(12^{+}) → ^{106}Sn(0^{+}). The role of the centrifugal barrier in the observed decay rate turns out to be, in general, no less important than the role of the Coulomb barrier (e.g., a change of 12 units in the angular momentum in 2p decay of the isotopes of Te lengthens the decay time, at a total energy of the two emitted protons of 1 to 3 MeV, by approximately 10 orders of magnitude). Large centrifugal barriers can ensure the possibility of observing a number of cases of relatively long-period two-neutron radioactive decay of many-particle isomeric states of neutron-rich nuclei, for example, ^{70}Ti(14^{+}) → ^{68}Ti(0^{+}) and ^{78}Fe(12^{+}) → ^{76}Fe(0^{+}), if the energy of the emitted pairs of neutrons is sufficiently small. (R.W.R.)

59741 ANGULAR DISTRIBUTIONS FOR $T_{np} = 1$ AND $T_{np} = 0$ TRANSFERS IN (^{3}He,p) REACTIONS. Meyer-Schuetzmeister, L.; Gemmell, Donald S. (Argonne National Lab., Ill.). Phys. Rev. Lett.; 27: No. 13, 869-72(27 Sep 1971).

Angular distributions of (^{3}He,p) reactions are investigated for some odd–even target nuclei, which allow orbital–angular-momentum transfers $L_{np} = 0,2$ for $T_{np} = 0,1$ transitions. "Pure" $L_{np} = 0$ distributions are observed for the n–p pair transfer with $T_{np} = 1$ leading to the analog state and to the corresponding state with the same nucleon configuration but with $T = T_{<}$. "Mixed" $L_{np} = 0 + 2$ distributions are observed for $T_{np} = 0$ transfers. (auth)

59742 SYMMETRY ENERGY FOR COLLECTIVE DIPOLE EXCITATION. Paul, P.; Amann, J. F.; Snover, K. A. (State Univ. of New York, Stony Brook). Phys. Rev. Lett.; 27: No. 15, 1013-16(11 Oct 1971).

Results from radiative proton capture in several nuclei near $A \approx 60$ and $A \approx 90$ show that the displacement energies of the T + 1 and T isospin components of the collective electric dipole states are well described by a collective symmetry energy $U = T\widetilde{V}/A$ with a value of $\widetilde{V} = 58 \pm 5$ MeV. The specific cases of ^{49}Sc and ^{64}Zn are discussed. (auth)

59743 REACTION ^{12}C(^{14}N,^{6}Li)^{20}Ne AND THE STRUCTURE OF THE UPPER $K = 0^{+}$ BANDS. Nagatani, K. (Brookhaven National Lab., Upton, N. Y.); Le Vine, M. J.; Belote, T. A.; Arima, A. Contract AT(30-1)-2098. Phys. Rev. Lett.; 27: No. 16, 1071-4(18 Oct 1971).

The reaction ^{12}C(^{14}N,^{6}Li)^{20}Ne was studied at 60 MeV, and forward-angle reaction data to states of ^{20}Ne were obtained. Different rotational bands were populated with different strengths consistent with cluster-transfer processes. The previously questioned structure of the $K = 0^{+}$ bands starting near 7 MeV is discussed, and a new classification for the bands is proposed. (auth)

59744 OPTICAL POTENTIAL FOR NUCLEON SCATTERING ON ^{40}Ca. Bruneau, M.; Vinh Mau, N. (Institut de Physique Nucleaire, Orsay, France). pp 333-40 of Methods and Problems of Theoretical Physics. /Bowcock, J. E. (ed.). New York; American Elsevier Publishing Co., Inc. (1970).

From Conference on methods and problems of theoretical physics; Birmingham, England (Jun 1967).

59745 MEASUREMENT OF THE LINEAR POLARIZATION OF LOW-ENERGY CAPTURE γ-RAYS FROM THE ^{35}Cl(n,γ) REACTION. Honzatko, J.; Kajfosz, J.; Kosina, Z. (Nuclear Research Inst., Rez, Czech.). Nucl. Phys.; A174: No. 3, 668-72(1971).

The 0.79- and 1.17-MeV levels of ^{36}Cl and the associated γ transitions following thermal-neutron capture were studied. From measurements of the correlation between direction and linear polarization of γ rays, the following spins and E2/M1 mixing ratios δ_1 (for primary transitions) and δ_2 (for secondary transitions) were found: for the 0.79-MeV level $J^{\pi} = 3^{+}$, $\delta_1 = 0.210 \pm 0.004$, $\delta_2 = -1.1 \pm 0.4$ and for the 1.17-MeV level $J^{\pi} = 1^{+}$, $\delta_1 = -0.47 \pm 0.10$, $\delta_2 = 0.32 \pm 0.06$. (auth)

59746 CIRCULAR POLARIZATION OF GAMMA RADIATION FROM ^{58}Co, ^{48}V, ^{52}Mn, AND ^{56}Co. Pingot, O. (Institut Interuniversitaire des Sciences Nucleaires, Mons, Belg.). Nucl. Phys.; A174: No. 3, 627-33(1971). (In French).

The β–γ circular polarization correlation of the cascades $2^{+}(\beta^{+}\ 472\ \text{keV})2^{+}(\gamma\ 810)0^{+}$ in ^{58}Co, $4^{+}(\beta^{+}\ 690)4^{+}(\gamma\ 1312)2^{+}(\gamma\ 983)0^{+}$ in ^{48}V, $6^{+}(\beta^{+}\ 580)6^{+}(\gamma\ 744)4^{+}(\gamma\ 935)2^{+}(\gamma\ 1434)0^{+}$ in ^{52}Mn, and $4^{+}(\beta^{+}\ 1500)4^{+}(\gamma\ 1240)2^{+}(\gamma\ 847)0^{+}$ in ^{56}Co was studied by using a Compton-effect polarimeter. The measured asymmetry parameters are -0.167 ± 0.004, -0.081 ± 0.003, -0.057 ± 0.003, and -0.085 ± 0.003, respectively. (auth)

59747 DECAY OF ^{68}As. Paradellis, T.; Houdayer, A.; Mark, S. K. (McGill Univ., Montreal). Nucl. Phys.; A174: No. 3, 617-26(1971).

^{68}As was produced via the ^{70}Ge(p,3n)^{68}As reaction. Twenty γ rays associated with the decay of ^{68}As were observed. Seventeen of these γ rays are placed into a decay scheme, which includes excited states in ^{68}Ge at 1016.5, 1778.7, 2269.8, 2429.4, 2454.0, 2650.5, 3788.0, 4075.0, and 4236.9 keV. The half-life of ^{68}As was measured to be $t_{1/2} = 159 \pm 4$ sec. (auth)

59748 LEVELS IN ^{76}Se POPULATED IN THE β-DECAY OF ^{76}As. McMillan, D. K.; Pate, B. D. (Simon Fraser Univ., Burnaby, British Columbia). Nucl. Phys.; A174: No. 3, 604-16 (1971).

Energies and intensities for 25 γ rays from ^{76}As decay were measured with Ge(Li) detectors. New data on γ rays at 563.5, 981.2, and 1213.5 keV plus β–γ and γ–γ coincidence measurements allow proposal of a revised ^{76}As decay scheme with ^{76}Se levels at 559.6, 1123.1, 1217.0, 1332.1, 1690.1, 1788.5, 2059, 2127.6, 2172.6, 2430.5, 2516, 2657.1, 2671.5, and 2866 keV. (auth)

59749 DECAY OF ^{80}As. McMillan, D. K.; Pate, B. D. (Simon Fraser Univ., Burnaby, British Columbia). Nucl. Phys.; A174: No. 3, 593-603(1971).

The energies and relative intensities of 20 γ rays following the β decay of ^{80}As were measured using a 23.8-cm^{3} Ge(Li) spectrometer. These data plus γ–γ coincidence results were used to construct a level scheme for ^{80}Se containing 12 excited levels at 665.8, 1448.8, 1477.1, 1872.6, 1960.1, 2310.9, 2514.0, 2774.2, 2836.2, 3024.0, 3606.1, and 3726.6 keV. The half-life of ^{80}As was measured to be 16.5 ± 0.3 sec. (auth)

59750 DISTRIBUTION OF $T_{<}$ STATES IN ^{89}Y. Vourvopoulos, G. (Florida A and M Univ., Tallahassee. Technion-Israel Inst. of Tech., Haifa); Shoup, R.; Brown, R. A. Nucl. Phys.; A174: No. 3, 581-92(1971).

^{88}Sr(^{3}He,d)^{89}Y data taken with the Oak Ridge Isochronous Cyclotron with $E^{3}_{He} = 25$ MeV are analyzed. Between 3.7 and 7.7 MeV excitation a large number of states is observed with $l_p = 2$ and $l_p = 0$. These states are considered to be antianalog states, mixed with core-polarization states. (auth)

59751 LIFETIME MEASUREMENTS IN sd SHELL NUCLEI VII. MEAN LIVES OF ^{27}Si AND ^{27}Al LEVELS. Mauritzson, I. (Rijksuniversiteit, Utrecht); Engmann, R.; Brandolini, F.; Barci, V. Nucl. Phys.; A174: No. 3, 572-80(1971).

The mean lives and excitation energies of the six lowest levels of ^{27}Si were measured by means of the ^{28}Si($\tau,\alpha\gamma$)^{27}Si reaction. Coincidence Doppler-shift-attenuation measurements led to mean lives of $\tau_m = 2200 \pm 400$, 56 ± 12, 16 ± 8, <10, and 79 ± 11 fsec for the ^{27}Si levels at $E_x = 0.96$, 2.17, 2.65, 2.87, and 2.91 MeV, respectively. With the recoil-distance method applied to the ^{24}Mg(α,n)^{27}Si and ^{24}Mg(α,p)^{27}Al reactions, the mean lives of the 0.78-MeV level in ^{27}Si and the 0.84-MeV level in ^{27}Al were measured to be $\tau_m = 50 \pm 6$ psec and 48 ± 3 psec, respectively. Branchings were measured for the states at $E_x = 2.17$, 2.65, 2.87, and 2.91 MeV in ^{27}Si. From the presently known information it is possible to assign positive parity to the level at 2.17 MeV. The spectroscopic data on the A = 27 mirror nuclei are compared with the results of many-particle shell-model calculations. (auth)

59752 NEW VIRTUAL AND ANALOGUE STATES IN ^{47}V. Kaestner, F. (Institut fuer Experimentalphysik, Hamburg); Buchholz, K.; Klapdor, H. V. Nucl. Phys.; A174: No. 3, 552-60(1971). (In German).

In an investigation of $T = {}^{3}/_{2}$ analog states in ^{47}V the ^{46}Ti(p,γ)^{47}V excitation function was measured for proton bombarding energies $E_p = 1350$ to 2280 keV. One hundred twenty-three new virtual levels were found in the excitation region $E^{*} = 6.5$ to 7.4 MeV in ^{47}V. The average level spacing in this region is determined to be $D \approx 6$ keV. Some prominent resonances are tentatively interpreted as

XUM

isobaric analog states corresponding to parent states in the excitation region $E^* \approx 2.3$ to 3.3 MeV in ^{47}Ti. (auth)

59753 PRODUCTION OF ^{26}Al AND ^{22}Na FROM PROTON BOMBARDMENT OF Si, Al, AND Mg. Furukawa, M. (Nagoya Univ., Japan); Shizuri, K.; Komura, K.; Sakamoto, K.; Tanaka, S. Nucl. Phys.; A174: No. 3, 539-44(1971).

The formation cross sections of ^{26}Al and ^{22}Na from proton bombardment of natural Si, Al, and Mg were measured as a function of E_p up to $E_p = 52$ MeV. The maximum values for ^{26}Al formation from natural Si, Al, and Mg are 60 mb at 44 MeV, 169 mb at 23 MeV, and 12.6 mb at 11.3 MeV, respectively. The excitation functions for the ^{22}Na formation are compared with those of previous experiments. (auth)

59754 ELASTIC AND INELASTIC SCATTERING OF 80-MeV DEUTERONS. Duhamel, G.; Marcus, L.; Langevin-Joliot, H.; (and others) (Institut de Physique Nucleaire, Orsay, France). Nucl. Phys.; A174: No. 3, 485-96(1971). (In French).

Deuteron elastic scattering by ^{12}C, ^{24}Mg, ^{27}Al, ^{58}Ni, ^{68}Zn, ^{89}Y, ^{120}Sn, and ^{208}Pb was studied in order to obtain optical-potential parameters. The inclusion of a vector spin–orbit potential is necessary for nuclei with $A \geqq 89$. Experimental angular distributions can also be well fitted without such a potential for light nuclei. The first 2^+ levels of ^{12}C, ^{58}Ni, ^{68}Zn, and ^{120}Sn and the first 3^- level of ^{12}C were observed; and the angular distribution of scattered deuterons analyzed by DWBA. Experimental deformation parameters are deduced. The $^{12}C(d,p)^{13}C$ reaction was studied. Experimental and calculated angular distributions to the first levels are compared. (auth)

59755 SOME (n,p) CROSS-SECTIONS OF ^{46}Ti, ^{47}Ti, AND ^{48}Ti. Ghorai, S. K.; Cooper, J. R.; Moore, J. D.; Alford, W. L. (Auburn Univ., Ala.). J. Nucl. Energy; 25: No. 8, 319-20(Aug 1971).

Activation techniques were used to measure the (n,p) cross sections of ^{46}Ti, ^{47}Ti and ^{48}Ti relative to the known cross section for the $^{27}Al(n,p)^{27}Mg$ reaction. The measured cross sections and the incident neutron energies were: 149 mb at 6.1 MeV, 106 mb at 5.0 MeV, and 46 mb at 4.1 MeV for ^{46}Ti; 135 mb at 6.1 MeV, 93 mb at 5.0 MeV, 86 mb at 4.1 MeV, and 68 mb at 3.4 MeV for ^{47}Ti, and 2.4 mb at 6.1 MeV for ^{48}Ti. (auth)

59756 SPIN AND PARITY OF SOME EXCITED STATES OF ^{48}Sc. Cambi, A.; Fazzini, T.; Giannatiempo, A.; Maurenzig, P. R. (Univ., Florence. Istituto Nazionale di Fisica Nucleare, Florence). Lett. Nuovo Cim.; 2: No. 11, 537-40(11 Sep 1971).

The γ and conversion electron spectra from the $^{48}Ca(p,n\gamma)$ reaction at $E_p = 1964$ and 1975 keV were studied using solid-state detectors. The conversion electrons were analyzed using a magnetic spectrometer. Internal conversion coefficients for several transitions in ^{48}Sc were determined. Spin and parity assignments for the 1143- and 1402-keV levels were made. (J.W.R.)

59757 LOW LYING 8 AND 12 HOLE STATES IN LIGHT NUCLEI. Strottman, D. (Nuclear Physics Lab., Oxford). Phys. Lett.; 36B: No. 4, 321-4(20 Sep 1971).

The positions of 4, 8 and 12 hole states in alpha particle nuclei from ^{20}Ne to ^{52}Fe are calculated using a j dependent monopole–monopole interaction with an A^{-1} dependence. The 12 hole states in ^{40}Ca and ^{44}Ti are lower than the 8 hole states and are calculated to be at 5 and 3 MeV respectively. B(E2)'s are calculated for ^{40}Ca and the nature of the 5.21 MeV state is discussed. (auth)

59758 INELASTIC EFFECTS IN THE $^{20}Ne(d,^3He)^{19}F$ REACTION. Dudek, A.; Edens, D. J. (Nuclear Physics Lab., Oxford). Phys. Lett.; 36B: No. 4, 309-12(20 Sep 1971).

The importance of semidirect contributions to the $^{20}Ne(d,^3He)^{*19}F$ (2.78) reaction is studied by using the coupled-channels formalism for inelastic scattering reactions in both the incoming and outgoing channels. The magnitude and shape of the differential cross section of the reaction to the $9/2^+$ level in ^{19}F can be well explained by the addition of inelastic effects in both reaction channels. (auth)

59759 MEASUREMENTS OF γ-RADIATION FOLLOWING keV NEUTRON CAPTURE IN ZINC. Bird, J. R. (Australian Atomic Energy Commission Research Establishment, Sutherland). Aust. J. Phys.; 24: 487-95(Aug 1971).

Gamma-ray spectra following the capture of 10 to 80 keV neutrons in natural zinc are reported. The results give information on γ-ray transitions and energy levels in ^{65}Zn, ^{67}Zn, ^{68}Zn, and ^{69}Zn. Positive and negative parity final states with angular momenta up to $5/2$ are populated, indicating the presence of p- and/or d-wave capture. There is little correlation between reduced widths for keV capture and (d,p) reactions and the importance of single-particle effects is reduced by comparison with capture in lighter nuclei. (auth)

59760 STUDY OF RESONANCES IN THE $^{29}Si(p,\gamma)^{30}P$ REACTION. Din, G. U.; Davis, J. R. (Australian National Univ., Canberra). Aust. J. Phys.; 24: 497-518(Aug 1971).

Gamma-ray decay schemes of 14 resonances in the $^{29}Si(p,\gamma)^{30}P$ reaction in the range $E_p = 900–2120$ keV have been obtained with high resolution Ge(Li) detectors. Consistent resonance decay schemes have been derived along with decay schemes of bound levels. Decay to bound levels at 3.84, 4.74, 4.94, 5.21, 5.51, and 5.70 MeV has been observed in this reaction for the first time, while new results have been obtained for the decay of some of the bound levels. The reported level at 4.468 MeV is confirmed. The decay schemes of the $E_p = 1110$, 1664, 1850, 197[illegible], and 2070 keV resonances indicate that they are predominantly T = 0 levels, whereas the 2105 and 2115 keV resonances are probably the split analogs of a T = 1 level in ^{30}Si. (auth)

59761 SEARCH FOR HIGH-SPIN STATES IN ^{27}Al. Carter, K. W.; Kean, D. C.; Piluso, C. J.; Spear, R. H. (Australian National Univ., Canberra). Aust. J. Phys.; 24: 471-85(Aug 1971).

A search has been made for high-spin states in ^{27}Al in the range of excitation energies E_x from 4.8 to 8.0 MeV using the reactions $^{12}C(^{16}O,p)^{27}Al$ and $^{24}Mg(\alpha,p)^{27}Al$. Gamma-ray branching ratios and proton–gamma angular correlations have been measured for prospective high-spin states. Although no unambiguous spin and parity assignments have been obtained, it is argued that states at $E_x = 5499$, 6716, 6952, 7226, and 7441 keV probably have spins and parities $11/2^+$, $9/2^+$, $11/2^+$, $9/2^\pm$ or $11/2^+$, and $13/2^+$ respectively. An attempt is made to interpret the results in terms of the strong-coupling rotational model. (auth)

59762 $^{27}Al(p,\gamma)^{28}Si$ RESONANCES FOR PRECISE CALIBRATION OF HIGH ENERGY GAMMA RAYS. Holmberg, P.; Kiuru, A. (Helsinki Univ.). Commentat. Phys.-Math.; 40: 135-9(1970).

Accurate measurements of gamma-ray energies in the 0.5–10.7 MeV range, occurring in the decay of the resonances at $E_p = 991.82$ keV and 1118.4 keV in the $^{27}Al(p,\gamma)^{28}Si$ reaction were performed. Precise energies of nine bound states were obtained and the Q-value for the reaction was determined as $Q = 11586.3 \pm 0.3$ keV. (auth) (Finland)

59763 ENERGY DETERMINATIONS OF GAMMA RAYS AND NEW WEAK TRANSITIONS IN THE DECAY OF ^{56}Co. Kiuru, A.; Holmberg, P.; Siivola, A. (Helsinki Univ.). Commentat. Phys.-Math.; 40: 113-17(1970).

Precise energies of 33 gamma rays following the decay of 77-day ^{56}Co were determined. Four weak gamma rays earlier reported were confirmed and four new, weak transitions were found and placed in the decay scheme. (auth) (Finland)

59764 PROPERTIES OF NUCLEAR LEVELS AND TRANSITIONS IN ODD COPPER ISOTOPES. PART 2. THE $^{60}Ni(p,\gamma)^{61}Cu$ REACTION. Kiuru, A.; Holmberg, P.; Viitasalo, M. (Helsinki Univ.). Commentat. Phys.-Math.; 41: No. 2, 55-72(Jun 1971).

The $^{60}Ni(p,\gamma)^{61}Cu$ reaction were investigated at $E_p = 1588$ keV, 1599 keV, 1605 keV and 1620 keV. Branching ratios for resonance states and bound states in ^{61}Cu are reported. Gamma-ray distribution measurements were in agreement with the following spin and parity assignments for levels in ^{61}Cu: ground state, $3/2^-$; 475.8 keV, $1/2^-$; 970.2 keV, $5/2^-$; 1393.8 keV, $5/2^-$; 1660.5 keV $(3/2, 5/2)$; 2088.4 keV, $(1/2^-)$; 2207.0 keV, $(3/2, 5/2)$. The resonances $E_p = 1599$, 1605 and 1620 keV were concluded to be $J^\pi = 3/2$ states. Mixing ratios for secondary gamma rays are given. (auth) (Finland)

59765 ISOSPIN EFFECT IN $^{31}P(\gamma,n)$ REACTION. Mutsuro, Naoshi (Tohoku Univ., Sendai); Kawamura, Nobuaki; Tsubota, Hiroaki. Kakuriken Kenkyu Hokoku; 3: No. 1, 48-55(Oct 1970). (In Japanese).

The photoneutron spectrum of ^{31}P was measured by the time-of-flight method to obtain information concerning charge symmetry properties. The ^{31}P target was bombarded by bremsstrahlung having maximum energies of 21.5 and 25.5 MeV. The spectrum of (γ,p) taken by the Abe et al, was compared with the present result. The intensity of low energy part of the (γ,n) spectrum was smaller than that of the (γ,p) spectrum. Five structures within the scope of energy resolution were seen in both spectra. Widths of the fine structures were 50–150 keV and the separations were 100–300 keV. These results were examined with the statistical model. The experimental results were inconsistent with the theoretical results. The isospin effect was then introduced. It is concluded that $T = 3/2$ state plays a principal role in the (γ,n) reaction of ^{31}P from the consideration of gross and fine structures in the (γ,p) and (γ,n) spectra. Neutron decay from the $T = 3/2$ state was produced between states with best overlapping in balance of isospin part and other part of wave function. The fine structures of the spectra are forbidden (γ,n_0) transitions through isospin mixing. (Japan)

59766 ISOMER RATIOS FOR (n,2n) REACTIONS IN THE RANGE OF MASS NUMBERS BETWEEN 70 AND 90. **Bergmann, Helmar (Institut fuer Radiumforschung und Kernphysik, Vienna). Acta Phys. Austr.; 31: No. 4, 354-62(1970). (In German).**

The isomer ratio for the (n,2n) reaction was experimentally determined on target nuclei of ^{70}Zn, ^{76}Ge, and ^{82}Se with a neutron energy of (14.7 ± 0.15) MeV. For the calculation of the isomer ratio, two methods were utilized to obtain theoretical data for mass numbers between 70 and 90. With a mathematical procedure of Uhl, which is based on the statistical theory of nuclear reactions, satisfactory agreement was obtained between experimental and theoretical isomer ratios. Neither one of the two mathematical methods, however, was able to yield the parameter for spin distribution. (tr-auth)

59767 EVIDENCE FOR NEGATIVE PARITY ROTATIONAL BANDS IN ^{24}Mg. **Branford, D.; Gardner, N.; Wright, I. F. (Univ., Manchester, Eng.).** Phys. Lett.; 36B: No. 5, 456-8 (4 Oct 1971).

From a study of the ^{12}C(^{16}O,α)^{24}Mg reaction six ^{24}Mg levels have been ascribed to two rotational bands with $K^{\pi} = 0^-$ and $K^{\pi} = 3^-$. (auth)

59768 CROSS SECTIONS FOR ^{89}Y(n,n′)^{89m}Y AND ^{89}Y(n,2n)^{88}Y REACTIONS. Abboud, A. (Inst. of Nuclear Research, Warsaw); Decowski, P.; Grochulski, W.; (and others). Acta Phys. Pol.; B2: No. 4, 527-33(Jul-Aug 1971).

Excitation curves for the ^{89}Y(n,n′)^{89m}Y reaction were measured in the neutron energy range 3 to 18 MeV and for the ^{89}Y(n,2n)^{88}Y reaction in the energy range 13 to 18 MeV. The results obtained were interpreted in terms of the statistical nuclear reaction model. The problem of the competition between electromagnetic-radiation emission and neutron emission from the highly excited compound-nucleus states is discussed. (auth)

59769 OPTICAL MODEL ANALYSIS OF ^{3}He ELASTIC SCATTERING FROM NEIGHBORING EVEN AND ODD MASS NUCLEI. **Siegel, Graham Roger. St. Louis; Washington Univ. (1971). 200p. University Microfilms Order No. 71-19,831.**

Thesis.

Measured differential cross sections for the elastic scattering of ^{3}He ions are reported for angles between 6° and 168° for the following energies and targets: (30 MeV) ^{48}Ti, ^{51}V, ^{52}Cr, ^{60}Ni, ^{63}Cu, and ^{64}Zn; (32 MeV) ^{48}Ti, ^{51}V, ^{52}Cr, and ^{53}Cr; and (29 and 35 MeV) ^{51}V. The data are compared with optimum nuclear-optical-model predictions that were calculated using least-squares automatic-search computer programs. Ambiguities of the potential parameters of the model are studied in detail, with the result that, although both discrete and continuous ambiguities are present, the scattering does define rms radii for both the real and the imaginary parts of the potential. Furthermore, fits obtained with surface-peaked absorption potentials are consistently better than those obtained with volume absorption potentials. In all cases the inclusion of a spin–orbit potential significantly improves the optical-model fit to the data. The "best-fit" values of the spin–orbit potential depth were found to be between 1.2 and 3.8 MeV for most cases. No unambiguous target-spin effects were observed, but the average of the spin–orbit potential depths for odd-mass nuclei was always greater than that for the even-mass nuclei. A coupling between the spin–orbit and absorption potentials makes deductions based on small differences in the spin-orbit well depths inconclusive. A brief description of the experimental method is given, along with details of the experimental equipment and procedures. The preliminary analysis of the data, where measured elastic scattering yields were converted to center-of-mass differential cross sections, is also described. Mathematical derivations of some of the equations used in the optical model analysis are given. Finally, computer programs written for this study and the experimental differential cross sections are listed. (Diss. Abstr. Int., B.)

59770 INELASTIC SCATTERING OF 8.0 TO 9.0 MeV NEUTRONS BY ^{24}Mg, ^{27}Al, ^{28}Si, ^{31}P, AND ^{32}S. **Mittler, Arthur. Lexington, Ky.; Univ. of Kentucky (1970).** 142p. University Microfilms Order No. 71-19,382.

Thesis.

Measurements were made of the differential elastic and inelastic cross sections for neutrons scattered by silicon at 7.71 MeV; magnesium at 7.97 MeV; and aluminum, silicon, phosphorus, and sulfur at 7.96 and 9.05 MeV. Natural scattering samples were used. A neutron time-of-flight system was employed. The normalization for the measured differential cross sections was determined by making comparisons with neutron–proton scattering. Finite sample corrections were made for the elastic scattering data. The elastic cross sections have rms relative and absolute uncertainties of 2 to 5 and 6 to 8 per cent, respectively. The inelastic cross sections have rms relative and absolute uncertainties of 3 to 7 and 6 to 10 per cent, respectively. All measured elastic cross sections were compared to theoretical calculations obtained by adding the shape elastic contribution from the optical model to the compound elastic contribution from the statistical model. Theoretical calculations of the inelastic scattering from the first excited levels of ^{28}Si and ^{32}S were made by summing the statistical and direct-interaction predictions. The measurements agree with the models for ^{32}S. For ^{28}Si, only the 9.05-MeV measurements were in agreement with the models. The particle–core coupling model was used to compute the direct-interaction contributions to the inelastic cross sections of the low-lying levels of ^{27}Al and ^{31}P. The theoretical predictions are in agreement with the ^{31}P measurements but fail to describe the ^{27}Al measurements. (Diss. Abstr. Int., B)

59771 EXPERIMENTAL STUDY OF γ-RAY TRANSITION PROBABILITIES WITH THE RECOIL-DISTANCE AND THE DELAYED-COINCIDENCE TECHNIQUES. Henson, Sylvestus Hyatte. Stony Brook, N. Y.; State Univ. of New York (1970). 164p. University Microfilms Order No. 71-17,174.

Thesis.

The plunger and delayed-coincidence techniques were developed for use with the high-energy charged-particle beams from an FN tandem accelerator. By means of the plunger technique the lifetimes of the 1.974-MeV and 1.453-MeV states in ^{30}P were found to be 6.8 ± 0.4 psec and 9.2 ± 0.5 psec, respectively. A value of 10.7 ± 1 psec was obtained for the mean life of the 3.86-MeV state in ^{13}C. A charged-particle–γ technique was used to measure the lifetime of the 2.13-MeV state in ^{40}Ar. The value obtained was 150 ± 20 psec. Upper lifetime limits of 166 psec and 121 psec were obtained for the 780-keV level in ^{27}Si and the 2.80-MeV level in ^{39}Ca, respectively. A neutron–γ technique was successfully employed to clarify two previous measurements that were inconsistent in regard to the lifetime of the 287-keV state in ^{75}Se. (Diss. Abstr. Int., B.)

59772 DETERMINATION OF PHOTONUCLEAR REACTION CROSS SECTIONS. **Tikhonov, A. N.; Shevchenko, V. G.; Galkin, V. Ya.; (and others). Vestn. Mosk. Univ., Ser. III. Fiz. Astron.; 11: No. 2, 208-14(Mar-Apr 1970). (In Russian).**

An operative system for the automatic handling of data is described for the determination of photonuclear reaction cross sections with a 35-MeV betatron. The system provides for fully automatic processing of experimental data as accumulated in the analyzer all the way to obtaining the cross section of a photonuclear reaction. Bremsstrahlung which is generated at the target of the betatron passes through a collimator and then impinges on the desired material. The neutrons thus produced are recorded by a BF_3 detector using a paraffin moderator. The pulses are sent to the memory of a pulse-height analyzer. This system is illustrated with data from (γ,n) reactions with the nuclei ^{51}V, ^{59}Co, ^{58}Ni, and ^{60}Ni. (K.S.W.)

59773 (AD–721481) ISIS: A PROGRAM FOR COMPUTERIZED FISSION DATA ANALYSIS. **Alexander, Peter; Lightbody, David; Hansen, Carl; Patton, Waldo A. (Teledyne Isotopes, Westwood, N. J. Columbia Univ., New York). 30 Nov 1970. Contract DASA01-69-C-0057. 103p. (IWL–7909-217). NTIS.**

A two part computer program has been written to aid in the analysis and interpretation of experimental fission data. The first part of the program calculates the population of all members of any radioactive decay chain at any point in time using as input the initial population distribution and the structure of the decay chain. The program may also be used to perform a time integration of the population for any member to give the number of decays during a specified time interval. The second part of the program uses as input the experimentally measured yield values derived from extraction at various times after fission of one or more members of a particular fission product decay chain. The independent fission yield to any given mass chain is assumed to be distributed according to a Gaussian function. The parameters Z sub P and w characterizing this distribution are varied so as to minimize the quantity Chi squared which is based on the difference between the calculated and experimentally determined fission yield values. (auth)

59774 (AERE-Trans–1139) SUPERHEAVY ELEMENTS: EXTENSION OF THE PERIODIC SYSTEM. **Greiner, W. Trans-**

lated by J. B. Sykes, J. B. (Atomic Energy Research Establishment, Harwell, Eng.), from Umsch. Wiss. Tech.; 69: No. 12, 365-72(1969). 16p. Dep. NTIS (U. S. Sales Only). UK 15p.

In the periodic system the elements are arranged according to the number of their nuclear protons; the system extends from hydrogen as the lightest element, with one proton, to uranium, with 92 protons. During the last 30 years it has been possible to produce heavier elements (the transuranics) artificially. So far elements up to one with 104 protons, kurchatovium, have been reached. These elements are highly unstable, however, and immediately decay. According to present theory, stability will reappear only with very much heavier nuclei. It is hoped that the production of these superheavy elements will be possible in the foreseeable future. Their investigation will open up entirely new territory. (auth)

59775 (AWRE-O-44/71) EVALUATION OF $\bar{\nu}$ FOR ^{238}U. Mather, D. S.; Bampton, P. F. (Atomic Weapons Research Establishment, Aldermaston (England)). Jul 1971. 17p. Dep. NTIS (U. S. Sales Only). UK 15p.

An evaluation was made of direct measurements of $\bar{\nu}$ for the neutron-induced fission of ^{238}U using data available up to December 1970. A set of three straight lines is found to give the best representation of the variation of $\bar{\nu}$ with neutron energy and values specifying this evaluation were produced for entry in a new Data File DFN-272. (auth)

59776 (FRNC-TH-56) DETERMINATION OF ELECTROMAGNETIC TRANSITION PROBABILITIES FROM MEASUREMENTS OF THE MEAN LIVES OF EXCITED NUCLEAR STATES; APPLICATION TO ^{140}Ce, ^{191}Pt, AND ^{135}La NUCLEI. Bourgeois, Christian (Paris Univ., Orsay (France)). 1971. 67p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

A system was developed for rapidly detecting gamma–gamma coincidences. This system was used in conjunction with a double focusing magnetic spectrometer in order to make electron–electron or electron–gamma coincidence measurements. The assembly was used to measure the mean lives of nuclear levels ranging from some tens of picoseconds up to a few microseconds. Studies of the excited states of the ^{191}Pt, ^{140}Ce and ^{135}La nuclei allowed the theoretical models proposed for the three different cases to be tested, and an estimation to be made of the form of the potential associated with each of these nuclei in the energy states considered. (France)

59777 (IFA-NR-33) ABSOLUTE MEASUREMENT OF ^{239}Pu FISSION CROSS-SECTION FOR 2200 m/sec NEUTRONS. Borcea, C.; Borza, A.; Buta, A.; Isbasescu, A.; Marinescu, L.; Mihai, I.; Nascutiu, T.; Petrascu, M.; Savu, V.; Simion, V. (Institutul de Fizica Atomica, Bucharest (Romania)). 1970. 29p. Dep. NTIS (U. S. Sales Only).

The absolute fission cross section σ_f for ^{239}Pu was measured by means of a method requiring no knowledge of an intermediate cross section for the neutron flux determination. The principle of the method and the apparatus used are described. The final result is 741.0 ± 7.0 barns. (R.W.R.)

59778 (JAERI-Memo-4520) ^{208}Pb(γ,n)^{207}Pb REACTION NEAR THRESHOLD. Mizumoto, M.; Nakajima, Y.; Bergere, R.; Fuketa, T. (Japan Atomic Energy Research Inst., Tokyo). Jul 1971. 17p. Dep. NTIS (U. S. Sales Only).

The photoneutron cross section for ^{208}Pb was studied at several hundred keV neutron energy by the neutron time-of-flight technique. Spins and parities of the compound levels were determined by measuring the angular distribution of emitted neutrons, and the ratios of reaction matrix elements for channel spin 1 and 0 were calculated for the excited states of 1^+ of ^{208}Pb. (auth)

59779 (JINR-P-7-5912) INVESTIGATION OF THE PRODUCTION AND DECAY OF COMPOUND NUCLEI IN THE HIGH-ENERGY HEAVY ION REACTIONS. Oganesian, Yu. Ts.; Penionzhkevich, Yu. E.; Shamsutdinov, A. O.; Ngyuen, Tak An. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1971. 15p. (In Russian). Dep. NTIS (U. S. Sales Only).

The results of measurements of the excitation functions are given for the following reactions: ^{130}Te(^{12}C,xn)$^{142-x}$Ce, ^{130}Te(^{13}C,xn)$^{143-x}$Ce(x = 3–12), ^{130}Te(^{12}C,αxn)$^{138-x}$Ba, ^{130}Te(^{13}C,αxn)$^{138-x}$Ba(x = 4–10), at a carbon ion energy of more than 10 MeV/nucl. The dependence of the production cross section of a compound nucleus on the energy of the bombarding ion is measured. This cross section value is shown to decrease essentially with the increasing energy of the bombarding particle. The estimate of the critical value for the angular momentum is given. The energy dependence of the ratio between the evaporation cross section of α-particles and the neutron evaporation cross section is determined. (auth)

59780 (KFK-1401) MEASUREMENT OF THE CIRCULAR POLARIZATION OF γ RADIATION AFTER CAPTURE OF POLARIZED THERMAL NEUTRONS IN NUCLEI. Djadali, Fayegh (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Experimentelle Kernphysik). Jun 1971. 49p. (In German). Dep. NTIS (U. S. Sales Only).

The circular polarization of γ radiation from nuclei after capture of polarized thermal neutrons was measured using Ge(Li) and NaI(Tl) detectors. The Karlsruhe research reactor FR2 was used as a neutron source. The flux was 6×10^6 nsec^{-1} at the target. Reflection from a Co–Fe mirror of 1 m length provided a polarization of 66%. Natural targets of S, Cl, Y, K, Ce, Nd, and La were exposed to this beam. From the measurement of the circular polarization of high-energy capture γ rays several spin values were newly established or confirmed. The E2/M1 mixing ratio of the 8.58-MeV transition in Cl was obtained. The circular polarization averaged over the γ spectrum after capture of polarized thermal neutrons was measured for some nuclei. Conclusions on the spin of the compound state are drawn. Natural targets of Mo, Cd, In, Sb, I, Cs, Pr, Gd, Tb, Ho, Ta, Hg, and La were used. (R.W.R.)

59781 (KURRI-TR-76, pp 19-20) EXPERIMENT ON SHORT LIVED NUCLEI. Katoh, Toshio (Kyoto Univ. (Japan). Research Reactor Inst.). (In Japanese).

From Meeting on nuclei with short life; Osaka, Japan (30 Jun 1969).

In Reports of the study meeting on nuclei with short life.

Short-lived nuclei were produced by (n,p) reaction, and gamma radiation from the nuclei was observed with a Ge(Li) semiconductor detector. Merits of the (n,p) reaction for the production of the short-lived nuclei are production of nuclei which cannot be made by any other methods and possibility of experiment with small funding and a small size neutron generator. Irradiation of samples was performed outside the neutron generator and without cooling, because conditions of sample preparation and neutron irradiation were not severe. Gamma-ray spectra were measured just after the irradiation. The cross-section of the (n,p) reaction, however, is small, and the irradiation was repeated many times. Sample of enriched ^{174}Yb was irradiated with fast-neutron flux of 7×10^7 cm$^{-2}\cdot$sec^{-1}, and sent to a counting room by a pneumatic tube system. Gamma rays from ^{174}Tm, made by the reaction ^{174}Yb(n,p)^{174}Tm, were observed with a Ge(Li) detector. The half-life was measured to be 5.5 min. The irradiation was repeated 176 times, and data were accumulated. Observed spectra and a proposed decay scheme are shown in figures. Experiments on ^{94}Y, ^{98}Nb, ^{178}Lu, and ^{186}Ta are planned. (Japan)

59782 (KURRI-TR-76, pp 21-6) MEASUREMENT FOR SHORT LIVED NUCLEI. Okano, Kotoyuki (Kyoto Univ. (Japan). Research Reactor Inst.). (In Japanese).

From Meeting on nuclei with short life; Osaka, Japan (30 Jun 1969).

In Reports of the study meeting on nuclei with short life.

Outline of studies on short-lived nuclei produced with reactors and hilacs is presented. The short-lived nuclei of Xe and Ba were studied at Cornell University with a TRIGA type reactor. Pulsed neutron beam with width of 35 msec was produced in the reactor, and the flux was 2×10^{15} n/cm$^2\cdot$sec. Irradiated samples were sent to a counting station by a pneumatic tube system within 50 to 150 msec. Polyethylene capsules were broken with an injection needle, and Xe gas was collected on top of a cold trap. Measurement of gamma rays with a Ge(Li) semiconductor or a NaI(Tl) scintillation detector was performed automatically. On the other hand, rapid chemical separation was employed for the other case. A gas-phase separation method was applied for separation of ^{90}Rb. Uranium stearate sample was irradiated with neutrons. Halogens were removed with a glass-wool trap and xenon gas was removed with a charcoal trap. Rubidium ions produced by decaying Kr gas were collected on an aluminum foil, and gamma rays and beta rays were detected with scintillation counters. A mass separator was also used to obtain Xe gas; and a hilac, to study Th isotopes produced by heavy ion bombardment. A semi on-line irradiation system was designed at Research Reactor Institute of Kyoto University (KUR). A pneumatic tube was set in the reactor of KUR. Measurement and irradiation can be repeated automatically. Transportation time for samples is about 0.3 sec. Studies of ^{104}Rh ($T_{½}$ = 43 sec) and ^{108}Ag (2.42 min) were carried out. (Japan)

59783 (UCRL-50400(Vol.4)) EVALUATED NUCLEAR CROSS SECTION LIBRARY. Howerton, R. J.; Doyas, R. J.; Michels, T. C.; Perkins, S. T. (California Univ., Livermore. Lawrence Radiation Lab.). 15 Apr 1971. 171p. Dep. NTIS.

The LRL collection of evaluated data for neutron-, photon-, and charged- particle-induced reactions is maintained in a computer-oriented system. This system, with its history, methods of evaluation, and examples of input and output representation of the data, is described.

59784 (UCRL–73336) THRESHOLD PHOTONEUTRONS AND PHOTON DOORWAYS. Berman, B. L.; Bowman, C. D.; Baglan, R. J. (California Univ., Livermore. Lawrence Radiation Lab.). 5 Aug 1971. 7p. (CONF-710814–1). Dep. NTIS.

From International conference on statistical properties of nuclei; Albany, N. Y. (22 Aug 1971).

A review is given of work on threshold photoneutron cross sections and photon doorway states. The threshold photoneutron cross sections were measured for 16 nuclei, and over 250 resonances were identified and in most cases parametrized. (J.F.P.)

59785 TABLITSA ENERGII GAMMA-LUCHEI VOZNIKAYUSHCHIKH PRI RASPADE RADIOAKTIVNYKH YADER. (Energy Tables for Gamma Ray Emission During Radioactive Decay). Dzhelepov, B. S.; Koksharova, S. F. Leningrad; Izdatel'stvo Nauka (1970). 288p.

Tables are presented of the energy of gamma radiation arising through decay of radioactive nuclides with half-lives greater than one second. The energy values of gamma radiation are arranged in ascending order, and are accompanied by a list of the nuclei which emit the quanta indicated. An extensive bibliography is appended which includes Russian and foreign literature up to October, 1969, and which contains experimental data on gamma ray energies which were evaluated for this compilation. 500 references. (tr-auth)

59786 PHOTOFISSION OF ^{232}Th NEAR THRESHOLD: ANGULAR DISTRIBUTION. Manfredini, A. (Istituto Nazionale di Fisica Nucleare, Messina, Italy. Univ., Messina, Italy); Fiore, L.; Ramorino, C.; Woelfli, W. Nuovo Cim.; 4A: No. 2, 421-30 (21 Jul 1971).

Measurements on the angular distribution of photofission fragments of ^{232}Th from monochromatic γ-rays at energies near threshold are reported. The data are compared with measurements of other authors obtained with a bremsstrahlung γ-ray source. (auth)

59787 SCREENING EFFECTS ON INTERNAL CONVERSION FROM OUTER ATOMIC SHELLS. Trusov, V. F. (Latvian State Univ., Riga). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 11, 150-3(1970). (In Russian).

Coefficients of internal conversion of γ radiation were computed for the N and O shells of mercury by using two screening potentials. Values are given for radial wave functions for various subshells. Testing the ratios M_1/N_1, M_1/O_1 and N_1/O_1 shows that, for coefficients of internal conversion, these ratios are very close (1%) to the ratios of the electron density for all observed energies. Results are found to agree with experimentally obtained values for the E-2 transition (158 keV) for ^{199}Hg (O. Dragoun, P. Jahn et al., Phys. Lett., B28: No. 4, 251(1968)): $N_{II}/N_I = 7.7 \pm 2.4$ and $N_{II}/N_{III} = 1.37 \pm 0.10$. (K.S.W.)

59788 ELASTIC SCATTERING OF 5- TO 10-MeV PROTONS FROM ALIGNED ^{165}Ho. Fisher, T. R. (Lockheed Palo Alto Research Lab., Palo Alto, Calif.); Tabor, S. L.; Watson, B. A. Phys. Rev. Lett.; 27: No. 16, 1078-80(18 Oct 1971).

The scattering of protons from an aligned ^{165}Ho target $[B_2/B_2(\max) = -0.34]$ is analyzed to obtain an estimate of the nuclear quadrupole moment or, equivalently, the nuclear deformation parameter β. The data are in reasonable agreement with the result, $\beta = 0.33$, derived from Coulomb excitation measurements. (auth)

59789 NEW (p,n) REACTION STUDIES AT $E_p = 23$ MeV. Bentley, R. F.; Carlson, J. D.; Lind, D. A.; Perkins, R. B.; Zafiratos, C. D. (Univ. of Colorado, Boulder). Phys. Rev. Lett.; 27: No. 16, 1081-3(18 Oct 1971).

The (p,n) reaction was studied at $E_p = 23$ MeV on 35 nuclei ranging in mass from ^{9}Be to ^{208}Pb. Overall energy resolution for the levels of interest ranged from 50 to 200 keV. Compound-nucleus contributions appear to be generally small at this bombarding energy. Early distorted-wave Born-approximation analysis of the data reveals several difficulties, both for macroscopic and microscopic forms of analysis. (auth)

59790 EXPERIMENTAL MEASUREMENT OF THE K-CONVERSION COEFFICIENT OF 80 keV TRANSITION IN ^{144}Pr. Sahota, H. S. (Punjab Univ., Patiala, India). Curr. Sci. (India); 40: No. 11, 289-90(5 Jun 1971).

The gamma intensity of the 80-keV transition in ^{144}Pr was measured relative to that of the 133-keV transition by using a 2.5-cm^3 Ge(Li) detector. The final result, $\alpha_K = 2.09 \pm 0.16$, agrees with the theoretical value. (R.W.R.)

59791 NUCLEAR CHARGE DISTRIBUTIONS OF ^{89}Y, ^{90}Zr, AND ^{92}Mo BY ELASTIC ELECTRON SCATTERING. Singhal, R. P. (Univ. of Glasgow). J. Phys., A (London); 4: No. 5, L93-7(Sep 1971).

Elastic scattering of electrons was used to extract the nuclear charge distribution parameters of the N = 50 isotones ^{89}Y, ^{90}Zr and ^{92}Mo. The momentum transfer range studied is from 0.25 fm^{-1} to 1.15 fm^{-1}. A comparison of the differences in the charge distributions is made with the shell model predictions. (auth)

59792 K- AND L-SHELL ELECTRON SHAKE-OFF IN THE BETA DECAY OF ^{204}Tl. Howard, J. M.; Seykora, E. J.; Waltner, A. W. (North Carolina State Univ., Raleigh). Phys. Rev., A; 4: No. 5, 1740-5(Nov 1971).

Electron shake-off has been investigated in the decay of ^{204}Tl in a measurement of the relative intensities of the Hg and Pb K and L x rays. Values of $(1.0 \pm 0.1) \times 10^{-2}\%$ and $(20.0 \pm 2.0) \times 10^{-2}\%$ have been obtained for the K-shell and total L-shell electron shake-off probabilities, respectively. Approximations of individual L-subshell shake-off probabilities resulted in values of $(2.0 \pm 0.6) \times 10^{-2}\%$, $(9.3 \pm 0.6) \times 10^{-2}\%$, and $(9.0 \pm 0.6) \times 10^{-2}\%$ for the L_I, L_{II}, and L_{III} subshells, respectively. These values, in some cases, differ by as much as a factor of 3 from theoretical predictions. (auth)

59793 NUCLEAR CHARGE DISTRIBUTIONS FROM ELECTRON SCATTERING: BARIUM AND NEODYMIUM. Heisenberg, J. (Stanford Univ., Calif.); Hofstadter, R.; McCarthy, J. S.; (and others). Contract NONR-225(67). pp 169-189 of Topics in Modern Physics. /Brittin, Wesley E. (ed.). Boulder, Colo.; Colorado Associated Univ. Press (1971).

Over the last few years, the authors have performed detailed explorations of nuclear charge distributions of the calcium isotopes and lead, ^{208}Pb. With these doubly magic nuclei, precise measurements of differential cross sections have led to information concerning the behavior of the charge distribution in the central regions of the nuclei and at the extreme edge. Since these two elements, calcium and lead, at opposite ends of the periodic table, show similar characteristics, intermediate nuclei ^{138}Ba and ^{142}Nd were examined. Experimental differential cross sections for electron scattering by ^{138}Ba at 500 and 200 MeV and for ^{142}Nd at 129.4, 199.3, 299.1 and 499.5 MeV are presented. The experimental values, along with a least-squares analysis of the data allow parameters to be determined for the nuclear charge distributions. The distributions are also compared with information obtained from muonic x rays and low-energy electron scattering. The results are then related to the earlier work on calcium and lead and compared with various nuclear models. (L.M.T.)

59794 NUCLEAR PHOTOFISSION CROSS SECTIONS FOR THE PHOTON ENERGIES UP TO 5 GeV. SUPERGIANT RESONANCE IN THE PHOTONUCLEI REACTIONS. Vartapetyan, G. A.; Demekhina, N. A.; Kasilov, V. I.; (and others) (Physical-Technical Inst., Kazan). Yadern. Fiz.; 14: No. 1, 65-72(Jul 1971). (In Russian).

Photofission yields for the nuclei ^{238}U, ^{235}U, ^{232}Th, ^{209}Bi, ^{197}Au, and ^{181}Ta in the photon energy interval from 100 MeV up to 5 GeV are measured by means of the glass detectors. The measured results are in satisfactory agreement with the yields calculated on basis of the photomeson fission model. In the fission cross sections of U and Th besides the giant resonance there is a resonance at the photon energy $E \sim 300$ MeV corresponding to the resonances in the photon–nucleon interaction cross section. The integral photofission cross sections are presented. (auth)

59795 BETA–GAMMA DIRECTIONAL CORRELATION OF ^{203}Hg. Wyrick, John M. St. Louis; St. Louis Univ. (1970). 203p. University Microfilms Order No. 71-21,434.

Thesis.

The beta–gamma directional correlation of ^{203}Hg was measured for the beta energies 80, 100, 130, and 160 keV. The 279-keV gamma rays following the 207-keV beta decay were measured in coincidence with beta rays of the energies mentioned above. The objective of this experiment was to determine whether or not the "ξ-approximation" is valid for the first-forbidden beta decay of ^{203}Hg. The final experimental results indicate values for the $A_2(\beta)$ beta directional correlation coefficients that agree with the magnitude of these values as predicted in the ξ-approximation. A survey of beta–gamma directional correlation theory is given with emphasis on experimental applications. Also included is a discussion of the apparatus and experimental techniques used in the ^{203}Hg measurements. (Diss. Abstr. Int., B)

59796 ELASTIC ELECTRON SCATTERING FROM ORIENTED ^{165}Ho NUCLEI. Uhrhane, Francis Joseph. Stanford, Calif.; Stanford Univ. (1971). 137p. University Microfilms Order No. 71-19,772.

Thesis.

The determination of the distribution of electric charge in the

XUM

highly deformed nucleus of ^{165}Ho is considered. High-energy electron scattering is used to examine the nuclear charge distribution. Nuclear orientation is required in order to measure the effect of a distorted nucleus on the scattering cross section. The orientation is accomplished by the so-called "static" method maintaining the ^{165}Ho sample at 0.4°K and applying a magnetic field. Corrections to the raw experimental data are explained, and the final experimental results are presented. The results include cross sections for electron scattering at a polar angle of 36° from randomly oriented nuclei and from aligned nuclei at seventeen incident beam energies ranging from 160.6 MeV to 452.2 MeV. One theory for scattering from randomly oriented nuclei is found to provide a reasonable fit to the data but to give little new information about the nucleus. The alignment effect measured has features in qualitative agreement with available theoretical calculations, but has essentially no quantitative agreement. Assumptions of the theories in contradiction to the experimental conditions are pointed out. (TSS)

59797 EXCITATION OF ISOMERIC ACTIVITIES OF Rb, Y, Pd, Cd, W, Os, AND Pb USING 14.8-MeV NEUTRONS. Rurarz, E.; Chwaszczewska, J.; Haratym, Z.; Pietrzykowski, M.; Sulik, A. (Inst. of Nuclear Research, Swierk, Poland). Acta Phys. Pol.; B2: No. 4, 553-64(Jul-Aug 1971).

Activation cross sections of ^{84m}Rb, ^{86m}Rb, ^{89m}Y, ^{107m}Pd, ^{109m}Pd, ^{111m}Cd, ^{185m}W, ^{190m}Os, and ^{203}Pb for 14.8-MeV neutrons were measured using Ge(Li) and NaI(Tl) detectors. The following values (in millibarns) were obtained: ^{85}Rb(n,2n)^{84m}Rb (20.5 min), 412 ± 40; ^{87}Rb(n,2n)^{86m}Rb (1 min), 432 ± 45; ^{89}Y(n,n′γ)^{89m}Y (16.5s), 438 ± 44; ^{108}Pd(n,2n)^{107m}Pd (21s), 590 ± 60; ^{110}Pd(n,2n)^{109m}Pd (4.8 min), 554 ± 55; ^{112}Cd(n,2n)^{111m}Cd (48 min), 812 ± 80; ^{111}Cd(n,n′γ)^{111m}Cd (48 min), 167 ± 17; ^{186}W(n,2n)^{185m}W (1.7 min), 1152 ± 110; ^{190}Os(n,n′γ)^{190m}Os (10 min), 15 ± 1.5; and ^{204}Pb(n,2n)^{203m}Pb (6.1s), 1020 ± 100. Experimental results for isomeric ratios in (n,2n) reactions are compared with statistical-theory predictions. (auth)

59798 DECAY SCHEME OF ^{232}Pa. Kaczarowski, R.; Kurcewicz, W.; Plochocki, A.; Zylicz, J. (Inst. of Nuclear Research, Swierk, Poland). Acta Phys. Pol.; B2: No. 4, 423-39(Jul-Aug 1971).

Magnetic and semiconductor (Ge and Si) spectrometers were used to study the ^{232}Pa → ^{232}U decay scheme. The following γ lines, new with respect to the earlier data reported by Bjoernholm et al., [Nucl. Phys., 42: 469(1963)] were observed: 922.7, 1003.3, 1016.4, 1051.4, 1055.4, 1085.4, 1125.1, 1132.7, and 1164.5 keV. Conversion coefficients and multipolarity assignments were determined for several of these transitions. Due to the e−γ coincidence studies it was possible to show that the 1125.1- and 1055.4-keV E1 transitions feed, respectively, the 2^+ and 4^+ levels of ^{232}U ground-state band. This indicates the existence of the new ^{232}U levels at 1172.8 and 1212.1 keV, which are interpreted as 2^- and 3^- members of the $K^\pi = 1^-$ octupole band. Another new level is proposed at 1132.9 keV. The 1016.4-keV M2 transition is believed to connect the bandhead state of the $K^\pi = 2^-$ octupole band with the ground state; the 1051.4-keV transition may possibly be an analogous E3 transition from the 3^- state of this band. As deduced from the β−γ coincidence experiments, the β^- decay energy of ^{232}Pa is equal to 1337 ± 10 keV. The discussion of experimental data in terms of nuclear models is concentrated on the octupole bands and their Coriolis interaction. (auth)

59799 RELATIVE K-CAPTURE PROBABILITY IN UNIQUE FIRST-FORBIDDEN DECAY OF ^{145}Sm. Myslek, B.; Pietrzyk, B.; Sujkowski, Z.; Szczepanikowski, J. (Inst. of Nuclear Research, Swierk, Poland). Acta Phys. Pol.; B2: No. 4, 441-50 (Jul-Aug 1971).

The relative K-capture probability, P_K, for the unique first-forbidden decay of ^{145}Sm to the 492.3-keV level in ^{145}Pm was measured by the coincidence method to be $P_K = 0.27 \pm 0.03$. This is compared with the theoretical values P_K(allowed) = 0.70 ± 0.03 and P_K(unique forb.) = $0.19^{+0.06}_{-0.05}$ calculated using the experimental decay energy Q = 115 ± 10 keV. (auth)

59800 LEVELS OF ^{230}Th AND ^{230}U FED IN DECAY OF ^{230}Pa. Kurcewicz, W. (Inst. of Nuclear Research, Swierk, Poland); Stryczniewicz, K.; Zylicz, J.; (and others). Acta Phys. Pol.; B2: No. 4, 451-71(Jul-Aug 1971).

The ^{230}Pa decay to levels of ^{230}Th and ^{230}U is investigated by using Si(Li) and Ge(Li) spectrometers for singles-spectra measurements, and a Ge(Li) spectrometer combined with a six-gap β spectrometer or with a NaI(Tl) detector for coincidence measurements. The decay scheme is proposed which accounts for all but one of the 50 transitions observed in the present investigation. The following bands of the ^{230}Th excited states are established or proposed (in parentheses: level energies in keV, spin values and parities of the levels): the ground-state band (53.19, 2^+ and 174.12, 4^+), the quadrupole bands (β: 634.7, 0^+ and 677.8, 2^+; γ: 781.4, 2^+ and 825.4, 3^+; β + γ (?): 1009.61, 2^+ and 1052.6, 3^+) and the octupole bands ($K^\pi = 0^-$: 508.20, 1^- and 571.71, 3^-; $K^\pi = 1^-$: 951.91, 1^-; 971.70, 2^-; and 1012.2, 3^-; $K^\pi = 2^-$: 1079.20, 2^- and 1127.85, 3^-). The ^{230}Pa → ^{230}Th decay energy, Q, is deduced from the measured relative probabilities of the K-capture transitions to several excited states in ^{230}Th: Q = 1315^{+15}_{-10} keV. For ^{230}U, the first excited 2^+ state is observed at 51.72 keV, and the bandhead state of the $K^\pi = 0^-$ octupole band is proposed at 366.5 keV. The experimental data are discussed in terms of nuclear models, with emphasis on the band-mixing effects. (auth)

59801 MEASUREMENT OF γ-RAY SPECTRA ACCOMPANYING RADIATIVE CAPTURE OF NUCLEONS. Brzosko, J. S.; Gierlik, E.; Soltan, A. Jr.; Szeflinski, Z.; Wilhelmi, Z. (Univ., Warsaw). Acta Phys. Pol.; B2: No. 4, 489-502(Jul-Aug 1971).

Spectra of photons from the (n,γ) reaction were measured for ^{115}In, Sb, ^{127}I, ^{133}Cs, ^{159}Tb, ^{165}Ho, ^{181}Ta, ^{197}Au, Tl, and ^{238}U nuclei at neutron energies of about 400 keV. The dependence of the cross sections for high-energy γ-ray emission on neutron energy in the range 0.03 to 1.4 MeV was investigated for ^{115}In, ^{181}Ta, and ^{197}Au. Furthermore, γ-ray spectra for the (p,γ) reaction were measured and compared with those for the (n,γ) reaction. The experimental results are compared with the results of calculation based on the compound-nucleus model under the assumption that the probability of emission of γ rays with energy of about 6 MeV is increased. (auth)

59802 (n,α) REACTIONS ON HEAVY NUCLEI INDUCED BY 14.2-MeV NEUTRONS. Jaskola, M. (Inst. of Nuclear Research, Swierk, Poland); Turkiewicz, J.; Zemlo, L.; Osakiewicz, W. Acta Phys. Pol.; B2: No. 4, 521-6(Jul-Aug 1971).

The energy spectra of alpha particles from (n,α) reactions with ^{122}Te, ^{139}La, ^{159}Tb, ^{160}Dy, ^{161}Dy, ^{163}Dy, ^{164}Dy, ^{166}Er, ^{168}Er, and ^{169}Tm induced by 14.2-MeV neutrons were measured using semiconductor detectors. The analysis of the energy spectra leads to results which imply that the evaporation theory is inadequate to describe the reactions investigated. The shapes of the experimental spectra suggest the presence of strong direct effects. (auth)

59803 THEORETICAL ESTIMATES OF LIFETIMES OF SUPERHEAVY NUCLEI. Lukasiak, A.; Sobiczewski, A.; Stepien-Rudzka, W. (Inst. of Nuclear Research, Warsaw). Acta Phys. Pol.; B2: No. 4, 535-52(Jul-Aug 1971).

The spontaneous-fission and alpha-decay half-lives of even superheavy nuclei are calculated microscopically. The calculations are based on the single-particle Nilsson scheme with the parameters fitted to the scheme obtained in the Woods−Saxon potential at zero deformation. The largest total half-lives of the order of 10^{10} years are obtained for the nuclei with Z = 108 to 110 and N = 184. The strength of the pairing forces used is smaller than in previous investigations. The use of a larger strength would lead to half-lives smaller by a few orders. The sensitivity of the half-lives to different factors, in particular to the strength of the pairing force, is discussed. (auth)

59804 COULOMB EXCITATION OF THE LEAD ISOTOPES WITH α AND ^{16}O BEAMS. Grosse, E.; Dost, M.; Haberkant, K.; (and others) (Max-Planck-Institut fuer Kernphysik, Heidelberg). Nucl. Phys.; A174: No. 3, 525-38(1971).

The lead isotopes were Coulomb excited by α particles of 15 and 18 MeV and ^{16}O ions of 70 and 80 MeV. By measuring the absolute yields of the de-excitation γ rays very accurately, B(Eλ) values for the first 2^+ states in ^{204}Pb and ^{206}Pb, the 3^- states in ^{206}Pb and ^{208}Pb, and of four states in ^{207}Pb were obtained. The E2 transition strengths to the first two excited states of ^{207}Pb are well described by coupling these states to a quadrupole core excitation of ^{208}Pb. The B(E3) values for the excitation of the $(3^- \otimes p_{\frac{1}{2}})$ doublet show only slight deviations from the weak-coupling value; yet the lifetimes of the two states, which were determined with the Doppler shift-attenuation method, are different from model predictions. The M1 transition rate of the $\frac{3}{2}^-$ state to ground, as determined from the lifetime of 0.17 psec, agrees with the value obtained from the B(E2) and the mixing-ratio measurement. (auth)

59805 ENERGY LEVELS IN ^{191}Ir. Price, R. H.; Johns, M. W. (McMaster Univ., Hamilton, Ont.). Nucl. Phys.; A174: No. 3, 497-524(1971).

The electron-capture decay of ^{191}Pt was studied using Ge(Li) detectors singly and in coincidence to identify fifty-one transitions in ^{191}Ir. The energies and intensities of the internal conversion lines associated with eighteen of these transitions were determined and used to establish multipolarities and mixing ratios. Thirteen transitions were excited in Coulomb excitation using oxygen ions of energy ranging from 25 to 65 MeV, and B(E2)↑

values were determined for six excited states. The results of the measurements are embodied in a decay scheme involving levels in ^{191}Ir with energies (in keV), spins and parities as follows: $0(3/2^+)$, $82.398\ (1/2^+)$, $129.400(5/2^+)$, $171.32(11/2^-)$, $178.93(3/2^+)$, $343.2\ (7/2^+)$, $351.15(5/2^+)$, $390.97(7/2^-)$, $502.5(9/2^+)$, $538.85(3/2^+)$, $587.95(5/2^+)$, $624.06(1/2^+)$, $658.87(3/2^-)$, $686.3(7/2^+)$, $747.74(5/2^+)$, $762.56(3/2^+)$, $799.75\ (5/2^-)$, and $935.33(3/2^+?)$. (auth)

59806 PROMPT $\bar{\nu}$ IN SPONTANEOUS AND NEUTRON INDUCED FISSION OF ^{236}U AND ITS HALF-LIFE FOR SPONTANEOUS FISSION. Conde, H.; Holmberg, M. (Research Inst. of National Defence, Stockholm). J. Nucl. Energy; 25: No. 8, 331-8(Aug 1971).

The energy dependence of prompt $\bar{\nu}$ was investigated for the neutron induced fission of ^{236}U in the energy range 0.8–6.7 MeV. The fission neutron detector was a large liquid scintillator. The data could be fitted to a straight line $\bar{\nu}_p(E_n) = 2.316 + 0.131E_n$. Prompt $\bar{\nu}$ for the spontaneous fission of ^{236}U and ^{238}U were also measured with the result $\bar{\nu}_p(^{236}U) = 1.90 \pm 0.05$ and $\bar{\nu}_p(^{238}U) = 2.00 \pm 0.05$. The ratio between the half-lives for spontaneous fission of ^{238}U and ^{236}U was determined to be 0.30 ± 0.03. (auth)

59807 MEASUREMENTS OF NMR ON ORIENTED ^{192}Ir AND ^{191m}Ir IN Ni AND Fe HOST LATTICES. Eska, G. (Technische Univ., Munich); Hagn, E.; Butz, T.; Kienle, P.; Umlauf, E. Phys. Lett.; 36B: No. 4, 328-30(20 Sep 1971).

From the extrapolated zero-field resonance frequencies the g-factors of the ^{192}Ir ground state and the $11/2^-$ isomer state of ^{191}Ir are deduced to 0.4701 ± 0.0027 and 1.0957 ± 0.066, respectively. In addition spin-lattice relaxation times were measured. (auth)

59808 ISOVECTOR POTENTIAL IN ^{208}Pb FROM PARTIAL MUON CAPTURE. Bressani, T. (Univ., Turin. INFN, Turin); Molinari, A. Phys. Lett.; 36B: No. 4, 297-300(20 Sep 1971).

The strength of the isovector potential in ^{208}Pb is estimated using the hypothesis of a total inhibition of the partial μ^- capture in ^{208}Pb with excitation of giant resonance in ^{208}Tl. (J.W.R.)

59809 EXPLANATION FOR THE 0^+ EXCITED PAIRING STATE IN ACTINIDE NUCLEI. Griffin, R. E.; Jackson, A. D.; Volkov, A. B. (State Univ. of New York, Stony Brook). Phys. Lett.; 36B: No. 4, 281-6(20 Sep 1971).

The existence of more than one collective 0^+ state in deformed nuclei due to the separation of "oblate" and "prolate" matrix elements is demonstrated by means of a model calculation and calculations using ^{240}Pu single particle wave functions. (auth)

59810 ENERGY DEPENDENCE OF $\bar{\nu}_p$ FOR ^{233}U, ^{235}U, AND ^{239}Pu BELOW 5.0 MeV. Walsh, R. L.; Boldeman, J. W. (Australian Atomic Energy Commission Research Establishment, Sutherland). J. Nucl. Energy; 25: No. 8, 321-30(Aug 1971).

Measurements were made of the energy dependence of $\bar{\nu}_p$ for neutron induced fission of ^{233}U from thermal to 2.0 MeV. An analysis was made of all existing data below 5 MeV for ^{233}U, ^{235}U and ^{239}Pu. It was observed from this analysis that the energy dependence of $\bar{\nu}_p$ for all three nuclei may be characterized by a two line dependence in which the change of slope occurs at the pairing energy. The nature of the $\bar{\nu}_p(E_n)$ dependence is explained in terms of the double-humped fission barrier, and is consistent with the adiabatic assumption of weak coupling of the collective degrees of freedom at the saddle point to the nuclear degrees of freedom at scission. (auth)

59811 MEASUREMENTS OF THE TOTAL NEUTRON CROSS SECTION OF PRASEODYMIUM BETWEEN 1 AND 18 MeV. Enayetullah, M. (Atomic Energy Centre, Dacca, Pakistan); Ameen, N.; Islam, N.; (and others). Nucl. Sci. Eng.; 46: No. 1, 148-50(Oct 1971).

The transmission method was used for the measurement of the neutron total cross section of praseodymium at 1 to 18 MeV. The results were compared with optical model calculations. (J.W.R.)

59812 NEW DATA OF DIFFERENTIAL MEASUREMENTS OF RATIO α FOR ^{239}Pu. Sukhoruchkin, S. I. At. Energ. (USSR); 31: No. 3, 245-58(Sep 1971). (In Russian).

Results of measurements performed during 1968–1970 yrs of the ratio $\alpha = \sigma_c/\sigma_f$ for plutonium-239, with neutron energies up to 10 to 15 keV, are considered. A reduction in the dispersion of experimental results for this energy range is pointed out; possible ways of determining this important reactor constant with greater accuracy are discussed. (31 references) (auth)

59813 β AND γ ACTIVITY OF THE FISSION PRODUCTS OF ^{235}U AND ^{239}Pu. II. COMPARISON WITH THE EXPERIMENTAL RESULTS. Costa, L.; de Tourreil, R. (CEN, Fontenay-aux-Roses, France). J. Nucl. Energy; 25: No. 7, 285-95(Jul 1971). (In French).

A comparative study is made between the various experimental measurements concerning the decay rates, β and γ residual powers, and the theoretical computation based on the fission products properties in the most sensitive case of only one thermal fission of ^{235}U and ^{239}Pu. It is concluded that even for the "well known" ^{235}U case, the discrepancies between the different experimental results are much greater than the estimated errors, owing to the difficulty of normalizing the measurements. The computed results obtained from the fission products properties give an error of <30% for β and 15% for γ residual powers between $10^2 \leq \tau \leq 10^3$ sec cooling time and only a few per cent for β and γ residual powers for cooling time $\tau > 10^3$ sec. (auth) (UK)

59814 NUCLEAR REACTIONS INITIATED BY RECOIL NUCLEI. Kabir, P. K.; Trefil, J. S. (Univ. of Virginia, Charlottesville). Nature (London); Phys. Sci.; 232: No. 30, 77-8(26 Jul 1971).

When a proton of relativistic energy strikes a heavy nucleus it is possible for the target nucleus, or a large amount of it, to recoil with a substantial fraction of the energy of the incident proton, and if this energy is sufficient to penetrate the Coulomb barrier between the recoiling particle and another heavy nucleus in the target, nuclear reactions can occur. Such a process has been invoked to account for the possible production of a nuclide with Z = 112 in a W target irradiated with 24 GeV protons (Marinov et al. Nature 229: 464 (1971)). The present authors attempt to estimate the rate of production of high energy recoil nuclei in such proton-W collisions, and it is thought that the results would be very similar for any other heavy nuclide target. It is found that the cross-section for the production of energetic heavy ions in interactions of protons with heavy nuclei is extremely small, and that the idea of using such recoil nuclei as secondary projectiles to initiate reactions between heavy nuclei is not promising; also that the results reported by Marinov are unlikely to have arisen from such secondary reactions caused by recoil nuclei. The possibility that inelastic proton-W collisions, resulting in break-up of the W nucleus, may provide energetic recoil fragments that could induce secondary reactions is also considered, and found unlikely. According to Batty (Nature Phys. Sci. 232: 78 (1971)), however, there seems to be conflict between these results and available experimental data, and it may be that more complicated interactions can occur. (UK)

59815 STUDY OF PHOTO-NUCLEAR REACTION BY MEANS OF RESIDUAL NUCLEUS METHOD. Kato, Toyoaki; Saito, Tatsuya; Tsai, Hui-tuh; Nomura, Koichi; Sato, Takeo (Tohoku Univ., Sendai). Kakuriken Kenkyu Hokoku; 3: No. 1, 115-20(Oct 1970). (In Japanese).

The dependence of the yield of (γ,n) reactions on the maximum energy of Bremsstrahlung was measured. The targets used were ^{12}C, ^{23}Na, ^{55}Mn, ^{127}I and ^{197}Au. Yield curves obtained are shown, and compared with those by Nathans et al. and by Montalbetti et al. The residual nucleus method was next applied to the study of photonuclear reactions on ^{133}Cs and ^{139}La. Yield distributions of Cs, I, and Sb nuclides produced with 250-MeV bremsstrahlung were measured. Yield curves plotted against the number of emitted particles were of parabolic form, and could be explained in terms of the two-step model of Serber. The results were compared with those by Halpern et al. The deviation from the line of stability on the neutron deficit side is discussed. (Japan)

59816 FRAGMENT YIELDS OF ^{90m}Y, ^{91}Sr, ^{92}Sr, ^{92}Y, ^{93}Y, ^{95}Zr, ^{95}Nb, ^{96}Nb, ^{99}Mo, ^{111}Ag, AND ^{112}Ag FOR THE FISSION OF ^{209}Bi INDUCED BY A 1000-MeV MAXIMUM ENERGY BREMSSTRAHLUNG HAVE BEEN DETERMINED RADIOCHEMICALLY. di Napoli, Vito (Univ., Rome); Laceranza, Angela Maria; Margadonna, Daniele; (and others) Gazz. Chim. Ital.; 101: No. 2, 117-28(1971). (In Italian).

The fragment yields of ^{90m}Y, ^{91}Sr, ^{92}Sr, ^{92}Y, ^{93}Y, ^{95}Zr, ^{95}Nb, ^{96}Nb, ^{99}Mo, ^{111}Ag, and ^{112}Ag for the fission of ^{209}Bi induced by 1000 MeV maximum energy bremsstrahlung have been determined radiochemically. The resulting mass-yield curve was found to be a single symmetrical peak with a width at half maximum of about 19 mass units and a maximum fission yield of 5 percent at a mass number of approximately 101. (auth)

59817 EVIDENCE FOR HIGH-SPIN CORE-EXCITED STATES IN ^{210}Po. Blomqvist, J.; Fant, B.; Wikstroem, K.; Bergstroem, I. (Research Inst. for Physics, Stockholm). Phys. Scr.; 3: No. 1, 9-10(1971).

With the aid of the pulsed α-beam of the 225 cm cyclotron, a 93 nanosecond level in ^{210}Po at 4372.0 keV is found, which is interpreted as a state arising from two protons in the $(h_{9/2})^2_8$ state, coupled to the first 5 state in ^{208}Pb. (auth) (Sweden)

XUM

59818 E2 CORE POLARIZATION BY NEUTRONS IN THE $(i_{13/2})^{-2}$ CONFIGURATION IN ^{206}Pb. Bergstroem, I.; Blomqvist, J.; Fant, B.; (and others) (Research Inst. for Physics, Stockholm). Phys. Scr.; 3: No. 1, 11-12(1971).

With the aid of the ^{204}Hg (α,2n) reaction and the pulsed beam of the 225 cm cyclotron, the 12^+ and 10^+ states of the $(i_{13/2})^{-2}$ configuration in ^{206}Pb at the energies 4027.2 and 3957.6 keV, respectively, have been localized. The partial E2 transition probability for the $12^+ \rightarrow 10^+$ transition has been determined, as well as an effective charge of 0.94 ± 0.04 for the $i_{13/2}$ neutron. It is concluded that the quadrupole polarization charge for the $i_{13/2}$ neutron is about 50% larger than for the $h_{9/2}$ proton. (auth) (Sweden)

59819 SIGN OF "δ", THE AMPLITUDE MIXING RATIO OF GAMMA TRANSITIONS, AND GAMMA--GAMMA–GAMMA ANGULAR CORRELATION STUDIES IN ^{160}Dy. Pande, U. S.; Singh, B. P. (Univ. of Roorkee, India). Can. J. Phys.; 49: 2088-92(1 Aug 1971).

The importance of gamma–gamma–gamma angular correlation in order to study the absolute sign of "δ", the amplitude mixing ratio of gamma transitions, independent of phase convention is given. A study of the triple gamma-rays cascade of 298 keV → 879 keV → 87 keV in ^{160}Dy from the decay of ^{160}Tb was done. (auth) (Canada)

59820 NEUTRON YIELD FROM PROTONS AND DEUTERONS OF MOMENTA BETWEEN 0.85 AND 1.7 GeV/c TOTALLY ABSORBED IN LEAD. West, D.; Wood, E. (Atomic Energy Research Establishment, Harwell, Eng.). Can. J. Phys.; 49: 2061-72(1 Aug 1971).

Neutron yields from protons and deuterons accelerated by the Birmingham synchrotron were measured at a series of momenta up to 1.7 GeV/c in a lead target 10 cm diameter and 60 cm long. The observed yield from deuterons is greater than that expected from two protons each having one half of the deuteron energy but is close to that which can be deduced from the measured proton yield on the hypothesis that stripping reactions are the predominant processes involved in the first interaction. (auth) (Canada)

59821 ENERGY LEVELS OF ^{142}Nd FED BY THE DECAY OF ^{142}Sm. Hayashibe, Shogo; Endo, Yorimasa; Miyata, Takamoto; Tazawa, Hisashi; Shiga, Toshio (Tohoku Univ., Sendai). Kakuriken Kenkyu Hokoku; 3: No. 1, 60-6(Oct 1970). (In Japanese).

Decay of ^{142}Sm produced by (γ,2n) reaction on ^{144}Sm, enriched to 90% or more in mass 144, was studied to investigate the level structure of ^{142}Nd. A Ge(Li) detector and a NaI(Tl) scintillation counter were employed to take singles and coincidence spectra. Beta and internal conversion spectra were observed with a magnetic β-ray spectrometer. The gate for the coincidence measurement was opened at the peak of the 1.576 MeV gamma-ray by the NaI(Tl) counter. The 0.642 MeV gamma-ray was strongly in coincidence with the gate, and a weak peak at 1.320 MeV was observed in the coincidence spectrum. Internal conversion spectra of the K and L + M electrons of the 2.216 MeV transition were taken by the beta spectrometer. The experimental K/L + M ratio was 5.0 ± 0.9. No gamma peak for the 2.216 MeV transition was observed in the singles spectrum with the Ge(Li) detector. The 2.216 MeV transition, therefore, is EO transition, and the level at 2.216 MeV has spin and parity of 0^+. The ratio of transition probability of the 2.216 MeV transition to that of the 0.642 MeV transition, which was also emitted from the 2.216 MeV level, was 0.13 ± 0.05. Five gamma rays having energy levels of 0.642, 1.320, 1.576, 2.389 and 2.841 MeV were observed, and seem to be gamma rays due to the decay of 73 min activity (^{142}Sm). Maximum energy components of positrons were 3.2 and 1.6 MeV. The decay scheme of the decay chain ^{142}Sm → ^{142}Pm → ^{142}Nd was constructed. The level structures of ^{142}Nd were discussed. The strength parameter of the EO transition was obtained and compared with the other data. (Japan)

59822 EVAPORATION OF CHARGED PARTICLES FROM EXCITED Ag AND Br NUCLEI. Fox, Jay A. Columbia, S. C.; Univ. of South Carolina (1971). 139p. University Microfilms Order No. 71-21,843.

Thesis.

A study is presented of singly and doubly charged particles with kinetic energies less than 35 MeV, which are emitted from the silver and bromine nuclei found in nuclear track emulsions after these nuclei have been excited by inelastic collisions with 3.5 GeV/c π^- mesons. The potential barrier method of Lohrmann and Teucher is used to separate interactions with this relatively heavy group of nuclei from those with the lighter constituents of the emulsion. The ratio of heavy to light emulsion nuclei is measured to be 3.6 ± 0.8, a result which agrees with other experiments. The singly and doubly charged particles which stop in the emulsion are identified principally by means of a photometric track width measuring device. A brief discussion of nuclear evaporation theory is given and the energy spectra of the observed singly and doubly charged particles are found to be in fair agreement with the theoretical prediction if a nuclear temperature of T = 5.1 MeV and effective barrier height of V = 1.3 MeV for singly charged particles, and T = 6.8 MeV and V = 8.6 MeV for doubly charged particles is used. The average kinetic energies of these Z = 1 and Z = 2 particles are (12.7 ± 1.2) MeV and (17.9 ± 2.1) MeV respectively, while the theoretical predictions are 11.5 MeV and 17.7 MeV. The variation of these energies with excitation energy agrees with the findings of Bogdanski et al., neither of which agrees with evaporation theory. The ratio of doubly to singly charged particles is found to be 0.268 ± 0.035, in agreement with the theoretical prediction of 0.29 ± 0.04. The excitation energy is 307 MeV, a value which is six percent less than that given empirically. The angular distributions of these singly and doubly charged particles are essentially isotropic, thus agreeing with the evaporation model. Warden has presented evidence that the angular distribution of tracks with no gaps is peaked in a direction transverse to the beam. It is demonstrated that such an effect is probably the result of a systematic error in data acquisition. It is concluded that, with relatively minor exceptions, the experimental results presented are adequately explained by the nuclear evaporation theory. (Diss. Abstr. Int., B)

59823 E4 MOMENTS IN ^{152}Sm AND ^{154}Sm. Stephens, F. S. (Univ. of California, Berkeley); Diamond, R. M.; de Boer, J. Phys. Rev. Lett.; 27: No. 17, 1151-4(25 Oct 1971).

The E4 transition moments between the ground state and the 4^+ rotational state in ^{152}Sm and ^{154}Sm were determined from Coulomb excitation experiments with 10- to 12-MeV ^{4}He projectiles. Quantum-mechanical corrections are applied to the calculations used in the analysis of the data. The resulting E4 moments are about twice those expected from previously measured β_4 deformations. (auth)

59824 MEASUREMENT OF THE VARIANCE OF THE NUMBER OF NEUTRONS EMITTED IN FISSION OF ^{252}Cf AS A FUNCTION OF THE FRAGMENT MASS AND TOTAL KINETIC ENERGY. Gavron, Avigdor (Soreq Nuclear Research Center, Yavne, Israel. Weizmann Inst. of Science, Rehovot, Israel); Fraenkel, Zeev. Phys. Rev. Lett.; 27: No. 17, 1148-51(25 Oct 1971).

The variance of the number of neutrons emitted by individual fragments in fission of ^{252}Cf was measured as a function of the fragment mass and the total kinetic energy released. The variance does not show pronounced "sawtooth" structure as a function of the fragment mass. The correlation coefficient between the excitation energies of complementary fission fragments is thus substantially less than unity for at least some portions of the fragment mass-ratio distribution. (auth)

59825 THERMAL NEUTRON CAPTURE INVESTIGATION OF THE ^{172}Yb AND ^{174}Yb LEVEL STRUCTURES. Alenius, G.; Arnell, S. E.; Schale, C.; Wallander, E. (Chalmers Univ. of Tech., Goteborg). Phys. Scr.; 3: No. 2, 55-62(1971).

The energies and intensities of gamma radiation from thermal neutron capture in ^{171}Yb and ^{173}Yb have been determined by means of a Ge(Li) pair and anti-Compton spectrometer. Internal reactor targets have been used. The reaction Q-values, energies of excited levels and decay schemes of ^{172}Yb and ^{174}Yb have been deduced. The positions of the $K^\pi = 0^-, 1^-$ octupole vibrational states in ^{172}Yb are discussed. (auth)

59826 PRE-EQUILIBRIUM EMISSION IN n, p AND n, α REACTIONS OF CsI. Milazzo-Colli, L.; Braga-Marcazzan, M. G. (CISE, Milan. Univ., Milan). Phys. Lett.; 36B: No. 5, 447-50 (4 Oct 1971).

Spectra of proton and α particles from neutron bombardment at energies from 12 to 22 MeV in CsI are compared with the theory of the pre-equilibrium emission mechanism. This effect is found dominant at the highest neutron energies. Statistical evaporation gives a small contribution. (auth)

59827 (CEA-R-4070) STUDY OF THE MECHANISM OF THE REACTIONS (d,p) AND (d,t) INDUCED BY LOW ENERGY (120 TO 200 keV) DEUTERONS ON ^{9}Be. DETERMINATION OF THE CHARACTERISTICS OF THE EXCITED LEVELS OF ^{11}B OBTAINED BY THE REACTIONS ^{9}Be + d. Perchereau, Jeanine

(Commissariat a l'Energie Atomique, Bruyeres-le-Chatel (France). Centre d'Etudes). 1971. 118p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis. Submitted to Paris Univ. (France). Faculte des Sciences.

The angular distributions of the charged products of the reaction ^{9}Be + d were determined for incident energies of 120, 150, and 200 keV. With a view to obtaining a better understanding of such reactions, the previously published experimental results were collated and normalized so as to obtain the changes in the angular dependence of the particles emitted, in the incident energy range of 0.120 to 1.8 MeV. These limits were chosen so as to cover and to go beyond the Coulomb barrier of 1.2 MeV. In the first stage an attempt was made to interpret the experimental data for the reactions ^{9}Be(d,p_0)^{10}Be, ^{9}Be(d,p_1)^{10}Be*, and ^{9}Be(d,t)^{8}Be in the framework of a direct interaction mechanism. The relative importance of the nuclear and coulombic distortions were studied further in the input and output channels. In a second treatment, the hypothesis of a composite nucleus was used. As a result of a study of the changes in the coefficients of the splitting into Legendre polynomials, it was concluded that there exist 4 resonant states of ^{11}B which have as yet unknown characteristics. The work shows that even under favorable conditions, stripping, pickup of low energy deuterons near light nuclei, and also of course stripping of the target-nucleus are practically nonexistent. It is nontheless true that deuteron stripping is slightly favored when the transfer momentum is low. It is stated that although the case is complex it was found that a previous theory often criticized, gives excellent results. In effect, in spite of its adjustable parameters and its attempt to explain as best as possible the real-wave functions, the DWBA has only given results which are competitive with the PWBA. The composite nucleus mechanism is responsible for the emission of protons p_0, tritons t_0 almost totally, protons p_1 to within 11 per cent. These emissions result from decay of ^{11}B states whose characteristics are E = 15.80 MeV Γ = 0.840 MeV spin $1/2^-$ and E = 16.7 MeV Γ = 1.060 MeV spin $3/2^+$ and, less certainly E = 15.12 MeV Γ = 0.750 MeV spin $1/2^+$ as determined from the resonant reactions ^{9}Be(d,α_0)^{7}Li and ^{9}Be(d,α_1)^{7}Li*. This work has also shown that it is improbable that the 16.9 MeV level exists. (auth)

59828 (COO-2022-10) MULTILEVEL ANALYSIS OF ^{235}U SCATTERING CROSS SECTION DATA. Adler, D. B.; Adler, F. T. (Illinois Univ., Ubrana. Dept. of Physics). [1971]. Contract AT(11-1)-2022-1.. 7p. (CONF-711009-1). Dep. NTIS.

For Presentation at joint meeting of the American Nuclear Society; Miami, Fla. (17 Oct 1971).

The procedure used for fitting the high-precision data with the multilevel expansion is based on the derivation of the scattering parameters from the total cross section parameters. Illustrative preliminary results of the uranium-235 analysis are given. (J.F.P.)

59829 (COO-2022-11) AMBIGUITIES IN R-MATRIX PARAMETERS FOR INTERFERING RESONANCES WITH TWO FISSION CHANNELS. Adler, D. B.; Adler, F. T. (Illinois Univ., Urbana. Dept. of Physics). [1971]. Contract AT(11-1)-2022-1. 5p. (CONF-711009-2). Dep. NTIS.

For Presentation at joint meeting of the American Nuclear Society; Miami, Fla. (17 Oct 1971).

Results are summarized which are obtained assuming N well-spaced interfering resonances of the same spin state, having constant Γ_γ, with two fission channels. It is concluded that the apparent nonuniqueness of the R-matrix parameters seems to be inherent to the formalism and not a consequence of the least squares procedures. (J.F.P.)

59830 (CU-1019-82) ROLE OF ANGULAR MOMENTUM AND ISOBARIC SPIN IN TESTS OF THE INDEPENDENCE HYPOTHESIS. Miller, J. M. (Columbia Univ., New York. Dept. of Chemistry). [1971]. 21p. Dep. NTIS.

The range of validity of the compound-nucleus model for the description of nuclear reactions proceeding through continuum states and leading to continuum states is extended if proper account is taken of all of the constants of the motion and of the detailed variation of level density from nucleus to nucleus. Adjustment of the level-density formula for those factors that make the ground state of the nucleus unusually stable can have dramatic effects on the probability for the emission of various types of particles. The conservation of angular momentum along with careful evaluation of the spin dependence of level densities can have large effects on the shapes of energy and angular distributions as well as the probabilities for the emission of the various types of particles. Finally, isobaric-spin conservation can increase the probability for proton emission in proton-induced reactions. This is particularly true when there is a very small probability for proton emission from the T < states of the compound nucleus. (auth)

59831 (IFA-CRD-41) POLARIZATION EFFECTS IN NUCLEAR TRANSFER REACTIONS. Ciocanel, A. (Institutul de Fizica Atomica, Bucharest (Romania)). 1970. 14p. Dep. NTIS (U. S. Sales Only).

A short exposition of the formalism for the transfer processes is presented, and the polarization calculation is accomplished. The physical meaning of these reactions at low energies on light nuclei and the effects of some approximations on the cross sections are also discussed, in the frame of the DWBA-theory. (auth)

59832 (JINR-E4-5890) NUCLEAR CENTRE OF MASS COORDINATE IN THE BLOCH-HOROWITZ THEORY. Palumbo, F. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 12p. Dep. NTIS (U. S. Sales Only).

A method is given to obtain intrinsic wave functions in the framework of the Bloch–Horowitz theory. The effects of spuriosity on energy are considered, and as an example previous work on (^{3}He) is analyzed. (auth)

59833 (JINR-E4-5907) CALCULATION OF NEUTRON EQUILIBRIUM PAIRING IN SPHERICAL SINGLE CLOSED SHELL NUCLEI. Bal'butsev, E. B.; Bochnacki, Z. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 18p. Dep. NTIS (U. S. Sales Only).

Neutron pairing in Ni, Sn and Pb isotopes is calculated by minimalization of the total energy under the condition of constant volume. Satisfactory overall agreement with experimental pairing parameters is found in all three cases. (auth)

59834 (KURRI-TR-76) REPORTS OF THE STUDY MEETING ON NUCLEI WITH SHORT LIFE, KUMATORI, OSAKA, JAPAN, 30 JUNE–1 JULY 1969. Iwata, Siro (ed.) (Kyoto Univ. (Japan). Research Reactor Inst.). 30 Jun 1970. 27p. (In Japanese). (CONF-690661).

Separate abstracts were prepared for the various papers in this conference. (R.W.R.)

For abstracts of individual papers see: 57481, 57521, 59781, 59782, 59835, and 59836.

59835 (KURRI-TR-76, pp 1-2) WHY WE STUDY NUCLEI FAR OFF STABILITY LINE. Yoshizawa, Yasukazu (Kyoto Univ. (Japan). Research Reactor Inst.). (In Japanese).

From Meeting on nuclei with short life; Osaka, Japan (30 Jun 1969).

In Reports of the study meeting on nuclei with short life.

Meaning of the study on nuclei far off stability line is explained. Mass formula and nuclear stability may be clarified by measuring mass of the nuclei far off the beta-stability line. Alpha decay of the nuclei far off the stability line and proton decay of neutron-deficient nuclei may be found, as well as ordinary alpha and beta decay of nuclei. Mirror nuclei are expected in the region of A ≤ 100, and superallowed transitions are observed. Investigation of double-magic nuclei far off the stability line is important for studying nuclear structure. Deformed nuclei may be found in this region. Study on the origin of chemical elements is interesting. It is considered that the chemical elements were produced from light elements by repeated neutron absorption and beta decay. Thus neutron-rich nuclei are important for the study of the origin of chemical elements. The nuclei far off the stability line are usually short-lived, and on-line study is necessary. The study is in progress with on-line mass separators, and the characteristics of the various separators in use are tabulated. (Japan)

59836 (KURRI-TR-76, pp 3-6) NUCLEI FAR OFF BETA STABILITY LINE AND GROSS THEORY OF NUCLEI. Yamada, Masami (Kyoto Univ. (Japan). Research Reactor Inst.). (In Japanese).

From Meeting on nuclei with short life; Osaka, Japan (30 Jun 1969).

In Reports of the study meeting on nuclei with short life.

Gross theory of nuclei is discussed in relation to nuclei far off beta stability line. Mass of the nucleus is expressed by the Weizsaecker semiempirical mass formula composed of five terms, that is, volume, surface, symmetry, Coulomb, and even–odd terms. Estimation by this formula is in agreement with actual mass data within 1% error. The present mass data, however, were obtained from the nuclei along the beta stability line, and the agreement in the region far from the beta stability line is still uncertain. The mass formula is very important for combining the experimental results and the fundamental theory. Results of calculation by Brueckner, Bethe and others are compared with each term of the mass formula. The surface and symmetry terms have a variation of about 40%. Data for the nuclei far off the stability line are necessary to determine magnitude of the terms precisely. Neutron

XUM

gas far off the stability line is also interesting material, because the nuclear force is relatively simple; accordingly, reliability of calculation is high, and the data about it are also necessary for the study of neutron stars. The nuclei far off the stability line are also useful for the study of the gross theory of beta decay, because measurement of their lifetime and beta spectrum is useful as a check of the nuclear matrix element of the beta decay. (Japan)

59837 (LA-4492) FORMALISM FOR THE [POLARIZED] $T(d,n)^4He$ AND $^3He(d,p)^4He$ REACTIONS. Gammel, John L.; Keaton, P. W. Jr.; Ohlsen, Gerald G. (Los Alamos Scientific Lab., N. Mex.). Jul 1970. Contract W-7405-eng-36. 71p. Dep. NTIS.

The formalism required to describe the $T(d,n)^4He$ or $^3He(d,p)^4He$ reaction when all particles may be polarized is discussed. The relation among the various sets of spin-1 tensors is stated explicitly, so that the formulas applying to a particular experiment may be written easily in terms of any desired system. (auth)

59838 (LA-4549) ENDF FORMATS AND PROCEDURES FOR PHOTON PRODUCTION AND INTERACTION DATA. Dudziak, Donald J. (comp. and ed.) (Los Alamos Scientific Lab., N. Mex.) Jul 1971. Contract W-7405-eng-36. 87p. (ENDF-102(Rev.) (Vol.2)). Dep. NTIS.

The ENDF formats for storage of photon production and photon interaction data are presented as are procedures for entering these data. Formats for photon production data are a revision of those given in Los Alamos Scientific Laboratory Report LA-3801 (ENDF-111) and supersede the earlier format. Sample sets of photon production data are given in the new format. Procedures are given to minimize ambiguities in entering data in the format and to facilitate writing processing codes to use the data. Classes of data for which formats and procedures are specified include photon production cross sections, multiplicities, transition probability arrays, angular distributions, energy spectra, and energy-angle distributions; also, photon interaction cross sections, secondary angular, energy, energy-angle distributions, and atomic form factors are included. (auth)

59839 (LA-4735) FINITE-DIFFERENCE SOLUTION OF AXIALLY SYMMETRIC NUCLEAR SINGLE-PARTICLE POTENTIALS. Fiset, E. O.; Nix, J. R.; Bolsterli, M. (Los Alamos Scientific Lab., N. Mex.). Aug 1971. Contract W-7405-eng-36. 7p. Dep. NTIS.

An implicit finite-difference method for solving Schrödinger's equation for axially symmetric static nuclear single-particle potentials was investigated. The method used is an improved version of the procedure previously outlined. The finite-difference equations are obtained in prolate spheroidal coordinates by use of a variational principle. The eigenvalues and eigenvectors of the resulting band matrix are found by use of inverse iteration, with the linear system of equations solved directly. The method works satisfactorily, but requires approximately 25 times as much computing time as an expansion of the wave function in deformed harmonic-oscillator basis functions, for comparable accuracy in the eigenvalues. (auth)

59840 (NP-19027) EXACT GROUND STATE OF SOME ONE-DIMENSIONAL N-BODY SYSTEMS WITH INVERSE ("COULOMB-LIKE") AND INVERSE-SQUARE ("CENTRIFUGAL") PAIR POTENTIALS. Note No. 315. Calogero, F.; Marchioro, C. (Rome Univ. (Italy). Istituto di Fisica). 5 May 1971. 8p. Dep. NTIS (U. S. Sales Only).

The exact ground state, and the corresponding binding energy, is exhibited, of the system composed of N (nonidentical) quantum-mechanical particles interacting in one dimension via the potential $V_{ij}(x_i-x_j) = g(x_i-x_j)^{-2} + (f_i-f_j)(x_i-x_j)^{-1}$. Some special choices of the constants f_i and g, that yield examples of possible physical interest, are discussed. (auth)

59841 (ORO-4119-1) RESEARCH IN EXPERIMENTAL AND THEORETICAL NUCLEAR PHYSICS. Progress Report. Liu, K. H.; Lynk, E. T.; Toosi, M. A.; Singh, Zorawar (Southern Univ., Baton Rouge, La. Dept. of Physics). 15 Jul 1971. Contract AT(40-1)-4119. 26p. Dep. NTIS.

A new treatment of the finite-range interaction within the framework of the distorted-wave Born-approximation (DWBA) was developed. Higher-order corrections to zero-range stripping calculations can now be more easily carried out to approach the limit of the "exact" result. The application of this method to the DWBA deuteron stripping calculations is recommended. Futhermore, the effect of the D state of the deuteron on proton polarization and deuteron analyzing power for the reaction $^{40}Ca(d,p)^{41}Ca$ leading to the ground state at several bombarding energies was studied. Previous studies of this reaction in the zero range and finite range have described j-dependent features of the cross section and vector analyzing powers. Preliminary results are in agreement with these. Finite-solid-angle corrections for two five-sided Ge(Li) detectors were measured by using the collimated-beam method. Data were taken with source-to-detector distances of 5, 7, and 10 cm for both the cylindrical and the trapezoidal detectors. The investigated detectors had volumes of 42 cm^3 and 19 cm^3, respectively. Reasonable agreement with the calculations of D.C. Camp and A. L. Van Lehn [Nucl. Instrum. Methods, 76: 192 (1969)] was found. (auth)

59842 (RT/FI-(71)6) SASSI: A FORTRAN PROGRAMME FOR THE CALCULATION OF NEUTRON SCATTERING FROM A SPHERICAL OPTICAL POTENTIAL. Benzi, V.; Fabbri, F.; Zuffi, L. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). 16 Feb 1971. 17p. Dep. NTIS (U. S. Sales Only).

The SASSI program, written for an IBM 360 computer in FORTRAN IV, calculates the neutron scattering cross sections from a spherical optical potential with a spin-orbit term. The program outputs are the total and reaction cross sections, the shape elastic total and differential cross sections, the total and differential compound cross sections for elastic scattering and inelastic scattering for a single excited level, the total and differential elastic cross sections, and the sum of all the total compound inelastic cross sections. (auth)

59843 (SC-DR-710320) PROCESSING CODES FOR GROUP-AVERAGED DISCRETE ORDINATES CROSS-SECTION TABLES. Adams, Kenneth G.; Renken, James H.; Flinchum, Joann H. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 42p. Dep. NTIS.

Three codes are discussed, COLAPS, EDIT, and MODIFY, that operate on any group-averaged cross-section tables which are used by transport codes such as DTF69, TWOTRAN, TDA, and MORSE. Each code is a separate entity. When used together, they provide a rather complete capability to modify and edit group-averaged cross-section tables. Familiarity with the notation and nomenclature in existing discrete ordinates transport codes is assumed. The programs are written in FORTRAN and run on the CDC6600. (auth)

59844 COMPARISON OF ANALOGOUS $\Delta T = 0$ β- AND γ-RAY DECAYS IN THE NUCLEAR 2s-1d SHELL. Bardin, T. T.; Becker, J. A. (Lockheed Palo Alto Research Lab., Calif.). Phys. Rev. Lett.; 27: No. 13, 866-9(27 Sep 1971).

M1, $\Delta T = 0$ radiative widths Γ_γ in the 2d-1s shell are compared with the widths computed with the Gamow-Teller β-decay ft values, Γ_β. For twelve of nineteen cases, $\Gamma_\gamma = (2 \pm 1)\Gamma_\beta$. (auth)

59845 Q-VALUE DEPENDENCE OF MULTINUCLEON TRANSFER REACTIONS. Toepffer, Christian (Univ., Frankfurt am Main). Phys. Rev. Lett.; 27: No. 13, 872-4(27 Sep 1971).

The regular behavior of multinucleon-transfer cross sections in reactions between heavy ions as a function of the Q values Q_{gg} for the ground-state transitions is explained in the molecular-wave-function method. The coupled equations of the scattering problem are solved analytically. (auth)

59846 REGGE POLE ANALYSIS OF GLORY SCATTERING. Sromovsky, Lawrence Anthony. Madison, Wis.; Univ. of Wisconsin (1971). 181p. University Microfilms Order No. 71-16,102.

Thesis.

Recent experiments studying the elastic scattering of α particles from spinless nuclei reveal a strong backward peak and a near-backward angular distribution similar in form to that of the meteorological glory. The usual explanation of this latter phenomenon in terms of surface waves suggested that an investigation of near-backward α-particle scattering might provide considerable insight into the properties of the nuclear surface. Near backward spinless scattering from several potentials, including square and Wood-Saxon wells of real and complex depth, are studied within the framework of Regge pole and partial wave analysis. The uniform asymptotic expansions of the Bessel and Hankel functions are used to treat the square well in detail. The treatment of the Wood-Saxon well relies heavily on numerical computations and analogies with the square well. The analysis of near backward scattering in terms of Regge poles provides a simple description of the intensity, energy dependence, and angular distribution which characterize the glory for all the potentials studied. The suggested connection of the glory with the surface properties of the potential is found to be valid in so far as these properties affect certain Regge poles of the scattering function (those near $l = kR$, where k is the incident wave number and R the potential radius). These poles are found to be the common source of all the phenomena termed glories. In some cases only one pole is involved; this is most likely for an absorbing Wood-Saxon well. In other cases a cooperative effect is operative; this occurs for the real Wood-

Saxon well and for the square well at special values of the index of refraction N. The glory for a square well with N = 1.333 (the scalar version of the meteorological glory) is found to be a relatively weak one involving many poles but little cooperation among them. (Diss. Abstr.)

59852 ft ASYMMETRY IN MIRROR GAMOW–TELLER β DECAY: BINDING-ENERGY EFFECTS. Wilkinson, D. H. (Univ. of Washington, Seattle). Phys. Rev. Lett.; 27: No. 15, 1018-22 (11 Oct 1971).

It is shown that the systematic asymmetry observed between positron and negatron emitters in mirror Gamow–Teller β decay is not due to binding-energy differences between the respective β-transforming nucleons; it must be due either to a fundamental weak-interaction effect or to a nuclear-structure effect of some type not yet quantitatively discussed. (auth)

59853 ENERGY DISPLACEMENT OF DIPOLE ISODOUBLETS. Akyuez, R. Oe.; Fallieros, S. (Brown Univ., Providence). Phys. Rev. Lett.; 27: No. 15, 1016-18(11 Oct 1971).

The difference in energy between the two isospin components of the giant dipole resonance in a nucleus with nonvanishing neutron excess is studied. An estimate is presented where this difference is expressed as a function of the mass number and the ground-state isospin of the nucleus. (auth)

59854 FINITE-RANGE INTERACTION IN DEUTERON STRIPPING REACTIONS. Liu, K. H. (Southern Univ., Baton Rouge, La.). Contract AT(40-1)-4119. Phys. Rev. Lett.; 27: No. 15, 1010-12(11 Oct 1971).

A new treatment of the finite-range interaction in stripping reactions within the framework of the distorted-wave Born approximation (DWBA) is presented. By this method, the finite-range calculation for the differential cross section in deuteron stripping is expressed as a power series expansion that approaches the "exact" results with computer time comparable to that for zero-range calculations. (auth)

59855 THEOREM FOR ENERGY-WEIGHTED AVERAGES OF SPECTROSCOPIC FACTORS. Shakin, C. M.; Da Providencia, J. (Univ., Coimbra). Phys. Rev. Lett.; 27: No. 16, 1069-71 (18 Oct 1971).

It is shown that, for a system with strong correlations, the centroid of the spectroscopic amplitudes for particle removal is given by the single-particle energy (defined appropriately) times the occupation probability of the orbit. (auth)

59856 INTERACTION CURRENT CONTRIBUTIONS TO PARITY NON-CONSERVING NUCLEAR γ-TRANSITIONS. Gari, M.; Huffman, A. H. (California Inst. of Tech., Pasadena). Contract AT(04-3)-63. Phys. Lett.; 36B: No. 5, 442-6(4 Oct 1971).

Parity non-conserving interaction current contributions to nuclear γ-transitions required by gauge invariance are calculated and discussed. Arguments are given that the strangeness conserving currents should contribute to the one pion-exchange parts of the interaction. (auth)

59857 SIMPLE COUPLING SCHEME FOR EXACT SHELL MODEL CALCULATIONS. Wong, S. K. M.; Zuker, A. P. (CEN de Saclay, Gif-sur-Yvette, France). Phys. Lett.; 36B: No. 5, 437-41(4 Oct 1971).

Shell model calculations are carried out in an antisymmetrized weak coupling basis. Dramatic reductions in dimensionality are achieved with little loss of accuracy and great gain of physical insight when compared with the conventional exact results. (auth)

59858 NUCLEON–NUCLEUS INELASTIC SCATTERING WITH REALISTIC NUCLEON–NUCLEON INTERACTIONS. Stafford, Richard David. Nashville; Vanderbilt Univ. (1971). 143p. University Microfilms Order No. 71-20,312.

Thesis.

A study was made of the problems inherent in applying the DWBA attack to nucleon–nucleus inelastic scattering through the use of realistic nucleon–nucleon interactions. The interaction forms discussed include a local approximation to the Brueckner G matrix suggested by Kuo and Brown as a result of their work in finite nuclei with the Hamada–Johnston interaction, local interactions with momentum dependence (repulsive terms proportional to p^2), and separable nonlocal interactions. Sample calculations are made with the Kuo–Brown interaction for proton inelastic scattering through excitation of a few low-lying states in the nuclei ^{90}Zr, ^{6}Li, and ^{14}N. The ^{6}Li and ^{14}N calculations include the tensor force. The ^{90}Zr calculation marks the first use of the Kuo–Brown effective interaction in inelastic scattering, and the ^{6}Li and ^{14}N calculations are the first application of the tensor part of that interaction. Inelastic scattering with momentum-dependent interactions and separable nonlocal interactions are examined formally, and calculational procedures are developed. (Diss. Abstr. Int., B)

59859 STUDIES IN QUADRUPOLE COULOMB EXCITATION. Lea, Suzanne Moore. Durham, N. C.; Duke Univ. (1970). 108p. University Microfilms Order No. 71-21,542.

Thesis.

The optimal method of calculating the quantum-mechanical differential cross section for quadrupole Coulomb excitation in the distorted-wave Born approximation is explained. Previous works have restricted the maximum number of partial waves used in expanding the distorted waves such that the calculation becomes inaccurate for low energies and/or forward scattering angles; this work removes that inaccuracy by using any desired number of partial waves up to a maximum of 300. A computer program was written which utilizes this approach. It reproduces known Coulomb excitation data in the classical limit and point-nucleus approximations. With a nucleus of finite size, however, significant differences from the point-nucleus case appear at energies near the Coulomb barrier. Data on excitation of nuclei through isobaric analog states are now available; they indicate that the interference between Coulomb excitation and the isobaric analog resonance should be significant. Codes that specify the scattering matrix for the nuclear interaction to have the form of a single-level Breit–Wigner resonance (a form appropriate to isobaric analog resonances) were written; these codes use optical-model and resonance parameters to calculate the phase shifts of the incoming and outgoing waves in the nuclear potential. Preliminary attempts to fit the data with this formulation are given. (Diss. Abstr. Int., B)

59860 COULOMB ENERGIES OF ISOSPIN TRIPLETS IN 2s–1d SHELL. Rappleyea, Chloe Annette. Boulder, Colo.; Univ. of Colorado (1970). 118p. University Microfilms Order No. 71-21,621.

Thesis.

Coulomb energies and second energy differences in the region $18 \leqq A \leqq 42$ are calculated for 0^+, $T = 1$ ground states. Preliminary calculations are done for masses 18 and 42 by using mixed configurations and radial wave functions derived from a Woods–Saxon potential well. To a good approximation, the second energy difference is just the Coulomb interaction energy of the last two protons in ^{18}Ne and ^{42}Ti. However, these preliminary calculations show that contributions from inclusion of four-particle–two-hole pair excitations in the nuclear wave functions of each triplet are important. The calculations also show that inclusion of opposite-parity orbits in nuclear wave functions may be necessary to reproduce experimental second energy differences. Based on these results, a detailed analysis of pairing interactions in the second

XUM

energy difference is done by including a pairing residual interaction in the shell-model Hamiltonian. A mathematical formalism that includes p–n pairs as well as p–p and n–n pairs is developed to calculate nuclear wave functions with this residual interaction. Inclusion of a pairing force depresses Coulomb energy expectation values for N = Z members of isospin triplets and is responsible for raising second energy differences. By using pairing strengths derived from fitting energy levels for mass-18 and mass-42 nuclei, results of the calculation reproduce experimental second energy differences extremely well. (Diss. Abstr. Int., B)

59861 THEORY OF STRUCTURAL CORRECTIONS IN PAIR CONVERSION COEFFICIENTS IN M1 TRANSITIONS OF NUCLEI. Barysaglebski, L. A.; Pazoiski, S. V. (Belorussian State Univ., Minsk. Vitebsk State Teaching Inst., USSR). Vestsi Akad. Navuk BSSR, Ser. Fiz.-Mat. Navuk; No. 2, 81-4(1969). (In Belorussian).

The relation of electronic factors with nuclear parameters in structural magnetic dipole theory of internal conversion coefficients for various types of static nuclear charges for Z = 20, 62, and 64 was studied. It is shown that variations of the electronic factors for transformation to the nuclear charge distributions, which are closer to experimental values, as in the case of conversion coefficients on the K shell for the M1 transitions of the nuclei, are noticeable for the electronic factor for the first nuclear parameter and are significant for the electronic factors for the other nuclear parameters. This leads to variations of the nuclear parameters determined from experimental work on internal conversion coefficients. (tr-auth)

59862 HARMONIC OSCILLATOR POTENTIAL INSERTIONS IN PARTICLE LINES. Clement, David M. (Univ. of California, Los Angeles). Nucl. Phys.; A174: No. 3, 561-71(1971).

Brueckner calculations of the binding energy of finite nuclei are usually performed with harmonic oscillator single-particle wave functions. It is, therefore, computationally more convenient to keep the oscillator potential in intermediate states and then subtract out its effects by calculating higher-order diagrams involving potential insertions in particle lines. It is found that the lowest-order diagram involving a single potential insertion in a particle line can be approximated by $-\kappa\bar{U}^{c.m.}$, where κ is the wound integral and $\bar{U}^{c.m.}$ is the average over the c.m. potential energy of the pairs of particles in the nucleus that occupy relative S states. (auth)

59863 PAIRING FACTORS FOR ELECTRIC TRANSITION OPERATORS: A COMMENT ON THE PRECEDING PAPER. Brussaard, P. J. (Rijksuniversiteit, Utrecht). Nucl. Phys.; A174: No. 3, 551(1971).

Difficulties in the application of Siegert's theorem are noted. Several errors in a recent paper by P. J. Brussaard [Nucl. Phys., A158: 440(1970)] are pointed out. The most significant concerns the fact that the commutator $[\rho, H]$ in general does not lead to a single-particle operator; in particular, the nonlocal character of the pairing interaction of the BCS model may be incompatible with the assumption that it does. (R.W.R.)

59864 SIEGERT'S THEOREM AND THE PAIRING FACTORS FOR ELECTRIC TRANSITION OPERATORS. Allaart, K. (Vrije Univ., Amsterdam). Nucl. Phys.; A174: No. 3, 545-50(1971).

It is argued that recent formulas for the electric transition operators in the BCS model and the subsequent conclusion that Siegert's theorem may not be applied in this case are incorrect. It is pointed out that these incorrect results are obtained using a prescription of Rose and Brink [Rev. Mod. Phys., 39: 306(1967)], which is very confusing. A modification of this prescription is given, and the correct form of the electric transition operators is discussed. (auth)

59865 FACTORIZATION AND FOLDED DIAGRAMS IN THE GOLDSTONE LINKED-CLUSTER SERIES. Becker, Richard L. (Oak Ridge National Lab., Tenn.); Jones, Robert W. Nucl. Phys.; A174: No. 3, 449-67(1971).

Factorization of insertions relative to skeletons in the Goldstone linked-cluster series can be achieved to a higher degree than is usually done by introducing folded diagrams. This is illustrated by a fourth-order example containing a second-order insertion. The generalization to all orders is found to be contained in the recent treatment of factorizability by Jones and Mohling [Nucl. Phys., A151: 420(1970)]. (auth)

59866 DENSE NEUTRON MATTER WITH REALISTIC INTERACTIONS. Pandharipande, V. R. (Niels Bohr Inst., Copenhagen. Tata Inst. of Fundamental Research, Bombay). Nucl. Phys.; A174: No. 3, 641-56(1971).

The energy of the neutron gas is studied with the Reid and Bressel–Kerman–Rouben soft-core potentials up to a density of 4.5 neutrons/Fn^3. Very approximate estimates for neutron-gas and -solid energies are presented also for the Hamada–Johnston hard-core potential. The short-range correlations are treated by a simple variational method in which the cluster expansion of the energy expectation value with a Jastrow wave function is truncated at the lowest-order two-body clusters. Healing constraints are introduced in the variation from qualitative comparison with lowest-order Brueckner theory, and a differential equation is obtained for the correlation function by minimizing the energy. The effective interaction for use with uncorrelated wave functions, given by this procedure is also interpreted with the Moszkowski–Scott separation method. It is shown that the lowest-order calculations may be reasonable for the Reid and Bressel–Kerman–Rouben soft-core potentials, whereas their applicability with Hamada–Johnston hard-core potential is doubtful for $\rho \gtrless 0.7\ F^{-3}$. The results give an approximate equation of state for dense neutron matter (the order of uncertainty in it is due to that in the neutron–neutron interaction at short range) and may be useful in neutron-star structure investigations. (auth)

59867 PHASE TRANSITIONS IN NUCLEAR FISSION. I. Ohta, Kohichi (Tokyo Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1493-1514(May 1971).

Within the framework of the state-independent pairing-plus-octupole model in the cluster representation, heavy nuclei in the actinide region are shown to undergo phase transitions of the second kind, between an asymmetric phase and a symmetric one, as the excitation energy is raised. For a description of the nucleus at high excitation energies, the Hartree–Fock–Gorkov approximation is used. The valence states responsible for the fission process are restricted within one major shell in each cluster, because the vicinity of the transition points is of interest. The situation is complicated, since there also occurs the superconducting–normal phase transition. The calculated transition points are in qualitative agreement with experiment, although more detailed and systematic experiments are required. (auth)

59868 GROSS THEORY OF FIRST FORBIDDEN β-DECAY. Takahashi, Kohji (Waseda Univ., Tokyo). Progr. Theor. Phys. (Kyoto); 45: No. 5, 1466-91(May 1971).

The gross theory of nuclear β decay developed by Yamada, Takahashi, and Koyama [Bull. Sci. Eng. Res. Lab., Waseda Univ., No. 31132: 146(1965); Progr. Theor. Phys. (Kyoto), 41: 1470 (1960); ibid., 44: 663(1970)] for allowed transitions is extended to include the first-forbidden transitions. The effect of the giant resonance is taken into consideration by using sum rules. The β-strength functions of both allowed and first-forbidden transitions and the β-decay half-lives are calculated. It is shown that the theory can explain the gross properties of the first-forbidden transitions as well as the allowed ones. In particular, the theoretical β-strength functions of neutron-deficient heavy nuclei are compatible with experimental data recently obtained by Hansen et al. [Nucl. Phys., A151: 609(1970)]. It is also shown that the first-forbidden transitions often predominate over the allowed transitions in heavy nuclei. (auth)

59869 UNIFIED DESCRIPTION OF INELASTIC AND QUASI-ELASTIC ELECTRON SCATTERING FROM NUCLEI. Balashov, V. V. (Moscow State Univ); Grishanova, S. I.; Kabachnik, N. M.; Kulikov, V. M. Phys. Lett.; 36B: No. 4, 325-7(20 Sep 1971).

On the basis of the particle-hole shell model and the method of the strong coupling of channels, the cross section for electrodisintegration of the nucleus is calculated from threshold up to high energies including both the region of the giant resonance and the quasi-elastic maximum. It is shown that the channel coupling leads to a considerable neutron yield. (auth)

59870 NATURE OF THE TWO-PION EXCHANGE CONTRIBUTION TO THE NUCLEAR FORCE. Riska, D. O. (NORDITA, Copenhagen); Chemtob, M. Phys. Lett.; 36B: No. 4, 313-16(20 Sep 1971).

Recent calculations of the two-pion contribution to NN scattering phase parameters are analyzed in terms of central, tensor and spin-orbit phase shifts. Conclusions are drawn concerning the qualitative features expected for the corresponding components of the nuclear force in the intermediate range region. (auth)

59871 ISOVECTOR MONOPOLE STATE AND COULOMB DISPLACEMENT ENERGIES. Auerbach, N. (Tel-Aviv Univ., Ramat-Aviv, Israel). Phys. Lett.; 36B: No. 4, 293-6(20 Sep 1971).

A correction to the Coulomb displacement energies arising from

XUM

the isovector monopole state is calculated using a sum rule approach. (auth)

59872 0^+ AND 1^+ UNLIKE PARTICLE-HOLE STATES IN DEFORMED ODD-ODD NUCLEI AND β-STRENGTH FUNCTIONS. Gabrakov, S. I.; Kuliev, A. A.; Pyatov, N. I. (Joint Inst. for Nuclear Research, Dubna, USSR). Phys. Lett.; 36B: No. 4, 275-7 (20 Sep 1971).

The properties of collective 0^+ and 1^+ states built of unlike particle-hole excitations in deformed odd-odd nuclei have been investigated in a microscopic approach. Their β-strength functions are calculated and compared with other predictions. (auth)

59873 TIME REVERSAL INVARIANT FORMULATION OF AVERAGE COMPOUND CROSS SECTIONS. Vager, Z. (Weizmann Inst. of Science, Rehovot, Israel. State Univ. of New York, Stony Brook). Phys. Lett.; 36B: No. 4, 269-70(20 Sep 1971).

A symmetrized expression of the independence of formulation and decay of the averaged compound cross section results in a modified Hauser–Feshbach formula. Such a formula changes estimates of the average compound elastic cross section by almost a factor of two. (auth)

59874 MASS PARAMETER OF FISSION ASYMMETRY. Kurochkin, S. G.; Cherdantsev, P. A. (Tomsk Polytechnic Inst., USSR). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 3, 157-9(1971). (In Russian).

The liquid drop model had been successfully used in studying the fission of atomic nuclei. Toroidal coordinates were adopted for describing the spherical fragments from the fission process. A mathematical relation was developed which was utilized to plot a family of curves representing the mass parameter of fission asymmetry. (K.S.W.)

59875 TEORIYA SLOZHNYKH YADER. (Theory of Complex Nuclei). Solov'ev, V. G. Moscow; Izdatel'stvo Nauka Glavnaya Redaktsiya Fiziko-Matematicheskoi Literatury (1971). 560p.

Basic contemporary theory of complex nuclei is considered, accompanied by pertinent accounts of various models, as the independent particle, generalized nucleus, the independent quasi particle, with pertinent methods of attack on the problem: Hartree–Fock, self-consistent field method, method of projection, and approximation methods. A semimicroscopic theory of nuclear vibrations in deformed and spherical nuciei is presented, including the structure of excited 0^+-states, the single and double phonon states, and interaction with phonons. 586 references. (K.S.W.)

59876 RESONANCE PHENOMENA IN NUCLEAR REACTIONS. Lovas, Istvan (Central Research Inst. for Physics, Budapest). Magy. Fiz. Foly.; 19: No. 3, 209-66(1971). (In Hungarian).

Resonances observed in nuclear reactions induced by one-nucleon bombardment are studied. The two historic approximation methods used for resonances are described: 1. the mathematical formal technique based on Schrodinger's equation of many-nucleon systems, and 2. the dynamic technique which has a more specific physical meaning. In the second case it is attempted to derive the dynamic properties directly from experimental data within the framework of the shell model. The anticipated development of the dynamic theory of nuclear reactions and its limitation are outlined, followed by application of the theory to resonance phenomena. A model of resonance phenomena in nuclear physics that may be solved exactly is developed. The equations applicable to two-, three-, and many-particle systems are examined taking resonances in elastic neutron scattering into account. The derived model has been applied to the description of isobaric analog resonances. Preliminary studies have been completed to generalize the field of application of the new model. (Doctoral dissertation, 55 references). (TTT)

59877 COMPRESSIBILITY UNDER DEFORMATION OF THE NUCLEAR HARTREE-FOCK FIELD. Castel, B. (Queen's Univ., Kingston, Ont.); Svenne, J. P. Can. J. Phys.; 49: 2028-30(1 Aug 1971).

The "compressibility under deformation" effect observed in isotopic shift experiments is analyzed in a deformed Hartree–Fock model. The empirical parameter ξ deduced previously from experiment is found to be consistent with the calculated estimate using a realistic interaction in four f-p shell nuclei. (auth) (Canada)

59878 DEPENDENCE OF HARTREE–FOCK SOLUTIONS IN sd-SHELL NUCLEI ON SPIN-DEPENDENT FORCES. Jensen, A. S.; Harvey, M. (Atomic Energy of Canada Ltd., Chalk River, Ont.). Can. J. Phys.; 49: No. 14, 1837-49(15 Jul 1971). (AECL-3898).

The Hartree–Fock solutions and the stabilities of these solutions are examined for all 4n nuclei in the (2s,1d) shell for various strengths of the spin-dependent forces. The relationship with a possible vibrational structure is discussed. (auth) (Canada)

59879 EFFECT OF LEVEL INTERFERENCE IN THE SLOW-NEUTRON CROSS-SECTIONS OF FISSILE NUCLEI. Koenig, D. R.; Michaudon, A. (CEN de Saclay, Gif-sur-Yvette, France). J. Nucl. Energy; 25: No. 7, 273-84(Jul 1971).

Simulated multilevel and single-level slow neutron cross sections for a fissile nucleus were calculated using, in both cases, the same level parameters corresponding to two spin states and three fission exit channels per spin state. The effect of level interference due to the fission exit channels was then evaluated from the comparison of these two sets of cross sections. Single-level analysis leads, in both cases, to distributions of "apparent" level parameters which are closely similar. This analysis demonstrates that, for such cross sections, interference effects contribute relatively little to the distortion of the apparent level parameters compared to the effects of the overlapping of non-interfering levels and the loss of very small levels. (auth)

59880 RADIATIVE CORRECTION FOR ELASTIC ELECTRON-AND POSITRON-NUCLEUS SCATTERING. Breuer, Hans (California State Coll., Pa.). Nucl. Data, Sect. A; 9: No. 3, 169-233 (Jun 1971).

Four formulas for the radiative correction to elastic electron- or positron-nucleus scattering are presented. Numerical values derived from them are given for atomic numbers 1, 2, 4, 8, 16, 50, and 90; energies 20, 50, 100, 200, 500, 1000, 2000, and 5000 MeV; scattering angles 30°, 60°, 90°, 135°, and 180°; and $\Delta E/E$ from 0.1 to 0.0002. A discussion of the radiation length together with computed values is included. (auth)

59881 INTRODUCTION TO X-COEFFICIENTS AND A TABULATION OF THEIR VALUES. Csonka, Paul L.; Haratani, Thomas; Moravcsik, Michael J. (Univ. of California, Livermore). Nucl. Data, Sect. A; 9: No. 3, 235-64(Jun 1971).

X-coefficients, as defined here, can be used to simplify the calculation of particle polarizations (vector polarizations as well as higher-order, so called, tensor polarizations) and spin correlations. If not more than two particles have nonzero spin in the reaction under study, then all polarizations and correlations can be expressed as linear combinations of X-coefficients, and only the numbers multiplying them depend on the form factors (invariant amplitudes). If three or four particles have nonzero spin, then bilinear combinations of X-coefficients appear, etc. The X-coefficients do not depend on the dynamics of the reaction and can be tabulated once and for all. They do depend on the spins of the participating particles and are given in this table for those spin values which are the most important ones from a practical point of view. (auth)

59882 ISOBARIC MASS EQUATION IN $A = 4n + 1$ NUCLEI. Auerbach, N. (Tel-Aviv Univ., Israel); Lev, A.; Kashy, E. Phys. Lett.; 36B: No. 5, 453-5(4 Oct 1971).

The parameters of the isobaric mass equation are calculated for the $T = 3/2$ multiplets in $A = 4n + 1$ nuclei, for $n = 2$ to $n = 10$. (auth)

59883 ALPHA CLUSTERING IN LIGHT NUCLEI WITH A SKYRME INTERACTION. Khadkikar, S. B. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Lett.; 36B: No. 5, 451-2(4 Oct 1971).

Equilibrium α-cluster configurations are calculated with a Skyrme interaction. Considerably less clustering is obtained than in previous calculations which used a B1 effective interaction, thus showing that the large α-clustering was due to the strong p-state repulsion required for saturation with density-independent forces. (auth)

59884 METHOD OF CALCULATING LOW-LYING SPECTRA IN SPHERICAL NUCLEI. Khodel, V. A.; Saperstein, E. E. (Kurchatov Inst., Moscow). Phys. Lett.; 36B: No. 5, 429-32(4 Oct 1971).

A method of calculating the long-range components of the effective interaction, Γ, between quasiparticles in nuclei is proposed. The equation for Γ in terms of the universal interaction amplitude Γ^u is deduced. The general expression for Γ^u containing 8 invariant amplitudes is given. A simple example is considered. (auth)

59885 THEORETICAL AND EXPERIMENTAL RESULTS ON INTERNAL BREMSSTRAHLUNG ACCOMPANYING ELECTRON

XUM

CAPTURE. (REVIEW). Kadar, Imre. ATOMKI (At. Kut. Intez.) Kozlem.; 13: No. 1-2, 29-51(May 1971). (In Hungarian).

If the energy of the recoil nucleus is disregarded, the total decay energy of electron capture, minus the bond energy of the electron, is carried away by the emitted neutrino. However, a secondary process also takes place, although with a much lower probability: in the radiative electron capture, the total decay energy is divided between the neutrino and a γ quantum, the so-called internal bremsstrahlung quantum. Determination of the maximum energy of the internal bremsstrahlung represents the only practical method to measure the total decay energy involved in electron capture. The radiative electron capture is a secondary process: the weak interaction is perturbed by an electromagnetic interaction, as a result of which a photon may be emitted during the electron capture. The perturbation is due to the sudden change of the electric and magnetic moments of the atom during the capture process. The original 1940 Morrison–Schiff theory and subsequent experimental measurements are reviewed, examining the reasons for the observed deviations. Subsequent theoretical studies of Glauber and Martin took radiative electron captures at higher shells into consideration; the more recent studies are also examined. The experimental techniques considered include spectrum shape measurements, determination of the intensity of the internal bremsstrahlung, angular distribution, angular correlation studies, and circular polarization measurements. (Review article, 57 references). (TTT)

59886 (WCAP-7735) TOPICAL REPORT: SENSITIZED STAINLESS STEEL IN WESTINGHOUSE PWR NUCLEAR STEAM SUPPLY SYSTEMS. Hazelton, W. S. (comp.) (Westinghouse Electric Corp., Pittsburgh, Pa. Monroeville Nuclear Center). Aug 1971. 20p. Dep. NTIS.

The results of an evaluation of the use of sensitized stainless steel in pressurized water reactor components are summarized. Tests conducted on the steel included intergranular corrosion cracking in various environments, stress analyses on piping, effects of hardsurfacing operations, effects of nitrogen on corrosion cracking, inspection procedures for sensitized components, and effects of localized high-oxygen-content coolant on components. Precautions taken during the fabrication and installation of sensitized components are described. (H.D.R.)

59887 SOME OF THE PROBLEMS AND THE PRESENT WORLD SITUATION OF ATOMIC POWER PLANT CONSTRUCTION. Bede, Gabor (Technical Univ., Budapest). Atomtech. Tajek.; 13: No. 7, 428-38(Nov 1970). (In Hungarian).

Nuclear power plants have become a strong competitor of conventional power plants. The planned construction and cost figures of nuclear power plants in USA, England, West Germany, France, Japan, and the Socialist countries are listed. The latest figures show that nuclear power plants are not more expensive than conventional power plants when individual units are larger than 500 MW(e). 17 references. (TTT)

59888 ECONOMIC OUTLOOK FOR ATOMIC ENERGY. Krymm, R. Atomtech. Tajek.; 13: No. 7, 419-27(Nov 1970). (In Hungarian).

The fast rate of growth of the nuclear power generating capacity is analyzed, reviewing the cost figures of the various reactor types, the competitive position of nuclear power plants during the next 10 to 15 years, their expected distribution in various geographic areas and long-range expectations from 1985 to the end of the century. The study was limited to HWR, BWR, natural-uranium-fueled heavy-water reactors and advanced gas-cooled reactors. The required capital investment and fuel cycle costs were examined and compared. It is expected that the problem of reliable nuclear fuel supply will be solved by long-range international agreements, in which protection of the national coal interest will be taken into account. Prevention of atmospheric contamination may result in excessive costs with respect to conventional power plants. It is anticipated that in many geographic areas large nuclear agro-industrial complexes will be established around nuclear power plants for desalting seawater and to serve the needs of chemical industry. The large power plants will be interconnected, creating an international network with a capacity expected to reach 5000 MW. (TTT)

59889 TRENDS IN THE PRODUCTION OF HEAT AND ENERGY IN THE FEDERAL REPUBLIC OF GERMANY. Kruppe, H. (Technische Ueberwachungs-Vereine eV, Essen). Brennst.-Waerme-Kraft; 23: No. 6, 285-9(Jun 1971). (In German).

From the development of steam and heat generation over the last decade a prognosis is made on further development up to 1980, using statistical information on boiler and furnace design, on power output and temperature levels, and on the breakdown into groups of operators. The marked effects on this developmen resulting from the regulations concerning air pollution or the inroads made by nuclear energy and natural gas are analyzed. 12 references. (auth)

59890 NUCLEAR ENERGY IN SWEDEN, 1970. Brynielsson, H. (Aktiebolaget Atomenergi, Studsvik, Sweden). pp 149-61 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

In Sweden 3,300 MW(e) capacity of nuclear power is under construction and the forecast for 1985 is about 15,000 MW(e). Long term prospects of the low-grade uranium shale of Billingen are interesting. The new company ASEA-ATOM for development, manufacture and marketing of nuclear reactors, fuel and components is owned in equal parts by the Government and ASEA. Other forms of collaboration with Government and foreign companies are described. The Atomic Energy Company, concentrating its activities to Studsvik, is responsible for the Government financed development work in collaboration with the nuclear industry and the utilities. (auth)

59891 INDIAN EXPERIENCE IN CONSTRUCTION OF NUCLEAR POWER REACTORS. Rao, V. Surya (Rajasthan Atomic Power Project, India). pp 163-81 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

The Indian Department of Atomic Energy has embarked, in collaboration with Canada, on the installation of Rajasthan Atomic Power Project—a 400 MW(e) nuclear power station. With the transfer of know-how of design and engineering from Canada, self-sufficiency is being achieved by gathering experience and first hand knowledge in construction. This has brought in its wake abundant problems like procurement of equipment, utilization of available materials, and adopting modern techniques for maximizing the utility of these materials both in manufacture and during construction with guaranteed assurance leading to safety. RAPP has overcome satisfactorily most of the above problems including a large scale indigenization program and has effectively set the pace in India for further nuclear power stations. (auth)

59892 CONSTRUCTION PROBLEMS AT KALPAKKAM. Srinivasan, M. R. (Madras Atomic Power Plant). pp 183-9 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

At Kalpakkam, near Madras, a twin unit CANDU type Atomic Power Station with each unit having an output of about 200 MW(e) is planned and work has commenced on the first unit. Though the basic features of the reactor system are similar to those of the Rajasthan reactors, a number of changes are being incorporated for reasons of economics or as a result of local conditions. The reactor containment building is being executed as a prestressed concrete structure designed to withstand the full internal pressure under the maximum credible accident. As part of the post-accident safety systems, a pressure suppression pool is being incorporated into the reactor building in order to keep both the temperature and pressure conditions in the areas occupied by personnel to safe values. A double containment principle is adopted for the reactor building as the inner prestressed wall is enclosed by an outer shielding wall with provisions made for venting of the gases in a controlled manner through a stack. Certain features of construction at Kalpakkam on the conventional side of the plant merit special mention. For example, the shoreline on the eastern sea coast of India is subjected to heavy littoral drift and is also visited by cyclones of high intensity more or less regularly. This has necessitated the adoption of submarine tunnel for drawing the cooling water for the condensers and the construction of an approach jetty extending about 500 meters into the open sea in order to facilitate the construction of the intake structure and also enable its maintenance. The existence of a high sub-soil water table has dictated the choice of the continuous cast diaphragm wall technique for a number of sub-structures of the power station. So far as the equipment is concerned, most of it, both nuclear and non-nuclear, is being contracted out to industry in India. (auth)

59893 STRETCH-OUT IN POWER PLANT SCHEDULES. Patterson, R. W. Power Eng.; 75: No. 9, 40-3(Sep 1971).

An attempt is made to formulate realistic schedules for fossil and nuclear power plant projects. The delay factors and adverse trends in construction and licensing are discussed. (H.D.R.)

59894 DEVELOPMENT OF THE SEQUENTIAL AUTOMATION OF THE THIRD UNIT OF THE CHINON NUCLEAR POWER STATION. Sonrel, Jean (Electricite de France, Chinon). Bull. Inform. A.T.E.N. (Ass. Tech. Energ. Nucl.); No. 88, 23-8(Mar 1971). (In French).

The developments arising from decisions taken on the running and general operation of Chinon 3 from the time of the preliminary studies are described. The principal difficulties which resulted in the modification of the initial automatic units are analyzed. The measures taken during the start up to ensure the correct actuation of the system are described. (France)

59895 REVIEW OF CIVIL ENGINEERING PROBLEMS IN CONSTRUCTION OF NUCLEAR POWER STATIONS. Yoshida, Minoru (Kansai Electric Power Co. Inc., Osaka). Tsuchi To Kiso; 18: No. 12, 1-3(Dec 1970). (In Japanese).

In view of advantages of economy and no public hazards, building of nuclear power stations is remarkable in Japan. Civil engineering problems in this field are reviewed about power station loca-

XUM

tion and technology. Three factors are important for selection of the nuclear power station site; (a) sparse population, (b) good ground condition, and (c) easy access to condenser cooling water. The possibility of increasing the sites in Japan is also considered. The most important thing in nuclear power stations is seismic design of the over-all station, which also concerns intake of cooling water. Soft ground foundations present problems, and regions with geological faults are to be averted. Recent development in employment of prestressed concrete vessels and also underground installation of reactors are reviewed. (Japan)

59896 FIRST UNIT OF SAINT-LAURENT-DES-FAUX POWER PLANT: GENERAL CHARACTERISTICS, POWER RUN-UP. Babinet, Gonzague; Bellin, Andre (Electricite de France, Tours). Ind. At.; 15: No. 2, 21-32(May 1971). (In French).

The first of the two natural uranium-graphite-gas reactors of Saint-Laurent-des-Eaux was put into service on March 14, 1969: a little more than six months after the first coupling into the network of the two turbo-alternator units (2 × 250 MW). The structure of the reactor is based on the integrated arrangement, i.e. the chief components of the primary circuit are integrated in a prestressed concrete pressure vessel. Two computers take care of the handling and the surveillance of the unit. The startup marked the completion of tests on various materials and the overall test phases prior to loading the reactor with the pressure vessel and bringing it up to temperature. (France)

59897 PERFORMANCE ANALYSIS OF BWR EMERGENCY CORE COOLING SYSTEM DESIGNED FOR SHIMANE NUCLEAR POWER STATION OF CHUGOKU ELECTRIC POWER COMPANY. Takashima, Yoshie; Horiuchi, Tetsuo (Hitachi Ltd., Ibaraki, Japan). Hitachi Hyoron; 53: No. 2, 106-10(Feb 1971). (In Japanese).

The emergency core cooling system designed for Shimane nuclear power station consists of two core spray lines, four low pressure water injection lines, one high pressure water injection line and one auto relief line. These lines are composed so as to maintain sufficient core cooling capacity and multiplicity against accidental loss of coolant under assumption of any possible area of break, even if external AC supply is lost. Performance analysis is based on results of performance tests of each line and analytical models. These tests are in regard to characteristics of the core spray cooling and reflooding and depressurization characteristics of the high pressure water injection system. Analyzed conditions are loss of coolant occurring at any position in the coolant pipe works with any possible area of break. The external AC supply and one out of two emergency diesel generators are assumed to be lost. The severest case is a full break in the recirculation pipe works. Maximum cladding temperature during the failure is 850°C, much lower than the chemical activation temperature of Zircaloy-2. This failure leads at the worst to perforation of the cladding in a few percentages of fuel rods. The other failures cause no perforation. The results are satisfactory. (Japan)

59898 PRUDENCE AND TECHNOLOGY: A TECHNOLOGIST'S RESPONSE TO PREDICTIONS OF CATASTROPHE. Weinberg, Alvin M. (Oak Ridge National Lab., Tenn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 37-40(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The predicted population growth and increasing electric power demands of the world are analyzed. The need for advancing technology to improve the quality of life for the present and future world populations is discussed. The utilization of available energy sources for world power demands is described. The proposed role of nuclear power in meeting the power requirements of the world is presented. 7 references. (D.C.C.)

59899 INSTRUMENTATION AT CONNECTICUT YANKEE AND MAINE YANKEE ATOMIC POWER STATIONS. Beckley, Bruce B.; Wood, Edwin, C. (Maine Yankee Atomic Power Co., Westboro, Mass.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 443-8(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The changes made to the instrumentation and control equipment at Connecticut Yankee since plant startup are summarized. There have been additional changes made in the design of Maine Yankee's control system beyond those already made in Connecticut. These fall into two categories: the first is changes to the nuclear steam supplier's package; the other category includes the additions made to the basic instrumentation for operator ease and improved performance. These changes between Connecticut and Main Yankee designs are described. (auth)

59900 NUCLEAR POWER AND NUCLEAR POWER PLANTS. Part 1 of Kaernkraftdrift av Fartyg. Goteborg; Stiftelsen foer Skeppsbyggnadsteknisk Forskning ([1971]). (In Swedish).

General information such as journal articles, statistics, and commercial news items about nuclear power in different countries is given along with data for specific power reactors and nuclear power plants. It consists of about 300 loose sheets which are revised and supplemented continuously. (Sweden)

59901 NUCLEAR ENERGY IN EUROPE. Casa, A. F.; Fiorentini, P.; Perilli, M. L.; Sansone, M. M. Com. Naz. Energ. Nucl., Notiz.; 17: No. 6, 41-92(Jun 1971). (In Italian).

A review of the present situation of nuclear energy in Europe is included. Nuclear plants and the fuel cycle (from mining to reprocessing) are discussed. (auth)

59902 SAFETY INSPECTION ON PROSPECTIVE TSURUGA REACTOR INSTALLATION (PROTOTYPE ATR) OF POWER REACTOR AND NUCLEAR FUEL DEVELOPMENT CORPORATION. Genshiryoku Iinkai Geppo; 15: No. 12, 53-64(Dec 1970). (In Japanese).

A prototype ATR in Tsuruga is to be situated on the Tsuruga Peninsula facing the Sea of Japan. It is D_2O-moderated and cooled with boiling light-water; its heat output is 557 MW (165 MW(e)); fuel is low-enriched UO_2 or mixed U–Pu dioxides, with Zircaloy-2 cladding. Topics discussed include: outline of the installation such as site conditions and the nuclear reactor; safety design and safety measures on nuclear and thermal design, fuel, control, containment and cooling, wasters, safety, aseismatic design, etc.; radiation exposure in normal operation due to radioactive wastes; accidents concerning reactivity and mechanical failure; serious and imaginary hazards; and technological ability of the applicant. (Japan)

59903 NUCLEAR POWER AS SOURCE OF ENERGY IN JAPAN. NUCLEAR POWER AND ENERGY ECONOMICS. Sakisaka, Masao (Japan Energy Economic Research Inst., Tokyo). Nippon Genshiryoku Gakkaishi; 13: No. 1, 29-33 (Jan 1971). (In Japanese).

Future problems of nuclear power as source of energy are based on the petroleum industry in this decade. Increase of energy demand must be supplied by petroleum. Therefore, economics of the nuclear power energy must be considered in comparison with energy cost of the petroleum energy. Development cost of new oil field is rising, and pollution control is intensified in countries with a large amount of petroleum consumption. Therefore, it is inevitable to get into high energy cost age. Nuclear power plants are therefore objects of attention, and incorporation of the nuclear power plants in energy supply has been increased in advanced countries. Expected nuclear power plants in Japan are described with respect to energy demands in the future. (Japan)

59904 NUCLEAR POWER AS SOURCE OF ENERGY IN JAPAN. URANIUM ENRICHMENT. Imai, Ryukichi (Japan Atomic Power Co., Tokyo). Nippon Genshiryoku Gakkaishi; 13: No. 1, 45-50(Jan 1971). (In Japanese).

Uranium enrichment becomes a very important problem in nuclear fuel for proven light water reactors. The uranium enrichment as a big science in Japan is described in view of nuclear power policy. Nuclear power plants in Japan are based on light water reactors at present. Therefore demand of the uranium enrichment is expected to become 8,000 to 13,000 t SWU per year in 1985, and a part of the nuclear fuel must be supplied domestically. However, as enrichment technique is not established now, it is the most important development research for nuclear energy industry. The enrichment development in Japan has been carried out by two methods, gas diffusion and gas centrifuge method. Schedule of the development by both methods is presented. (Japan)

59905 NUCLEAR POWER AS THE SOURCE OF ENERGY IN JAPAN. FORECAST OF NUCLEAR POWER GENERATION IN JAPAN. Miyake, Shin (Federation of Electric Power Companies, Tokyo). Nippon Genshiryoku Gakkaishi; 13: No. 1, 34-40(Jan 1971). (In Japanese).

Factors of reducing power reactor construction cost are described: large scale of plants, rationalization of design, standardization, and so on. Factors of lessening unit power cost are explained: reliability of equipment, increase in fuel burnup, and fuel cycle. Safety aspects are dealt with on the following: principle, plant safety design, radiation protection, site, earthquake, etc. Among items for future studies are: station site and seismic design, waste disposal, plant-operation automation, efficient fuel utilization, uranium enrichment, spent fuel transport and reprocessing, etc. (Japan)

59906 THERMAL AND NUCLEAR POWER GENERATION ENVISAGED FOR ACTIVE 1970's. Sakai, Takeshi (Hokuriku Electric Power Co. Inc., Toyama, Japan). Karyoku Hatsuden: 21: No. 12, 1285-94(Dec 1970). (In Japanese).

The introduction of nuclear power into the conventional pattern of power generation for Japan during the 1970's is discussed. Requirements for its introduction on a national basis are securing of energy resources, saving of foreign currency, and diversifying of energy resources. Large power companies have advantages in nuclear power generation because of the merit of large plant capacity and multi-plant power stations. Factors to make nuclear power generation economically advantageous for small power companies are discussed, including cost reduction of facilities, easy access to station sites, cooperative wide area operation, nuclear power complexes, etc. Turning to thermal power generation, its advantages are described, such as shorter period of construction, establishment of petroleum complexes, etc. Finally, problems of nuclear fuel supply and enrichment are described. (Japan)

Operation and Economics

59907 (CONF-710606-15) THE NEW ENGLAND POWER EXCHANGE. Mochon, Harry H. Jr. (New England Power Exchange, West Springfield, Mass.). [nd]. 11p.

From seventeenth annual meeting of the American Nuclear Society; Boston, Mass. (13 Jun 1971).

The New England Power Exchange (NEPEX) consists of joint planning and dispatching groups for bulk electric power. The NEPEX master-satellite dispatch center system is described, and system operating functions and problems are discussed. (H.D.R.)

59908 (DOCKET-50016-130) ENRICO FERMI ATOMIC POWER PLANT. Report for May 1971. (Power Reactor Development Co., Detroit, Mich.). 13 Oct 1971. 19p. (PRDC-EF-93). Dep. NTIS.

59909 (DOCKET-50219-149) OYSTER CREEK NUCLEAR POWER PLANT, UNIT NO. 1. Failure of Isolation Condenser Line Break Protection. (Jersey Central Power and Light Co., Morristown, N. J.). 30 Sep 1971. 2p. Dep. NTIS.

59910 (DOCKET-50245-94) MILLSTONE NUCLEAR POWER STATION, UNIT 1. Abnormal Occurrence No. AO-71-19. (Millstone Point Co., Hartford, Conn.). 8 Oct 1971. 2p. Dep. NTIS.

An operations incident involving a malfunction of the pressure control system for the turbine is described. A force imbalance in the number one control valve at rated pressure caused the high pressure trip of the reactor. Corrective actions are described. (D.C.C.)

59911 (DOCKET-50245-96) MILLSTONE NUCLEAR POWER STATION, UNIT NO. 1. Start-Up. (Northeast Utilities Service Co., Hartford, Conn.). 23 Mar 1971. 7p. Dep. NTIS.

59912 (DOCKET-50245-99) MILLSTONE NUCLEAR POWER STATION, UNIT 1. Abnormal Occurrence No. AO-71-20. (Millstone Point Co., Hartford, Conn.). 22 Oct 1971. 6p. Dep. NTIS.

On October 10, 1971, a malfunction in the turbine pressure control system caused a pressure transient and a high flux reactor trip. The trip was followed by a vessel blowdown which was caused by a relief valve which opened and failed to close. Corrective actions are described. (D.C.C.)

59913 (DOCKET-50263-88) MONTICELLO NUCLEAR GENERATING PLANT, UNIT 1. HPCI Problems Experienced During Start-Up. (Northern States Power Co., Minneapolis, Minn.). 18 Oct 1971. 5p. Dep. NTIS.

59914 (TID-25818) GUNDREMMINGEN NUCLEAR POWER PLANT. Monthly Report, July 1971. (Kernkraftwerk RWE-Bayernwerk G.m.b.H., Gundremmingen (West Germany)). 13 Aug 1971. 65p. (In German). Dep. NTIS.

The overhaul and refuelling work was completed on schedule on 11 July 1971. The reactor protection system, shut-down safety, and temperature coefficient were then checked and the plant restarted on 16 July 1971. The plant then operated at full power until the end of the month. The specific activity of the primary circuit water and exhaust gas were about a third of the values measured before the shut-down. (auth)

59915 MODERN POWER STATION PRACTICE. VOLUME 8. NUCLEAR POWER GENERATION. London; Pergamon Press (1971). 394p. £5.

The subject is dealt with under the headings: nuclear physics (basic physical concepts, nuclear reactions, the nuclear fission reaction, neutron slowing down and the heterogeneous thermal reactor), nuclear power reactors (reactor as a heat source, steam cycles and types of thermal reactor), British nuclear power plant (siting, design of nuclear power station plant, layout and development potential), nuclear power station operation (irradiation effects, effects of temperature, fuel cycles, instability, reactor kinetics, reactor control, reactor safety, neutron flux measurements, reactor power level measurements, temperature measurements, coolant measurements, safety circuits, sector servo control-rod system, reactor industrial television equipment and neutron flux scanning), and nuclear techniques (commissioning a nuclear power station, properties of reactor materials, health physics, legislation affecting nuclear power stations, nuclear fuel management and latest developments). (UK)

59916 DEVELOPMENT OF NUCLEAR POWER TECHNICAL SCHOOL IN THE RHEINSBERG TRAINING AND EXPERIMENTAL NUCLEAR POWER PLANT. Flach, G.; Hiersemann, R. (VEB Kernkraftwerke, Rheinsberg, Ger.). Kernenergie; 14: No. 5, 159-63(May 1971). (In German).

On basis of the position of the Rheinsberg nuclear power technical school in the Unitary Socialist System of Education, the educational, training, and perfecting concepts are presented. Aim, substance, and methods of acquirement and absorption of knowledge on nuclear power plant technology, abilities, and dexterities are given corresponding to the specific categories of qualification. Center of this concept is the qualification oriented to production techniques, pairing theoretical knowledge with the practical experience at hand. Therefore, the Rheinsberg nuclear power technical school performs part of technological qualification of present and future personnel and workmen in connection with nuclear industry. (auth)

59917 DRESDEN 2 INCIDENT OF JUNE 5, 1970. Cagle, C. D. Nucl. Safety; 12: No. 5, 538-46(Sep-Oct 1971).

On June 5, 1970, while Dresden Unit 2 was undergoing power testing and was operating at approximately 75% power [1875 MW(t), 623 MW(e)], a spurious signal in the reactor pressure-control system altered the steam flow to the turbine and caused a turbine trip followed by a reactor scram. Subsequent erratic water-level and pressure control in the reactor vessel, compounded by a stuck indicator pen on a water-level monitor-recorder and inability of the isolation condenser to function as needed, led to discharge of steam and water through safety valves into the reactor dry well. Electric cables were damaged, and electric motors developed low-resistance problems. No significant amount of radioactive contamination was discharged to the environment. There was no pressure damage of the reactor vessel or the dry-well containment walls. Recovery included replacing some electric cables with improved cables having higher temperature ratings, rerouting other electric cables, drying electric motors, reorienting the discharge direction of safety valves, revising the reactor pressure-control system, improving the capability of the isolation condenser, and revising operating and emergency procedures. The reactor remained shut down until Aug. 8, 1970. Two to 3 weeks of this downtime was ascribed to refueling. 3 references. (auth)

59918 REACTOR AVAILABILITY AND STATION RELIABILITY FOR CONTINUITY OF SERVICE. Hagen, E. W. Nucl. Safety; 12: No. 5, 499-515(Sep-Oct 1971).

The average availability of first-generation nuclear power reactors to produce uninterruptibly a supply of thermal energy was determined to be 83.4% for seven commercially operated electricity-generating stations by reviewing the station operating reports for a 3-year period. The safest nuclear power reactor is one that is in normal steady-state operation, and therefore it was pertinent to determine the causes of abnormal operation or unscheduled shutdowns. Operational deviations and unplanned station shutdowns were analyzed and categorized into those related to heat-transfer systems, instrumentation and controls, and the electric turbine-generator power system. The central problem areas were found to be leaks in the heat-transfer system, difficulties with the control-rod drives in the primary system, and both leaks and turbine controls in the secondary plant. From the data available a figure of merit was produced to evaluate the unscheduled shutdowns and also to give a comparative evaluation of station service reliability for use of utility operators. 27 references. (auth)

59919 OUTLOOK FOR NUCLEAR POWER IN AUSTRALIA. Griffiths, D. R. (Australian Atomic Energy Commission, Lucas Heights). Search; 2: No. 9, 333-7(Sep 1971).

Prospects for nuclear power in Australia are considered with reference to the world nuclear power position. The two factors thought most important in influencing the decisions of utilities in favor of nuclear plant, are costs involved in meeting pollution control requirements, and uncertainties regarding the future price of fossil fuel. A brief consideration is made of present Australian fossil fuel reserves and consumption and this is related on a state by state basis to the possible adoption of nuclear power. Nuclear power is not competitive at present, but should become more attractive during the 1980's. (Australia)

59920 NUCLEAR ECONOMICS AND CHANGE. McNelly, M. J.; Armitage, A. C. Pub. Util. Fortn.; 88: No. 6, 19-26(16 Sep 1971).

The impact of change on nuclear economics, and, more particularly, the impact of change on the relative costs of generation of nuclear versus oil and coal is examined. To do this, major components of nuclear, coal, and oil generation costs were calculated on a mills per kilowatt-hour basis for 1970 start-up plants and then reevaluated for plant starts five and ten years later. Brief reference is made to how such trends translate into the forecast growth of nuclear installations in the United States through 1985. (auth)

59921 COST BENEFIT ANALYSIS OF THE CHOICE BETWEEN NUCLEAR AND OTHER FUELS. Jones, G. K. 15p. of Operational Research Society Conference. London; Operational Research Society (1969). (CONF-691137-1).

From Operational Research Society Conference; Eastbourne, England (Nov 1969).

A case study in cost benefit analysis is presented which illustrates some of the practical difficulties involved. The study considers the choice between two possible fuels for a new power station: nuclear, using an advanced gas-cooled reactor (A.G.R.), or conventional coal-firing. After a resumé of recent fuel policy, the cost characteristics of both A.G.R. and coal stations are considered. The standard Discount Cash Flow (D.C.F.) method of financial assessment is described, involving forward simulation of the C.E.G.B. generating system. A full social cost benefit analysis is then described, and estimates given of some of the main differences from the normal D.C.F. analysis. One of the main factors considered is the redundancy caused in the mining industry by choosing a nuclear station rather than a coal-fired one. The primary and secondary effects of such redundancies on the cost benefit equation are considered for various assumptions about redeployment of the miners. Other important factors in the cost benefit equation are enumerated, including the correct marginal price of coal and the correct discount rate to be used. The analysis shows that the factors considered are important and could affect the final choice of fuel. (auth) (UK)

59922 TECHNOLOGICAL DEVELOPMENT IN THERMAL AND NUCLEAR POWER GENERATION IN THE 1970'S. Miyakawa, Yasuhiro (Tokyo Electric Power Co. Inc.). Karyoku Hatsuden; 21: No. 12, 1295-1302(Dec 1970). (In Japanese).

In the 1970's, efficient operation of whole power supply systems will be emphasized, and thus thermal and nuclear power plants are required to respond to change from start-up to full load operation as fast as possible. To meet these demands of fast response and stability, an advance from the traditional static optimization control to dynamic optimization control is necessary. In other words, so-called adaptive control is required, by which optimum operation is possible by recognizing dynamic characteristics of a system, computing and changing set values of controllers automatically. To realize the above requirement, identifiers or dynamic characteristics analyzers are needed. The most difficult and basic problem is the system stability or the identifier itself being one of the elements of a closed loop. The identifier is classified and analyzed mathematically, and its circuits are discussed in detail. (Japan)

59923 CHAPELCROSS MELT-OUT AND RECOVERY OPERATIONS. Weir, C. G. (United Kingdom Atomic Energy Authority, Annan, Scotland). pp 23-9 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

The observations and the actions taken at the time when a channel of fuel over-heated are described, together with the results of the subsequent inspection and the preparations made for the recovery operation. An account is also given of the sequence of the channel clearing operations, the difficulties encountered and the probable causes of the incident. After outlining the procedures used for decontaminating both the fabric of the building and the inside of the gas circuit, a brief summary is presented of the start-up tests and the subsequent operation at power. (auth) (UK)

59924 SAINT-LAURENT-DES-EAUX REACTOR I FUEL MELT DOWN INCIDENT: 17 OCTOBER, 1969. Knockaert, A. (Centrale Nucleaire, Saint-Laurent-des-Eaux, France); Feru, J.; Teste du Bailler, A. pp 31-3 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

During a routine re-fuelling operation, a graphite flow-restrictor was mistakenly loaded at the top of a fuel-element channel. This resulted in an excessive over-heat and five fuel-elements melted, provoking at the same time the destruction of the catch-pot placed at the bottom of the channel. The restoring work of the installation included: the recovery of the major parts of uranium (90%), the installation of a total filtration of the cooling gas, and the modification of the Burst Cartridge Detection (B.C.D.) System. The investigation inside the vessel, the organization of the operations, and the health physics organization are described. (auth) (UK)

59925 CEGB EXPERIENCE OF IN-PILE WORKING. Brown, V. (Central Electricity Generating Board, Berkeley, Eng.). pp 37-44 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

At virtually every C.E.G.B Nuclear Power Station it has been necessary to reinstate or recover failed components within the reactor. In some cases the outage time of generating plant to carry out recovery exercises was lengthy and expensive. The more notable exercises are examined, the design and material failures causing incidents are discussed, and the mechanics of the recoveries and the recovery tool developments are outlined. (auth) (UK)

59926 HEALTH PHYSICS CONTROL. Wheatley, B. M. (Central Electricity Generating Board, Berkeley, Eng.). pp 45-6 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

Although hazards cannot be measured directly, acceptable risks can be related to radiation doses in specified organs. The prediction of their doses and confirmatory measurements on the individual can only be derived from measurements of the environment or of surface dose on the individual. The choice of economic and reliable methods of controlling risks to workers and the estimation of their doses involves special professional skills. (auth) (UK)

59927 TRIAL OF NO. 1 PLANT IN MIHAMA NUCLEAR POWER STATION OF KANSAI ELECTRIC POWER COMPANY. Hamaguchi, Shunichi (Kansai Electric Power Co. Inc., Osaka). Karyoku Hatsuden; 22: No. 2, 115-23(Feb 1971). (In Japanese).

Testing of No. 1 plant in Mihama nuclear power station is in power raising phase. The performed tests are function test in hot state, fuel charging test and power raising test, peculiar to PWRs. The function test in hot state is performance test of reactor, machinery and equipments in primary cooling systems and reactor auxiliary systems, carried out under normal operating conditions, but before charging fuel. The power raising test is performed at five different levels including full power. Load shutdown test is performed at three levels. On Aug. 8, 1970, first parallel operation was successful, and 10 MW of power was supplied into system. (Japan)

59928 NUCLEAR POWER AS SOURCE OF ENERGY IN JAPAN. ECONOMICS OF NUCLEAR FUEL CYCLE. Takei, Mitsuo (Japan Energy Economic Research Inst., Tokyo). Nippon Genshiryoku Gakkaishi; 13: No. 1, 40-5(Jan 1971). (In Japanese).

Economics of nuclear power plants may be prescribed by arrangement, capacity and efficiency of each component in nuclear fuel cycle system. One most important nuclear power policy is securing of industrial facilities for the components. Development work of securing uranium ore abroad for the nuclear fuel cycle is described. For fuel processing, business tie-up situation of its industry is given. Fuel reprocessing is one of most important problems at present in Japan. Economizing the fuel reprocessing and shift to private industry system in future are considered as important matters, and then radioactive waste disposal problem is presented in respect of its technical development for safety management. (Japan)

59929 GENTILLY PIONEERS ADVANCED CONCEPTS IN REACTOR DESIGN, CONTROL, AND VERSATILITY. Mod. Power Eng.: 65: 58-61(May 1971).

Quebec's first nuclear power station produced its first electricity on April 6, 1971. Advantages of its BLW system over PHW reactors are discussed. Station operation is described under the following headings: reactor control, fuelling machine control, computer system, CRT graphic display, program development and turbine by-pass. (F.S.A.) (Canada)

59930 ELECTRIC FACILITIES OF MIHAMA NUCLEAR POWER STATION KANSAI ELECTRIC POWER CO. Inoue, Toru; Iriko, Teruo (Mitsubishi Electric Corp., Kobe, Japan). Mitsubishi Denki Giho; 45: No. 3, 316-30(Mar 1971). (In Japanese).

The electric facilities of Mihama nuclear power station are described. The major design features of the system with equipment ratings are discussed, and some of the special design considerations required for the electrical auxiliary system of the nuclear power station are also included. (auth) (Japan)

Safety and Siting

59931 (DOCKET-1155-136) LA CROSSE BOILING WATER REACTOR. Nuclear Instrumentation Automatic Gain Control System. (Dairyland Power Cooperative, La Crosse, Wis.). 27 Sep 1971. 24p. Dep. NTIS.

Power testing of the instrumentation automatic gain control system is described. (D.C.C.)

59932 (DOCKET-1155-137) LA CROSSE BOILING WATER REACTOR. Coolant Systems Corrosion Surveillance Program. (Dairyland Power Cooperative, La Crosse, Wis.). 25 Feb 1971. 36p. Dep. NTIS.

The corrosion rate of A335, P-11 steel used in the forced-circulation piping of the LaCrosse Boiling Water Reactor (LACBWR) is studied. Corrosion specimens were inserted in the piping and wall-thickness baseline data were taken before the reactor was placed in service. The first examination of corrosion specimens after installation and the first wall thickness measurements made since baseline data were determined are presented. The results indicate that: A335, P-11 steel possesses good general corrosion resistance in stagnant water; the material is subject to crevice corrosion; the material appears to be subject to erosion in flowing water; and the ultrasonic technique used to measure wall thickness is accurate to about ±0.020 inch. (auth)

59933 (DOCKET-1155-138) LA CROSSE BOILING WATER REACTOR. Technical Specifications, Change No. 3. (Division of Reactor Licensing (AEC), Washington, D. C.). 14 Oct 1971. 7p. Dep. NTIS.

Revised technical specifications are presented concerning the use of respiratory protective equipment for personnel. Protection factors for the respiratory equipment are included. (D.C.C.)

59934 (DOCKET-50003-92) INDIAN POINT STATION, UNIT NO. 1. Exposure of Four Employees to Airborne Radioactivity on September 12, 1971. (Consolidated Edison Co. of New York, Inc., New York). 13 Oct 1971. 8p. Dep. NTIS.

59935 (DOCKET-50010-96) DRESDEN NUCLEAR POWER STATION, UNIT 1. Supplement to Proposed Change No. 17 to Operating License DPR-2. (Commonwealth Edison Co., Chicago, Ill.). 7 Oct 1971. 12p. Dep. NTIS.

Requested additional information is presented concerning performance evaluation of the emergency core cooling system. (D.C.C.)

59936 (DOCKET-50146-93) SAXTON REACTOR. Technical Specifications, Change Request No. 49. (Saxton Nuclear Experimental Corp., Pa.). 18 Oct 1971. 3p. Dep. NTIS.

Revised technical specifications are presented concerning the increase in hydrogen pressure ratings for the primary coolant purification system. (D.C.C.)

59937 (DOCKET-50146-94) SAXTON REACTOR. Technical Specifications, Change Report No. 25. (Saxton Nuclear Experimental Corp., Pa.). 18 Oct 1971. 48p. Dep. NTIS.

Revised technical specifications are presented concerning the increase in hydrogen pressure ratings for the primary coolant purification system. (D.C.C.)

59938 (DOCKET-50155-93) BIG ROCK POINT NUCLEAR PLANT. Technical Specifications. (Consumers Power Co., Jackson, Mich.). 1 May 1964. 84p. Dep. NTIS.

59939 (DOCKET-50206-126) SAN ONOFRE NUCLEAR GENERATING STATION, UNIT 1. Technical Specifications, Proposed Change No. 7 (Revision). (Southern California Edison Co., Los Angeles). 22 Oct 1971. 12p. Dep. NTIS.

Revised technical specifications are presented concerning an increase in the average burnup limit for Cycle 2 operation from 17000 MWD/MTM to 18000 MWD/MTM. (D.C.C.)

59940 (DOCKET-50206-127) SAN ONOFRE NUCLEAR GENERATING STATION, UNIT 1. Technical Specifications, Proposed Change No. 8. (Southern California Edison Co., Los Angeles). 22 Oct 1971. 26p. Dep. NTIS.

Revised technical specifications are presented concerning control rod insertion limits for Cycle 3 operation. (D.C.C.)

59941 (DOCKET-50237-203) DRESDEN NUCLEAR POWER STATION, UNIT 2. Additional Information Regarding Fuel Performance. (Commonwealth Edison Co., Chicago, Ill.). 8 Oct 1971. 5p. Dep. NTIS.

Revised design parameters of the Susquehanna Power Reactor Units 1 and 2 are presented. Included also are additional data on the reactor requested by the Division of Reactor Licensing. (D.C.C.)

59999 (DOCKET-50387-11) SUSQUEHANNA STEAM ELECTRIC STATION, UNITS 1 AND 2. Preliminary Safety Analysis Report, Amendment No. 2. (Pennsylvania Power and Light Co., Allentown). 15 Oct 1971. 74p. (DOCKET-50388-11). Dep. NTIS.

Requested additional data on the reactor concerning design parameters and operation aspects are presented. (D.C.C.)

60000 LEAK RATE TEST ON NUCLEAR REACTOR CONTAINMENT VESSEL FOR NO. 1 UNIT OF MIHAMA POWER STATION, KANSAI ELECTRIC POWER CO., INC. Kaneda, A. (Mitsubishi Heavy Industries, Ltd., Tokyo); Kamisako, M.; Masaki, T.; Katayama, M.; Satake, M. Mitsubishi Juko Giho; 8: No. 3, 427-38(May 1971). (In Japanese).

Leak rate test was conducted on the No. 1 nuclear reactor containment vessel installed in the Mihama Power Station as its preoperational test. This is the first test in Japan approved to be performed by the absolute method on the basis of the test results

XUM

obtained at the time of completion of the vessel. The details of the test are described. As the result of the test, it was confirmed that the leak rate of the containment vessel at the design pressure (2.39 kg/cm^2G) was about 0.02%/24 h, which was far less than the allowable leak rate of 0.1%/24 h. It was also found that because the containment vessel is surrounded by an exterior shield concrete wall, there was a great error in the leak rate when it was heated from above during daytime, the error could be eliminated effectively by spraying water on the top of the vessel and also that leak rate could be calculated with sufficient accuracy by using the measured values during midnight to dawn, in which case spraying of water was not necessary. 60001 NUCLEAR POWER: RISKS AND SOCIAL CONCERNS. Tsivoglou, Ernest C. (Georgia Inst. of Tech., Atlanta). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 19-27(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The conflict between the nuclear power industry and the conservationists concerning the development of nuclear power plants is discussed. The problems of radioactive waste and thermal effluents are studied. Suggestions for safe development and operation of nuclear power plants are presented. 11 references. (D.C.C.)

60002 NUCLEAR POWER: SOCIAL NEEDS AND BENEFITS. Jordan, Walter H. (Oak Ridge National Lab., Tenn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 28-30(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The demands for electric power in the U. S. are discussed. The merits of building nuclear power plants to meet the demands are presented. The environmental effects of nuclear and fossil fuel plants are compared. 4 references. (auth)

60003 ECONOMIC VS BIOLOGICAL RISK AS REACTOR DESIGN CRITERIA. Otway, Harry J. (Los Alamos Scientific Lab., N. Mex.); Burnham, John B.; Lohrding, Ronald K. IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 451-4(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The economic risk to the power plant operator and the biological risk to the public health are compared as design criteria for determining the reliability required of reactor systems. When only the large-scale Design Basis Accident was considered for a 1000 MW(e) PWR, the biological risk was found to be the controlling risk. However, when the entire spectrum of accidents which would cause external release of fission products was considered, the economic loss to the reactor operator seemed disproportionately large when compared to the biological risk. 7 references. 60005 (ANL-7854) REACTOR DEVELOPMENT PROGRAM PROGRESS REPORT, AUGUST 1971. (Argonne National Lab., Ill.). 23 Sep 1971. Contract W-31-109-eng-38. 165p. Dep. NTIS.

Highlights of project activities for August 1971 are summarized. The EBR-2 operations, fission product monitoring instruments, data acquisition system, and physics measurements are described. Heat transfer and fluid flow studies for LMFBR safety aspects are reviewed. FFTF and LMFBR instrumentation development is described. Monitoring and sampling systems for liquid sodium are discussed. Performance characteristics of LMFBR fuel elements are analyzed. Physics measurements in the ZPR-6, ZPR-9, and ZPPR are presented. Reprocessing methods for LMFBR fuels are discussed. LMFBR safety studies and TREAT operations are described. (D.C.C.)

60006 (CONF-700113) PROCEEDINGS OF THE SEMINAR ON NUCLEAR POWER, BOMBAY, JANUARY 17-18, 1970. Rastogi, B. P. (ed.) (Department of Atomic Energy, Bombay (India)). 313p.

Included are 17 papers on the present potential and the future prospects of nuclear power. A separate abstract was prepared for each of 6 papers. The remaining 11 papers were previously abstracted for NSA and may be located under CONF-700113 in the Report Number Index. (H.D.R.)

For abstracts of individual papers see: 59890-59892 and 60017-60019.

60007 (CONF-710922-1) SOME IDEAS ON THE EXPERIENCE GAINED DURING THE CONSTRUCTION OF FAST BREEDER REACTORS. Carle, Remy (Commissariat a l'Energie Atomique, Paris (France)). [nd]. 11p.

From International conference on fast reactors; Aix-en-Provence, France (2 Sep 1971).

Some of the unique construction requirements and problems of sodium cooled fast breeder reactors are discussed, with particular emphasis on experience with the Phenix Fast Reactor. (H.D.R.)

60008 (CONF-710922-4) BASIC PROBLEMS OF THE DEVELOPMENT OF FAST BREEDER REACTORS. Haefele, W. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Angewandte Reaktorphysik). [1970]. 24p. Dep. NTIS (U. S. Sales Only).

From International conference on fast reactors; Aix-en-Provence, France (2 Sep 1971).

A number of basic problems of fast reactor development are reviewed. Burnup, stainless steel swelling, short neutron lifetime, Doppler effect, Na void effect and the choice of coolants are discussed. The problem of Pu fuel fabrication costs and the pool-loop problem are studied. 37 references. (auth)

60009 (CONF-710922-5) GAS COOLED FAST BREEDER REACTOR. Rickard, C. L. (Gulf General Atomic, Inc., San Diego, Calif.). [nd]. 5p.

From International conference on fast reactors; Aix-en-Provence, France (2 Sep 1971).

The development of gas-cooled fast breeder reactors is reviewed. Design problems associated with gas-cooled fast breeder reactors are described. (D.C.C.)

60010 (EURFNR-902) FAST BREEDER PROJECT. Fourth Quarterly Report 1970. (Kernforschungszentrum, Karlsruhe (West Germany)). Translation of report KFK-1270/4. 134p. Dep. NTIS.

Work Performed under United States-Euratom Fast Reactor Exchange Program.

60011 (JAERI-Memo-4419) PRELIMINARY DESIGN OF THE EXPERIMENTAL MULTI-PURPOSE HIGH TEMPERATURE REACTOR. (Japan Atomic Energy Research Inst., Tokyo). May 1971. 338p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

A preliminary design of the 50 MW(t) Experimental Multi-Purpose High Temperature Reactor is described. The basic concepts adopted in this design are (a) fuel kernels of UO_2 with low enriched uranium, (b) coated fuel particles with triple barrier coatings including SiC, (c) block-type fuel elements with hollow rod fuel pins, (d) three coolant loops including a closed gas turbine loop and two loops of methane steam reformer with successive coupling of the steam generator, and (e) reactor outlet coolant helium temperature of 1000°C and inlet temperature of

XUM

400°C. From this design work, it has been found that the maximum fuel temperature is about 1350°C and that the hydrogen permeation problem from the secondary coolant system can be solved in a reasonable way. It is also pointed out what are the subjects of research and development to be made to facilitate the design. This is the second stage of design evolution of the reactor and is to be followed by the conceptual (3rd stage) design and the detailed (4th stage) design. (auth) (Japan)

60012 (JUL-775-RG) TECHNICAL AND SCIENTIFIC POSITION AS WELL AS PROSPECT FOR NUCLEAR ENERGY IN THE ENGINEERING OF THE FEDERAL REPUBLIC OF GERMANY. PART II. Haefele, W.; Kraemer, H. (Kernforschungsanlage, Juelich (West Germany). Institut fuer Reaktorentwicklung. Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Angewandte Reaktorphysik). Jun 1971. 78p. (In German). (KFK-1430). Dep. NTIS (U. S. Sales Only).

The present state of the German atomic program is surveyed with respect to support of advanced reactor lines, namely high-temperature reactors and sodium-cooled fast breeders. Results of developmental work as well as problems and challenges are discussed from a technological as well as economical standpoint. As far as fast breeders are concerned, construction and successful operation of SNR 300 has greatest priority including development of the large sodium components by private industry. Also important is development of production facilities for plutonium-containing fuel elements. During construction of the SNR 300, an attempt should be made, as a collective European effort, at development of a commercial SNR 1000. Discussion of basic processes includes fuel elements, reactor safety, helium- and steam cooling of fast breeders, and reprocessing. 61 references. (H.B.G.)

60013 (KFK-1375) GAS BREEDER-MEMORANDUM. RESULTS OF AN INVESTIGATION OF THE FEASIBILITY AND ECONOMICS OF A GAS-COOLED FAST BREEDER. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Feb 1971. 502p. (In German). (EUR-4575; JUL-744-RG). Dep. NTIS (U. S. Sales Only).

The feasibility and the economics of a gas-cooled fast breeder (GCFB) are studied. This study has been initiated to determine what measures should be taken in the event that the sodium-cooled fast breeder would not fulfill its technical and economic expectations. The design of a GCFB could, to a great extent, be based on known techniques. The experience gained, especially with the construction and operation of gas-cooled thermal reactors, could be used. Contrary to the steam-cooled breeder reactor, the GCFB has favorable breeding properties and its potential as regards fuel consumption is close to the sodium breeder. Topics discussed include: fuel elements; physical criteria; components; safety; and economics. 20 references. (auth)

60014 (ORNL-4676) MOLTEN-SALT REACTOR PROGRAM SEMIANNUAL PROGRESS REPORT FOR PERIOD ENDING FEBRUARY 28, 1971. (Oak Ridge National Lab., Tenn.). Aug 1971. Contract W-7405-eng-26. 277p. Dep. NTIS.

Activities directed to the development of a single-fluid molten salt breeder reactor are reported. Sections are included on: (1) Molten-Salt Reactor Experiment; (2) MSBR design and development; (3) chemistry; (4) materials development; and (5) Molten-salt processing and preparation. A separate abstract was prepared for each of the 5 sections. (H.D.R.)

For abstracts of individual sections see: 57298, 57522, 58168, 60015, and 60096.

60015 (ORNL-4676, pp 21-72) MSBR DESIGN AND DEVELOPMENT. (Oak Ridge National Lab., Tenn.). Aug 1971.

In Molten-Salt Reactor Program semiannual progress report for period ending February 28, 1971.

BERYLLIUM FLUORIDES—$BeF_2-LiF-ThF_4-UF_4$, heat transfer and thermophysical properties of, (E/T)
CORROSION LOOPS—inspection of sodium fluoroborate salt, postoperation
HIGH-TEMPERATURE LATTICE TEST REACTOR—physics measurements on molten salt reactor lattices in
LITHIUM FLUORIDES—$BeF_2-LiF-ThF_4-UF_4$, heat transfer and thermophysical properties of, (E/T)
MOLTEN SALT BREEDER EXPERIMENT—design parameters of
MOLTEN SALT BREEDER EXPERIMENT—fission product removal from fuel salt in, performance of gas separators and bubble generators for, (E)
MOLTEN SALT BREEDER REACTOR—steam generator for, hybrid computer simulation model of
—fuel salt for, heat and mass transfer and thermophysical properties of, (E/T)
—design of single fluid 1000 MW(e)
—heat exchangers for, shutdown temperature transients in empty, (T)
—heat exchangers for, effects of tubing failures in, (T)
—tritium distribution and control in, (T)
—physics analysis of single fluid 1000 MW(e)
MOLTEN SALT REACTOR EXPERIMENT—fuel salt for, postoperation inspection of Mark 2 pump for
—coolant salt for, postoperation inspection of pump for
REACTORS, MOLTEN SALT—maintenance of, development of remote welding for
—design parameters of 300 MW(e) demonstration
THORIUM FLUORIDES ThF_4—$BeF_2-LiF-ThF_4-UF_4$, heat transfer and thermophysical properties of, (E/T)
URANIUM FLUORIDES UF_4—$BeF_2-LiF-ThF_4-UF_4$, heat transfer and thermophysical properties of, (E/T) (H.D.R.)

60016 NUCLEAR REACTOR INSTALLATIONS. (to Siemens Aktiengesellschaft). British Patent 1,245,007. 2 Sep 1971. Priority date 13 Oct 1967, Germany.

REACTORS, GAS COOLED—design with direct cycle carbon dioxide turbines (H.D.R.)

60017 COMMENTS ON THE ROLE OF CONTRACTING IN THE DEVELOPMENT OF ATOMIC ENERGY IN THE UNITED STATES. Erlewine, John T. (Atomic Energy Commission, Washington, D. C.). pp 191-8 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

The development of nuclear power is of special interest and importance throughout the world. However, it is evident that actual achievement of this potential through the development of nuclear power to the point where it contributes in a substantial way to the lives and welfare of the citizens of any country is a challenging task fraught with many problems, not all of which are scientific or technical in nature. How contracting was used in the United States as a tool of management in solving some of the non-technical problems in developing a commercial nuclear power industry is described. (auth)

60018 NATIONAL NUCLEAR CENTRES IN DEVELOPING COUNTRIES. Sethna, H. N. (Indian Atomic Energy Commission, Bhabha). pp 199-210 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

Developing countries which for economic reasons wish to develop nuclear power and use nuclear energy for peaceful purposes are faced with the problem of the creation of a cadre of scientific and technical personnel who could provide the necessary guidance. The problem could nevertheless be handled by setting up a national complex for research and development. This in its turn requires a substantial financial and technical investment, paucity of which is the main handicap of developing countries. The methodology of expansion of activities and the growth of this center are described. (auth)

60019 STATUS OF HEAVY WATER MODERATED REACTOR. Haywood, L. R. (Chalk River Nuclear Labs, Ont.). pp 225-39 of Proceedings of the Seminar on Nuclear Power. /Rastogi, B. P. (ed.). Bombay; Department of Atomic Energy (1970).

From Seminar on nuclear power; Bombay, India (17 Jan 1970).

The worldwide status of heavy water moderated power reactors is briefly summarized. The Canadian reactor program is described, and development programs for fuels, coolants, materials, fuel reprocessing, heavy water production, and mechanical equipment are discussed. (H.D.R.)

60020 NUCLEAR ENERGY RESERVES AND LONG-TERM ENERGY REQUIREMENTS. Zimen, K. E. (Hahn-Meitner-Institut fuer Kernforschung, Berlin). Angew. Chem. Int. Ed. Engl.; 10: No. 1, 1-11(Jan 1971).

The world's potential energy reserves are summarized on the basis of available estimates, and the future energy consumption is estimated with the aid of a working hypothesis relating to the growth of the world's population (P) and the energy consumption per capita (γ). According to this estimate, the energy requirements in 30 years will be about seven times and in 80 years about fifty times as high as they are today, and all the concentrated energy sources will be exhausted in about 120 to 160 years. The energy requirements in the steady state ($P\gamma$ = const.) could be of the order of 10^{13} MWh per year and could be met out of magmatic rocks (U,Th) and seawater (U,D). High priority should be given to research and development work on the construction, reliability,

XUM

and safety of breeder and fusion reactors, the chemical treatment and final disposal of radioactive waste, the extraction of uranium, thorium, and deuterium from the "primitive" raw materials, the relevant problems relating to protection of the environment, and the worldwide control of the excess birthrate. (auth)

60021 SEALING ARRANGEMENT FOR ROTATABLE MEMBERS. **(to Interatom, Internationale Atomreaktorbau GmbH). British Patent 1,245,218. 8 Sep 1971. Priority date 26 Apr 1969, Germany.**

REACTORS, LIQUID METAL COOLED—core vessels for sodium cooled, sealing means for rotatable covers on
SEALS AND GLANDS—design characteristics for rotatable cover, for liquid metal cooled reactor core vessels
VESSELS—seals for rotatable covers of liquid metal cooled reactor core (H.D.R.)

60022 MEASUREMENT OF RADIATION HEAT RELEASE VALUE IN STRUCTURAL AND MODERATING MATERIALS OF REACTOR IVV-2. Gerasimenko, V. P.; Goshchitskii, B. N.; Gusev, V. V.; **(and others). At. Energ. (USSR); 31: No. 1, 7-11(Jul 1971). (In Russian).**

With the quasi-adiabatic and isothermic calorimeters the values of radiation heat release were measured in some structural and moderating materials of the reflector and the core of the water cooled and moderated reactor IWW-2. The results, obtained by both methods, coincide within limits of 10 to 15% and are close to the results of calculations, based on simple assumptions about the γ- and fast neutron spectra. It is shown that a lead screen 20 mm thick almost completely eliminates the γ-component of radiation heat release in hydrogenous moderators and reduces it in aluminum approximately 2.5 times. (auth)

60023 SPINNING DISCS: A BETTER WAY TO COOL POND WATER? Papamarcos, John. Power Eng.; 75: No. 9, 54-7 (Sep 1971).

A demonstration project to investigate the effectiveness of a spinning disc spray system for power plant cooling ponds is described. The basic system consists of 24 inch by $\frac{1}{4}$ inch discs mounted on shafts floating on the pond. Electric motors drive the shafts to produce spray when the discs spin. Nine prototype units are being tested in the demonstration project. (H.D.R.)

60024 NUCLEAR POWER ABROAD: A TIME OF CHANGE. **Loftness, Robert L. Combustion; 43: No. 2, 12-17(Aug 1971).**

National efforts to achieve independence in the field of nuclear energy and changes in the direction of development activities due to changing economic factors are discussed. Broad changes include the shift to the most economic reactor types, increased emphasis on independent uranium enrichment facilities, engineering development from an industrial base instead of in national laboratories, and the formation of national and international consortia. (H.D.R.)

60025 PHENIX REACTOR. CIVIL ENGINEERING ON THE PHENIX SITE. Labat, P. **(Groupement Atomique Alsacienne Atlantique, Le Plessis-Robinson, France); Gregut, A. Energ. Nucl. (Paris); 13: No. 3, 213-17(May 1971). (In French).**

The civil engineering and erection work carried out on the Phenix power reactor site since the spring of 1968 is described. Site preparation, the main substructure excavation, and the foundation and erection work are discussed. (France)

60026 DESIGN FOR ACCESS AND INSPECTION IN GAS-COOLED REACTORS. Wright, R. F. **(British Nuclear Design and Construction Ltd., Whetstone, Eng.); Jones, G. H. pp 57-69 of Active Working on Reactors. London; British Nuclear Energy Society (1971).**

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

The requirements for access and inspection remain various. The nature of unscheduled happenings on power reactors has been most individual in character. The evolution of a design approach for access and inspection has not been easy. An attempt is made to identify three principal areas of significance and to identify issues for further attention. (auth) (UK)

60027 HEAT ENGINE PLANT. **Coast, Geoffrey; Morgan, Vernon (to United Kingdom Atomic Energy Authority). British Patent 1,245,971. 15 Sep 1971. Filed 19 Jan 1968.**

Reference is made to a plant in which heat energy is conveyed by means of a compressible fluid from a heat source, such as a nuclear reactor, to an energy converter such as a gas turbine. Thermal efficiencies of the order of 40% can be obtained from such a plant, but such high efficiency in conventional plants entails complexity in design. There is a pressure limitation on the circuit imposed by the reactor, and this must be offset in some way if high efficiency is to be obtained. The closed circuit system described comprises the following components arranged in sequence in the direction of flow: a compressor, the heat output side of a regenerative heat exchanger, a heat source (nuclear reactor), a machine for converting heat energy to mechanical energy (gas turbine), the heat input side of the heat exchanger, and residual heat energy utilization means. The latter allows more than 16% utilization of the heat energy output from the heat source. The total thermal efficiency can be more than 40%, and is obtainable without undue complexity. The working fluid may be CO_2 or He. Freon may be used in a second turbine system for utilizing the residual heat energy. (UK)

60028 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. **(to Babcock and Wilcox Co.). British Patent 1,245,757. 8 Sep 1971. Filed 1 Nov 1968.**

The reactor described employs parallel fuel pins passing through the core to form three zones, the two outer parts of each pin containing blanket material and the central part containing fissile material. The pins are of non-uniform cross section, with maximum cross section in the central zone, to give a maximum coolant velocity in that zone. Satisfactory heat transfer can be obtained by subdividing the pins into a limited number of axial portions each having a fixed diameter. The reduction in coolant flow path area through the central region of the core in addition to giving a greater concentration of pumping power through the hottest part, also minimizes the core volume fraction allocated to coolant flow. A low coolant volume fraction tends to make the core somewhat safer in the event of a coolant loss accident, particularly in the case of steam cooled fast breeder reactors, and also improves the overall efficiency and breeding ratio. (UK)

60029 POWER FROM THE FAST BREEDER. **Hamilton, David. New Sci. Sci. J.; 51: No. 766, 453-5(26 Aug 1971).**

It is stated that in Britain, a commercial fast reactor power station can be in operation before 1980, the compelling reason for its use being its excellent fuel economy. In addition, it is fueled with Pu and "breeds" Pu from ^{238}U, creating a surplus for the first fuel charge of other fast breeder reactors. The advantages of this reactor are very clear, although by 1966 only America, Russia and Britain had experimental fast reactors, the latter concentrating on problems of fuel reprocessing, heat transfer, fuel design and component development. The danger is that the chain-reaction can easily run-away, creating a supercritical mass which would eventually be blown apart. The handling of liquid Na at temperatures of 500°C or more poses another problem, but the reactor has special safety features. The nuclear industry still faces extensive development work, but seven fast reactors are in operation around the world, five are being built, and six more are planned. It is only by running them that the true reliability and economic value of fast reactors can be found. (UK)

60030 WHITHER NUCLEAR POWER? Booth, E. S. (Central Electricity Generating Board, London). Proc. Inst. Elec. Eng. (London); 118: No. 9, 1215-26(Sep 1971).

A broad examination of the likely role of nuclear power in relation to other sources of primary energy for electricity generation in the U.K. is given, and the historical reasons for the choice of different types of reactors in various countries are reviewed. The design and operational performance of the Mk I gas-cooled-reactor stations (Magnox) of the U. K.'s first nuclear-power program are fully discussed. An account of the progress to date in the design and construction of the Mk II gas-cooled-reactor stations (a.g.r.) of the second nuclear-power program and a description of the a.g.r. system is given. Basic descriptions are given of the more advanced types of thermal-reactor systems available for large-scale application and from which a successor or concomitant to the a.g.r. may be chosen, namely the Mk III gas-cooled reactor, also known as the high-temperature reactor (h.t.r.), and the steam-generating heavy-water reactor (s.g.h.w.r.), and also of the type which should become available for commercial exploitation within a few years, the fast-breeder reactor. The dilemma facing the CEGB in the immediate future before deciding on which more advanced reactor type to adopt is considered. The advantages and disadvantages of the four options open to the CEGB—choice of the h.t.r.s.g.h.w.r. or a light-water reactor, or adherence to the a.g.r.—are explained. The cost of introducing a more advanced reactor system can be so great that the case for internationally financed launching programs is indisputable. In spite of the present uncertainties about the direction of nuclear power, there is no dilemma about the merit of nuclear power for electricity generation in the long term. (auth) (UK)

60031 METHOD OF EXCHANGING THE MODERATOR AND FUEL OF A NUCLEAR REACTOR, AND REACTOR EMPLOYING

THE METHOD. (to Brown, Boveri and Co. Ltd.). British Patent 1,246,760. 22 Sep 1971. Priority date 11 Sep 1969, Switzerland.

REACTOR LOADING MACHINES—design characteristics of high temperature gas cooled graphite moderated reactor
REACTORS, GAS-COOLED—loading machine for high temperature graphite moderated
REACTORS, GRAPHITE-MODERATED—loading machine for high temperature gas cooled (D.C.C.)

60032 DEVELOPMENT OF BREEDER REACTORS IN THE EUROPEAN COMMUNITY. De Heem, L. (Societe pour la Coordination de la Production et du Transport de l'Energie Electrique, Brussels). Elec. Rev.; 189: No. 9, 299-300(Aug 1971).

A brief summary is given of the fast reactor programs of the countries of the European Communities. It includes an outline of the work of the Committee of the International Union of Producers and Distributers of Electrical Energy (UNIPEDE) and of the Euratom Commission, in assisting with fast reactor policy and development. (UK)

60033 IMPROVEMENTS IN HEAVY-WATER MODERATED POWER REACTORS. (to Japan Atomic Energy Research Inst.). British Patent 1,248,295. 29 Sep 1971. Priority date 5 Mar 1968, Japan.

REACTORS, HEAVY WATER MODERATED—design of water cooled pressure-tube, with increased core power density
REACTORS, WATER COOLED—design of heavy water moderated pressure-tube, with increased core power density (H.D.R.)

Kinetics and Dynamics

60034 (AE–428) INTEGRAL MEASUREMENT OF FISSION-PRODUCT REACTIVITY WORTHS IN SOME FAST REACTOR SPECTRA. Andersson, T. L. (Aktiebolaget Atomenergi, Studsvik (Sweden)). Aug 1971. 35p. Dep. NTIS (U. S. Sales Only).

The reactivity worth per atom for a number of fission-product isotopes relative to that of ^{235}U was measured in three fast-reactor spectra. The following isotopes were studied: ^{95}Mo, ^{97}Mo, ^{99}Tc, ^{101}Ru, ^{102}Ru, ^{104}Ru, ^{103}Rh, ^{133}Cs, ^{147}Pm and ^{149}Sm. A fission product mock-up sample was also included in the measurements. The reactivity worths were measured by the pile-oscillator technique. The fundamental mode amplitude of the perturbation signal was obtained through Fourier analysis. The experimental results are compared with calculated values obtained from perturbation calculations using the fission product cross sections available in the SPENG data library. From a comparison between the measured and the calculated reactivity worths it is concluded that only the ^{95}Mo, ^{104}Ru, and ^{149}Sm worths are well predicted in all three systems. For the other samples the calculated values are generally too high. The fission product cross section data in the SPENG data library are compared with corresponding data from the UK Nuclear Data File ND 5066. Considerable discrepancies exist between the two data sets. A separate set of reactivity worth calculations was performed using the Integral Transport Perturbation Programme developed by E. A. Fischer. The calculated results do not differ from those obtained with our own perturbation programme with more than 4% for any of the samples. 21 references. (auth)

60035 (ANL–7824) CHEMICAL ENGINEERING DIVISION. CROSS SECTIONS AND BURNUP SEMIANNUAL REPORT, JANUARY–JUNE 1971. Larsen, R. P.; Dudey, N. D.; Fluss, M. J.; Heinrich, R. R.; Malewicki, R. L.; Oldham, R. D.; Popek, R. J.; Williams, J.; Crouthamel, C. E.; Vogel, R. C. (Argonne National Lab., Ill.). Aug 1971. Contract W-31-109-eng-38. 15p. Dep. NTIS.

Research and development efforts of the cross sections and burnup programs are reported for the period January to June 1971. Work was done in the following areas: measurements of fast-neutron fission yields of gamma-active fission products were made on samples of uranium and plutonium irradiated in the ZPR-3 critical facility, feasibility studies of two independent methods for measuring the fast-neutron tritium yields from heavy-element fission were carried out and preliminary results for ^{235}U were obtained, a five-year program was concluded in which capture-to-fission ratios were determined for uranium and plutonium isotopes irradiated throughout the core and blankets of EBR-II, and fission-rate and activation-rate measurements were made in four mockup configurations of EBR-II in the ZPR-3 critical facility. 5 references. (auth)

60036 (EURFNR–945) CHECK OF NUCLEAR DATA AND METHODS OF CALCULATION BY INTEGRAL EXPERIMENTS. Kiefhaber, E. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Jun 1971. 70p. (KFK–1422). Dep. NTIS (U. S. Sales Only).

Work performed under United States–Euratom Fast Reactor Exchange Program.

Calculations concerning integral experiments in fast zero power assemblies are discussed. By comparing calculated and measured quantities the nuclear data and methods of calculations used are examined to get indications for further improvements. Following a few introductory remarks some comments to the state of the art of the physics prediction for fast reactors are given. Then the activities at Karlsruhe to improve the nuclear data and methods of calculation, especially some of the most recent results, are described. At first the improvements in the group constant sets are considered and the influence of the energy dependence of the fission spectrum is studied. It is outlined that the proper treatment of relatively thin reflecting zones is difficult in the present scheme of calculations even if a more appropriate type of transport cross section is used. For the SUAK-assemblies the influence of an uncertainty in the enrichment on the criticality is determined. The criticality effect of using the P1-approximation for the scattering on hydrogen instead of the transport approximation is studied for SUAK UH1B and SNEAK 3A2. The difficulties concerned in the calculation of material worths and neutron life time are discussed. The theoretical results obtained at Karlsruhe for the Doppler effect seem to be satisfactory at the moment. The influence of the model used for the calculation of reaction rates and cell traverses for heterogeneous platelet-arrangements is studied and the experimental and theoretical results for the cell traverses are compared. The measured and calculated reaction rate traverses through core and blanket of SNEAK 3A2 are also compared with special emphasis on heterogeneity effects in the core-blanket transition region. Some comments are devoted to the significance of adjustment procedures for group constants. 50 references. (auth)

60037 SOME PROPERTIES OF BOILING-WATER REACTOR SELF-OSCILLATION CONDITIONS. Kebadze, B. V.; Plyutinskii, V. I. At. Energ. (USSR); 31: No. 2, 89-92(Aug 1971). (In Russian).

The results of natural circulation boiling-water-reactor self-oscillation conditions are presented. The character of dependence of oscillation amplitude upon power, pressure and other plant parameters requires an accurate examining of the expected operating conditions and transient processes near the stability limit position. Plant dynamics study in the frequency domain illustrates an oscillation destabilizing effect upon low frequency processes which gives rise to oscillation amplitudes and plant slow parameters cyclic changes. 5 references. (auth)

60038 THERMAL AND HYDRODYNAMIC TRANSFER FUNCTIONS OF BWR CORE. Kagawa, Tatsuo; Yanai, Ryoichi; Ishizuka, Takao (Tokyo Shibaura Electric Co. Ltd., Kawasaki, Japan). Toshiba Rebyu; 26: No. 5, 660-5(May 1971). (In Japanese).

The power-to-void transfer function in the boiling channel, which is very important in calculating the kinetic behavior of BWR cores, was measured by the frequency response method using a high-pressure test loop, under the same thermal and hydrodynamic conditions as those of the core (70 kg/cm^{2}a, 284°C). The Jones analytical method was simplified and applied to the test loop for comparative investigation of measurements and calculations. It was found that the calculations well predict measurements qualitatively, and that, particularly when the boiling part occupies most of the test section, calculations come also quantitatively close to measurements. Thus calculation has proved utilizable for presuming reactor characteristics, except for the case with small boiling. (auth) (Japan)

60039 FAST NEUTRON REACTOR PHENIX. Carle, T.; Moreau, J. C.; Megy, J. (CEN de Saclay, Gif-sur-Yvette, France). Energ. Nucl. (Paris); 13: No. 2, 172-5(May 1971). (In French).

The role of Phenix in the development program for fast reactors is reviewed. The various decisions taken in the preliminary plan are indicated together with a description of the reactor and the principal data. The present level of progress and future developments are indicated. (France)

60040 REACTOR PHYSICS HETEROGENEOUS METHODS DEVELOPED AT CISE. PART 1. Bruschi, C.; Caimmi, G. F.; Fava, L.; Goldaniga, G. (CISE, Milan). Energ. Nucl. (Milan); 18: No. 9, 459-72(Sep 1971).

The work done at CISE in the field of heterogeneous methods is reviewed. Such methods were studied to evaluate the hetero-

XUM

geneous effects in the CIRENE reactor. The approximation presented is limited to a monopole formalism, and is in many respects rather conventional. However three points are worth mentioning, namely: (a) the approach to the calculation of the heterogeneous parameters; (b) the auxiliary source technique employed to take the radial finiteness of the core into account; (c) the technique used to ensure spectrum consistency between the parameter and the core calculations. The core calculation is two-dimensional in the radial plane, the finite height of the elements being accounted for by an axial buckling. (auth)

60041 SPATIAL EFFECTS IN TRANSFER-FUNCTION MEASUREMENTS OF LARGE NUCLEAR REACTOR POWER SYSTEMS. Habegger, L; Hsu, C. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 418-25(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The importance of spatial effects in proposed transfer-function measurements in large, fast reactors was investigated. A general theoretical formulation of space-dependent transfer-functions is derived which includes the effects of input and output device spatial characteristics. A quantitative indication of spatial effects is given by numerical simulation of measured transfer-functions in a Liquid Metal Fast Breeder Reactor (LMFBR). An approximate method of solution using the Galerkin's procedure was developed in conjunction with the investigation. 9 references. (auth)

60042 PARAMETER IDENTIFICATION IN A NONLINEAR REACTOR SYSTEM. Roman, William S.; Hsu, Chun; Habegger, Loren J. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 426-9(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

Identification of plant parameters in a nonlinear space-dependent reactor system based on simulated measurements has been accomplished. The quasilinearization iterative technique provides the computational capability for solving the nonlinear equations in the identification process. Examples of the identification of feedback temperature coefficients in one and two neutron energy group nonlinear models with linear temperature feedback are presented. 6 references. (auth)

60043 PRECISION OF SHUTDOWN MARGIN MEASUREMENTS USING THE TWO-FREQUENCY REACTOR NOISE TECHNIQUE IN AN LMFBR. Buhl, A. R.; Ackermann, N. J. Jr. (Oak Ridge National Lab., Tenn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 430-4(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The precision of reactor noise techniques for measuring subcritical reactivity can be related to detector efficiency and parameters of the measuring instrumentation. Using a two-detector cross-correlation technique, it is determined that such measurements can be made in a certain fast reactor (the FFTF) to −3 to −5 dollars with acceptable statistics and measurement times. 8 references. (auth)

60044 POWER SHIFT PHENOMENA IN LARGE FAST BREEDER REACTORS. Philbin, Jeffrey Stephen. Urbana, Ill.; Univ. of Illinois (1971). 100p. University Microfilms Order No. 71-21,210.

Thesis.

A method for accurately analyzing the changes in the neutronic characteristics of large fast reactors during long-term operation is developed. The non-uniform buildup and depletion of the fuel nuclides is taken into account by using eigenfunction expansions in the solution of the one-dimensional, multigroup diffusion equations. A refueling scheme is introduced in order to study the behavior over many reloading cycles as well as between two loading events. The depletion of fissile nuclides in the core and the buildup of fissile nuclide in the blanket cause a power shift into the blanket. The effect of this power shift upon the multiplication factor, the breeding ratio, the power density, and the reactivity coefficients of a large mixed oxide fast reactor is explored in detail. The power shift into the blanket during the approach to equilibrium is 1.55% of the total reactor power. The breeding ratio increases only slightly during reactor operation. The sodium void coefficient increases by 11.2% from startup to the end of an equilibrium period. The Doppler coefficient, which changes only slightly during the approach to equilibrium, becomes more negative. The total change in the Doppler coefficient is 1.71%. (Diss. Abstr. Int., B)

Control Systems

60045 STABILIZATION OF THE HEAT-OUTPUT FIELD IN FAST REACTORS BY CONTROL ELEMENTS. Usynin, G. B.; Shibaev, V. A.; Chirkov, V. A. At. Energ. (USSR); 31: No. 1, 3-6(Jul 1971). (In Russian).

The effect of the neutron-absorbing control rods disposition in fast reactor cores on the nuclear fuel breeding and the fuel cladding temperatures is analyzed. It is shown that, if the inner breeding ratio is smaller than unity, it is expedient to locate the rods in the outlying district of the core. The results of calculations for a 1000 MW(e) reactor are given. (auth)

60046 USE OF FISSION CHAMBERS IN WATER-COOLED REACTORS. Lomakin, S. S.; Malyshev, E. K.; Belozerov, V. G.; (and others). At. Energ. (USSR); 31: No. 1, 56-7(Jul 1971). (In Russian).

A small-scale (123 mm long) fission chamber for ^{235}U neutron fluxes has been designed for reliable operation at 300°C, and details of construction are given. Gold and cobalt foils were irradiated and used to test the sensitivity and linearity of the chamber; the sensitivity during initial operation was 0.8×10^{-16} a/n/cm^2 · sec. (K.S.W.)

60047 HYDRAULIC CONTROL RODS. IDEAS AND INVESTIGATIONS FOR THE DEVELOPMENT OF FULLY HYDRAULICALLY OPERATED AND CONTROLLED CONTROL AND SHUTDOWN SYSTEMS FOR WATER AND STEAM COOLED NUCLEAR REACTORS. Muehlhaeuser, O. (Kernforschungszentrum, Karlsruhe, Ger.). Konstr. Masch., App. Geraetebau; 22: No. 6, 211-17(1970). (In German).

A control rod drive system is presented where the displacement of the control rod and the recording of the displacement path take place hydraulically. The total installation from the electrical pulse input to the control rod is given. (INIS)

60048 COMPLEX AUTOMATION OF NUCLEAR POWER PLANTS. Missbach, M.; Rehfeld, G.; Kromer, H.; Sukrow, S.; Ebersbach, H. G. (VEB Kombinat Kraftwerksanlagenbau, Berlin). Kernenergie; 14: No. 5, 137-41(May 1971). (In German).

A review of development in the field of nuclear power plant automation since end of 1968 is given. The following fields are dealt with: process control and signaling, safety systems, control techniques, nuclear measuring techniques, and process computers. 68 references. (auth)

60049 PHENIX REACTOR. MONITORING CONTROL SYSTEMS, INSTRUMENTATION, AND ELECTRICAL POWER SUPPLY. Chapelot, A. (CEN de Saclay, Gif-sur-Yvette, France). Energ. Nucl. (Paris); 13: No. 3, 206-12(May 1971). (In French).

The operation principles of the power station are related to the organization of the monitoring system adopted. Different aspects involved in the monitoring are considered: nuclear monitoring, thermal control, and the failed fuel detection system. Central data processing and the sodium instrumentation are discussed. (France)

60050 INCORE DETECTOR FOR MEASURING POWER AND BREEEDING DISTRIBUTIONS IN POWER BREEDERS. Goldstein, N. P.; Sun, K. H.; Gonzalez, J. L. (Westinghouse Research Labs., Pittsburgh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 380-7(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

For optimum operation of fast breeder reactors, knowledge of the incore power and breeding distributions is desirable. Because of the high temperature liquid sodium environment in the breeders, an activation method rather than a technique involving ion chambers seems to be the most appropriate experimental technique at present. An activation system has been worked out in which $^1/_{16}$″ BeO balls containing oxides of ^{235}U and ^{238}U are inserted into the reactor for activation and withdrawn to be counted in a Ge(Li) counter. Measurements of the activated fission and ^{239}Np gamma-rays yield the desired information. Parameters and procedures are obtained based on a specific fast Demonstration Breeder design. However, only slight modification would be required for the application to other breeders. 3 references. (auth)

60051 STABILITY OF REACTOR CONTROL SYSTEMS IN COUPLED CORE REACTORS. Raju, G. V. S.; Josselson, R. (Ohio Univ., Athens). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 388-94(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

XUM

For combating not only general deviations in total power, but localized flux (power) perturbations as well, separate control systems are designed for separate cores of the coupled-core reactor. Conditions are obtained for global asymptotic stability of a coupled core reactor including its control system. The results obtained for stability are in the form of the weaker Popov condition, which allows the determination of stability geometrically in the frequency domain. An example of a coupled core reactor with typical parameters is given to illustrate the ease involved in the determination of stability. 17 references. (auth)

60052 SENSITIVITY ANALYSIS OF A TWO-OUT-OF-FOUR COINCIDENCE LOGIC REACTOR PROTECTIVE SYSTEM. Tashjian, B. M. (Combustion Engineering, Inc., Windsor, Conn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 455-64(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The mathematical models for a reactor protective system were developed for sensitivity analysis. The models are for the two-out-of-four coincidence logic configuration and reflect the "spurious trip" and "no trip" system failure modes. The models, developed from conditional probabilities and series chain configuration techniques, are adaptable to other coincidence logic schemes as well. An example is included to demonstrate the sensitivity analysis technique. 2 references. (auth)

60053 SETTING TEST INTERVALS AND ALLOWABLE BYPASS TIMES AS A FUNCTION OF PROTECTION SYSTEM GOALS. Hirsch, Herbert M. (General Electric Co., San Jose, Calif.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 488-94(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The usefulness of availability design goals for determining required periodic test intervals and allowable bypass times as permitted by IEEE-279 criteria is described. Formulas are developed for calculating these times for instrumentation logic configurations common to reactor protection systems. Both simultaneous and uniformly staggered test schedules are considered. In addition to sample problems illustrating the application of these formulas, nomographs are presented for rapid graphical determination of test intervals and bypass times. 2 references. (auth)

60054 NUCLEAR REACTOR CONTROL SYSTEM. Murrell, Michael David; Davis, Dennis (to British Nuclear Design and Construction Ltd.). British Patent 1,244,965. 2 Sep 1971. Filed 29 Dec 1967.

An object of the system described is to provide a method of automatic control so that a reactor can operate with a desired neutron flux at nominally steady states, but which can also be used for startup. A signal proportional to the actual neutron flux inverse doubling time is produced and a signal proportional to a demanded neutron flux inverse doubling time is generated; these two signals are compared and their difference used to control the setting of the reactor control rods during periods of large errors in the neutron flux. The system may also be used to improve stability during periods of steady state operation. For large errors in neutron flux the system controls to an inverse doubling time subject to a limiter, while for small errors the flux is controlled to its demanded value. Either analogue or digital circuitry may be employed for obtaining the error signals from the reactor signals and for generating the appropriate automatic control law for the control rods. The flux doubling time may be measured directly or obtained by differentiating the signal representing the actual flux. (UK)

60056 GRAPHIC DETERMINATION OF THE PARAMETERS OF THE TEMPERATURE FIELD IN THE CONCRETE OF THE REACTOR BIOLOGICAL SHIELD. Gavrilovic, Milan. Nukl. Energ.; 5: No. 6, 12-14(1968-1969).

A practical engineering graphic procedure is presented for determining the parameters of the radial temperature field in the concrete of the biological reactor shield, cooled in two vertical concentric cylindrical surfaces (the first one is the inner surface of the concrete, the second one is inside the concrete itself). The procedure has been designed for the analysis of the power reactor shields and, because of their large sizes, it has been treated in plain geometry. The exact distribution of nuclear heating, in the radial direction, has been approximated by the simple exponential function. (auth)

60057 (AECL-3994) TOFA: A CDC 6600 COMPUTER CODE FOR TORSIONAL FREQUENCY ANALYSIS. Wong, P. Y. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). Aug 1971. 34p. Dep. NTIS (U. S. Sales Only). AECL $1.00.

TOFA is designed for studying torsional vibrations of a mechanical system. It is intended as a tool for design engineers to determine if a mechanical system is torsionally stable. An analysis of a rotor system, commonly used in coolant pumps of a commercial nuclear power reactor, is presented as an application. (auth)

60058 (ANL-7817) SODIUM TECHNOLOGY QUARTERLY REPORT, JANUARY-MARCH 1971. Kesser, G. M. (comp. and ed.) (Argonne National Lab., Ill.). Jul 1971. Contract W-31-109-eng-38. 72p. Dep. NTIS.

The research, development, and management efforts in the Sodium Technology Program for the period January–March 1971 comprised activities in the following areas: (1) In the national meter program, coordination of the national effort to produce a standardized on-line oxygen meter continued; other work included development of on-line meters for carbon and hydrogen, development of a steam-generator leak detector, and design and testing of meter modules for FFTF. (2) In the analytical standards program, work was begun on the preparation of RDT standards relating to purity specifications for sodium and cover gas; laboratory studies involved development and testing of interim methods of sampling and analysis. (3) Investigation of methods for detection and characterization of fuel-cladding failures proceeded with the development of a method for detecting ^{135}I in reactor sodium by separation and counting of its daughter ^{135m}Xe. (4) Studies of the chemistry of liquid sodium were directed toward investigation of the Na-Na$_2$O-NaOH-NaH phase diagram and examination of the vacuum distillation method as a means of determining oxygen and carbon in sodium. (5) Studies were continued on the transport of carbon in sodium-steel systems and on the development of methods for determining activities of oxygen and carbon in sodium by equilibration of metal specimens. 60059 (CONF-710606-14) CORE HEAT TRANSFER AND FLUID FLOW IN THE GCFR. Markoczy, G. (Eidgenoessisches Institut fuer Reaktorforschung, Wuerenlingen (Switzerland)). [1970]. 28p. Dep. NTIS (U. S. Sales Only).

From seventeenth annual meeting of the American Nuclear Society; Boston, Mass. (13 Jun 1971).

Investigations of the thermohydraulic behavior of gas cooled fast reactor fuel elements are briefly reviewed. Experimental and analytical studies for the development of computer codes to predict gas, cladding, and fuel temperature distributions in fuel rod clusters are summarized. (H.D.R.)

60060 (EURFNR-904) INHERENT PROPERTIES OF THE VARIOUS PRIMARY CIRCUIT DESIGNS FOR SODIUM-COOLED REACTORS. Mueller, R. A. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Translation of report KFK-1379. 32p. Dep. NTIS.

Work Performed under United States–Euratom Fast Reactor Exchange Program.

The fundamental structure of the primary circuit of sodium-cooled reactors is described. On the basis of a general descrip-

XUM

tion found by abstraction additional parameters are introduced stepwise so that the variants under consideration approach the real engineered designs. The method yields a consistent scheme comprising all possible variants up to a defined degree of refinement. The inherent properties are clearly attributed to the individual variants. All designs investigated and realized so far can be placed on specific positions in this "family tree" and thus can be definitely recognized as the specific solutions of the general system. 41 references. 60062 (ORNL-TM-3516) ORRIBLE: A COMPUTER PROGRAM FOR FLOW AND TEMPERATURE DISTRIBUTION IN LMFBR FUEL ROD BUNDLES. Wantland, J. L. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 28p. Dep. NTIS.

A computer program named ØRRIBLE was written to predict the flow and temperature distribution for steady single-phase flow through a bundle of nineteen heated rods spaced by helical wire wraps in a hexagonal duct. Any combination of flow subchannels can be blocked at the inlet. The section can have an unheated entrance length followed by a heated section and an unheated exit length. In the heated section the linear heat rate of each of the rods can be individually specified. Turbulent interaction, sweeping crossflow due to the wire wrap, and transverse thermal conduction are considered. An approximate relationship for pressure diversion crossflow in terms of local axial mass velocities is used to eliminate pressure as a variable. Hence the computational procedure does not require iterative techniques. ØRRIBLE can be extended to larger bundles with different internal configurations. (auth)

60063 PRESTRESSING OF PRESSURE VESSELS OF NUCLEAR POWER PLANTS WITH WRAPPED REINFORCEMENT. Hobst, L. Inzenyrske Stavby; 19: No. 2, 79-80(Feb 1971). (In Czech).

The advantages are discussed of wrapping concrete pressure vessels of nuclear power stations with a wrapped reinforcement, as compared with cable prestressing. The measurements showed that the losses induced by unequal application of the prestressing force are in the wrapped reinforcement by about 8 to 15% lower than those in curved cables. The use of a steel rope seems to be more suitable than the use of a wire 7 mm in diameter. The winding sets and the reinforcement protection against corrosion are also dealt with, and the advantages are analyzed of a vessel wall composed of several coaxial layers. (INIS)

60064 PURIFICATION OF THE COOLANT WATER BY DISTILLATION. Bagretsov, V. F.; Zakharov, S. I. At. Energ. (USSR); 30: No. 4, 347-50(Apr 1971). (In Russian).

The purification of water from the primary circuits and holding ponds by distillation was studied, examining the influence of various factors such as the productivity of the distilling apparatus, the amount of reflux, the salt concentration of the solution, and the pressure of the secondary vapor, on the amount of the produced distillate. The results indicated that the volume of the vapor space of the separator should not be reduced. Increase of the reflux over 5% affected only slightly the level of purification of the vapor from radioactive elements. Fine particles were removed by means of fiberglass, the use of which helps to eliminate scrubbers. The efficiency of the operation is characterized by the purification coefficient K_{pur} of the vapor with respect to the radioactive elements; another indicator, K_i^{app}, the isotopic particient coefficient has been proposed to calculate the concentration of radioactive elements in the vapor phase. However, values diverging by a factor of 100 were encountered in the value of K_i^{app} for ^{58}Co, ^{60}Co, and ^{59}Fe. It was found that K_{pur} depends on the salt content in the solution, which means the more deposits formed, the higher the value of K_{pur}. Thus, experimental data are needed to optimize the distillation operations. (TTT)

60065 HYDRODYNAMIC PROBLEMS OF VESSEL-TYPE BOILING-WATER REACTORS. Sarygin, A. P.; Sokolov, I. N.; Kondrat'ev, V. I.; (and others). At. Energ. (USSR); 30: No. 4, 350-3(Apr 1971). (In Russian).

Examination of the circulation in the VK-50 reactor yielded information which helped to increase the reliability of the reactor operation and the design of high-power reactors. The experiments involved measurements of temperature, pressure, and flow rate of the coolant at 35 and 70 bar at power levels ranging from the startup level to the nominal power. The flow rate of the coolant in the EBWR and Humboldt Bay reactors was twice as high as in the VK-50 reactor. Calculation of the pressure drop in the core yielded low results; it is recommended to use a correction factor for calculating flow rates under conditions of natural convection. It was concluded that natural convection represents a simple and compact heat transfer mechanism for vessel-type reactors because it operates reliably under steady-state, transient and emergency conditions. At reduced (60 to 70%) power levels a supplementary reactivity reserve is released by the decrease of the mean vapor content in the core. The results also indicated a high, 35 to 45%, vapor content and low circulation flow rate of about 0.5 m/sec. (TTT)

60066 SOLID-STATE ROD CONTROL SYSTEM FOR PRESSURIZED WATER REACTORS. Thompson, F. T. (Westinghouse Electric Corp., Pittsburgh). Westinghouse Eng.; 31: No. 2, 51-9(Mar 1971).

A flexible, highly reliable solid-state control rod drive system for pressurized water reactors is described. The modular components of the system are diagrammed, and the system operation is discussed. The operation of the system in the Robert E. Ginna power reactor is described. (H.D.R.)

60072 IMPROVEMENTS IN AND RELATING TO NUCLEAR REACTORS. Pettinger, Donald Stanley; Roberts, Geoffrey Al-

fred (to Nuclear Power Group Ltd.). British Patent 1,241,357. 4 Aug 1971. Filed 3 Oct 1969.

During the life of nuclear fuel it is desirable to progressively reduce the coolant flow through the fuel channel, so as to maintain constant temperatures at the coolant outlets, and for this purpose valves or gags are fitted to the fuel channels. Such gags are usually driven by motorized units located in members supported within the fuel channels. The drive unit and gags are removable from the reactor for maintenance purposes. With increased reactor operating temperatures difficulties can be encountered with the working parts of conventional valves and drives. In the system described the valve body has a number of openings for the passage of coolant with ball-shaped members for closing the openings to seal off coolant flow. These members are held in position by the coolant pressure and are releasable to fall under gravity into the openings. The ball-shaped members may be stored in a hopper located above the channels, and the hopper may have a metering valve controlling the release of the ball-shaped members; the hopper may be connected to the valve body by a duct the lower end of which is a spiral form in order to reduce the speed of the ball-shaped members before they enter the valve body. (UK)

60073 FLUID-COOLED NUCLEAR REACTOR. Cook, Reginald Kenneth; Burylo, Piotr Stanislaw (to British Nuclear Design and Construction Ltd. and English Electric Co. Ltd.). British Patent 1,241,269. 4 Aug 1971. Filed 23 Dec 1969.

Where a reactor has direct cycle gas turbines associated with it a problem arises in accommodating short term turbine load variations, since the thermal inertia of the reactor core is much greater than that of the turbines. Furthermore, where a turbine is located in a "pod" within the wall of a reactor pressure vessel, it is difficult to make suitable provision for controlling the flow of coolant fluid around the turbine or associated heat exchange equipment because of their inaccessibility and because such provision could interfere with the pressure vessel stressing system. In the system described means are provided to allow a proportion of cool coolant fluid fed to the upstream side of the core to by-pass the core and mix with the hot coolant from downstream of the core. The by-pass means preferably includes a variable valve. Also, a peripheral seal is provided, extending between the core and the pressure vessel walls, with at least one variable valve located in this seal. A standpipe may be provided extending through the pressure vessel above the valve with valve control means extending from the pressure vessel through the standpipe. (UK)

60074 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. Nichols, Ronald William (to Atomic Power Constructions Ltd.). British Patent 1,242,533. 11 Aug 1971. Filed 15 Aug 1967.

It is stated that with higher gas temperatures and higher rates of heat transfer in modern reactors there has not been a proportionate increase in heat sink capacities. Therefore, thermal transients arising for example from power excursions have become progressively a greater problem. Such transients require expensive and sophisticated steam circuit components between heat exchanger outlets and turbines. In the system described, in addition to the main heat exchangers for removing heat from the core coolant during normal functioning, independent secondary exchangers are provided for removing heat from the coolant during operating conditions that would otherwise give rise to undesirable thermal transients and/or unstable operation in a secondary fluid system associated with the main exchangers. Advantages of the system relating to factors such as deposition on heat exchanger surfaces and blanking-off of defective tubes, and to fault conditions are described. Provision of an independent shutdown heat exchanger also facilitates core cooling in the event of a primary gas circulator failure. Other advantages of the system are also described. (UK)

60075 FRACTURE INVESTIGATIONS AND STATUS OF THE HEAVY-SECTION STEEL TECHNOLOGY PROGRAM. Witt, F. J.; Whitman, G. D. Nucl. Safety; 12: No. 5, 523-9(Sep-Oct 1971).

The Heavy-Section Steel Technology Program is one of the major nuclear pressure-vessel safety-research efforts sponsored by the U. S. Atomic Energy Commission. The scope of this investigation covers metallurgy, chemistry, material properties, inspection, analytical and experimental stress and strain analyses, environmental effects, fracture mechanics, and the general area of fracture behavior. Considerations of how thickness affects the fracture behavior of steels are studied as manifested in dynamic-tear-test specimens, nil-ductility-transition drop-weight specimens, compact-tension specimens, and flawed tensile specimens. Test results have demonstrated a significant increase in toughness levels as a function of temperature. Similar behavior is indicated to occur after the steel is subjected to high fast-neutron fluences, although there is a significant increase in the temperature at which the major portion of the change occurs. In addition, a proposed method of relating flaw size and nominal stress (load) as a function of temperature for frangible, transitional, and tough behaviors has been shown to have a potential for calculating quantitative safety margins in reactor pressure vessels. 31 references. (auth)

60076 SOME ASPECTS ON HEAT TRANSFER AND FLUID DYNAMICS OF HIGH TEMPERATURE GAS COOLED REACTOR. Okamoto, Yoshizo; Akino, Norio (Japan Atomic Energy Research Inst., Tokai). Nippon Genshiryoku Gakkaishi; 13: No. 8, 456-61(Aug 1971). (In Japanese).

In order to extend the application of nuclear reactors, high temperature gas cooled reactors (HTGR) are being developed for their promising characteristics for multi-purpose utilization in industry. In general, multi-purpose HTGRs have an ability to generate high temperature heat steadily. The generated heat cannot only be converted to electricity, but also used for process and reduction gas preheating in iron works and chemical industries. Technical problems of heat-transfer and fluid dynamics of HTGRs up to the range of 1,000°C are classified and tabulated. Research and development items concerning reactor cores, fuels, heat exchangers and other components are described in detail. 11 references. (auth)

60077 PHENIX REACTOR. CIRCUITS AND MAIN COMPONENTS. Befre, J. L. (CEN de Saclay, Gif-sur-Yvette, France); Robin, M. G.; Delisle, J. P. Energ. Nucl. (Paris); 13: No. 3, 183-93(May 1971). (In French).

The evolution in time of the design and fabrication of the chief components of the Phenix loops is recalled. The problems which arose in the feasibility studies and the preliminary tests for each of the main components are examined (pumps, intermediate exchangers, and vapor generators). These components are described and the problems encountered in their fabrication and development are examined. (France)

60078 DFR PRIMARY CIRCUIT FAILURE. Kirk, J.; Walker, J. B. (United Kingdom Atomic Energy Authority, Dounreay, Scotland). pp 1-5 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

The DFR primary circuit leak was first discovered on 9 May 1967 and the reactor was finally shut down on 29 July to enable the fault to be located and repaired. Location was anticipated to be difficult because the leak was contained within the leak jacket surrounding the complicated circuit. By a variety of methods including tracer techniques using gaseous fission products and helium, the position of the leak in the extremely complicated circuit was located approximately. Final location involved the use of acoustic techniques and was accomplished by the end of November. The primary circuit vault was first entered on 12 November and finally re-sealed on 24 April 1968 after 148 pipe cutting and re-welding operations had been successfully completed. (auth) (UK)

60079 REMOVAL AND REPLACEMENT OF BOILING CHANNELS ON THE PROTOTYPE SGHWR. Green, E.; Clifton, J. J. (Atomic Energy Establishment, Winfrith, Eng.). pp 7-22 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

Some of the engineering operations, procedures and radiological protective measures adopted in removing six Zr—Nb pressure tubes and replacing these with Zircaloy 2 units are described. The work was carried out during a planned shut-down. In the SGHWR it is possible to obtain easy access to the core channel units. (UK)

60080 SPATIAL TEMPERATURE FIELD OF A CONCRETE VESSEL. Zdravkovic, M.; Vlajic, Milorad. Nukl. Energ.; 5: No. 6, 26-9(1968-1969). (In Serbo-Croatian).

An analytical model for the determination of the spatial temperature field caused by the working temperature and nuclear heating inside the reactor vessel has been constructed. The analytical model has been applied to the concept of a one-wall cold reactor vessel of prestressed concrete (500 MW BHWR). (auth)

60081 BEHAVIOR OF CONCRETE REACTOR VESSELS AT RAISED TEMPERATURES AND SOLUTION OF THE THERMAL PROTECTION. Stankovic, Caslav. Nukl. Energ.; 5: No. 6, 16-19(1968-1969). (In Serbo-Croatian).

An analysis has been made of the characteristics of temperature stresses in concrete reactor vessels, and the results shown

XUM

of an investigation into the behavior of concrete vessels at raised temperatures: the mechanical and thermodynamical characteristics of the concrete, and the mechanical characteristics of steel for prestressing. The conclusions hint to a further possible development of these vessels. A brief review of a solution for the thermal protection of the concrete reactor vessel for a 500 MW BHWR is presented. The problems of the deep cooling of the vessel are described. (auth)

Fuels

60082 (ANL-7782) EXPERIMENTAL IRRADIATIONS OF FUEL ELEMENTS HAVING KNOWN CLADDING DEFECTS IN EBR-II. Brunson, G. S.; Fryer, R. M.; Strain, R. V. (Argonne National Lab., Ill.). Jul 1971. Contract W-31-109-eng-38. 45p. Dep. NTIS.

The EBR-II program to develop techniques for detecting and identifying leaking fuel elements has included experimental irradiation of fuel elements having known leaks. Two such tests are reported: a "top leaker" having a small leak in the upper weld (which, however, did not leak enough to be detected) and a bottom leaker having a small laser-drilled hole (~3-mil diameter) at the bottom end of the fuel element. After a reactor shutdown, if the primary pumps are turned off, the reduction in external pressure permits the expulsion of bond sodium containing radioactive iodine from the fuel element. The daughter xenons (especially ^{135}Xe) growing out of the expelled iodine appear as a surge in primary-tank cover-gas activity, reaching a peak 11 or more hours after the reactor shutdown. This is a useful trademark of this type of leak; a semiquantitative model is presented to explain this behavior. 12 references. (auth)

60083 (ANL-7785) FEASIBILITY STUDY OF THE IDENTIFICATION OF FUEL-CLADDING FAILURES USING SODIUM-SOLUBLE ISOTOPIC TAGS. Meyer, R. J.; Johnson, C. E.; Ross, L. E. (Argonne National Lab., Ill.). Aug 1971. Contract W-31-109-eng-38. 17p. Dep. NTIS.

Two isotopic tagging methods for locating cladding defects in sodium-bonded fuels are discussed. Both methods rely on reactor activation of the tag while it is confined inside the fuel pin. One method uses ^{121}Sb and ^{197}Au, whose activation products are ^{122}Sb and ^{198}Au. The other uses ^{198}Pt and ^{197}Au, whose activation products are ^{198}Au and ^{199}Au. Varying the weight ratios of the stable isotopes produces distinctive disintegration ratios of the activation products. Each fuel element in a particular subassembly is tagged with the same distinctive isotopic mixture. Should a cladding of a fuel element fail, the tag is released into the primary sodium coolant. Identification of a released tag identifies the subassembly in which the failure occurred. (auth)

60084 IMPROVEMENTS IN AND RELATING TO NUCLEAR REACTOR FUEL ELEMENTS. Heaton, John Fildes; Roberts, Geoffrey Alfred (to Nuclear Power Group Ltd.). British Patent 1,204,758. 9 Sep 1970. Filed 29 Nov 1968.

A fuel element construction for a nuclear reactor comprises a block of solid neutron moderating material adapted for assembly with similar blocks to form a reactor core structure. Said block contains a plurality of substantially parallel passages each containing a nuclear fuel-containing member having cross-sectional dimensions such that when the member is located in a passage a clearance is left between the member and the wall of the passage for the flow of cooling fluid. Each said member has a plurality of spaced axially extending lugs on its surface adapted to contact the wall of the passage. (IIB)

60085 PHENIX REACTOR. THE FUEL ELEMENTS. Ratier, J. L. (CEN de Cadarache, Saint-Paul-les-Durance, France). Energ. Nucl. (Paris); 13: No. 3, 194-5(May 1971). (In French).

The fissile element and the fertile element are briefly described. The principal characteristics of the fuel assembly are given. (France)

Auxiliary and Emergency Systems

Refer also to abstracts 57783 and 60208.

60086 REACTOR CONTAINMENT-BUILDING SPRAY SYSTEMS FOR FISSION-PRODUCT REMOVAL. Row, Thomas H. Nucl. Safety; 12: No. 5, 516-22(Sep-Oct 1971).

Containment-building spray systems as fission-product-removal devices are becoming widespread in pressurized-water-reactor design, and the AEC has been sponsoring a research program to investigate the applicability of these systems as engineered safety features. Three spray solutions are presently in use or being seriously considered by plant designers. Molecular iodine removal by these sprays is very effective, and decontamination factors ranging from 20 and 1000 may be obtained, depending on the solution selected. The explosion hazard from generation of radiolytic hydrogen, first identified in this program in 1967, continues to require serious consideration in plant design. 23 references. (auth)

60087 PHENIX REACTOR. FUEL AND SPECIAL HANDLING FACILITIES IN THE REACTOR. Benoist, E. (CEN de Cadarache, Saint-Paul-les-Durace, France); Boulinier, C. Energ. Nucl. (Paris); 13: No. 3, 196-205(May 1971). (In French).

The handling operations are usually performed during reactor shutdown periods, and do not last long because of the small number of components involved. The handling of elements relating to control rods, guide tubes, fuel, fertile and shielding assemblies, includes: the preparation of new elements, transfer to the reactor, loading and unloading of the reactor, outside drum storage; conditioning and dismantling of spent elements in the hot cell; evacuation to the reprocessing plant or to the solid waste storage area. The systems for handling the primary pumps and exchanger, the control rods and mechanisms, the transfer arm, and other irradiation devices, include: special flasks; storage and wash down pits; the dismantling cell. Preliminary and full scale prototype tests on fuel handling devices demonstrated the viability of the solution adopted. (France)

60088 CHARACTERISTICS AND DESIGN BASES OF CHARCOAL FILTER. Aoki, Toshio (Kansai Electric Power Co., Japan). Nippon Genshiryoku Gakkaishi; 13: No. 8, 462-7(Aug 1971). (In Japanese).

The important quantities of halogen vapor that might be released normally and abnormally into the reactor building and/or into the vent systems of the reactor plant are usually removed by charcoal filters installed in the vent ducts and recirculation air ducts in the containment of a reactor. The mass transfer theory is applied analytically to the adsorption mechanism of charcoal beds incorporating the isotopic exchange of methyl iodide in an impregnated charcoal filter, to explain the two cases of constant inlet mass concentration (vent system) and constant initial concentration (recirculation system). Filter efficiencies are discussed on the above two cases, as well as leakage problems including an extreme case of high temperatures combined with almost 100% humidity, and remarks are offered on leakage tests by freon gas to get the bases for design and maintenance of systems. (auth)

60089 DETECTION OF BOILING IN NUCLEAR REACTORS. Saxe, R. F. (North Carolina State Univ., Raleigh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 337-9 (Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The subject of the detection of boiling in nuclear reactors has become important with the impending construction and operation of Liquid-Metal, Fast-Breeder Reactors for power production. Several methods for the possible detection of boiling by equipment located outside the reactor have been proposed and investigated and have, in general, been reduced to two methods. Experiments were performed to assess the relative sensitivities of these two methods. It is shown that a large difference in sensitivity exists between the two methods. 9 references. (auth)

60090 HIGH-TEMPERATURE ACOUSTIC SENSORS FOR BOILING DETECTION. Gavin, A. P.; Anderson, T. T. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 340-4(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A system utilizing immersed acoustic noise detectors to detect boiling is one possible solution to the problem of detecting loss of cooling in a fuel channel of a liquid metal cooled fast breeder reactor. Two models of a symmetric drive sensor incorporating lithium niobate as the piezoelectric element have been fabricated and tested for acoustic response in water at room temperature and in an air furnace up to 600°C. Sensitivities of both models were 500 pC/bar, with acoustic response to 100kHz when immersed in water. The sensors were not adversely affected by exposure in the furnace. Decreasing internal resistance with increasing temperature limits the useful range of present models to about 540°C. 12 references. (auth)

60091 EARTHQUAKE-RESISTANT NUCLEAR REACTOR STATION. Busey, Harold M. (to McDonnell Douglas Corp.). U. S. Patent 3,599,589. 17 Aug 1971. Filed 29 Dec 1967.

A floating structure is described for the protection of nuclear reactors from damage during earthquake shock. The structure is designed to absorb shocks without rupture of critical nuclear reactor equipment. (auth)

Operation and Economics

60092 (AECL-3910) PLUTONIUM RECYCLE IN CANDU-TYPE PHW HEAVY WATER REACTORS. Duret, M. F. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). May 1971. 14p. Dep. NTIS (U. S. Sales Only). AECL $0.50.

Fuel cycle costs for DANDU-PHW reactors of the Pickering type using natural UO_2 homogeneously enriched with plutonium are compared with costs obtained using only natural uranium. Four consecutive plutonium recycles are considered, which is enough to indicate the effect of the growing ^{242}Pu concentration on burnup and hence, costs. The effect of plutonium salt is considered. The reactor system envisaged corresponds to that of the Ontario Hydro Electric Power Commission, which is expected to increase to about 19,000 MW(e) in 1990. Total system fuel cycle costs are examined over this period. (auth)

60093 (AECL-3995) PLUTONIUM PRODUCTION IN NPD: A COMPARISON BETWEEN EXPERIMENT AND CALCULATION. Duret, M. F.; Griffiths, J.; Bir, R.; Chabrillac, M.; Vidal, R. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). Aug 1971. 23p. Dep. NTIS (U. S. Sales Only). AECL $1.00.

The Canadian Nuclear Power Demonstration Reactor (NPD) is a heavy water cooled and moderated, horizontal pressure tube reactor with a power level of about 25 MW(e). Most of the fuel is in the form of short (50 cm) bundles of Zircaloy-clad, natural UO_2 fuel pins in a 19-element circular array. In 1968 a series of eight of these bundles with irradiations covering the range 1000–10,000 MWd/tU was mass spectrometrically analyzed by the CEA in France. The bundles were selected to have an irradiation history typical of an unperturbed CANDU-type reactor with bi-directional on-power fuelling. Gross gamma-ray measurements were made on each pin to check burn-up homogeneity and so that representative pins could be selected. From each bundle, six pins of twelve in the outer ring, three pins of six in the inner ring, and the central pin were dissolved and analyzed. Uranium analyses were made with a UF_6 mass spectrometer giving a very good accuracy on ^{235}U depletion measurements and a thermo-ionization device was used for plutonium analyses. The amounts of plutonium and neodymium were determined by the isotopic double dilution method. These measurements provided relative concentrations of ^{235}U, ^{236}U, ^{238}U, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{242}Pu and ^{148}Nd in each ring of each bundle. Burnup values were determined from the ^{235}U/^{238}U ratios, and ratios of other isotopic abundances were compared to predictions made using both Canadian and French methods of lattice calculation. In general, the agreement is good. (auth)

60094 (CONF-710922-2) REVIEW OF FAST REACTOR OPERATING EXPERIENCE. Cohen, Karl (General Electric Co., Sunnyvale, Calif.). [1970]. 17p.

From International conference on fast reactors; Aix-en-Provence, France (2 Sep 1971).

Design characteristics for operating and planned liquid sodium cooled fast reactors are compared. Operating experiences for liquid sodium cooled reactors are discussed under the following topics: fuel; refueling; instrumentation and controls; sodium technology; auxiliary systems; major heat transfer components; and availability and maintainability. 10 references. (D.C.C.)

60095 (IAEA-R-742-F) ANALYSIS OF URANIUM BURN-UP AND PLUTONIUM BUILD-UP IN FAST REACTORS. Final Repor for the period 1 January–31 December 1960. Orlov, V. V. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut). Aug 1970. 86p. (In Russian). Dep. NTIS (U. S. Sales Only).

Completed and projected construction of atomic electric power plants in the various countries of the world is summarized. A program is offered for the computation of the changes in isotopic composition of fuel in various types of nuclear reactors. The program is divided into spatial and time portions to yield burn-up of U and accumulation of Pu. Examples of the calculations are given for each of four fuel cycles: uranium reactor reprocessor; plutonium breeder reactor; thorium breeder reactor; and breeder reactor with mixed fuel. Repeated fuel recovery is also treated. 16 references. (K.S.W.)

60096 (ORNL-4676, pp 1-20) MOLTEN-SALT REACTOR EXPERIMENT. (Oak Ridge National Lab., Tenn.). Aug 1971.

In Molten-Salt Reactor Program semiannual progress report for period ending February 28, 1971.

60097 (ORNL-TM-3525) EVALUATION OF PLUTONIUM USE IN HIGH-TEMPERATURE GAS-COOLED REACTORS. Kasten, Paul R.; Bennett, Leonard L.; Thomas, W. E. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 29p. Dep. NTIS.

High-temperature gas-cooled reactors (HTGRs) are generally proposed for operation on the thorium fuel cycle using highly enriched ^{235}U as initial and makeup fissile fuel, with recycle of the bred ^{233}U. However, development of a fuel recycle technology also inherently develops the ability to fabricate plutonium-fueled HTGR fuel elements. Thus, light water reactors (LWRs) which produce plutonium, fast breeder reactors (FBRs) producing excess plutonium (or ^{233}U), and HTGRs can work together. A systems analysis study was therefore performed to help clarify the role that HTGRs might play in utilizing plutonium from light water reactors in the near future and from FBRs at times when plutonium production exceeds breeder reactor requirements. These investigations considered competition between LWRs, FBRs, HTGRs, and fossil plant types with HTGRs utilizing either ^{235}U or plutonium as the makeup fuel (the initial fissile fuel was ^{235}U for both cases). The effects of rising ore prices, separative work prices, values of bred fissile materials, and changing capital costs with time were included in the calculations. The basic tool used in these studies was a linear programming optimization model of the U. S. utility industry, which determines the optimum long-term expansion plan of the industry with minimum cost as the objective function. The results indicate that use of the plutonium-makeup fuel cycle permits HTGRs to have a much deeper penetration of the power market than use of the ^{235}U-makeup fuel cycle alone (1075 plants vs 493); plutonium-makeup HTGRs are economically preferred over plutonium-fueled LWRs over the period of this study (1970-2015); use of Pu-makeup HTGRs has no significant influence on the introduction and use of FBRs; as the price of uranium ore rises and the price of plutonium decreases, it will eventually be necessary for HTGRs to operate with plutonium as the initial fissile fuel if they are to compete with LWRs fueled with uranium tails and plutonium; and if FBRs produce excess fissile fuel it appears economically desirable that such fuel be ^{233}U for use in HTGRs. 7 references. (auth)

60098 ADVISABILITY OF OPERATING NUCLEAR POWER PLANTS AT A REDUCED POWER LEVEL BEFORE REFUELING. Mityaev, Yu. I. At. Energ. (USSR); 30: No. 4, 339-43(Apr 1971). (In Russian).

Operators of several power plants such as the Yankee Atomic reactors and the Novo-Voronezh power plant reduce the power before refueling; a considerable amount of electricity is generated during the low-level operation. Calculations were made to determine under which conditions such an operating scheme be economically profitable by reducing the net cost of the generated electricity. For the calculations it was assumed that the reactor contained identical fuel channels resulting in an improved burnout and that the power plant operates without requiring reprocessing of the fuel. The calculation involved a comparison of operation with and without reducing the power level before refueling, keeping the amount of electricity generated between reloading or the number of reloaded channels identical. The results indicated that reduction of the power before reloading helps to reduce unproductive neutron losses in the control rods. This results in the reduction of the net costs of the generated energy if the number of reloaded fuel channels is increased. It is recommended to use such an operational scheme for vessel-type, light-water reactors with a relatively high power coefficient of reactivity. (TTT)

60099 PLAN AHEAD FOR DECONTAMINATION. Bell, Robert S. Power Eng.; 75: No. 8, 38-40(Aug 1971).

Procedures and requirements for the decontamination of power reactor components are described. Component maintenance and replacement requirements for different reactor types are discussed in terms of decontamination problems. (D.C.C.)

60100 EFFECT OF CONDENSING THE SPATIAL MESH ON THE ACCURACY OF FAST BREEDER FUEL-CYCLE ANALYSES. Alcouffe, Raymond E.; Hirons, Thomas J. (Los Alamos Scientific Lab., N. Mex.). Nucl. Sci. Eng.; 45: No. 3, 333-5(Sep 1971).

Calculational results that employ the collapsing theory are presented. This theory is utilized to reduce the spatial mesh used to perform the fuel-cycle analysis of a large fast breeder. These results indicate that a satisfactory analysis can be performed while reducing a typical two-dimensional spatial mesh by a factor of 30. Only the reduction of the spatial mesh is described. (auth)

60101 OPTIMAL CONTROL ROD PROGRAMMING OF LIGHT WATER REACTORS IN EQUILIBRIUM FUEL CYCLE. Motoda, Hiroshi (Hitachi Ltd., Kawasaki, Japan). Nucl. Sci. Eng.; 46: No. 1, 88-111(Oct 1971).

A generalized treatment for investigating the effects of various refueling schemes on the optimal control rod programming that maximizes the average burnup of discharged fuels in a two-region, radially one-dimensional light water moderated nuclear reactor is presented and applied to a boiling water reactor having uranium fuel of a single ^{235}U enrichment. It is assumed that the refueling scheme has reached an equilibrium fuel cycle, and the analysis by burnup space is applied, which helps in interpreting geometrically the coupled effect of the control rod programming and the fuel burnup by the trajectory drawn in this space. Three refueling schemes are considered: parallel, series out-in, and series in-out. Scatter loading is assumed in each region and the batch number and volume fraction of each region are varied as the refueling parameters. Fuel management and poison management constitute a hierarchy relation, and the effect of the refueling schemes on burnup maximization or enrichment minimization is several times greater than that of the control rod programmings. However, the policy of the optimal control rod programming strongly depends on the refueling scheme. The power density of the inner region should be as high as possible for out-in scheme (inner high policy) and vice versa for in-out scheme (outer high policy). However, either policy can be optimal, depending on the refueling parameters for parallel schemes, and in some cases the optimal control rod programming is not unique (degenerate policy). Optimal control rod programming increases the discharge burnup or decreases the enrichment of the feed fuels by about 0 to 4% over the conventional constant power shape operation. The difference is mainly determined by the reactor design and the refueling scheme. Optimal refueling should be chosen from among parallel schemes, which have much larger freedom than series schemes. (15 references) (auth)

60102 ECONOMIC CHARACTERISTICS FOR FUEL CONSUMPTION IN NUCLEAR POWER STATIONS. Marx, D.; Steinbock, P. (Technische Univ., Dresden). Kernenergie; 14: No. 5, 142-4(May 1971). (In German).

Starting from the necessity to apply uniform systems of characteristics to all components of the process of reproduction in the generation of electric energy, characteristics of fuel consumption for nuclear power stations in accordance with standardized characteristics for conventional power plants are presented. A suggestion is made for determination, planning, and clearing of nuclear fuel consumption in such a manner that the latter becomes an integrated part of normative cost accounting. (auth)

60103 OPTIMAL STRATEGIES IN REACTOR SYSTEM ECONOMICS. Nelson, Paul Jr.; Young, Gale (Oak Ridge National Lab., Tenn.). Nucl. Sci. Eng.; 46: No. 1, 140-7(Oct 1971).

The breeding of nuclear fuel and its transfer between reactors cause the different reactor types to be interacting components of a system which may have fairly complex optimal strategies. This is illustrated in an idealized example employing two types of reactors. For simplicity it is assumed that both reactors use and produce the same kind of fuel, and that this fuel can also be purchased externally (e.g., from a uranium mining and diffusion plant operation) as needed, at constant price. A global or other large economically isolated power system required to generate a prescribed total power output P(t) over some period of time is considered. The problem is to employ the different reactors in such a way as to accomplish this in the most economical manner. (auth)

60104 APPLICATION OF LINEAR PROGRAMMING TO REFUELING OPTIMIZATION FOR LIGHT WATER MODERATED POWER REACTORS. Suzuki, Atsuyuki; Kiyose, Ryohei (Tokyo Univ.). Nucl. Sci. Eng.; 46: No. 1, 112-30(Oct 1971).

The fuel management optimization problem within a light water moderated nuclear reactor is formulated as a multistage decision process, and the amount of fresh fuel in each zone and the shuffling schemes of reloading fuel are simultaneously determined so as to minimize the consumption of fresh fuel throughout plant life. The problem in case of a five-zone core involves about 8000 variables and about 2000 constraints on the variables. However, it is shown that the optimal refueling policy can be obtained in a reasonable length of computing time by using linear programming and, prior to the overall optimization calculation, by solving the subproblem of minimizing the stagewise consumption of fresh fuel. The optimal refueling policy results in reduction of the consumption of fresh fuel by about 10% compared with the conventional policy of uniform partial batch refueling. The essential assumption in the calculation model is that the spatial power distribution in the core does not change significantly with time and the optimal allocation of energy output (integrated power output) for each zone can be attained by optimizing the control rod programming for one core life. Three-dimensional depletion calculations are repeatedly performed to verify feasibility of the model based on that assumption. 22 references. (auth)

60105 STABILITY STUDY OF A PWR NUCLEAR POWER STATION CONNECTED TO AN ELECTRIC POWER SYSTEM. Obinata, Sumiko; Kobayashi, Shigeo; Wakamatsu, Seiji (Electrotechnical Lab., Tokyo). Denshi Gijutsu Sogo Kenkyusho Iho; 35: No. 2, 129-44(Feb 1971). (In Japanese).

The overall system stability of an electric power system which includes a PWR nuclear power station under governor-free operation is described. First the whole system is divided into two independent subsystems, the power plant internal system and the electric power system, respectively. The stability of the individual subsystems and that of the total system are discussed. It has been concluded that the interaction between the two subsystems is not strong under governor-free operation, and that, therefore, the total system is stable enough if both subsystems are stable. 60106 ACTIVE WORKING ON REACTORS. Proceedings of the Joint International Discussion Meeting, London, October 1, 1970. London; British Nuclear Energy Society (1971). 84p. £ 1.75. (CONF-701054).

Eight papers were presented. A separate abstract was prepared for each paper. (UK)

For abstracts of individual papers see: 59923–59926, 60026, 60078, 60079, and 60107.

60107 TOOLS AND RECOVERY EQUIPMENT. Compton, S. J. (United Kingdom Atomic Energy Authority, Sellafield, Eng.). pp 47-56 of Active Working on Reactors. London; British Nuclear Energy Society (1971).

From Meeting on active working on reactors; London, England (1 Oct 1970). See CONF-701054.

High radiation restricts access to nuclear reactors for repair work which necessitates special tools and equipment to be developed for this purpose. Efficient viewing equipment is an essential requirement for the true assessment of the situation inside the reactor. Small items lost inside the reactor are usually recovered by using the television camera grab attachment or simple snares. The dismantling of equipment in-pile would probably require tools or equipment designed specifically for the job, and operated remotely, and would thus not normally be useable for any other purpose. In the event of a fuel channel melt-out incident the presence of contamination would make the recovery work much more difficult, and complicated equipment would be required due to the necessity to prevent the spread of contamination. Equipment was developed for remotely carrying out measurements and for taking samples of materials from components inside the reactor. (auth) (UK)

60108 METHODS FOR THE ANALYSIS OF THE RENTABILITY OF NUCLEAR POWER PLANTS AND THEIR APPLICATION IN YUGOSLAVIA. Mojovic, Ljubomir. Nukl. Energ.; 5: No. 6, 1-8(1968-1969). (In Serbo-Croatian).

The economic factors of interest for the assessment of the rentability of nuclear power plants are being considered. The method of the integral annual costs used in Yugoslavia for the economic analysis of power plants is applied to nuclear power plants, paying due regard to the current regulations and recommendations for such analyses. The methods and criteria for evaluating the rentability of projects and their intercomparison from the point of view of national economy are analyzed. A discussion follows on the feasibility of certain methods and criteria. The setbacks of using for this purpose the integral annual costs obtained by the usual procedure employed in Yugoslavia are described. The use of certain criteria for nuclear power plants is discussed. (auth)

60109 TRANSMISSION IN THE 1980'S. Begent, H. H. (English Electric Power Transmission Ltd., Stafford). Elec. Rev.; 189: No. 9, 301-2(Aug 1971).

The most promising means for improving the competitive position of electricity are by the use of fast breeder reactors and the improvement of load factor. Developments in ac and dc transmission systems for use with fast reactors are discussed. It is concluded that underground 300 kV systems are the most promising. They are compared with the ultra high voltage overlay of large power pools. (UK)

60110 EMERGENCY COOLING SYSTEM FOR A NUCLEAR POWER GAS TURBINE. Bammert, K. (Inst. of Turbomachinery and Gasdynamics, Hanover). Atomkernenergie: 18: No. 2, 131-2(1971).

The aftercooling of a gas cooled high-temperature reactor is described which during normal operation delivers its primary heat to a direct-cycle gas turbine. (auth)

60112 (CEA-CONF-1797) FLINA CODE. Rousseau, J. C. (Commissariat a l'Energie Atomique, Grenoble (France). Centre d'Etudes Nucleaires. Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). [1971]. 11p. (CONF-710630-1). Dep. NTIS (U. S. Sales Only).

From European two-phase flow group meeting; Riso, Denmark (9 Jun 1971).

The FLINA code concerns reactor safety and was written for treating problems arising from boiling sodium. The code describes the stable or transient thermodynamic flow of a two phase fluid in the channel of a reactor or test loop. The code was established using models resembling those of FLICA. The numerical methods were adapted to the special treatment of critical flow. Furthermore, in the transient case, these methods allow the treatment of acoustic problems as well as slow variations. This code was initially intended for the description of boiling sodium, but preliminary tests demonstrated that it could also be used for treating problems such as periodic expulsion in a heating channel, all types of oscillation in the heat exchangers, and depressurization in the primary circuit of a reactor plant. Some relevant examples are cited. (France)

60113 (CONF-710922-3) REVIEW OF FAST REACTOR SAFETY. Farmer, F. R. (United Kingdom Atomic Energy Authority, Risley (England). Authority Health and Safety Branch). [nd]. 14p. Dep. NTIS (U. S. Sales Only).

From International conference on fast reactors; Aix-en-Provence, France (2 Sep 1971).

A whole variety of phenomena which bear on fast reactor safety is presented. The subjects which are introduced but not discussed in depth range from sodium fires, decay heat removal, core meltdown and sub-assembly events. Particular designs or design solutions to specific problems are not discussed. (auth)

60114 (CONF-711103-1) HEAT TRANSFER FROM ELECTRICALLY HEATED RODS DURING A SIMULATED LOSS-OF-COOLANT ACCIDENT. Lawson, C. G. (Oak Ridge National Lab., Tenn.). [1971]. 38p. Dep. NTIS.

From American Institute of Chemical Engineers meeting; San Francisco, Calif. (29 Nov 1971).

Transient heat-transfer data are presented for single Zircaloy clad heaters (0.5-in.-OD × 2-ft-long) and a seven-rod cluster in a closed cycle, circulating, 1500 psi pressurized, water loop at power levels of 17.5 kW/ft (450,000 Btu/hr · ft^2) with cooling water near 500°F inlet and 1500 psi during a 12-second depressurization and coolant loss. Flow regimes associated with bulk-nucleate boiling and with thin film surface evaporation are clearly discernible where the temperature difference and heat flux data are considered. The high heat-transfer coefficients were observed for times greater than the heat-removal time constants of the heater rods and suggest that assumptions made in current calculations are conservative. (12 references) (auth)

60115 (HEDL-SA-164) TRANSLATING ELEVATED TEMPERATURE MATERIAL PROPERTIES INTO RULES FOR STRUCTURAL DESIGN. Jakub, M. T.; Moen, R. A.; (and others) (Hanford Engineering Development Lab., Richland, Wash.). [1971]. Contract AT(45-1)-2170. 51p. (CONF-710903-2). Dep. NTIS.

From first international conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

A description is given of how existing data on austenitic-type stainless steel material were utilized to establish structural design rules for the Fast Flux Test Facility (FFTF). These rules govern the design of all heat transport system pressure boundaries, including the core support and core holddown structures. In addition to limiting design against material degradation from mass transfer and irradiation damage, the rules are intended to guard against structural failure from ductile rupture, ratchetting, gross deformation, buckling instability, and creep-fatigue interaction. (auth)

60116 (HMI-B-113) CHEMICAL ASPECTS OF REACTOR SAFETY. Hoinkis, E. (Hahn-Meitner-Institut fuer Kernforschung, Berlin (West Germany)). Aug 1971. 52p. (In German). Dep. NTIS (U. S. Sales Only).

Papers related to chemical problems in both normal and abnormal reactor operation are reviewed. Aspects covered include: (1) release and transport of fission products; (2) release and adsorption of iodine and iodine compounds; (3) aerosol production and behavior; (4) chemical reactions of cladding material; (5) oxidation of graphite and coated particles; (6) chemical reaction of fuels; (7) chemical reactions in sodium loops; and (8) corrosion in water-cooled reactors. 155 references. (H.D.R.)

60117 (KFK-1380) PROPAGATION OF LOCAL DISTURBANCES IN THE CARE OF FAST SODIUM-COOLED REACTOR AND THEIR SIGNIFICANCE FOR REACTOR SAFETY. Gast, K. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). May 1971. 162p. (In German). Dep. NTIS (U. S. Sales Only).

The problem of propagation of local cooling disturbances and fuel element faults in the core of a sodium cooled fast breeder reactor is analyzed. Initial faults, their possible consequences and potential mechanisms to cause a nuclear accident are discussed and are weighed in their importance with regard to reactor safety. Among possible chains of events two critical paths are identified: local cooling disturbances within a fuel element bundle, which could, via successive failure of fuel pins or local boiling, lead to gross boiling and sodium ejection from the entire fuel element and finally to an explosive interaction between overheated fuel and sodium; and simultaneous rupture of many cladding tubes in the gas plenum region of a fuel element, resulting in a sudden release of considerable amounts of fission gas, which could lead to a nuclear excursion via the sodium-void-reactivity. The latter problem of sudden fission gas release is solved by a simple change in the fuel element design. Of the former chain of faults, the most important individual events are analyzed, especially with respect to their detectability by means of special monitoring instruments. A first analytical model is developed to describe the process of local sodium boiling in a pin bundle geometry. The model is based on the assumption of single bubble boiling at considerable superheat. The thermal hydraulic properties of a fuel element bundle are considered. In the numerical calculations, the effects of sodium superheat and of the temperature field in the disturbed region are investigated parametrically. 82 references. (auth)

60118 (ORNL-4727) DEFORMATION AND RUPTURE BEHAVIOR OF LIGHT-WATER REACTOR FUEL CLADDING. Hobson, D. O.; Rittenhouse, P. L. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 20p. Dep. NTIS.

XUM

The results of transient-temperature burst tests performed on Zircaloy cladding tubes are presented. These establish base-line criteria with reference to reactor loss-of-coolant accidents and materials parameters and provide a basis for comparisons among multirod tests, tests with irradiated cladding, and in-reactor experiments. This study delineates the maximum expansion to be expected from each combination of pressure and heating rate and shows, rigorously, the effect of wall thickness variation on expansion. In addition, the α-to-β transformation is shown to have a large effect on the strain and rupture behavior of the tubing. (auth)

60119 PROBLEM OF LOCATING NUCLEAR POWER PLANTS. **Gerisch, G. (Institut fuer Energetik, Leipzig). Kernenergie; 14: No. 5, 133-6(May 1971). (In German).**

From the general contents and the importance of the territorial structure of production processes special requirements and conditions concerning the site of nuclear power plants are derived. The relations between power plants and their environment are analyzed. Considering the qualities of nuclear fuel, the requirement on safety of environment and the economic effect of different cooling methods, the locating of nuclear power plants is regarded as a problem of optimization. For its solution a practically tested conception is presented. In conclusion, trends of the locating of nuclear power plants are deduced. 9 references. (auth)

60120 RADIATION MONITORING. **Hekkala, Barney. Power Eng.; 75: No. 9, 44-6(Sep 1971).**

Methods for surveillance of nuclear power plants for radioactivity in effluents and in plant systems are described. Engineered systems tailored to the requirements of a specific plant are discussed. (H.D.R.)

60121 ANALYSIS OF MECHANICAL WORK ENERGY FOR LMFBR MAXIMUM ACCIDENTS. **Padilla, Andrew Jr. (Hanford Engineering Development Lab., Richland, Wash.). Nucl. Technol.; 12: No. 4, 348-55(Dec 1971).**

The evolution of analytical methods for predicting the mechanical work energy for LMFBR maximum accidents are reviewed. The analytical methods based on the thermal interaction of molten fuel with sodium are discussed in detail and comparisons of mechanical work energies, pressure-time histories, and temperature-time histories are made. Areas for further work are suggested. 21 references. (auth)

60122 RELIABILITY REQUIREMENTS FOR NUCLEAR POWER PLANTS. **Knecht, O.; Zeibig, H. (INTERATOM, Bensberg, Ger.). Kerntech. Atomprax.; 13: No. 7-8, 314-18(Jul-Aug 1971). (In German and English).**

In planning a nuclear power plant it is necessary to establish how reliable the individual component systems must be in order to achieve a stipulated safety rating and a stipulated availability of the plant as a whole. The safety engineering aspect of this problem is discussed, with the derivation of reliability requirements from a stipulated permissible overall risk resulting from unforeseen events (malfunctions). Using the reactor SNR-300 as an example, it is shown that the decisive criterion for the reliability requirements for the safety facilities of a reactor is the radiological component of the overall risk. A numerical example is given for the controls of the primary cycle pumps which must be automatically slowed down and stabilized at an after-cooling speed of revolution of 5% after a reactor scram. The correlation between the design basis for nuclear power plants and the risk analysis method is also discussed. (auth)

60123 PROTECTION AGAINST REACTOR EMERGENCIES ASSOCIATED WITH REACTIVITY PERTURBATIONS. **Grebenyuk, G. G.; Dorri, M. Kh.; Solov'ev, M. M. This paper was summarized in At. Energ. (USSR); 29: No. 5, 363-4(Nov 1970) as paper No. 439/5361. (In Russian).**

A method is examined for protection against reactor emergencies associated with reactivity perturbations, based on a system of automatic power regulation. Among such emergencies are obstruction of the fuel channels in the active zone and disruption of normal cooling of the fuel elements, which results in the overheating of parts of the active zone and causes reactivity perturbations. A method is proposed for detecting emergency situations from indirect evidence — the appearance of an emergency perturbation in the reactivity. (auth)

60124 UTILITY OF ICE CUBES AS AN ABSORBENT FOR GASEOUS FISSION PRODUCTS. **Soldano, B. A. (Furman Univ., Greenville, S. C.); Ward, W. T. Nucl. Technol.; 12: No. 4, 363-6(Dec 1971).**

Ice cubes, which were made using a base-borate solution containing 1 wt % $Na_2S_2O_3$, were found to be effectively 100% efficient in removing I_2 from an I_2-air stream, but neither additive was found to be effective for trapping CH_3I if the water was in the form of ice cubes. (auth)

60125 RELIABILITY-ENGINEERING METHODS IN REACTOR-SAFETY TECHNOLOGY. **Rubel, Paul. Nucl. Safety; 12: No. 5, 496-9(Sep-Oct 1971).**

Reliability engineering seeks deliberately to increase the likelihood that devices or systems will function as intended. To this end, analytical techniques are routinely applied in fields such as aerospace in ways that give rotational direction to the various quality-assurance activities. A recent survey of similar applications to enhance reactor safety revealed that, although qualitative-analysis methods have been adopted widely, probabilistic modeling and risk forecasting have been somewhat restricted by lack of adequate supporting information. Probabilistic analysis use is expanding, however, as current efforts gradually overcome the information problem. Meanwhile, quality assurance has benefited from the insight provided by the preliminary risk-evaluation studies. 9 references. (auth)

60126 FUEL-ROD FAILURE AND ITS EFFECTS IN LIGHT-WATER-REACTOR ACCIDENTS. **Rittenhouse, P. L. Nucl. Safety; 12: No. 5, 487-95(Sep-Oct 1971).**

The status of research and testing for identifying the modes of fuel-rod failure that may result from a loss-of-coolant accident in a light-water-cooled reactor and the influence of such failures on the efficiency and effectiveness of emergency cooling are reviewed. Subjects covered include deformation and rupture of Zircaloy cladding of fuel rods, coolant-channel blockage resulting from this mode of fuel-rod failure, and embrittlement of cladding by reaction with steam. The effects of all these factors on the integrity of the reactor core and on the ability to cool the core are discussed. 22 references. (auth)

60127 COMPUTER CODES FOR ANALYZING NUCLEAR ACCIDENTS. **Winton, M. L. Nucl. Safety; 12: No. 5, 461-87(Sep-Oct 1971).**

Many computer programs have been developed for use in various aspects of nuclear accident analysis. The Nuclear Safety Information Center has separated over 200 of these codes into 15 groups and tabulated them. The resulting table gives name of code, machine on which it is operable, its language, corporate author, a statement of what the code does, a reference citation, and date of the reference. An outline of the analysis of a loss-of-coolant accident is given, and codes that might be used in the analysis are briefly discussed. Several comparisons of similar codes are cited, and some of the results are discussed. In addition, there is notation of those codes on which information may be obtained from the Argonne Code Center, the European Nuclear Energy Agency (ENEA) Library at Ispra, and the Radiation Shielding Information Center. 9 references. (auth)

60128 OUTCRY OVER EXPOSURE GUIDELINES. **Auxier, J. A. Nucl. Safety; 12: No. 5, 456-60(Sep-Oct 1971).**

There has been a growing public concern about radiation pollution of the environment over the past few years. Also, the public news media have given increased coverage to individuals critical of the radiation-exposure guides and standards recommended by the Federal Radiation Council and other national and international committees and councils. The recommendations of the Federal Radiation Council are those with which the Atomic Energy Commission and other federal agencies must comply. An objective view is presented of some of the many problems, hypotheses, and assumptions that underlie the positions of those critical of the radiation-exposure standards and guidelines, as well as those who maintain staunchly that the recommended dose levels are adequately low. It is concluded that there is no need to adjust the guidelines at present. Current contamination levels are so low, relative to the guidelines, that exposure levels will not reach 10% of the recommended guideline limits during the next few decades. Consequently, even if future research indicated a need for the full 10-fold reduction recommended by the critics, the average population dose would still be below reduced guidelines. 22 references. (auth)

60129 PUBLIC OPPOSITION TO NUCLEAR POWER: AN INDUSTRY OVERVIEW. **Slater, H. G. Nucl. Safety; 12: No. 5, 448-56(Sep-Oct 1971).**

The recent history of public and press attitudes toward nuclear power and its effect on the environment can be traced in the results of polls, panel meetings, debates, etc. Although opposition is not the rule, the quick response by the nuclear industry to the environmentalists' positions has helped to improve public relations. Since nuclear technology is involved in these complex problems, its leaders must do all they can to inform the public and to respond with candor to important questions so that mutual trust and understanding may prevail. 24 references. (auth)

60130 HTGR SAFETY. Kaplan, S. I. (Oak Ridge National Lab., Tenn.). Nucl. Safety; 12: No. 5, 438-47(Sep-Oct 1971).

For a high-temperature gas-cooled reactor (HTGR), the postulated accident mechanisms that carry population-safety significance are those which either increase the releasable fission-product inventory of the primary system or those which release the primary-system contents to the environment. Nominally these mechanisms comprise loss of coolant, graphite oxidation, loss of forced circulation of coolant, reactivity excursions, and core blockage. However, the specific multiple lines for safeguarding against all these accident mechanisms which are postulated for a large HTGR render the probability of their occurrence extremely low. Safety-directed research has provided a good general understanding of the major fission-product escape and transport mechanisms, core physics, and graphite-oxidation phenomena, although much detailed experimental information is still needed before rigorous predictions of coolant chemistry and fission-product behavior for new designs become feasible. Future research paths will be influenced by the shifts in relative importance of certain accident mechanisms as reactor size increases, by increased public pressure to minimize all radioactive releases, and by new developments in fuel and component design. 41 references. (auth)

60131 LIGHT-WATER-REACTOR SAFETY. Bright, G. O. (Idaho Nuclear Corp., Idaho Falls). Nucl. Safety; 12: No. 5, 433-8(Sep-Oct 1971).

Light-water-reactor safety problems are primarily associated with the large power reactors now being constructed. Consideration of these complex systems has resulted in the development of a Water-Reactor Safety Program Plan which represents an industry-wide consensus on issues, needs, and priorities. The principal issues are identified as development and confirmation of analytical techniques for design and safety evaluation. Specific areas of greatest importance are emergency core-cooling capability, fuel-failure phenomena under abnormal conditions, and development of needed standards and quality-assurance procedures. Current and planned future programs should provide adequate capability for solution of problems that can be identified at present, but safety is a moving target and, as reactor design advances, a continuing program is foreseen. 13 references. (auth)

60132 LMFBR SAFETY. Rose, David (Argonne National Lab., Ill.). Nucl. Safety; 12: No. 5, 421-33(Sep-Oct 1971).

The research effort and recent results of the major research and development programs of the U. S. Atomic Energy Commission and of U. S. industry for LMFBR safety are reviewed. The safety program for the liquid-metal-cooled fast breeder reactor stresses accident prevention and the early detection and control of potential accidents. The main areas of interest include the investigation of fuel behavior and of fuel-failure propagation, the understanding of the phenomena involved in reactivity accidents and the development of techniques to assess their effects, the mechanical responses of reactor systems to accidents, and the containment of the consequences of postulated accidents. 61 references. (auth)

60133 FAULT TREE ANALYSIS WITH PROBABILITY EVALUATION. Crosetti, Paul A. (Douglas United Nuclear, Inc., Richland, Wash.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 465-71(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

Reliability analysis is playing an increasingly important role in quantitative assessment of system performance for assuring nuclear safety, improving plant performance and plant life, and reducing plant operating costs. In particular, fault tree analysis with probability evaluation provides an all inclusive, versatile mathematical tool for analyzing complex systems. Its application can include a complete plant as well as any of the systems and subsystems. Fault tree analysis provides an objective basis for analyzing system design, performing trade-off studies, analyzing common mode failures, demonstrating compliance with AEC requirements, and justifying system changes or additions. The logic of the approach makes it readily understandable and, therefore, it serves as an effective visibility tool for both engineering and management. 7 references. (auth)

60134 ELRAFT A COMPUTER PROGRAM FOR THE EFFICIENT LOGIC REDUCTION ANALYSIS OF FAULT TREES. Semanderes, Stavros N. (Westinghouse Electric Corp., Pittsburgh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 481-7(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

ELRAFT is a FORTRAN program which formulates the simplest logic expression for each secondary event in a fault tree in terms of the basic events which combine to cause it. Each secondary event is expressed as the union of intersections of basic events; dependencies are eliminated by insuring that in a particular intersection, a basic event can appear only once, and a particular intersection of basic events is unique and is not a subset of another intersection of events. The property of prime numbers as expressed in the unique factorization theorem of number theory is utilized to eliminate dependencies. Each basic event is assigned a prime number and a particular combination of basic events can be expressed uniquely by a single number which is equal to the product of the prime numbers corresponding to the basic events. The output includes the event probabilities and a listing of the combinations of events causing failure arranged by single failures, then double, triple, etc. Input is quite simple with only one card for each event in the tree containing the description and location of the event and its failure probability (the latter for basic events only). The program can handle very large fault trees utilizing the CDC 6600 computer, and the computing time is independent of the probabilities involved. An exact evaluation can be obtained in seconds where a simulation might require many minutes to get an approximation. The existing program is designed to handle fault trees which use only AND and OR logic gates. It could, however, be extended to handle any type of logic gate for which there is a mathematical probability equivalence. 4 references. (auth)

60135 SYSTEMATIC APPROACH TO SAFETY DESIGN AND EVALUATION. Salvatori, Romano (Westinghouse Electric Corp., Pittsburgh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 495-504(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The concept of probabilistic analysis is recommended as a practical tool for developing design criteria and goals. The proposed procedure and the basic principles are developed in detail. Practical applications of the probabilistic approach are included. 5 references. (auth)

60136 SAFETY ASPECTS OF FAST REACTORS. Farmer, F. R. (United Kingdom Atomic Energy Authority, Risley, Eng.). Elec. Rev.; 189: No. 9, 295-6(Aug 1971).

Features of fast breeder reactors which differ from those of thermal reactors are discussed in relation to reactor safety. Fundamental factors which assist safe operation are nondependence on auxiliary supplies after shutdown, and the low pressure of the Na coolant system. (UK)

Power Conversion Systems

60137 (KFK-1409) CLOSED GAS TURBINE CYCLE FOR A 1000-MWe GAS-COOLED FAST BREEDER REACTOR. Savatteri, C. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). May 1971. 86p. (In German). (EUR-4578). Dep. NTIS (U. S. Sales Only).

Progress in reactor technology permits reactor outlet temperatures exceeding 700°C in the case of gas-cooled fast breeders. These temperatures meet the requirements of a gas turbine. To obtain design characteristics for the final rating of a 1,000 MW(e) plant with a helium turbine, which is coupled in a direct circuit with a helium-cooled fast breeder reactor, the influence of the following parameters on process efficiency is investigated: turbine inlet temperature, compressor inlet temperature, minimum temperature difference of the heat exchanger, primary pressure, pressure loss and number of intermediate coolings. Arguments are discussed relative to the design to be selected for the turboset and the heat exchanging equipment. The pressure loss occurring in the piping system is determined and a fully integrated arrangement of the plant components is described. 38 references. (auth)

60138 (N-71-19497) SNAP-8 REFRACTORY BOILER DEVELOPMENT. TOPICAL REPORT 3: EVALUATION OF SNAP-8, SN-1 BOILER. Henderixson, W. H.; Harrison, R. W. (General Electric Co., Cincinnati, Ohio. Space Div.). 3 Nov 1970. Contract NAS3-10610. 55p. (NASA-CR-72814; GESP-550). NTIS.

The SNAP-8, SN-1 boiler which was designed and fabricated by NASA was performance tested for 13,500 hours. After testing the boiler was removed from the test facility and the boiler materials were evaluated. The evaluation indicated excellent compatibility of the boiler materials with liquid metals at high temperatures and all indications point to the design life capability of 40,000 hours. (auth) (STAR)

60139 COMBINED HELIUM AND STEAM CYCLE FOR NUCLEAR POWER PLANTS. Kilaparti, S. R.; Nagib, M. M.

XUM

(Illinois Inst. of Tech., Chicago). Mech. Eng.; 93: No. 8, 14-18(Aug 1971).

An improvement of the combined thermal efficiency is achieved above the thermal efficiency of either the gas or Rankine cycle. The most favorable combination is found to be between a simple gas cycle with no intercooling or reheating and a simple Rankine cycle. The efficiency improvement under these conditions amounts to about 10 points at a compressor pressure ratio of 3.5. This does not represent the highest possible efficiency obtained with the combined cycle. Greater improvement could be achieved through the use of one reheating in the gas cycle. This, however, is connected with complication in the cycle arrangement. It is believed that, for very large power outputs (i.e., 2000 MW(e) and above), such a combined-cycle arrangement represents a successful and probably economic solution. 3 references. (auth)

60140 TOMMORROW'S PLANT: GAS TURBINES, NUCLEAR POWER, DRY COOLING. Fortescue, Peter (Gulf General Atomic Inc., San Diego, Calif.). Power Eng.; 75: No. 8, 45-7(Aug 1971).

The operating characteristics of a power reactor utilizing a closed cycle gas turbine and secondary air cooling system are described. The closed cycle gas turbine power system described operates on a Brayton cycle. (D.C.C.)

60141 POWER PLANTS. Jubb, Albert; Ward, Robert George; Hurst, James Norman; Holliday, John Bertram; Ashley, James Wilfred (to Rolls-Royce Ltd.). British Patent 1,242,528. 11 Aug 1971. Filed 1 Nov 1967.

Reference is made to closed cycle gas turbine nuclear power plants. In the system described the compressor, the turbine and heat exchangers are located within a cavity in the wall of the reactor pressure vessel, and the compressor and turbine are removable from the pressure vessel independently of the reactor. Provision may also be made for removal of the heat exchangers. A common supporting structure for the removable components may comprise a cylindrical "pod," with cooling means. Details are given of the constructional features of the components and their interconnections. (UK)

60142 EXAMPLES OF STRESS ANALYSIS OF STRUCTURES BY FINITE ELEMENT METHOD. EXAMPLES OF THERMAL STRESS ANALYSIS AND INPUT AND OUTPUT DATA OF STEAM-GENERATOR, ETC. Mori, Koichi; Nakai, Yasuo; Nagato, Kotaro; Sasaki, Takashi; Takenaka, Yutaka (Kawasaki Heavy Industries, Ltd., Kobe, Japan). FAPIG (Tokyo); No. 59, 182-7(Nov 1970). (In Japanese).

For economical and mechanically reliable design of nuclear power plants, it is necessary to make detailed stress analysis of their components, such as boilers, pressure vessels, etc., based on detailed analysis of temperature and stress distributions. But these detailed numerical analyses are difficult in practical problems, even though a machine is employed. To cope with this difficulty, finite element method is used as the most practical strategy. Some applications of the finite element method to nuclear vessels and components using calculation programs for stress analysis and for heat conduction are presented. Computational complexities arising in the use of the finite element method are analyzed. (Japan)

60143 IMPROVEMENTS IN OR RELATING TO POWER GENERATING PLANTS. (to Babcock Atlantique). British Patent 1,242,627. 11 Aug 1971. Priority date 29 Nov 1968, France.

HEAT—storage methods for, during power plant reduced load operation

NUCLEAR POWER PLANTS—power generation cycle for, with means for storing heat during reduced load operation (H.D.R.)

60144 STEAM GENERATOR, PARTICULARLY FOR PRESSURIZED WATER NUCLEAR REACTORS. Michael, Horst; Schabert, Hans-Peter (to Siemens Aktiengesellschaft). U. S. Patent 3,603,383. 7 Sep 1971. Priority date 25 Mar 1967, Germany.

A steam generator particularly for pressurized water reactors includes an elongated pressure vessel, a bundle of heat exchanger tubes located in the vessel and extending substantially parallel to one another in the longitudinal direction of the vessel, and a pair of spaced-apart tube support plates mounted in the vessel and formed with recesses wherein respective ends of the tubes extend. The tubes are spaced from one another a distance that is only a fraction of the diameter thereof, and have a reduced diameter over a length thereof of several decimeters adjacent to the tube support plates. (Official Gazette)

60145 GAS TURBINE FOR A NUCLEAR POWER PLANT. Bammert, K.; Rehbach, J. (Inst. of Turbomachinery and Gasdynamics, Hanover). Atomkernenergie: 18: No. 2, 121-30(1971).

Problems which arise in designing the turboset of a nuclear gas turbine plant are explained by the example of a 25-MW(e) pilot power plant in which the heat source is a high-temperature reactor and the working agent is helium. While experience with closed-cycle air turbine plants and measuring results obtained in these can be used as a basis, the use of helium, which in direct-cycle operation may carry activated particles also to the turboset, poses new design problems. The high velocity of sound in helium and the high thermal conductivity of this gas allow favorable dimensions of the machines, full utilization of the materials and considerable cooling effects, which in turn allow high turbine inlet temperatures. These thermodynamic properties are favorable. On the other side there are difficulties of a hitherto unknown kind. For achieving low leakage rates, welded casings and lip seals at the partition joints are required. The helium turboset demands more stages and thus slimmer rotors, and special care during starting and stopping. The turbine casing is provided with internal insulations which must not be subject to abrasion. The helium turbine is provided with a casing cooling, a rotor hub cooling, and a blade foot cooling system to keep the temperatures of the rotor blade and rotor disc materials in the first stages within limits. In a helium atmosphere, activated gaseous foreign matter can cause corrosion and sliding surfaces tend to be cold-welded. Detailed explanations are given as to how these difficulties are mastered and how the new problems of lubricating-oil supply, oil-helium separation, retention of the working agent by means of the shaft labyrinths, sealing at the outer shaft passage opening during rotation, and standstill, etc., have been solved by proven design methods. The statements made on the control system cover the starting, normal operation with load changes, and stopping of the plant. (14 references) (auth)

60146 NUCLEAR REACTOR INSTALLATIONS. Birch, William; Powell, Christopher (to United Kingdom Atomic Energy Authority). U. S. Patent 3,600,278. 17 Aug 1971. Filed 1 Mar 1968.

A nuclear reactor is described which has vertically extending fuel tubes which terminate in a pond above the core. A flexible tube plate is penetrated by the fuel tubes and forms the base of the pond containing structure. The tube plate is supported from flanges on the tubes. (auth)

60147 STEAM-GENERATING INSTALLATION. (to Siemens Aktiengesellschaft). British Patent 1,247,228. 22 Sep 1971. Priority date 17 Apr 1968, Austria.

BOILERS—design characteristics of superheating reactor core vessel

REACTORS, SUPERHEATING—steam generators in, core vessel arrangement for (D.C.C.)

Research and Test Reactors

60148 (AI-69-Memo-95) ANALYSIS OF AEROSOL BEHAVIOR FOR FFTF HYPOTHETICAL ACCIDENTS. Koontz, R. L.; Baurmash, L. (Atomics International, Canoga Park, Calif.). 28 Oct 1969. 65p. Dep. NTIS.

The distributions of the released mass of fuel, fission products, fuel cladding, and sodium coolant within the FFTF containment volumes following several postulated accidents are estimated. The mass leaking from the inner and outer vessels is computed assuming various leak rates from each compartment of the containment system. (15 references) (auth)

60149 (ANCR-1002) SUMMARY OF ETR CRITICAL FACILITY SAFETY ANALYSIS INFORMATION. Knight, D. W.; Kaufman, N. C.; Henscheid, J. W. (Aerojet Nuclear Co., Idaho Falls, Idaho). Jul 1971. Contract AT(10-1)-1375. 55p. Dep. NTIS.

A review of possible accidents at the Engineering Test Reactor Critical Facility (ETRC) shows that no credible accident would introduce a step reactivity insertion greater than 1.0$. Accidents of this magnitude would result in a total energy release far less than the minimum energy release (35.5 MW-sec) required to damage the core. All calculations are shown to be very conservative. Even though no accident mechanism can be conceived which could cause a fuel element to completely melt, the consequences of this accident are considered to be the maximum possible. It is shown that if a fuel element which had been used for an ETR flux run were to melt in the ETRC, no hazard would be presented to ETRC personnel, NRTS personnel, or off-site personnel. In addition the following conclusions were reached: (1) The conclusions of the original ETRC hazards report remain valid. (2) None of the changes which have been made to the reactor control system, the control rods, or to the fuel elements have increased the risk level associated with the operation of the ETRC. (3) New calculational techniques and information gathered since the ETRC achieved criticality support the original conclusion that the operation of the ETRC does not present a hazard to ETRC operating personnel or to personnel at the Test Reactor Area (TRA), NRTS, or off-site. 22 references. 60150 (DOCKET-50184-32) NATIONAL BUREAU OF STANDARDS REACTOR. Operations Report, January 1–June 30, 1971. (National Bureau of Standards, Washington, D. C.). 7 Oct 1971. 13p. Dep. NTIS.

60151 (DOCKET-50184-33) NATIONAL BUREAU OF STANDARDS REACTOR. Replacement to Primary System Main Heat Exchanger. (National Bureau of Standards, Washington, D. C.). 7 Oct 1971. 2p. Dep. NTIS.

60152 (DOCKET-50231-96) SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR. Technical Specifications, Proposed Change No. 7. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). 8 Oct 1971. 19p. Dep. NTIS.

Revised technical specifications are presented concerning personnel responsibilities and administrative controls. (D.C.C.)

60153 (DOCKET-50231-97) SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR. Cladding Temperatures for the FRED Poison Rod. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). 4 Oct 1971. 15p. Dep. NTIS.

60154 (DOCKET-50231-98) SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR. Ninth Quarterly Plant Operation Report, May 1–July 31, 1971. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). 8 Oct 1971. 26p. Dep. NTIS.

60155 (DOCKET-50231-99) SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR. Technical Specifications Proposed Change No. 8. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). 16 Oct 1971. 31p. Dep. NTIS.

Revised technical specifications are presented concerning Core 2 transient test program. (D.C.C.)

60156 (GULF-RT-A-10800) FAST REACTOR SPECTRUM MEASUREMENTS. Quarterly Progress Report, May 1, 1971–July 31, 1971. Young, J. C.; Slaggie, E. L.; Neill, J. M.; Verbinski, V. V. (Gulf Radiation Technology, San Diego, Calif.). 20 Aug 1971. Contract AT(04-3)-167. 20p. Dep. NTIS.

The work performed during the second quarter of 1971 on a continuing program of neutron spectrum measurements in subcritical assemblies (STSF) is described. All the planned experimental measurements on the first core to be studied (STSF-9) were completed. Further calculations for this core are also reported. 13 references. (auth)

60157 (INR-1316) PRIMARY COOLANT PURIFICATION SYSTEM IN THE EWA-10 REACTOR. Bieguszewski, Zygmunt (Institute of Nuclear Research, Warsaw (Poland)). 1971. 20p. (In Polish). Dep. NTIS (U. S. Sales Only).

The filter unit used for removal of ionic, colloidal, and discrete solid particles from the primary coolant water is described. It comprises mixed bed ion exchange column, electrophoretic filter, and mechanical filter with cylinder filtering element. The performance data and experience in reactor water purification system operation are outlined, covering the period 1967 to 1970. 5 references. (auth)

60158 (ORNL-TM-3514) EXPERIMENTAL INVESTIGATION OF NEUTRON STREAMING THROUGH THE GRID-PLATE SHIELD OF THE FAST FLUX TEST FACILITY. Clifford, C. E.; Mynatt, F. R.; Stevens, P. N. (Oak Ridge National Lab., Tenn.). 5 Oct 1971. Contract W-7405-eng-26. 41p. Dep. NTIS.

An experiment was performed at the Tower Shielding Facility (TSF) to determine the effect of neutron streaming in sodium coolant holes on the peak neutron fluence transmitted through a prototype of the FTR grid-plate shield. Three grid-plate shield configurations were used in the experiment, each having different hole configurations. A flux increase of about 10% was measured for straight-through holes and a 3% increase was measured for holes having a single offset. Standard deviations of measurements obtained were approximately 2%. 6 references. (auth)

60159 (RCN-150) DETERMINATION OF EFFECTIVE CROSS SECTIONS OF FISSION PRODUCTS FOR FAST BREEDERS IN THE FAST-THERMAL COUPLED CRITICAL REACTOR STEK. Bustraan, M. (comp.) (Reactor Centrum Nederland, Petten). Jul 1971. 26p. Dep. NTIS (U. S. Sales Only).

The influences of fission products on fast breeder reactors are outlined. A description is given of the fast-thermal coupled facility STEK. Integral measurements of fission product cross sections by a sample oscillator technique in fast reactor spectra are described. A review is given of the available samples, including some highly active samples of actual fission products. One of the methods used to measure the neutron spectrum in the center of the fast zone is the time-of-flight technique. The results of central reactivity worth measurements in the first two cores — STEK-4000 and -3000 — are presented and compared with calculations. The calculated and measured fast neutron spectra in the sample position are also given. Some techniques are mentioned for adjustment of the differential cross section values with the results of the integral measurements. 28 references. (auth)

60160 (STI/DOC-10/127) DETERMINATION OF ABSORBED DOSE IN REACTORS. (International Atomic Energy Agency, Vienna (Austria)). 1971. 261p. IAEA $7.00.

The requirements for absorbed dose determination in low atomic number materials in reactor cores are discussed. The materials include graphite, water, carbon dioxide, and hydrocarbons. Reactor radiation, reactor dosimetry problems, radiation spectra, and the calculation of absorbed dose are described. Experimental methods for the measurement of absorbed dose in reactors, including calorimetry, ionization chambers, and chemical and solid state dosimetry, are surveyed. 361 references. (H.D.R.)

60161 TEMPERATURE EFFECT IN THE 20 TO 250°C RANGE FOR CERTAIN, STRICTLY REGULAR, HETEROGENEOUS, U–H_2O CRITICAL ASSEMBLIES. Bat, G. A.; Gulimov, V. N.; Zarubin, Yu. V.; Obukhov, V. K.; Ushakov, Yu. V. At. Energ. (USSR); 30: No. 4, 354-8(Apr 1971). (In Russian).

Due to little experimental data, the temperature dependence of criticality is calculated with an error of at least 20%. In order to remedy this situation, experiments were carried out with unperturbed, uranium–water systems within a wide range of ^{235}U from $\rho_H/\rho_5 \approx 50$ to 600, and at temperatures from 20 to 250°C. Four fuel elements with different amount of uranium were used in the experiments; above 90°C only elements containing 40.5 g ^{235}U were employed. The sectional elements consisted of zirconium-canned units within a steel housing. Space was left for the control rods in the water between the fuel elements. It was found that the critical loading G^{235} depends only slightly on the uranium concentration of the fuel. A hardening of the thermal neutron spectrum was noted when large-step lattices were heated. The experimental data agreed with the calculations when the system was heated above 200°C; errors may be reduced by using an improved computer program which implies homogenization of the lattice in a four-group approximation. (TTT)

60162 KINETIC DISTORTION IN A TRIGA REACTOR WITH AN ASYMMETRIC REFLECTOR. El-Zeftawy, Medhat M.; Ruby, Lawrence (Univ. of California, Berkeley). Nucl. Sci. Eng.; 45: No. 3, 335-41(Sep 1971).

The prompt and delayed flux shapes in the TRIGA Mark III reactor with an asymmetric reflector can be calculated in a straightforward manner using a standard multigroup diffusion code. A semiempirical kinetic distortion factor has been shown to be consistent with theoretical predictions based on such a calculation. It is concluded that for water-reflected assemblies, standard pulse-neutron methods will yield a less spatially dependent value of the reactivity if a relatively small, readily obtained kinetic distortion correction factor is applied. (auth)

60163 INTEGRAL REACTION RATE DETERMINATIONS. PART I. TAILORED REACTOR SPECTRUM PREPARATION AND MEASUREMENT. Draper, E. Linn Jr. (Cornell Univ., Ithaca, N. Y.). Nucl. Sci. Eng.; 46: No. 1, 22-30(Oct 1971).

Four different epicadmium neutron flux spectra were produced by boron filter insertion in a beam port of the Cornell University 100-kW TRIGA reactor. The first spectrum was the unaltered (except for cadmium covers) fission slowing down spectrum; three hardened spectra were produced by the insertion of boron filters enriched in ^{10}B. The shapes and amplitudes of the spectra were determined by the computer code SAND II to reproduce foil activation data obtained from a set of resonance and threshold detectors. (auth)

60164 STUDIES ON THE HEAT TRANSFER DYNAMIC ANALYSIS AND THE STABILITY OF TRIGA MARK-II REACTOR.

Park, Yong Chip; Yook, Chong Chul; Park, In Yong. Hanyang Univ. Res. Works Grad. Sch.; 5: 214-23(1969).

The heat transfer dynamic analysis of TRIGA Mark-II reactor with cylindrical fuel elements is derived under some assumptions of the fuel rod temperature effects and coolant water temperature effects on reactor feed back into reactor reactivity at 100 kW power level. Coolant water temperature variations are taken into consideration. The over all closed loop reactor transfer function is analytically calculated and it is compared with the measured value in Bode diagram by experimental data. The reactor dynamics and the stability are analyzed by means of the root locus. (Korean Sci. Abstr.)

60165 STUDY OF SAFETY ROD MOVEMENT DURING SCRAM IN THE ZfK ROSSENDORF RESEARCH REACTOR. Nagel, S. (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Kernenergie; 14: No. 5, 152-6(May 1971). (In German).

Shut-down movement of safety rods was studied on a complete scram mechanism of the Rossendorf WWR-SM research reactor. The experimental equipment enables detailed registration of path-time curve and, with this, information on individual phases of movement (acceleration, free fall, deceleration). Measurements were carried out according to the principle of light barrier with divided gauge length. Experiments in air or water yielded a shutdown time of 380 or 400 ms for a distance of 730 or 715 mm. (auth)

60166 KINETIC PARAMETERS DETERMINATION IN A NATURAL URANIUM-LIGHT WATER LATTICE BY THE PULSED SOURCE TECHNIQUE. Lazarescu, G. A. (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 3, 375-9(1971).

Experiments were performed on a HELEN natural uranium-light water lattice, using the pulsed source technique, to prove that the prompt fundamental mode can be experimentally separated and its decay constant measured accurately even in the case of a far subcritical lattice. Because the prompt to delayed flux ratio is reduced and kinetic distortion very strong, it was difficult to obtain an experimental value for the reactivity in concordance with the theoretical one in this lattice. (auth)

60167 CRITERIA FOR COMPARISON OF RESEARCH REACTORS. Tsykanov, V. A. At. Energ. (USSR); 31: No. 1, 15-17(Jul 1971). (In Russian).

The lack of comparison criteria taking into account both reactor properties and their application peculiarities makes it difficult to compare different type reactors. It is useful to have such criteria for comparison of various reactors in choosing a reactor type for comparative evaluation of operating reactors. Such criteria are proposed for an extensive class of reactors in which the neutrons produced are used to irradiate specimens. One of the proposed criteria characterizes the productivity of a reactor and another one accounts for its economic parameters. The latter criterion may be considered as an ideal efficiency of a research reactor. For taking into account of reactor economy more completely the fuel burnup level and the reactor time utilization factor should also be used. (auth)

60168 VVR REACTOR SEMIAUTOMATIC ACTIVATION ANALYSIS SYSTEM. Lisovskii, I. P.; Smakhtin, L. A.; Filippova, N. V.; Volgin, V. I. This paper was summarized in At. Energ. (USSR); 29: No. 6, 450(Dec 1970) as paper No. 450/5821. (In Russian).

A semiautomatic pneumatic shuttle system for a nuclear reactor is described. The specimens were irradiated in hermetically sealed polyethylene capsules which were placed in the shuttle rabbit. After ten rabbits with specimens have been placed in the loader, all further operations (irradiation exposure, extraction of capsule with specimen from the rabbit and delivery of specimen to the laboratory for measurements) are handled automatically. The total time elapsed from the end of the irradiation exposure to the beginning of measurements is 10 to 20 sec (depending on the size of the capsules). Work done in activation analysis with the aid of this semiautomatic shuttle and irradiation system is reviewed. Operating experience with this pneumatic shuttle, over a four-year period, has demonstrated the versatility, reliability, and ease of operation of the system. 12 references. (auth)

60169 SYSTEM FOR AUTOMATIC STARTUP AND POWER REGULATION OF RESEARCH REACTORS. Khasan, M. A.; Sisevich, I. G. At. Energ. (USSR); 31: No. 1, 11-15(Jul 1971). (In Russian).

A time suboptimal control system for start-up and power level changes in research reactors is given. The control signal is chosen in such a way to not violate the safe exploitation conditions. Object dynamics is described by two differential equations and the Maximum principle used as a guide to the choice of control signal. To solve the synthesis problem for the system physical considerations are used instead of complex mathematical conditions. A system of the above type is implemented on a reactor of the WWR-S type. The implementation required little change in the standard reactor control system. The required additional blocks were developed on semiconductor components. A general system block diagram, diagrams of individual blocks, and a description of the system working sequence are included. (auth)

60170 EXPERIMENTAL STUDIES OF POWER INCREASE IN In-Ga RADIATION LOOPS. Kiknadze, G. I.; Bedbenov, V. B.; Lyudvigov, R. B.; Sharimanova, L. G. At. Energ. (USSR); 31: No. 2, 113-18(Aug 1971). (In Russian).

A neutron flux distribution representing the leakage from the nuclear reactor core is investigated in different heterogeneous indium-graphite assemblies (models of radiation loop activity generators). It is shown that the specific and total power of a radiation loop may be increased when activity generators are designed in the form of multilayer systems consisting of thin layers of the gamma-carrier ($\Sigma_a d \ll 1$) arranged with the definite pitch in the moderator. Five experimental models of the activity generator of the radiation loop have shown that for thick blocks of the indium absorber the value of the radiation power of the gamma carrier is mainly caused by thermal neutrons and only for layer thickness of the gamma-carrier of $\lambda_a/16$ and less resonance neutrons contributed appreciably to the induced radioactivity. 10 references. (auth)

60171 SOME INTEGRAL-REACTIVITY PROPERTIES AND THEIR APPLICATION TO THE IGR REACTORS. Lavrenikov, V. D. This paper was summarized in At. Energ. (USSR); 29: No. 4, 283(Oct 1970) as paper No. 430/5683. (In Russian).

The integral reactivity is a parameter having a very similar character for all reactors and may be used successfully in studying reactor dynamics. On transforming the equation of reactor dynamics by changing the argument (time replaced by heat evolution), the integral reactivity may be expressed in terms of the reactor power. It is shown that, in the case of IGR reactor, the proper application of integral reactivity properties increase the accuracy of calculating the heat evolution at the reactor shutdown, and sometimes give a fairly simple analytical solution. In addition to this, the integral reactivity may be used in order to calculate the surge parameters which are particularly important for this reactor: the dependence of the total heat evolution, and also the reactivity at the final stage of the surge, on the initial reactivity. It is shown that the integral reactivity may be employed when measuring the thermal coefficient of reactivity of the IGR reactor. (auth)

60172 MICRODISTRIBUTION OF FISSION DENSITY IN VVR-M (WATER-COOLED WATER-MODERATED REACTOR) CRITICAL-ASSEMBLY LOOP CONVERTER CELLS. Klimentov, V. B.; Kopchinskii, G. A.; Bobkov, V. G. This paper was summarized in At. Energ. (USSR); 29: No. 4, 283(Oct 1970) as paper No. 429/5737. (In Russian).

The possibilities of carrying out loop tests in thermal reactors with many-element assemblies of highly-enriched fuel elements are limited by the serious nonuniformity of the energy evolution and fuel consumption (burnup). In order to study the conditions of reactor tests on many-element loop assemblies, the microdistributions of fission density were measured along the radius and on the surface of the central and peripheral model fuel elements in a seven-element fuel assembly, using the method of autoradiography in a critical VVR-M test system. Rods made of tablets of uranium dioxide (90% enriched) 0.9 cm in diameter were used as model fuel elements. 5 references. (auth)

60173 OPERATING EXPERIENCE AND RESULTS OBTAINED WITH THE TRIGA RESEARCH REACTOR AT THE GERMAN CANCER RESEARCH CENTRE. Krauss, O.; Lorenz, W. J.; Maier-Borst, W.; Ostertag, H.; Wolber, G. (Deutsches Krebsforschungszentrum, Heidelberg). Kerntech. Atompraх.; 13: No. 7-8, 307-13(Jul-Aug 1971). (In German and English).

Operating experience and the results obtained with the reactor TRIGA Mark I in the Nuclear Medicine Institute of the German Cancer Research Center in Heidelberg are reported. The irradiation facilities and the experimental peripherals of the reactor are described in some detail. Recent results are reported on the use of the reactor in nuclear medical cancer research and in clinical practice. A discussion of the design alterations of the reactor in the final construction stage is included. 30 references. (auth)

60174 EXPERIMENTAL FAST REACTOR JOYO. FUEL HANDLING SYSTEM. Ohno, Tadao (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 17: No. 2, 20-2(Feb 1971). (In Japanese).

Fuel handling system of "Joyo" consists of the following parts:

fuel replacing machine for the purpose of replacing and transferring fuel in the reactor container, loading and unloading machine, transfer-rotor at boundary of the container to play a part of intermediary base at the time of transferring fuel, and fuel storage system outside the container. Main conditions for design are determined as follows: fuel cycle of operation for 45 days and stop for 15 days; maximum quantity of fuel replacement at each cycle of 20 rods; cooling time in the reactor for spent fuel of 45 days; decay heat at the time of unloading fuel out of the reactor of 1.5 kW; and in-pile sodium temperature at the time of fuel replacement of 250°C. It may be said that most of the problems peculiar to "Joyo" result from sodium. (Japan)

60175 EXPERIMENTAL FAST REACTOR JOYO. COOLING SYSTEM. Abe, Yasuhiro (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 17: No. 2, 13-17(Feb 1971). (In Japanese).

Cooling of the EFR "Joyo" consists of primary Na cooling systems to remove heat from the reactor core, intermediate heat exchangers, and secondary Na cooling systems to dissipate heat to the atmosphere. The overall cooling system is of two loops. Both the primary and the secondary systems are provided with an auxiliary system to be used in maintenance and trouble in main cooling systems. The primary system is of double-walled pipes to cope with Na leakage. The primary cooling system is within a containment vessel, nitrogen gas atmosphere is provided around the Na system; and no water is involved in buildings containing the Na systems. The following are described: constituents of the cooling loops including the primary and secondary systems, overflow, purification, cover gases, pumps, heat-exchangers, piping, pre-heating, etc.; aseismatic design, purities of structural materials, sodium, etc.; and operation, maintenance, accident, etc. (Japan)

60176 EXPERIMENTAL FAST REACTOR JOYO. COMPONENTS OF CORE. Ohno, Tadao (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 17: No. 2, 17-19(Feb 1971). (In Japanese).

The core is composed of 313 components, i.e., 67 fuel assemblies, 6 control rods, 191 radial blanket assemblies, 1 neutron source and 48 reflectors. The fuel assembly is composed of 91 fuel elements in which mixed oxide pellets sandwiched by depleted uranium oxide pellets are contained in a stainless steel fuel clad. An interval of each fuel element is maintained with wrapping wire. The radial blanket assembly is composed of 19 fuel elements with depleted uranium oxide pellets. The reflector material is stainless steel. The control rod is composed of 7 control rod elements, in which sintered B_4C pellets are contained in a stainless-steel clad. Because of high temperature and high heat flux, creep effect and thermal ratcheting becomes important. Because of high level irradiation with fast neutrons, swelling of stainless-steel and irradiation embrittlement present problems. Mass-transfer phenomenon by sodium medium and corrosion by sodium are also important. (Japan)

60177 EXPERIMENTAL FAST REACTOR JOYO. MECHANICAL FEATURES (REACTOR PROPER). Hirota, Isao (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 17: No. 2, 9-13(Feb 1971). (In Japanese).

The reactor proper of the sodium cooled EFR "Joyo" broadly consists of the following: a reactor vessel hung from upper pit end; core structure in it; rotary plugs to serve both as top shield and mechanism for horizontal fuel movement; and control-rod drive sets through the rotary plugs. Among other components are a fuel exchanger for exchanging fuels between in-pile storage rack and reactor core, a fuel transport for exchanging used and new fuels, a graphite shield serving also for in-pile sodium containment, and a safety vessel containing the graphite shield. The following are described: functions of nuclear reaction control, heat removal, fuel exchange and shielding; the reactor vessel, reactor core structure, rotary plugs, control-rod drive, and safety vessel and graphite shield; and problems including safety rod dropping in earthquakes, heat deformation of the reactor-vessel, sodium adhesion between the rotary plugs and the reactor vessel, and regulating-rod vibration during reactor operation. (Japan)

60178 SORA REACTOR PROJECT. Energ. Nucl. (Paris); 13: No. 3, 229(May 1971). (In French).

The chronological development of the SORA reactor project is presented. The advantages of a pulsed reactor are examined. (France)

60179 FEEDBACK BEHAVIOR OF THE PROMPT MODERATOR HEATING EFFECT. Ishikawa, Michio. Nippon Genshiryoku Gakkaishi; 13: No. 8, 430-9(Aug 1971). (In Japanese).

SPERT-III • E-Core transient tests demonstrated that under certain reactor conditions the prompt moderator heating (PMH) effect significantly attenuates the reactivity added during the fast burst power period. The behavior of the PMH feedback effect is examined through both qualitative analysis based on theoretical considerations and a quantitative analysis on the SPERT-III transient tests obtained with EUREKA, a multi-region, nuclear kineto-thermohydrodynamic code. The marked effects brought upon power reactor kinetics by the PMH feedback are discussed. (auth)

60180 TARGET FOR THE AEC'S REACTOR STANDARDS PROGRAM IN THE INSTRUMENTATION AND CONTROL AREA. Havenstein, Paul L. (Division of Reactor Development and Tech., Washington, D. C.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 332-6(Feb 1971).
From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The development of standards for the FFTF instrumentation and control systems is described. (D.C.C.)

60181 INVESTIGATION OF BOILING DETECTION IN THE HFIR USING OUT-OF-CORE INSTRUMENTATION. Fry, D. N.; Kryter, R. C.; Robinson, J. C. (Oak Ridge National Lab., Tenn.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 345-50(Feb 1971).
From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

Analysis of neutron fluctuations produced by coolant pressure oscillations and of neutron noise were investigated as two possible boiling detection methods during a boiling experiment in the High Flux Isotope Reactor (HFIR). Neither method detected boiling because the void volume due to boiling was 0.007 in.^{3}, which is less than the detection threshold for either method. 12 references. (auth)

60182 PERFORMANCE OF PERMANENT MAGNET FLOW-THROUGH-TYPE SODIUM FLOWMETERS IN EBR-II INSTRUMENTED SUBASSEMBLIES. Forster, George A. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 363-5(Feb 1971).
From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The first two instrumented fueled subassemblies in EBR-II included permanent-magnet sodium flowmeters. The first operated for the duration of the test, four months, with no observable degradation. Its signal was about six percent below that calculated. The second flowmeter had been precalibrated in a sodium system. Operating data from EBR-II indicates that its sensitivity has been stable within three percent during the first 150 days in the core. Post-test examination will supply more conclusive data. 4 references. (auth)

60183 DEVELOPMENT OF AN IN-CORE PERMANENT-MAGNET PROBE-TYPE SODIUM FLOWSENSOR FOR OPERATION IN THE FAST FLUX TEST FACILITY (FFT). Verber, F.; Jaross, R. A.; Mulcahey, T. P. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 366-71(Feb 1971).
From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A permanent-magnet, probe-type sodium flowsensor small enough to be inserted and removed through curved instrumentation guide tubes and positioned above fuel assembly outlet coolant channels in the FFTF has been developed and tested in out-of-pile dynamic sodium loops. Design and construction features, test results, and improved design considerations, are presented. 6 references. (auth)

60184 EDDY-CURRENT PROBE-TYPE SODIUM FLOWSENSOR FOR FFTF REACTOR FUEL CHANNEL FLOW MONITORING. Brewer, John (Argonne National Lab., Ill.); Jaross, Robert A.; Brown, Russell L. IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 372-7(Feb 1971).
From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

An eddy-current probe-type flowsensor is being developed for FFTF to indicate sodium flow velocity at the outlet of a fuel channel in a temperature range of 300°F to 1200°F and a velocity range of 0 to 18 fps. Design considerations, out-of-reactor tests, both dry and in sodium, were performed and results are presented. Typical sensitivity of 0.6 mV rms/ft-sec has been obtained with excellent stability. 6 references. (auth)

60185 ON-LINE, DIGITAL DATA HANDLING AND OPTIMAL CONTROL INVESTIGATIONS AT THE MISSOURI UNIVERSITY RESEARCH REACTOR. Partain, C. Leon; Noyes, Clyde R.;

XUM

Wilbur, Robert E.; Schlapper, Gerald A. (Univ. of Missouri, Columbia). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 395-402(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

An on-line, digital data handling and optimal control system based upon a PDP8s, general purpose, programmable digital computer, has been developed and tested at the Missouri University Research Reactor (MURR), a 5 megawatt, thermal, flux-trap type nuclear reactor. The instrumentation which has been successfully interfaced to the small digital computer includes a 100 channel, 250 Hz, randomly addressable reed scanner; a 10-bit, 100 kHz, analog-to-digital converter; a 60 Hz real time clock which provides a hardware interrupt every 16.7 milliseconds; and two relay contact outputs. Software which has been implemented includes a real-time executive which schedules eight different tasks in a specified priority and periodic scheme, a console utility package which allows direct, on-line, communication between computer core memory and the ASR-33 teletype, an analog signal input task, various control algorithms, an output task, and a systems log task. The automatic control algorithms are dependent upon the physical parameters of the reactor system. These parameters may be periodically identified by on-line dynamic testing and the control decision algorithm may be modified accordingly. Methods of z-transform analysis are applied in a linearized approach to the problem of representing each component of the closed-loop reactor, computer control system. The optimization theory based on the maximum principle of L. S. Pontryagin has been applied in an effort to improve the control calculations with respect to minimum time response. Testing methods used were hybrid computer simulation and on-line parameter input studies at the MURR. 14 references. (auth)

60186 LYNCHBURG POOL REACTOR PROTECTIVE SYSTEM INSTRUMENTATION. Lovallo, J. M. (Babcock and Wilcox Co., Lynchburg, Va.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 438-42(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A reliable modular protective system has been designed, tested, and installed on the Lynchburg Pool Reactor (LPR). Solid-state and integrated circuit technology has been used throughout in the design of all modules. These module designs can be easily duplicated for use at other research reactor facilities, and the system is flexible enough to accommodate changing requirements. (auth)

60187 RELIABILITY AND FAULT TREE APPLICATIONS AT THE NRTS. Vesely, W. E. (Idaho Nuclear Corp., Idaho Falls). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 472-80(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

Fault tree methods and reliability engineering techniques are used at the National Reactor Testing Station (NRTS) principally to evaluate reactor protective and safeguard systems. The particular analytical technique called "Kinetic Tree Theory," with the associated computer programs, is used to obtain quantitative probabilistic characteristics regarding the safety and reliability of these systems. Once the fault tree or block diagram is drawn, the Kinetic Tree Theory technique automatically yields detailed time-dependent information for every component, for every minimal cut set (critical path) and for the system itself. The computer time needed for this detailed analysis is negligible. In actual application, the fault tree and reliability engineering techniques, with the quantitative evaluations by Kinetic Tree Theory, have yielded results which verify the practical value of these types of safety and reliability analyses. 3 references. (auth)

60188 EXPERIMENTAL FAST REACTOR JOYO. REACTOR CONTAINER. Yuasa, Yoichi (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo: 17: No. 2, 22-5(Feb 1971). (In Japanese).

The shape of the container vessel bears resemblance to containers for pressurized light water reactors (PWR). In sodium-cooled reactors, fire due to sodium must be considered. As counter measures, vacuum-breaking valves and reinforcing rings were designed. Design load for the container is as follows: gravity including snow load; design pressure to maximum inner pressure (= 1.5 kg/cm^2g) × 0.9, minimum outer pressure (= 0.05 kg/cm^2g); load due to wind for velocity head $q = 60\sqrt{h}$ kg/m^2, where h is height from ground; load due to earthquake for vertical deviation of 0.27 g × 1.5, horizontal direction and magnitude value by dynamic analysis × 1.5; and thermal load of 150°C for upper part, and −15°C for lower part, assuming sand cushion part as boundary. Most important problem is measurement of leakage after sodium was filled up. For this problem, permissible rate of leakage was determined as 0.45% or less/day when no sodium, and 3% or less/day when sodium was filled-up. Material was determined according to ASME Code Sec. II, SA-516 Gr. 60, SA-300 Cl.1. Construction method was single stage construction. (Japan)

60189 EXPERIMENTAL FAST REACTOR JOYO. REACTOR BUILDINGS. Oike, Isao (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo: 17: No. 2, 25-9(Feb 1971). (In Japanese).

Buildings for the EFR "Joyo" are constructed on artificial foundation in sand of the Pacific coast, and are a reactor building and buildings around the reactor building, such as main cooler building for coolers of Na coolant, waste treatment, and maintenance buildings. Aseismatic design is fully taken into consideration, and the buildings are grouped in A-class buildings containing primary Na coolant, B-class buildings with secondary coolant and wastes, and C-class buildings for others. The reactor building is about 27 m high above ground and 32 m deep below it, and diameter is 31 m. The building complex around the reactor building is 50 × 55 m, and has two floors above and two in the basement. Details of these buildings including interior equipment, etc. are described. (Japan)

60190 EXPERIMENTAL FAST REACTOR JOYO. CONSTRUCTION OF REACTOR BUILDING. Shimoda, A. (Power Reactor and Nuclear Fuel Development Corp., Tokyo). Genshiryoku Kogyo; 17: No. 2, 29-31(Feb 1971). (In Japanese).

Civil engineering works for the reactor building of the EFR "Joyo", both excavation and concrete placing, are described. Primary excavation was started in January 1970, and secondary excavation was completed in July the same year. Below −20 m G.L., a 12-m thick ferro-concrete mat and beams are used for foundation. When construction of a containment vessel is started, the concrete placing is limited to peripheral portion. After construction of shielding walls and the concrete placing within the containment vessel, the structure will reach ground level in April 1972. The construction schedule is described, and the excavation and the concrete works are explained. Depth of the excavation including the primary and secondary is about 32 m; formation there is mostly sand. In the concrete works, the shielding concrete is especially treated for controlling specific gravity. (Japan)

60191 OPERATING EXPERIENCE OF TSURUGA POWER STATION. Iwakoshi, Yonesuke (Japan Atomic Power Co., Tokyo). Karyoku Hatsuden; 22: No. 1, 24-7(Jan 1971). (In Japanese).

Tsuruga power station, the second commercial nuclear power station in Japan, was completed in 47 months from commencement of construction. The station continued power generation at availability of near 100% during peak demand period of last summer, and its reliability was highly valued. First charging of fuel began on Sept. 20, 1969, and it took 176 days to carry out fuel charging test, nuclear heating test and power raising test. Various problems encountered during trial and operation thereafter are described. Trial revealed that thermal efficiency is higher than designed value, and operating power output was increased from 322 MW to 331 MW. Satisfactory operation is continuing since March 14, 1970. Problems encountered in this period are reviewed. During periodical inspection in the fall, first fuel replacement of 48 fuel assemblies is planned. (Japan)

60192 (N-71-25411) PRELIMINARY IMPACT SPEED AND ANGLE CRITERIA FOR DESIGN OF A NUCLEAR AIRPLANE FISSION PRODUCT CONTAINMENT VESSEL. Finnegan, Patrick M.; Puthoff, Richard L.; Turnbow, James W. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). May 1971. 37p. (NASA-TM-X-2245). NTIS.

Reports and photographs of 96 major accidents occurring before 1965 and involving multiengine jet aircraft were studied. Impact speed and angle are presented for landing and takeoff accidents, cruise accidents without in-flight structural failure, and in-flight structural failure accidents. The landing and takeoff accidents had an average impact velocity of 200 ft/sec from any direction and a maximum impact velocity of 300 ft/sec with a 10 deg solid angle about the roll axis. The cruise accident without structural failure had an average impact velocity of 400 ft/sec and a maximum possibility as high as 1000 ft/sec (305 m/sec), both within a 10 deg solid angle about the roll axis. The in-flight structural failure accident had an average impact velocity of 400 ft/sec

(122 m/sec) from any direction and a maximum possibly as high as 1000 ft/sec (305 m/sec) within a 10 deg solid angle about the roll axis. The in-flight structural failure accident determines the most severe impact speed for all impact angles. (auth) (STAR)

60193 (N-71-26979) ANALYTIC STUDY OF AN ELECTRIC STEPPING MOTOR DRIVE FOR A NUCLEAR REACTOR CONTROL DRUM. Kieffer, Arthur W. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). May 1971. 38p. (NASA-TM-X-2297). NTIS.

A stepping motor as a reactor control drum drive (drum weight is approximately 159 kg) is evaluated. Motor performance is evaluated for different load and motor conditions. Failure free operation, where the motor rotates one step increment for each step command, is considered most important. Failures were less frequent when stepping was at a rate that allowed the system to come to rest between steps. A failure free operating region is defined for this type of stepping rate. (auth) (STAR)

60194 (N-71-27855) THERMAL DESIGN OF THE SNAP 8 TANTALUM STAINLESS STEEL BOILER. Sellers, A. J. (Aerojet-General Corp., Azusa, Calif.). Jun 1971. Contract NAS3-13458. 105p. (NASA-CR-72760). NTIS.

The design analysis of a once through type, forced convection mercury boiler is presented. Heat and momentum transfer parameters are established as well as the internal geometry of the working fluid flow passage and overall boiler design configuration. The boiler design was based on heat and momentum transfer correlations derived from idealized wetting and non-wetting two phase flow models. Predicted performance characteristics as defined by NaK and mercury-side temperature and pressure profiles were in relatively good agreement with test results of experimental and full scale boilers. If foreign materials such as oil or air enter the system, undesirable changes in heat transfer result. (auth) (STAR)

60195 (SWRHL-78-r) FINAL REPORT OF OFF-SITE SURVEILLANCE FOR THE NRX-A6 REACTOR TEST SERIES. (Western Environmental Research Lab., Las Vegas, Nev.). Aug 1971. 46p. Dep. NTIS.

The NRX-A6 reactor test was a 60 minute full-power test under the NERVA program. The test was conducted at the Nuclear Rocket Development Station, Jackass Flats, Nevada, on December 15, 1967. The off-site radiological monitoring procedures used and the data obtained are summarized. (H.D.R.)

60196 (SWRHL-87-r) ENVIRONMENTAL SURVEILLANCE FOR PEWEE 1, EXPERIMENTAL PLANS II AND III, NOVEMBER 21 AND DECEMBER 4, 1968. Final Report. (Western Environmental Research Lab., Las Vegas, Nev.). Sep 1971. 33p. Dep. NTIS.

Radiological monitoring and sampling were conducted in off-site areas after the testing of the Pewee 1 reactor through Experimental Plans (EP's) II and III, conducted on November 21 and December 4, respectively, at Test Cell C, Nuclear Rocket Development Station. No radioactivity was released during Experimental Plan I. Following EP II, airborne radioactivity was detected by aircraft, but was not detected off-site on the ground by thermoluminescent dosimeters (TLD's) and Geiger-Mueller (GM) survey instruments or in air, vegetation and milk samples. The radioactive effluent from EP III was found by aircraft and off-site surveillance to have moved east-southeast from the test area as far as northwestern New Mexico. The effluent was not detected off-site by TLD's or GM survey instruments; however, low levels of ^{131}I, ^{132}Te-I and ^{133}I were detected on natural vegetation and air samples. Air samples which contained reactor-related radioactivity were collected in southeastern Nevada, southern Utah, southwestern Colorado, northern Arizona, and northwestern New Mexico. Emissions from reactor pulse-cool-down operations and possibly portions of the main reactor cloud transported south by the evening drainage winds were also detected by air samplers located in southeastern California and Nevada. The maximum calculated thyroid dose from the inhalation of airborne radioiodine, based on air sampling results, occurred at Las Vegas, Nevada, where the postulated child thyroid dose was less than one mrad. (auth)

60197 THERMIONIC CONVERTER CELLS FOR NUCLEAR REACTOR. Becker, Richard A.; Hill, Paul R.; Hobson, Robert R. (to United States Atomic Energy Commission). U. S. Patent 3,590,286. 29 Jun 1971. Filed 21 Nov 1968.

An improved thermionic converter cell is provided for use with a cylindrical fuel ring space power reactor. The collector of a conventional converter cell is modified to enclose a vapor chamber condenser which carries the generator heat through a beryllium oxide reflector to an external heat sink. The combination of beryllium oxide as the reflector material and vapor chamber condensers provides a radial neutron reflector which has both good nuclear properties and high effective thermal conductivity. (Official Gazette)

60198 SHUTTLE DESIGN STARTS IN OUTER ORBIT. Gregory, Daniel L. (Boeing Co., Seattle). Astronaut. Aeronaut.; 9: No. 8, 46-51(Aug 1971).

Systems concepts for low-cost space transportation are described. One component of such systems would be a reusable interorbital nuclear ferry. (H.D.R.)

60199 FUEL ELEMENTS FOR USE IN THERMIONIC NUCLEAR REACTORS. Busse, Claus A. (to EURATOM). U. S. Patent 3,601,638. 24 Aug 1971. Priority date 9 Apr 1967, Luxembourg.

Nuclear fuel-heated thermionic converters are designed in which heat pipes are provided to ensure isothermal heat transfer between the converters and the reactor. (auth)

Process Heat and Desalination Reactors

60200 CHANGE-OVER TO NEW FORMS OF ENERGY IN THE IRON AND STEEL INDUSTRY. Schenck, H.; Wenzel, W. (Rheinisch-Westfaelische Technische Hochschule, Aachen). Brennst.-Waerme-Kraft; 23: No. 6, 295-6(Jun 1971). (In German).

By adopting a well-considered energy policy it may be possible to replace the conventional processes in the iron and steel industry by direct reduction of the ore. Among the new ideas is the partially direct use of nuclear energy to provide process heat thus by-passing the production of electricity. For a steel plant of this conception it is calculated that the utilization of nuclear energy is particularly favorable. (auth)

60201 NUCLEAR POWER OPERATED DE-SALINATION OF SEA WATER UNDER NOMINAL AND PARTIAL LOAD CONDITIONS. Kunst, B. (Gesellschaft fuer Anlagenbau mbH, Essen); Gnam, E.; Regnet, K.; (and others). Brennst.-Waerme-Kraft; 23: No. 6, 290-4(Jun 1971). (In German).

The state of the art of such installations and the principal development trends are reviewed. The effects of reactor type and size are treated in detail. The main operating parameters of the nuclear power plant and desalination plant working under partial load are investigated with reference to an installation with a capacity of 400,000 m^3 fresh water per day. 6 references. (auth)

60202 DEVELOPMENT OF EXPERIMENTAL MULTI-PURPOSE HIGH TEMPERATURE GAS-COOLED REACTOR. Nozawa, Shunya; Nozawa, Masao (Japan Atomic Energy Research Inst., Tokai). Nippon Genshiryoku Gakkaishi; 13: No. 8, 468-74(Aug 1971). (In Japanese).

Design studies as well as research and development on different aspects of an experimental multi-purpose high temperature reactor were initiated at the Japan Atomic Energy Research Institute (JAERI) at the end of 1969. The outlet temperature of the reactor is supposed to be 1,000°C and the power 50 MW(t). A brief description is given of two design studies undertaken in JAERI. Items of research and development related to the reactor are discussed. Also a summary is presented of views of the Japanese Atomic Energy Commission on the multi-purpose utilization of nuclear heat from high temperature reactors, and of the activities of the Iron and Steel Institute of Japan on the use of nuclear heat for steel making. (auth)

Marine and Portable Power Reactors

60203 (AD-721019) THEORETICAL NUCLEAR ANALYSIS OF THE MH-1A: CORES 2 AND 3. Final Report. Gregory, Michael V.; Iyer, Shrinivas S.; Lillie, Richard A.; Henry, C. Daniel (Army Engineer Reactors Group, Fort Belvoir, Va. Engineering Div.). 1 Mar 1971. 110p. (ED-7102). NTIS.

The methods and results of the theoretical analysis of the nuclear properties of MH-1A Cores 2 and 3 are presented. The basic physical parameters are obtained by use of two cross-section codes, LEOPARD and LEOPROD, an X-Y geometry depletion code TURBO*, plus a Z-axial calculation using the CNCR-2 code together with the HOMOG and PEAK processor codes. The theory, results, and input details of the LEOPROD blackness theory code giving absorber region constants are considered in some detail. (auth) (USGRDR)

60204 KONSTRUKTIVNYE OSOBENNOSTI ATOMNYKH SUDOV. (Constructional Features of Nuclear-Powered Vessels). Volkov, N. N.; Kodatskii, S. B. Leningrad; Izdatel'stvo Sudostroenie (1971). 248p.

The special features of construction of atomic-powered transport vessels are presented. Provision for radiation safety on shipboard during collisions, running aground on sandbanks, or other damage is discussed, with details of shielding construction surrounding the reactor compartment. Experimental studies are an important aspect of the subject, and attenuation is focussed on model building and testing. Materials of construction are evaluated for shielding purposes. The probability of uncontrolled release of radioactivity on shipboard is considered. 91 references. (K.S.W.)

60205 NUCLEAR-POWERED SHIP MUTSU. Higuchi, Niroku (Ishikawajima-Harima Heavy Industries Co. Ltd., Tokyo). Kuki Chowa To Reito; 10: No. 11, 149-56(Oct 1970). (In Japanese).

The first nuclear-powered ship "Mutsu" is complete except for the installation of a nuclear reactor. The features of the ship are: the thermal output of the reactor, 36 MW; main-engine power, 10,000 ps; navigational speed, 16.5 kt; and the number of crew, 79. The air conditioning of the ship, involving the countermeasure against radioactivity is described. It is divided into those for radiation control areas, residential areas, and operation-control rooms. The radiation control area includes a reactor and auxiliary facilities, and the rooms for sampling, measurement, waste storage and contamination survey. The air in the area is handled collectively in 2 systems. It is passed through filters, diluted with the air from blowers, then via ducts, finally discharged to the atmosphere. For the residential area, two systems of air conditioning are used separately for upper and lower decks; but when one of them fails, the single system is capable of serving both decks. The air conditioning for the operation-control rooms is mainly for the protection of instruments, and also for the crew. (Japan)

60206 NUCLEAR POWER OPERATIONS DEEP FREEZE 70-71. Bell, Myron H. (Naval Nuclear Power Unit, Fort Belvoir, Va.). Antarctic J. U. S.; 6: No. 4, 144-5(Jul-Aug 1971).

The PM-3A nuclear power plant operation and maintenance during 1970 and early 1971 are summarized. (H.D.R.)

60207 NUCLEAR POWERED SHIPS AND MARINE REACTORS. Part 2-4 of Kaernkraftdrift av Fartyg. Goteborg; Stiftelsen foer Skeppsbyggnadsteknisk Forskning ([1971]). (In Swedish).

General information such as journal articles and commercial news items about nuclear ships and ship reactors is given along with data for specific ships and reactors. It consists of about 500 loose sheets which are revised and supplemented continuously. (Sweden)

Production Reactors

60208 SYSTEMS APPROACH TO NUCLEAR PLANT PROTECTIVE SYSTEMS DATA PROGRAM. Crosetti, P. A.; Faught, M. L. (Douglas United Nuclear, Inc.; Richland, Wash.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 317-22(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A computerized data program for the Hanford nuclear reactor complex is described. This program is used for the recording, checking, handling, and utilization of large amounts of test and inspection data on nuclear plant protective systems. The program features data collection at the system level, yet it readily permits data collection at the equipment, component, or failure mode level as needed. 3 references. (auth)

Reactor Theory

60209 (DUN-7538) WIGL2, A SELF-INITIALIZING VERSION. Agee, L. J. (Douglas United Nuclear, Inc., Richland, Wash.). 5 Feb 1971. Contract AT(45-1)-1857. 120p. Dep. NTIS.

The original version of WIGL2 is a one-dimensional, two-group, space-time diffusion theory program with zero, one, or six delayed neutron groups. The program will treat slab, cylindrical, and spherical geometries, and it includes nonboiling heat transfer. Xenon feedback and feedback effects due to fuel and coolant temperature are accounted for. Control rod motion and control system feedback based on total core power or outlet coolant temperature can be simulated. Transients may be excited by prescribed changes in inlet coolant temperature, coolant flow rate, or rod position. One of the major difficulties involved in using WIGL2 was that it required a balanced set of initial conditions. If the program input does not meet this requirement, WIGL2 will appear to have experienced a perturbation, the size of which is of the order of the accuracy of the input, and the variables of interest (fluxes, temperature, etc.) will begin to change with time, i.e., experience a drift. The problem of the drift has been eliminated by using the program HFN as an input subroutine. HFN does a critical search adjusting one of the few-group parameters so the reactor is "just critical" and returns the flux shape. The flux shape is used (with the heat transfer parameters) to determine the fuel and coolant temperature in each of the thermal hydraulic regions. The flux shape is also used to determine the xenon, iodine, and precursor distribution. To make the program more usable with Hanford-type reactors, a second rod bank was added which will trip when a scram signal is generated. The output was also modified to give the user more control over the amount of output printed. (auth)

60210 (JAERI-Memo-4406) BENCHMARK TEST BY VARIOUS CROSS SECTION SETS FOR FAST REACTOR ANALYSIS IN JAPAN. Ishiguro, Y.; Takano, H.; Hasegawa, A.; Katsuragi, S.; Iijima, S. (Japan Atomic Energy Research Inst., Tokyo). Apr 1971. 20p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

The results obtained by the benchmark test working group of the Reactor Constants Subcommittee in the Japanese Nuclear Data Committee are presented. The object of this working group was to analyze the standard critical assemblies using various cross section sets and codes for fast reactor analysis in Japan, to wash out various problems from the results, and to utilize the information obtained for aiming at future revision of the cross section sets. (auth) (Japan)

60211 (RPI-328-189) FORMULATION AND APPLICATION OF ANALYTIC REPRESENTATIONS OF FAST REACTOR FLUX AND IMPORTANCE SPECTRA. Dunn, Floyd E.; Becker, Martin (Rensselaer Polytechnic Inst., Troy, N. Y. Dept. of Nuclear Science). [nd]. Contract AT(30-3)-328. 79p. Dep. NTIS.

A model is developed for the study of fast reactor flux and importance spectra. The model is based on slowing down theories of the continuous slowing down type with suitable modifications introduced where such theories are deficient. The ability to obtain analytic solution for the flux and importance spectra depends on the ability to fit basic cross section ratios (such as the moderating ratio) to simple analytic forms. The cross section fits are used to obtain an expression for the slowing down density, which generally is a smooth function. Detailed cross sections, however, are used to relate flux and importance to slowing down density. The model yields good agreement with multigroup spectra on both broad group and ultra-fine group bases and yields quite accurate values for integral parameters (e.g., criticality and reaction rates). In addition, it is found to be possible to get a good correlation of cross section fit parameters with composition. 10 references. (auth)

60212 STATIC AND PULSED REACTIVITY MEASUREMENTS ON LARGE ^{235}U FUEL FORMS IN WATER. Currie, R. L.; Parks, P. B.; Jarriel, J. L. (Savannah River Lab., Aiken, S. C.). Nucl. Technol.; 12: No. 4, 356-62(Dec 1971).

Subcritical multiplication constants were derived from static and pulsed measurements for arrays of large, hollow cylinders of uranium-aluminum alloy. The cylinders were of two types: 11.21-cm-ID, 20.07-cm-OD bare ^{235}U-Al alloy castings and 10.07-cm-ID, 12.27-cm-OD Al-clad "logs" extruded from the castings. The alloy was 9.985 weight percent enriched uranium (92.2% ^{235}U) in aluminum. These measurements extended previous benchmark experiments with small diameter rods of lower enrichment into the region of larger diameters and higher enrichments. The transport diffusion theory codes MGBS-TGAN overestimated the values of k_{eff} for the arrays tested by 7 to 12%. The more sophisticated Monte Carlo code KENO was more accurate, with errors less than 5%. 17 references. (auth)

60213 APPLICATION OF MODERN CONTROL THEORY TO SPATIALLY DEPENDENT NUCLEAR REACTORS. Tsai, Tsung-yuan. Blacksburg, Va.; Virginia Polytechnic Inst. (1971) 130p. University Microfilms Order No. 71-21,067.

XUM

Thesis.

A study of control problems in large nuclear reactors is presented. The problem of designing feedback controllers to track and regulate reactor power optimally is formulated as an optimal control problem. The state space method of modern control theory is used. Within the framework of this new concept, the analysis and the design of an optimal controller are precisely defined. Particular attention is focused on the problem of controlling spatial power distributions. The mathematical model includes a one-energy-group, space-dependent diffusion equation, a one-group delayed neutron equation, dynamics for xenon and iodine concentrations, typical equations for thermal feedback loops, and simple second-order dynamics for a control rod positioning mechanism. The choice of this model is based on the assumption that the model adequately describes the physical process and yet is simple enough for the purpose of controller implementation. The design of the controller is divided into two portions. The first considers the power tracking problem and the second considers the steady-state regulating problem. With this division, a lower-order model is used by neglecting the time constants that are irrelevant to the transient responses. The optimal control theory is applied to the nonlinear power tracking problem. This results in a set of canonic partial differential equations with split boundary conditions. A finite difference method is used to obtain the numerical solution. Solving the two-point boundary-value problem is the most difficult task in this optimal controller design. To transform the modern techniques to practical designs, several fixed-structural schemes are considered. During the regulating phase, the linearized equations about an operating point are used. Linear control theory is applied to derive an optimal feedback controller. Examples are presented to demonstrate the feasibility of this scheme. (Diss. Abstr. Int., B)

60214 SYNTHESIS SOLUTIONS OF THE MULTIGROUP BOLTZMANN EQUATION FOR SLABS. Schwetje, W. (Kernforschungszentrum, Karlsruhe, Ger.). Nucl. Sci. Eng.; 46: No. 1, 159-65(Oct 1971).

Some special half-range expansions in known expansion functions and unknown coefficient functions for solving the multigroup Boltzmann equation for slabs are described. The expansion functions, to be chosen by the user, can take into account nearly all information that may be available over the space-, angle-, and energy-dependence of the expected solution. Transport boundary conditions can be exactly satisfied, which is of importance in small, absorbing or only weakly multiplying systems. Two of the expansions eliminate one variable, the other two expansions eliminate two variables. The resultant reduced equations for the coefficient functions are rather simple and can be solved numerically. The expansions are applied to calculations of the neutron distribution within a thin homogeneous natural uranium slab. (auth)

60215 SYNTHESIS OF FAST REACTOR NEUTRON ENERGY SPECTRA. Ombrellaro, P. A.; Snider, M. A. (Argonne National Lab., Ill.). Nucl. Sci. Eng.; 46: No. 1, 150-9(Oct 1971).

Synthesis models are used to obtain 50 energy-group synthesized flux and current spectra for several fast reactor compositions. These spectra are compared with 50 energy-group exact spectra for the same compositions. (auth)

60216 INVESTIGATIONS OF FUEL CONSUMPTION IN REACTOR OPERATION WITH VARYING DURATION OF THE CAMPAIGNS. Meyer, K. (Ingenieurhochschule, Zittau, Ger.). Kernenergie; 14: No. 5, 144-7(May 1971). (In German).

Using a simple model with alternating campaigns of shorter and longer duration, the fuel consumption as referred to the energy released is shown to be equal to that in periodic operational regime with a duration of campaigns corresponding to the arithmetic mean of campaigns of shorter and longer duration, provided that the reactivity at the end of the two campaigns is equal to that at the end of campaigns in periodic regime. 60217 OPTIMIZATION STUDY OF FAST REACTORS. Kuz'min, A. M.; Silaev, Yu. V.; Orlov, V. V.; Khromov, V. V. At. Energ. (USSR); 31: No. 2, 83-8(Aug 1971). (In Russian).

Methods for the optimization of fast reactor design parameters are examined. Problems of uniform power distribution and minimization of the plutonium fuel requirements are considered. Results of a reactor power optimization analysis are presented and discussed. 10 references. (auth)

60218 REAL TIME REACTOR SIMULATION ON A HYBRID COMPUTER. Doi, Kazuyori; Sano, Kenji (Atomic Energy Research Lab., Hitachi, Japan). Nippon Genshiryoku Gakkaishi; 13: No. 8, 447-52(Aug 1971). (In Japanese).

A feasibility study was made on a hybrid computer for real time simulation to be used in large systems. Both the Boiling Water Power Reactor (BWR) and the Sodium Cooled Experimental Fast Reactor (EFR) were simulated, which, when relying on pure analog simulation, requires several nonlinear elements and about 100 operational amplifiers. In the hybrid simulation, the analog part undertakes the operations of linear transfer functions, while the digital parts take care of function generation as well as the multiplication and division of the arithmetic operations. Two problems of transients were considered, i.e., insertions of reactivity in the form of a ramp of 2.16 cents/sec in the operation of the BWR, and that of a step of 10 cents in the EFR. It was found that the error due to the digital execution time was negligible, which attested to the validity of the above-mentioned appropriation of functions to the analog and digital parts. The study proves that real time simulation can more easily and accurately be realized with a hybrid than with an analog computer. 14 references. (auth)

60219 PARAMETER SENSITIVITY OF THE REACTOR CONTROL SYSTEM BY MEANS OF THE ROOT LOCUS METHOD. Park, Je Baik; Yook, Chong Chul; Park, In Yong. Hanyang Univ. Res. Works Grad. Sch.; 5: 206-13(1969).

Root locus is a plot of the roots of the characteristic equation of the closed-loop system as a function of the gain. The root locus analysis to determine the gain sensitivity of a control system is standard procedure, i.e., an analytical procedure for obtaining the root locus with positive gain is described and it has been well developed. The stability and dynamics of the reactor control system are analyzed by means of the root locus method about variation of the over-all gain of transfer function. By a simple extension, root locus procedure will also yield information on the effect of variations in such additional parameters of the reactor control system as the time constant of the first order term for the damping coefficient of the second order term for the range from the negative infinite to the positive infinite. (Korean Sci. Abstr.)

60220 MINIMUM CRITICAL MASS OF ^{235}U REFLECTED BY NATURAL URANIUM IN WATER. Gray, A. W. (Westinghouse Electric Corp., Pittsburgh). Nucl. Technol.; 12: No. 4, 342-7 (Dec 1971).

An analytical study was completed to define minimum critical mass parameters for a spherical region containing a ^{235}U-H_2O mixture reflected by a natural U-H_2O mixture. The study indicates that for an optimum natural-H_2O reflector, the calculated minimum critical mass for the central sphere lies in the range of 75 to 200 grams of ^{235}U. The analytic study was divided into three phases. In the first phase homogeneous, two-region systems were examined using diffusion theory programs. The results indicated a minimum critical mass of 451 grams ^{235}U for an optimal system. In the second phase a Monte Carlo program was utilized to compute K_{eff} for U metal rod-H_2O moderated lattices for which experimental data are available. The purpose of the second phase was to establish the validity of the Monte Carlo program as an analytical tool. In the third phase the Monte Carlo program was used to calculate ^{235}U + H_2O spheres closely reflected by an optimum lattice of natural U rods. The Monte Carlo program indicates that the minimum critical mass in an H_2O moderated system reflected by a U metal lattice is 135 ± 65 grams ^{235}U 11 references. (auth)

60221 EVOLUTION OPERATOR METHOD AND ITS APPLICATION TO PROBLEMS OF REACTOR THEORY. Abedin-Zadeh, R.; Pucker, N. (Univ., Graz). Acta Phys. Austr.; 32: No. 1, 47-59(1970).

The "evolution operator method" is an approximation procedure and is derived from the time-dependent perturbation theory of quantum mechanics, where also the name "evolution method" is used. This procedure allows the approximate calculation of functions which depend on the canonical quantities q(x) and p(x) of a given problem. More generally one is able to calculate the same functions of the corresponding disturbed problem, if the solution of the undisturbed case is known. For applications in reactor physics, the flux $\phi(x)$ is used instead of q(x). The meaning of the generalized variable p(x) follows from the specific problem under consideration. The foundations of the method are outlined very shortly. One is able to show in this way very easily that the method of Lie-series coincides with the evolution operator method. With the help of a simple example from diffusion theory, the advantages and disadvantages of the method are demonstrated. 15 references. (auth)

60222 NUCLEAR HEAT TRANSPORT. El-Wakil, M. M. Scranton, Pa.; International Textbook Company (1971). 512p. $16.50.

The processes of heat generation and transport in nuclear reactor cores and the thermal design of reactor cores are investigated. Basic reactor physics aspects are reviewed to develop the neutron flux distributions and reaction rates in a core. The effects of heat generation and temperature distributions in fuel elements and core components in the steady and unsteady states are examined. The mechanisms of heat removal by single-phase and two-phase nonmetallic and metallic coolants are discussed. Hydrodynamics and thermal design procedures for boiling and non-boiling cores are outlined. 156 references. (H.D.R.)

60223 (AD-721076) ANALYTICAL PULSE REACTOR MODEL WITH DELAYED NEUTRONS. Leonard, B. E. (Armed Forces Radiobiology Research Inst., Bethesda, Md.). Dec 1968. 71p. (AFRRI-SR-68-25). NTIS.

The Fuchs–Nordheim model is extended to develop an approximate solution to the point reactor equations of motion which includes delayed neutrons and nonadiabatic systems. Self-limiting reactor excursions are considered. Time-dependent relations for both reactor power and energy generated are obtained. The division of the time domain allows a superposition of the prompt burst and delayed neutron tail powers. The initial delayed neutron tail power is shown to be nearly independent of pulse size. Experimental measurements of TRIGA pulses from 1.00 × beta to 3.21 × beta show only a few percent deviation from theory for the prompt burst and delayed tail powers for pulses above 1.10 × beta. A 16 percent deviation is found for a 1.00 × beta pulse. The theoretical results are provided, with tables and figures, in such a form as to be easily applied to problems requiring self-limiting reactor excursion analysis. (auth) (USGRDR)

60224 (EURFNR-899) STRATEGIES FOR ACCELERATING TWO-DIMENSIONAL SN METHODS BY COARSE LATTICE TECHNIQUE. Kinnebrock, W. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Neutronenphysik und Reaktortechnik). Translation of report KFK-1361. 14p. Dep. NTIS.

Work Performed under United States–Euratom Fast Reactor Exchange Program.

The time of two dimensional SN-calculations can be shortened if the initial flux is prepared by a SN-calculation with less spatial points. Also this initial calculation can be shortened in time in the same way. A statistical interpretation is presented of 120 transport-problems calculated by the two dimensional SN-code "SNØW" with different strategies. Simultaneously there is developed a theory, describing the calculation-time in dependence of the applied strategy. This theory made it possible to find strategies which save about 60% calculation-time in the mean. 11 references. (auth)

60225 (JAERI-Memo-4394) CALCULATION CODE FOR THERMAL NEUTRON MULTI-GROUP REACTOR CONSTANTS: THERMOS-MUG. Ise, Takeji; Horikami, Kunihiko (Japan Atomic Energy Research Inst., Tokyo). Apr 1971. 42p. (In Japanese and English). Dep. NTIS (U. S. Sales Only).

A computer code has been prepared for calculating thermal neutron multi-group reactor constants. The code is a modified version of the ANL-THERMOS code. The modifications are made on the following points: a program for obtaining the multi-group constants for thermal neutrons is added; any scattering kernel can be fed into this code with input cards of BCD form with the present outputs from GAKER-MUG, UNCLE-TH, and FLANGE treated by this code; and the maximum number of velocity meshes is increased up to 60. 9 references. (auth) (Japan)

60226 (LFEN-NI.-60-a) FORTRAN PROGRAM LFEN-FR 10: DETERMINATION OF THE DIFFUSION LENGTH OF THERMAL NEUTRONS IN MODERATOR FROM EXPERIMENTAL DISTRIBUTIONS OF THE NEUTRON FLUX. Martinho, E. (Junta de Energia Nuclear, Sacavem (Portugal). Laboratorio de Fisica e Engenharia Nucleares). 1970. 13p. (In Portuguese). Dep. NTIS (U. S. Sales Only).

The CODINETE 25 program makes it possible to determine the diffusion length of thermal neutron in the moderator from an experimental distribution of the neutron flux. The 25 most significant harmonic modes are considered in the program. The theory of the CODINETE 25 is given and the sequence of calculation is outlined. The characteristics of the program are presented. The data input and the readout are described. (J.S.R.)

60227 BEHAVIOR OF THE INTEGRAL REACTOR CHARACTERISTIC K^+. Mogil'ner, A. I. At. Energ. (USSR): 30: No. 4, 389-90(Apr 1971). (In Russian).

The integral reactor characteristic has been defined as K^+ = average number of generated neutrons/average losses due to internal processes, whereby "internal processes" designate absorption, moderation, scattering and fission. It is attempted to clarify the physical meaning of the dependence of K^+ on the chosen mathematical model and to determine the connection of K^+ and K_∞, the neutron multiplication factor in an infinite medium. An expression was derived indicating that K^+ is a characteristic of the core material; it is only slightly affected by the dimensions of the reactor and the composition of the reflector. In cases when the two-group approximation is applicable, K^+ is larger than K_∞. (TTT)

60228 NEUTRON FLUX IN CELLS OF FINITE, SQUARE LATTICES. Auerbach, T. (Eidgenoessische Technische Hochschule, Zurich). Nucl. Sci. Eng.; 46: No. 1, 61-75(Oct 1971).

The multigroup neutron flux in cells of finite, regular, unreflected, square lattices is determined. The dependence on buckling and on cell squareness is shown explicitly for the moderator spectrum only. The corresponding fuel spectrum at each lattice site may be obtained readily from the condition of flux continuity. Heterogeneous theory of the source-sink type forms the starting point of the theory. It is shown that each integration constant appearing in the heterogeneous solution for a finite periodic lattice separates into a product of two constants, one of which is a purely geometrical factor of position x_i, y_i of the i'th element, while the other is a purely physical constant depending on the physical characteristics of the lattice alone. Knowledge of the position dependence allows the flux in a square cell of a finite system to be determined for all multipole orders by means of summation techniques. The physical constants are obtained from multipole moderator-to-fuel boundary conditions. These conditions are expressed in terms of response coefficients and result in a set of equations from which the position dependence is again eliminated by means of summation techniques. The result is a set of simultaneous equations for the physical constants alone which can be solved once the criticality condition is satisfied. The number of these equations is independent of the number of elements in the lattice and equals twice the number of multipoles times the number of energy groups. (33 references) (auth)

60229 METHOD FOR DETERMINING THE COEFFICIENTS OF REACTOR TRANSFER FUNCTIONS. Pridatko, S. A.; Trofimov, A. S. This paper was summarized in At. Energ. (USSR); 29: No. 5, 362(Nov 1970) as paper No. 437/5477. (In Russian).

One of the problems in the investigation of nuclear reactor control is the determination of the dynamic characteristics, which may vary during operation. The structure of the characteristics (the transfer functions), obtained from a consideration of the physical processes taking place, remains constant for a given reactor, but the dynamic coefficients are subject to variation. Determining these coefficients on a reactor in actual operation is an important theoretical and practical problem. The general experimental methods for determining the dynamic characteristics of controlled devices (transfer functions, amplitude-phase characteristics) are based, as a rule, on an analysis of the way in which the device reacts to a typical test signal or to natural disturbances present in the form of noise. The transfer functions studied usually have the form of rational fractions. In the present study the method of "areas" for determining the coefficients of the transfer function of a stable linear system for a stepwise disturbance at the input is extended to the case of arbitrary input disturbances. In addition, the transfer function is assumed to be transcendental; this means that the device can be described by partial differential equations. 4 references. (auth)

60230 COLLISION PROBABILITY CALCULATIONS OF MULTIPLICATION FACTORS FOR LATTICES. Hunt, Douglas C. (Dow Chemical Co., Golden, Colo.). J. Franklin Inst.; 291: No. 6, 417-26(Jun 1971). (RFP-1186).

A multigroup version of the method of successive generations is used to determine the multiplication factors of unmoderated and unreflected periodic lattices of identical fissile components. The lattice components must be one-dimensional (i.e., spheres, infinitely long cylinders or infinite slabs). Lattices of nearly one-dimensional components (cubes or long cylinders) may, however, be approximately treated. The lattice components may be arranged in a linear, planar or cuboidal manner; the permissible component arrangements being limited by the lattice component geometry. The computation traces successive neutron collisions in the lattice, starting from a uniform neutron-source density distribution in each lattice component. The initial source-density energy distribution is specified in a 16-group format which is obtained from S_4 transport equation solutions. The method satisfactorily predicts the critical pitch of two experimentally measured lattices and, to this degree of confidence, is used to compute the critical parameters of other similar lattices. The method is also used to find the reactivity temperature coefficient of thermal expansion for several just-critical arrays. This coef-

XUM

ficient is found to be positive for large arrays of small elements which have a high interaction factor. 15 references. (auth)

60231 NEW APPROXIMATION IN THE CALCULATION OF COLLISION PROBABILITIES IN CLUSTER-TYPE FUEL LATTICES. Yamamoto, Kazuko; Ishida, Masayoshi (Hitachi Ltd., Kawasaki, Japan). J. Nucl. Sci. Technol. (Tokyo); 8: No. 8, 458-64(Aug 1971).

A new approximation is proposed for calculating the first flight collision probabilities in cluster-type fuel lattices, based on the subcell model. In this method the unit cluster is divided into subregions of fuel pins (with or without cladding) arranged in rings, associated coolant, and homogeneous annular regions surrounding the fuel region. The fuel pins and associated coolant are treated separately, and each is distinguished ringwise as a different subregion. The collision probability is then calculated for a neutron proceeding from one subregion to another. The method treats rigorously the fuel annulus where a neutron starts with consideration given to the non-uniform structure of the annulus. The other fuel annuli, however, are treated approximately as if each annulus was homogeneous. The values of the homogenized cross sections of the annuli are determined in such manner that the number of outgoing neutrons from the homogenized annuli equals that from the actual non-uniform fuel annuli. The collision probability is then apportioned among fuel pins and coolant in the annulus. The results of the method compare favorably with those of the exact methods based on direct numerical evaluation of the collision probabilities. Multigroup application of the method shows that the time require for calculation is comparable with the standard multigroup calculation scheme. 10 references. (auth)

60232 EFFECT OF ACCELERATOR PULSE SHAPES ON NEUTRON SLOWING DOWN TIMES. Beynon, T. D.; Mondal, M. A. W. (Univ. of Birmingham, Eng.). J. Nucl. Energy; 25: No. 9, 391-5(Sep 1971).

A technique using a Green's function is used to obtain general expressions for the effect of a finite pulse width on the average and most probable slowing down time of a neutron field in a moderator. The method allows corrections for the width of the pulse to be made either to measurements or calculations. (auth) (UK)

60233 SOLUTION OF THE MULTI-DIMENSIONAL, MULTI-GROUP DIFFUSION EQUATION USING THE LIE SERIES METHOD BARE REACTOR. Lemanska, M. (Soreq Nuclear Research Centre, Yavne, Israel). J. Nucl. Energy; 25: No. 9, 397-403 (Sep 1971).

The multi-dimensional G-group diffusion equation is solved using the technique of the generalized Lie series with operators of higher order. The variables are separated in the solution obtained. Critical equations are derived. A method for calculating the critical size of multi-dimensional bare reactor is given. It is shown that this method is simpler than the usual diffusion method. (auth) (UK)

60234 ESTIMATION OF REACTOR PARAMETERS BY OPTIMAL FILTERING METHOD. Suda, Nobuhide; Shirai, Shoji (Osaka Univ.). J. Nucl. Sci. Technol. (Tokyo); 8: No. 8, 438-43 (Aug 1971).

Measurements of reactor parameters, such as prompt neutron generation time and subcriticality, have been made using band pass filters or else applying the correlation technique. Other new methods of reactor parameter estimation would now appear to be available thanks to developments in the optimal filtering technique, such as the optimal linear (Kalman) filter and some of the nonlinear optimal filters. Such new methods should prove very promising for on-line estimation of the reactor parameters. A description is given of the application of some of these new methods to subcriticality measurements. The results of computer simulation of estimates using the Kalman filter are presented, as also an account of experiments with the actual reactor noise obtained on the Toshiba Training Reactor (TTR-1), using a nonlinear analog filter. The results agree with those reported by Nomura using conventional methods. 10 references. (auth)

60235 IMPROVEMENT TO THE CALCULATION OF COLLISION PROBABILITIES IN ANNULAR SYSTEM AND ITS APPLICATION TO CLUSTER GEOMETRY. Takeda, Toshikazu; Sekiya, Tamotsu (Osaka Univ.). J. Nucl. Sci. Technol. (Tokyo); 8: No. 9, 503-12(Sep 1971).

A new method of calculating first-flight collision probabilities in cluster geometry is developed. The collision probabilities in an annular system as well as the transition probabilities for a neutron escaping from one subcell to reach other subcells are calculated and combined. The former is an improvement on Bonalumi's approximation and the latter is an extension of the Dancoff correction to subcells containing fuel rods and coolant. As applications of the present method, the collision probabilities in a hexagonal cluster with 7 fuel rods and in a square cluster with 28 fuel rods are calculated. Fairly good agreement is obtained by comparing the probabilities with the results obtained by the exact method. One-group calculations of the flux distribution are carried out in these systems. 15 references. (auth)

60236 NONLINEAR DYNAMIC OPTIMIZATION TECHNIQUE FOR CONTROLLING XENON INDUCED OSCILLATIONS IN LARGE NUCLEAR REACTORS. Love, Carl G. (Westinghouse Research Labs., Pittsburgh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 408-11(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

The problem of controlling the spatial power distribution in a reactor core under changing load conditions is formulated as a nonlinear optimization problem. The one-dimensional distributed core model is approximated by using finite differences to obtain a set of nonlinear ordinary differential equations. Linear programming is then used in an iterative scheme to determine the optimum control rod strategy. 3 references. (auth)

60237 MILTIGROUP, SPATIALLY DEPENDENT STUDIES OF MILD EXCURSIONS IN LARGE FAST REACTORS. Picarelli, John Gerard. Urbana, Ill.; Univ. of Illinois (1971). 163p. University Microfilms Order No. 71-21,211.

Thesis.

A method is developed for the analysis of mild excursions in large fast reactors. Studies of mild excursions, that is, transients which may be expected to occur during the normal operation of a large fast reactor, are performed for two representative, sodium-cooled assemblies. The method is based on a perturbation approximation to the one-dimensional, space- and time-dependent, multigroup diffusion equations. No temperature feedback effects are included. In the perturbation approximation, the group scalar fluxes, the delayed neutron precursor concentrations, and the nuclear parameters defining the reactor assembly are written in terms of their steady state values plus time-dependent changes or perturbations. The spatial dependence of the fluxes and the precursor concentrations is represented by series of even and odd Jacobi polynomials, which are orthogonal over the interval [−1, 1]. The governing system of coupled, partial differential equations is reduced to systems of first-order, ordinary differential equations. The coefficients defined in the even and odd polynomial expansions are taken to be time-dependent functions and are determined as solutions to these systems of first-order equations. The systems of first-order equations belong to the class of stiff differential equations. Conventional Taylor series and multistep methods, when applied to such equations, are restricted to very small time steps to guarantee stability. A technique developed by Gear, however, permits efficient and accurate solutions of stiff equations. This technique is applied to the systems of first-order, ordinary differential equations. Results are obtained in two- and six-group studies of transients arising from sodium void and ^{239}Pu perturbations. These results show that the method predicts proper behavior based on elementary neutron physics considerations as applied to large fast reactors. (Diss. Abstr. Int., B)

60238 ANALYTICAL AND EXPERIMENTAL INVESTIGATION OF THE NEUTRON ENERGY EFFECTS ON REACTOR FLUCTUATION SPECTRA. Ackermann, Norbert Joseph Jr. Knoxville, Tenn.; Univ. of Tennessee (1971). 136p. University Microfilms Order No. 71-21,864.

Thesis.

An analytical and experimental investigation of the neutron energy effects on reactor fluctuation spectra was performed to provide some information about the nonpoint model dependence of reactor noise. A two-energy group, one space point reactor kinetics model was developed using the Langevin conjecture. This model predicted no deviation from the one-energy group, point kinetics model in the frequency range of experimental interest except that the cross power spectral density (CPSD) between the two-energy groups was a complex valued function and that the thermal neutron lifetime could be determined directly from the slope of the curve for the tangent of the phase angle of that CPSD. A reactor noise experiment was performed to investigate these effects using an incore detector that was detecting thermal neutrons in the reactor core and an out-of-core detector that was detecting core fast leakage neutrons in the water shield. The auto power spectral density (APSD) of the incore and out-of-core detectors and the CPSD between the two gave results which were in agreement within the experimental uncertainties. However, the tangent of the CPSD phase angle did not give a slope which agreed with the thermal lifetime of the reactor. (Diss. Abstr. Int., B)

60239 LYAPUNOV STABILITY OF SPATIALLY-DEPENDENT NONLINEAR REACTOR SYSTEM INCLUDING AN EXTERNAL PRIMARY HEAT EXCHANGER. Hsu, C.; Habegger, L. (Argonne National Lab., Ill.). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 412-17(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

In the study of reactor system stability, the past work is mainly concentrated in two areas: the study of reactor core stability using either the point model or distributed model, and the study of plant dynamics using a lumped parameter model with time delay. The former study assumed no interaction between the core dynamics and the rest of the components in the system whereas the latter neglected the distributed effect, thus some salient features in the system may be lost. The stability of a distributed reactor system which consists of the core dynamics with nonlinear temperature feedbacks, the external primary heat exchanger, and the coolant loop interconnecting these two major components is analyzed. The coupled set of nonlinear partial differential equations is treated directly without recourse to the usual lumped parameter approximation. An extension of Lyapunov's theory, which has been successfully used in the study of distributed core dynamics, is employed to obtain stability criteria for this coupled system. 3 references. (auth)

60240 ANALYSIS OF SPACE-DEPENDENT DYNAMIC PROPERTIES OF POWER REACTORS. Yoshikawa, Hidekazu; Wakabayashi, Jiro (Kyoto Univ., Uji, Japan). Nippon Genshiryoku Gakkai Rochuseishi Kenkyu Senmon Iinkai Hokoku; No. 31, 1-22 (Nov 1970). (In Japanese).

Dynamic analyses of nuclear, thermal and hydrodynamical properties of large scale power reactors were carried out. The dynamic nuclear property can be solved approximately with a diffusion model for small number of groups. A finite cylindrical reactor with plural regions in Z direction of flow was assumed. Quasi-static approximation was employed, in which asymptotic neutron flux at each time-mesh and asymptotic reverse reactor frequency were obtained approximately by a modified Helmholtz expansion method. Analysis was carried out thermally and hydrodynamically on a representative single flow path. Heat conduction along Z axis was neglected in consideration of heat transfer in fuel rods. Melting at center of the fuel rods was also ignored. Temperature dependence of heat conductivity, specific heat and density of fuel material was disregarded, and an equation of heat conductivity in radius vector direction was analyzed by difference approximation. Dynamic properties of single phase and two phase flow are described by conservation laws of mass, momentum and energy, but analysis was carried out by difference approximation on the basis of momentum integration method. A model that reactor constants in each region of each group vary with variation of fuel temperature, coolant temperature and amount of bubbles was used in calculation of internal feed back effects. The method described can show slow transient phenomena as the primary approximation of behavior in nuclear, thermal and hydrodynamical properties after production of voids. (Japan)

60241 OPTIMAL POWER CHANGE OF A REACTOR HAVING INTERNAL FEEDBACK. Akimoto, Tadashi; Ogawa, Yuichi (Hokkaido Univ., Sapporo). Nippon Genshiryoku Gakkaishi; 13: No. 9, 500-7(Sep 1971). (In Japanese).

State space-constrained time optimal control having internal feedback can be obtained by two alternative modes of control. One is that which brings the system from the initial equilibrium state to the objective equilibrium state in minimum time, and the other raises the reactor power to the objective level with maximum rapidity in order to follow the load change immediately. In the former mode, the controllability of the nonlinear system is rigorously satisfied if the delayed neutrons are ignored, and even with the delayed neutrons taken into account the system can be optimally controlled for practical purposes. In the latter mode, a system of control must be provided to apply after the objective power level is reached, in order to bring the reactor system to the final equilibrium state while keeping the power level constant. The choice between the two modes of control would depend on the purpose of reactor operation. (9 references) (auth)

Experimental Applications

60242 MEASUREMENT OF TEMPERATURE FLUCTUATIONS IN A NATURAL CONVECTION WATER LOOP. Nishihara, Hideaki (Kyoto Univ.). J. Nucl. Sci. Technol. (Tokyo); 8: No. 8, 450-7(Aug 1971).

Investigations of reactor noise in water-cooled research reactors show that the power spectra density rises in the low frequency domain. The cause of this phenomenon is often attributed to fluctuations in the coolant temperature, but this has never been proved experimentally. An attempt in this direction was undertaken. The temperature fluctuation in a natural convection heat transfer loop decoupled from neutronics was measured and analyzed in the frequency domain. The test section of the loop had a rectangular channel measuring 5 mm × 50 mm in cross section and 500 mm in length. This configuration simulated a coolant channel of the MTR-type fuel element used in swimming-pool reactors. The power spectral density of the temperature fluctuation at the channel exit showed a shape similar to the power spectral density of the noise-equivalent source obtained in the Kyoto University Reactor at comparable power levels. 13 references. 60243 MELTING HEAT RATING OF UO_2–25 WT. PERCENT PuO_2 FUELS. Lawrence, L. A.; Christensen, J. A. (Hanford Engineering Development Lab., Richland, Wash.). Nucl. Technol.; 12: No. 4, 367-74(Dec 1971).

For UO_2– 25 wt % PuO_2, the quantity $\int_{T_s}^{T_m} kdT$ was established at 49 ± 5 W/cm, where $T_s = 700°C$, k is the fuel thermal conductivity, and T_s and T_m refer to fuel surface and melt temperatures, respectively. This result derives from measurements on six individual fuel pins. Each pin was surrounded by a calorimeter consisting of a heavy-walled aluminum sleeve with thermocouples at two radial positions. Heat generation rates measured calorimetrically were supplemented by postirradiation burnup analyses for ^{140}Ba, ^{141}Ce, and ^{95}Zr. Fuel pins were irradiated for ten hours at steady-state, peak heat ratings after which they were rapidly quenched to preserve structures representative of peak power operation. Fractional fuel melting was correlated with heat rating and the correlation extrapolated to zero melting to yield melting heat rating. Flux depression corrections are required to apply these measurements, which were made in a thermal flux, to fast flux environments. These were obtained by measuring radial burnup profiles in several irradiated cross sections and numerically integrating the results. 12 references. (auth)

60244 NUCLEAR REACTOR CONTROL DEVICE. Frisch, Erling; Andrews, Harry N.; Braun, Howard E. (to Westinghouse Electric Corp.). U. S. Patent 3,595,748. 27 Jul 1971. Filed 24 Jan 1968.

A nuclear reactor is disclosed wherein a portion of its fuel assemblies have primary or shutdown neutron absorbing control elements coupled to incremental drive mechanisms, and a portion of its fuel assemblies have one or more individually movable auxiliary fine flux trim rods (FFT) coupled to new and improved two-position mechanisms. The two-position mechanisms are associated with curved guide channels in such a manner as to control the position of individual FFT rods associated with a plurality of fuel assemblies. (Official Gazette)

60245 MEASUREMENT TRANSMITTER. (to Belgonucleaire SA). British Patent 1,241,139. 28 Jul 1971. Priority date 12 Jul 1968, Belgium.

REACTORS—core measurements in, device for magnetic transmission of

TELEMETERING SYSTEM—design parameters for magnetic (H.D.R.)

60246 NUCLEAR FUEL RETAINER. Smith, Bart Alan; Lass, James Lloyd (to General Electric Co.). British Patent 1,240,617. 28 Jul 1971. Priority date 23 Sep 1968, United States.

REACTOR FUEL ELEMENTS—design with cup-shaped retainer between fuel and fission gas plenum (H.D.R.)

60247 NUCLEAR REACTOR FUEL ASSEMBLY. Crowther, Russell Lee (to General Electric Co.). British Patent 1,241,456 4 Aug 1971. Priority date 15 Dec 1967, United States.

REACTOR FUEL ELEMENTS—design of assemblies with radially varying plutonium and uranium contents (H.D.R.)

60248 DESIGN OF SPECIFICALLY OPTIMAL FILTERS FOR NUCLEAR REACTOR SYSTEMS. Schweizer, Philipp F. (Westinghouse Electric Corp., Pittsburgh). IEEE (Inst. Elec. Electron. Eng.), Trans. Nucl. Sci.; NS-18: No. 1, 403-7(Feb 1971).

From IEEE nuclear science symposium; New York, N. Y. (4 Nov 1970).

A design procedure is presented for selecting the optimal parameters of a filter used in extracting true signals from noisy reactor measurements. The equations for the optimal filter are presented and a procedure is given for approximating the optimal filter with a simpler and less expensive structure. A design example demonstrates how the method may be applied to a reactor protective system. 4 references. (auth)

60249 PERSPECTIVES OF PLUTONIUM UTILIZATION SEEN FROM 1970. Lafontaine, I. (Belgo-Nucleaire SA, Brussels). J. Belge Radiol.; 54: No. 1, 111-18(Jan-Feb 1971). (In French).

Uranium production is estimated for the western world. Data for the years 1971 through 1985 are presented as tables and diagrams. Installations, both in operation and in the planning stage, for the recycling of plutonium are listed and discussed. Also listed are facilities for the production of plutonium fuel elements. It is concluded that, in the coming decade, cost for plutonium fuel production must be reduced so that plutonium and enriched uranium become competitive. In comparison with ^{235}U, plutonium has advantages for fast breeder reactors. (H.B.G.)

60250 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTOR FUEL ELEMENTS. Gatley, John Andrew; Jackson, George Oliver (to United Kingdom Atomic Energy Authority). British Patent 1,246,275. 15 Sep 1971. Filed 20 Dec 1967.

Reference is made to fuel elements of the tubular fuel pin type, having internal and external sheaths, with fuel material in the annular space between the two sheaths, thus allowing better cooling, particularly with ceramic fuels. A disadvantage is that allowance must be made for differential expansion between the sheaths. The fuel pin described is designed to allow for such expansion. The outer and inner sheaths are sealingly secured together at one end of the fuel pin, while the other ends are sealed together by a bellows seal so as to permit relative longitudinal movement. A second bellows seal is provided, spaced from the first seal, and a venting duct to the outside of the fuel pin is located between the two seals. This duct may be wrapped helically around the outer sheath to act as a spacer for the pins and promote mixing of the coolant flowing over the pins. The helically wound tube also allows for decay of short-lived fission products. (UK)

60251 FUEL ASSEMBLY WITH SOLID END-FITTING. Gumuchian, A. (to Commissariat a l'Energie Atomique). Canadian Patent 877,595. 3 Aug 1971. Priority date 6 Jun 1967, France.

The end fitting of a fuel assembly is constituted by a solid cylinder which is intended to be placed within a stationary cylindrical support tube of a nuclear reactor diagrid. The support tube is provided with openings for the admission of a cooling fluid such as liquid metal. The lower extremity of the end fitting has a recess for the engagement of a member which locks the end fitting in the support tube. The upper extremity of the end fitting is attached to a connecting element which is joined to the fuel assembly box containing the fuel pins. The connecting element is pierced by openings so that the cooling fluid, which is admitted into the space formed between the support tube and the end fitting, can circulate between the space and the interior of the fuel assembly box. (F.S.A.)

60252 NUCLEAR FUELLING ARRANGEMENT. McConkey, K. N. (to Canadian General Electric Co. Ltd.). Canadian Patent 877,592. 3 Aug 1971.

The structure of a fuel bundle and end fittings for the channels in a pressure tube nuclear reactor are described. Latches are employed to retain the fuel bundles within the reactor pressure tube against the force of coolant flow. Each bundle is provided with contracting end pads which permits the insertion or retraction of a bundle while unloading the latch from axial forces exerted thereagainst, so that jamming may be avoided and complete latch disengagement assured. (F.S.A.) (Canada)

60253 CORE ASSEMBLY FOR NUCLEAR REACTORS. Gumuchian, A. (to Commissariat a l'Energie Atomique). Canadian Patent 878,198. 10 Aug 1971. Priority date 5 Dec 1966, France.

A fuel assembly for nuclear reactors is described which consists of clusters of pins disposed within a tubular sleeve. This consists of a duct for the circulation of coolant and which is constituted by a thin metallic strip wrapped in a helix around the clusters and in close contact therewith. Each turn of the strip is rigidly joined to the adjacent turns. The end turns are respectively fixed to a bottom end-fitting and to a solid top end-fitting of the assembly. (F.S.A.) (Canada)

60254 CENTERING DEVICE FOR NUCLEAR REACTOR LOADING MACHINES. Kumpf, H. (to Siemens Aktiengesellschaft). Canadian Patent 873,597. 15 Jun 1971.

The device consists of a movable vertical tubular loading mast and a clamping mechanism, for grasping the fuel elements, in the mast interior. The mast includes a tubular member located at and telescoping the lower end and displaceable in the longitudinal direction. The arrangement is thus able to select a particular fuel element from the lattice forming the reactor core. The tubular member has a lower edge portion formed with a surface to engage the fuel elements of the reactor core located adjacent to the selected fuel element so as to align the latter with the mast. (F.S.A.) (Canada)

60255 FUEL SYSTEMS FOR NUCLEAR REACTORS. Nims, John B. Jr. (to Atomic Power Development Associates Inc.). U. S. Patent 3,600,276. 17 Aug 1971. Filed 12 May 1967.

A nuclear reactor is described comprising an array of fuel subassemblies having tapered cooperating interface surfaces, whereby longitudinal expansion of the sub-assembly causes radial core expansion. (auth)

60256 SAFETY ARRANGEMENTS FOR PRESSURE VESSELS. (to Siemens Aktiengesellschaft). British Patent 1,247,148. 22 Sep 1971. Priority date 9 Jul 1969, Germany.

REACTOR CONTAINMENT STRUCTURES—design characteristics of prestressed concrete (D.C.C.)

60257 SERIES PAIRS OF DOOR SETS. Martlew, Clifford Keith (to United Kingdom Atomic Energy Authority). British Patent 1,243,979. 25 Aug 1971. Filed 16 Nov 1967.

Reference is made to door sets primarily for use in nuclear reactor air locks. The series pair of door sets described comprises, for each door set, a manually operable fastening and an electrically controlled fastening. A switch mechanism, operable by the mechanism of the manual fastening, is arranged for actuating the electric fastening of the opposing door set. The switch mechanisms and fastenings are so arranged that one door set is unfastened at the electrically controlled fastening only when the other door set is fastened by its manually operable fastening. The arrangement may be applied to double leaf door sets. (UK)

60258 NUCLEAR REACTOR PRESSURE VESSELS. (to Siemens Aktiengesellschaft). British Patent 1,247,897. 29 Sep 1971. Priority date 29 Dec 1967, Germany.

PRESSURE VESSELS—design of reactor, with prestressed concrete walls and steel cover

REACTORS—pressure vessels for, use of steel cover on prestressed concrete (H.D.R.)

60259 HANDLING GRIP. Naudet, Robert; Renaux, Charley (to Commissariat a l'Energie Atomique). French Patent 2,039,528. 4 Jan 1971. Filed 2 Apr 1969. (In French).

A device for gripping control rods in a fast neutron reactor cooled by liquid metal is described. It consists of a body revolving about a vertical axis upon which two fingers pivot about a pin perpendicular to this axis. (France)

GENERAL

60260 (AECL-3783(Rev.1)) PACKAGE OF COMPUTER PROGRAMS FOR THE ANALYSIS OF TEMPERATURE DISTRIBUTION IN THREE DIMENSIONAL SYSTEMS. Carver, M. B. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). Jul 1971. 38p. Dep. NTIS (U. S. Sales Only). AECL $1.00.

60261 (BNL-50299) MEMBRANES, MATERIAL TRANSFER, AND IDEAL TRACER THEORY. Nims, Leslie F. (Brookhaven National Lab., Upton, N. Y.). Jun 1971. 8p. Dep. NTIS.

60262 (BNWL-SA-3977(Rev.)) ECOLOGICAL AND ENVIRONMENTAL PROBLEMS IN THE APPLICATION OF BIOMATHEMATICS. Vaughan, Burton E. (Battelle-Northwest, Richland, Wash. Pacific Northwest Lab.). [1971]. 29p. (CONF-710716-1). Dep. NTIS.

From sixth symposium on mathematical statistics and probability; Berkeley, Calif. (19 Jul 1971).

60263 (BRH/DMRE-71-5) NUCEAR MEDICAL TECHNOLOGY TRAINING. Proceedings of a Colloquium held on February 28, 1969 at the Radioisotope Laboratory, Cincinnati General Hospital, Cincinnati, Ohio. Simmons, Guy H. (ed.) (Cincinnati Univ., Ohio. Medical Center. Bureau of Radiological Health, Rockville, Md. Div. of Medical Radiation Exposure). Jun 1971. 71p. GPO $0.75.

60264 (CALT-767-P-3-15) MEASUREMENT OF DISLOCATION DAMPING FORCES AT HIGH DISLOCATION VELOCITY. Jassby, K. M.; Vreeland, T. Jr. (California Inst. of Tech., Pasadena. W. M. Keck Lab. of Engineering Materials). [1971]. 17p. Dep. NTIS.

60265 (CALT-767-P-3-16) DISLOCATION MOBILITY IN COPPER AND ZINC AT 44°K. Jassby, K. M.; Vreeland, T. Jr. (California Inst. of Tech., Pasadena. W. M. Keck Lab. of Engineering Materials). [1970]. 7p. Dep. NTIS.

60266 (CALT-767-P-3-17) EXPERIMENTAL DETERMINATION OF THE LINE ENERGY OF A BASAL SCREW DISLOCATION IN ZINC. Nagata, N.; Jassby, K. M.; Vreeland, T. Jr. (California Inst. of Tech., Pasadena. W. M. Keck Lab. [of Engineering Materials]). [1971]. 20p. Dep. NTIS.

60267 (CALT-767-P-3-18) BASAL DISLOCATION INTERACTIONS WITH A FOREST OF NON BASAL DISLOCATIONS IN ZINC. Nagata, N.; Vreeland, T. Jr. (California Inst. of Tech., Pasadena. W. M. Keck Lab. of Engineering Materials). 1971. 26p. Dep. NTIS.

60268 (CONF-711014-1) ANALYSIS OF REPAIR IN HUMAN DNA BY 5-BROMODEOXYURIDINE PHOTOLYSIS. Regan, James D. (Oak Ridge National Lab., Tenn.). [1971]. 14p. Dep. NTIS.

From Symposium on DNA repair mechanisms; Erbach, Germany (3 Oct 1971).

60269 (COO-1826-17) BIOLOGY OF CARCINOMA IN SITU OF THE LUNG. [Saccomanno, Geno] ([Saint Mary's Hospital, Grand Junction, Colo.]). [nd]. 3p. (CONF-710631-1). Dep. NTIS.

From American Institute of Biological Sciences meeting; Washington, D. C. (9 Jun 1971).

60270 (COO-2094-7) ICR QUARTERLY REPORT NO. 29, MAY 1, 1971. Ashenhurst, Robert L. (Chicago Univ., Ill. Inst. for Computer Research). Contract AT(11-1)-2094. 94p. Dep. NTIS.

60271 (COO-2094-8) ICR QUARTERLY REPORT NO. 30, AUGUST 1, 1971. Ashenhurst, Robert L. (Chicago Univ., Ill. Inst. for Computer Research). Contract AT(11-1)-2094. 136p. Dep. NTIS.

60272 (DASA-2711) EFFECTS OF AIRBLAST ON SHEEP IN TWO-MAN FOXHOLES. Richmond, D. R.; Fletcher, E. R.; Jones, R. K. (Lovelace Foundation for Medical Education and Research, Albuquerque, N. Mex.). 1 Jun 1971. Contract DASA-68-C-0118. 38p. (POR-LN-401).

60273 (LA-4421) DIVIDING HEAD TABULATIONS. Briscoe, W. L.; Gibson, T. O. (Los Alamos Scientific Lab., N. Mex.). 16 Mar 1970. 19p. Dep. NTIS.

60274 (LA-4744) BOUNDS ON THE BANDWIDTH OF BIPARTITE GRAPHS. Korfhage, Robert R. (Los Alamos Scientific Lab., N. Mex.). Sep 1971. Contract W-7405-eng-36. 5p. Dep. NTIS.

60275 (MHSMB-24) STATIC DETECTOR. Technical Report No. 201. Hanna, H. A. (Mason and Hanger-Silas Mason Co., Inc., Burlington, Iowa). 6 Jan 1971. Contract W-49-010-AMC-68(A). 24p. Dep. NTIS.

60276 (NP-19036) NINETEENTH ANNUAL REPORT FOR THE YEAR ENDED 30 JUNE 1971. (Australian Atomic Energy Commission). 147p. Dep. NTIS (U. S. Sales Only).

Activities for the year ending 30 June are described. Summaries are given of the status of the Jervis Bay nuclear power station; uranium exploration activities in Australia; radioisotope development, production and distribution; research related to nuclear power and associated disciplines; and international matters. Nuclear power is also discussed in a more general sense with respect to management and regulation, the environment, and world wide developments. Publications by staff are listed. (Australia)

60277 (NYO-3515-5) TRANSPORT AND CATABOLISM OF PROTEINS, TECHNIQUES AND MECHANISMS. Final Report, March 1965–February 1970. Hughes, Walter L. (Tufts Univ., Boston, Mass. Dept. of Physiology). Contract AT(30-1)-3515. 15p. Dep. NTIS.

60278 (NYO-3515-6) UPTAKE OF ^{125}I LABELED RAT GAMMA GLOBULIN BY INTESTINAL EPITHELIAL CELLS IN THE NEONATAL RAT. King, Paul N.; Hughes, Walter L. (Tufts Univ., Boston, Mass. Dept. of Physiology). Sep 1970. Contract AT(30-1)-3515. 11p. Dep. NTIS.

60279 (NYO-3798-12) MOESSBAUER SPECTROSCOPY OF BIOCHEMICALS CONTAINING IRON. Progress Report No. 6, October 1, 1970–August 31, 1971. May, Leopold (Catholic Univ. of America, Washington, D. C. Dept. of Chemistry). Sep 1971. Contract AT(30-1)-3798. 10p. Dep. NTIS.

60280 (ORNL-TM-3549) PROBABILISTIC MODEL FOR ESTIMATING THE OPERATING COST OF AN ELECTRIC POWER GENERATING SYSTEM. Joy, D. S.; Jenkins, R. T. (Oak Ridge National Lab., Tenn.). Oct 1971. Contract W-7405-eng-26. 42p. Dep. NTIS.

60281 (ORO-3344-4) FORMATION ENERGIES OF INDIVIDUAL VACANCIES IN ALKALI HALIDES. Final Report. Plint, C. A. (Oklahoma Univ. Research Inst., Norman). 10 Mar 1971. Contract AT(40-1)-3344. 42p. Dep. NTIS.

60282 (ORO-3885-3) CELL RESPONSE TO NUCLEIC ACID PENETRATION. Progress Report, September 1970–August 1971. Stuy, Johan H. (Florida State Univ., Tallahassee). Contract AT(40-1)-3885. 11p. Dep. NTIS.

60283 (RLO-2225-T-10-3) AQUATIC MYXOBACTERIA, CHONDROCOCCUS COLUMNARIS AND OTHER FISH PATHOGENS. Progress Report, 1971. Ordal, Erling J. (Washington Univ., Seattle. Dept. of Microbiology). Contract AT(45-1)-2225. 27p. Dep. NTIS.

60284 (RLO-2225-T-15-7) CHARACTERIZATION AND FRACTIONATION OF TOBACCO LEAF TRANSFER RNA. Guderian, Ronald H.; Pulliam, Robert Lee; Gordon, Milton P. (Washington Univ., Seattle. Dept. of Microbiology). 1970. 35p. Dep. NTIS.

60285 (RLO-2226-T-3-8) DETECTION OF ANTINUCLEAR ANTIBODIES IN NZB AND OTHER MOUSE STRAINS. Siegel, B. V.; Brown, McKay; Morton, Jane I. (Oregon Univ., Portland. Medical School). [1971]. 19p. Dep. NTIS.

60286 (SC-DR-710418) DEVELOPMENT OF AN ELECTRIC MANOMETER TESTER. Hayes, Everett G. (Sandia Labs., Albuquerque, N. Mex.). Oct 1971. 12p. Dep. NTIS.

60287 (SC-M-710408) PROGRAM FGCD (USER'S AND PROGRAMMER'S MANUAL). Toliver, Lee (Sandia Labs., Albuquerque, N. Mex.). Apr 1971. 29p. Dep. NTIS.

60288 (SC-RR-710502) EYE-CONTROLLED VERSUS HAND-CONTROLLED TRACKING. Bechtel, F. K.; Langenhorst, J. W.

XUM

(Sandia Labs., Albuquerque, N. Mex.). May 1971. 62p. Dep. NTIS.

60289 (SC-RR-710628) OPERATIONAL AMPLIFIER MODELS FOR COMPUTER-AIDED CIRCUIT ANALYSIS. Harstad, David N. (Sandia Labs., Albuquerque, N. Mex.). Oct 1971. 40p. Dep. NTIS.

60290 (UCLA-12-839) FATTY ACID TRANSPORT INTO THE BRAIN. Dhopeshwarkar, G. A.; Subramanian, Carole; McConnell, Douglas H.; Mead, James F. (California Univ., Los Angeles. Lab. of Nuclear Medicine and Radiation Biology). 1971. Contract AT-04-1-GEN-12. 18p. Dep. NTIS.

60291 (UCRL-20525) HETEROGENEOUS DISLOCATIONS IN GaAs. Osiecki, R.; Thomas, G. (California Univ., Berkeley. Lawrence Radiation Lab.). Jun 1971. Contract W-7405-eng-48. 7p. (CONF-710439-1). Dep. NTIS.
From second international conference on high-voltage electron microscopy; Stockholm, Sweden (14 Apr 1971).

60292 (UCRL-20700) DISLOCATION CONTRAST AT HIGH VOLTAGES. Osiecki, R.; De Jonghe, L. C.; Bell, W. L.; Thomas, G. (California Univ., Berkeley. Lawrence Radiation Lab.). Jun 1971. Contract W-7405-eng-48. 8p. (CONF-710439-2). Dep. NTIS.
From second international conference on high-voltage electron microscopy; Stockholm, Sweden (14 Apr 1971).

60293 (UCRL-72001) MODES OF COMPUTER AUTOMATION IN THE CHEMISTRY LABORATORY. Frazer, Jack W. (California Univ., Livermore. Lawrence Radiation Lab.). 16 Jul 1971. 23p. (CONF-700303-2). Dep. NTIS.
From twenty-first conference on analytical chemistry and applied spectroscopy; Cleveland, Ohio (1 Mar 1970).

60294 (UCRL-73197) MICROWAVE ROTATIONAL SPECTROSCOPY APPLIED TO TRACE-GAS POLLUTANT MONITORING. Hrubesh, Lawrence W. (California Univ., Livermore. Lawrence Radiation Lab.). 3 Aug 1971. 8p. (CONF-711102-1). Dep. NTIS.
From Joint conference on measurement of environmental pollutants; Palo Alto, Calif. (8 Nov 1971).

60295 (UCRL-Trans-10548) PREPARATION AND CONTROL OF THE FUNCTIONING OF A MERCURY CATHODE CELL WORKING AT AN IMPOSED POTENTIAL. Moinet, Claude; Peltier, Daniel. Translated for Univ. of California, Lawrence Radiation Lab., Livermore, from Bull. Soc. Chim. Fr.; No. 2, 690-6(1969). 19p. Dep. NTIS.

60296 MIRNOE ISPOL'ZOVANIE ATOMNOI ENERGII. MEZHDUNARODNOPRAVOVYE VOPROSY. (World Use of Atomic Energy. Questions of International Law). Malinin, S. A. Moscow; Izdatel'stvo Mezhdunarodnye Otnosheniya (1971). 176p.

Questions of international law represent the focal point of this presentation of the various aspects of the world-wide use of atomic energy. Forms of collaboration of governments, legal problems connected with nuclear powered ships, and radioactive waste disposal are some of the chief topics covered. (268 references) (K.S.W.)

CORPORATE AUTHOR INDEX

In the Corporate Author Index, technical report literature is indexed by the organization or institution responsible for issuing the report. Entries are given for all report literature and for published literature for which a corporate author approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate author gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

  Prog. rpt. on nuclear structure at intermediate energies, 3/71, 25:59693 (ORO-1316-100)
RIJKS INSTITUUT VOOR DE VOLKSGEZONDHEID, BILTHOVEN (NETHERLANDS). LABORATORIUM VOOR STRALINGSONDERZOEK.
  Gross radioactivity in airborne dust, 25:57575 (RA-42)
ROCHESTER GAS AND ELECTRIC CORP., N. Y.
  Robert Emmett Ginna Nuclear Power Plant, Unit No. 1. Technical supplement accompanying application to increase power, Amendment 3, 25:59942 (DOCKET-50244-81)
ROCHESTER UNIV., N. Y. DEPT. OF CHEMISTRY.
  Calculation of some isotope separation factors for chemical exchange, distillation, exchange distillation,

and absorption using UF/sub 6(g)/, 25:57528 (UR-3999-11)

ROME UNIV. (ITALY). ISTITUTO DI FISICA.
- Elementary solutions of Schrodinger equation for some time dependent interactions, 25:59207 (NP-19033)
- Exact ground state of some one-dimensional N-body systems with inverse (Coulomb-like) and inverse-square (centrifugal) pair potentials, 25:59840 (NP-19027)
- Remarks on inclusive experiments and high energy models, 25:59322 (NP-19024)

RUTHERFORD HIGH ENERGY LAB., CHILTON (ENGLAND).
- International survey of the operation of dc electrostatic particle separators, 25:59644 (RHEL/R-222)
- Simple ionization measuring device for bubble chamber pictures, 25:57825 (RPP/H-81)

S

SACRAMENTO MUNICIPAL UTILITY DISTRICT, CALIF.
- Rancho Seco Nuclear Generating Station, Unit 1. Statement why the construction permit should not be suspended pending completion of the NEPA environmental review, 25:59971 (DOCKET-50312-26)

SAINT MARY'S HOSPITAL, GRAND JUNCTION, COLO.
- Biology of carcinoma in situ of the lung, 25:60269 (COO-1826-17)

SANDIA LABS., ALBUQUERQUE, N. MEX.
- Detection of high explosives by capture gamma-ray techniques, 25:57866 (SC-RR-710450)
- Development of an electric manometer tester, 25:60286 (SC-DR-710418)
- Eye-controlled versus hand-controlled tracking, 25:60288 (SC-RR-710502)
- Ground motion predictions for Amchitka, 25:57602 (SC-RR-69-376)
- Operational amplifier models for computer-aided circuit analysis, 25:60289 (SC-RR-710628)
- Processing codes for group-averaged discrete ordinates cross-section tables, 25:59843 (SC-DR-710320)
- Program FGCD (user's and programmer's manual), 25:60287 (SC-M-710408)

SAXTON NUCLEAR EXPERIMENTAL CORP., PA.
- Saxton Reactor. Technical specifications, Change Report No. 25, 25:59937 (DOCKET-50146-94)
- Saxton Reactor. Technical specifications, Change Request No. 49, 25:59936 (DOCKET-50146-93)

SCRIPPS INSTITUTION OF OCEANOGRAPHY, LA JOLLA, CALIF.
- 1971 results for intercomparison of analytical methods for ^{137}Cs and ^{134}Cs used at Scripps with methods used at 56 other institutions, 25:57348 (TID-25777)
- Natural cesium in sea water, 25:57301 (TID-25776)

SKODA WORKS, PILSEN (CZECHOSLOVAKIA). NUCLEAR POWER CONSTRUCTION DEPT.
- Development of pressure vessel steels for Czechoslovak Nuclear Stations, 25:58216 (ZJE-106)
- Properties of zirconium alloys from the operation standpoint, 25:58217 (ZJE-107)
- Some remarks concerning zirconium alloy welding, 25:58188 (ZJE-110)

SOUTHAMPTON UNIV. (ENGLAND).
- Acoustically induced vibrations of slender rods in a cylindrical duct. I and II, 25:57621 (TRG-Report-2141)

SOUTHERN CALIFORNIA EDISON CO., LOS ANGELES.
- San Onofre Nuclear Generating Station, Unit 1. Technical specifications, Proposed Change No. 7 (revision), 25:59939 (DOCKET-50206-126)
- San Onofre Nuclear Generating Station, Unit 1. Technical specifications, Proposed Change No. 8, 25:59940 (DOCKET-50206-127)

SOUTHERN UNIV., BATON ROUGE, LA. DEPT. OF PHYSICS.
- Prog. rpt. on research in experimental and theoretical nuclear physics, annual, 7/15/71, 25:59841 (ORO-4119-1)

STANFORD UNIV., CALIF. INST. FOR PLASMA RESEARCH.
- Longitude distribution of solar flares, 25:58570 (N-71-14166)

STONE AND WEBSTER ENGINEERING CORP., BOSTON, MASS.
- Surry Power Station, Units 1 and 2. Sensitized stainless steel in pressurized water reactor applications, 25:59962 (DOCKET-50280-52)

T

TECHNISCHE HOCHSCHULE, AACHEN (WEST GERMANY).
- Determination of the anisotropy of the threshold energy for the production of Frenkel defects in Ta, 25:59125 (JUL-729-FF)

TECHNISCHE HOCHSCHULE, MUNICH (WEST GERMANY). INSTITUT FUER RADIOCHEMIE.
- Calculations for production of ^{231}Pa and ^{232}U by neutron irradiation from ^{230}Th and ^{232}Th mixtures in the reactor with various irradiation conditions, 25:57479 (BMBW-FBK-71-6)

TECHNISCHE UNIVERSITAET, MUNICH (WEST GERMANY).
- Simple technique of producing thin carbon films, 25:58346 (CONF-711002-, pp 144-6)

TELEDYNE ISOTOPES, WESTWOOD, N.J.
- ISIS: program for computerized fission data analysis, 25:59773 (AD-721481)

TENNESSEE VALLEY AUTHORITY, KNOXVILLE.
- Browns Ferry Nuclear Plant, Units 1, 2, and 3. State why the construction of the station should not be interrupted during prospective review period, 25:59950 (DOCKET-50259-27)
- Sequoyah Nuclear Plant, Units 1 and 2. Statement why construction permits should not be suspended pending completion of NEPA environmental review, 25:59977 (DOCKET-50327-20)

TEXAS UNIV., AUSTIN. CENTER FOR PARTICLE THEORY.
- Lower bound on lambda/sub +/ in K/sub 13/ decay, 25:59392 (ORO-3992-69)

THERMO ELECTRON CORP., WALTHAM, MASS.
- Thermionic performance of CVD tungsten emitters, 25:58839 (TEE-4125-5)

TOKYO UNIV. (JAPAN). INST. FOR NUCLEAR STUDY.
- Absolute measurement of alpha ray by a surface-barrier type silicon detector, 25:57794 (INS-TCH-5)
- Alpha-ray thickness gage. II, 25:57864 (INS-TL-112)
- Antiproton--proton charge exchange and elastic scattering at 232 MeV, 25:59266 (SJC-P-71-1)
- Optics of the 75 cm hydrogen bubble chamber. I, 25:57826 (SJC-T-71-3)

TOLEDO EDISON CO., OHIO.
- Davis--Besse Nuclear Power Station. Statement of reasons why construction permit should not be suspended pending environmental review, 25:59987 (DOCKET-50346-20)

TOULOUSE UNIV. (FRANCE). FACULTE DES SCIENCES.
- Secondary electron emission from germanium under electron bombardment, 25:58683 (FRNC-TH-49)

TUFTS UNIV., BOSTON, MASS. DEPT. OF PHYSIOLOGY.
- Prog. rpt. on transport and catabolism of proteins, techniques and mechanisms, final, 3/65--2/70, 25:60277 (NYO-3515-5)
- Uptake of ^{125}I labeled rat gamma globulin by intestinal epithelial cells in the neonatal rat, 25:60278 (NYO-3515-6)

U

UNION CARBIDE CORP., OAK RIDGE, TENN. COMPUTING TECHNOLOGY CENTER.
- Laboratory quality control computer program, 25:57611 (CTC-51)

UNION CARBIDE CORP., OAK RIDGE, TENN. Y-12 PLANT.
- Pyrolytic carbon infiltration studies, 25:58352 (Y-DA-2123(Rev.1))
- Scanning electron microscopy of fractures in welded structures, 25:58215 (Y-DA-4280)

UNITED KINGDOM ATOMIC ENERGY AUTHORITY, RISLEY (ENGLAND). AUTHORITY HEALTH AND SAFETY BRANCH.
- Review of fast reactor safety, 25:60113 (CONF-710922-3)

UNITED STATES-EURATOM FAST REACTOR EXCHANGE PROGRAM.
- Aqueous reprocessing of fast breeder fuel elements, 25:57518 (EURFNR-888)
- Fast Breeder Project. Fourth quarterly report 1970, 25:60010 (EURFNR-902)
- Inherent properties of the various primary circuit designs for sodium-cooled reactors, 25:60060 (EURFNR-904)
- Strategies for accelerating two-dimensional SN methods by coarse lattice technique, 25:60224 (EURFNR-899)

UNIVERSIDAD NACIONAL AUTONOMA DE MEXICO, MEXICO CITY. FACULTAD DE CIENCIAS.
- Dosimetry of ionizing radiation on Drosophila melanogaster, 25:57999 (NP-18944)
- Measurement of thicknesses of various materials using Si(Li) and surface barrier detectors, 25:57865 (NP-18941)

V

VIRGINIA ELECTRIC AND POWER CO., RICHMOND.
- North Anna Power Station, Units 1 and 2. Reasons why construction permits should not be suspended pending environmental review, 25:59985 (DOCKET-50338-32)
- Surry Power Station, Units No. 1 and No. 2. Final safety analysis report, amendment No. 26, 25:59960 (DOCKET-50280-50)

PERSONAL AUTHOR INDEX

Authors' names are indexed in the form appearing in the abstracted publication. Each entry under an author's name gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. The following changes in spelling have been introduced to reduce some of the confusion which might result from omitting the accents:

Germanic	ä appears as	ae
Germanic	ö	oe
Germanic	ü	ue
Scandinavian	ø	oe

SUBJECT INDEX

Cross references are included in cumulative subject indexes and in *Subject Headings Used by the USAEC Division of Technical Information* (USAEC report TID-5001).

The reader is also referred to *Guide to Abstracting and Indexing for Nuclear Science Abstracts* (USAEC report TID-4576).

Most headings in the subject index are specific materials, things, and processes. The headings are followed by modifiers that describe the properties of, or processes applied to, the headings.

All index entries cite *NSA* volume and abstract numbers; volume number precedes the colon and the abstract number follows it. The designation (R) following the abstract number indicates a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. Report numbers, where applicable, are included in parentheses after the abstract number of the citation. Published literature (journal article or book) can be identified by the absence of a report number.

Ideas presented in the original literature, rather than key words, have been indexed. The indexers have selected what seemed the most probable and logical place to look for typical information. Since it is not always possible to anticipate where a user would look for information, the cumulative indexes include numerous cross references. Consideration of synonymous or closely related terms will prove valuable.

Information is indexed for the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use or to the general class headings that include the specific headings. For example, information on boiler design for the Fermi Fast Breeder Reactor would be indexed under the headings BOILERS and FERMI FAST BREEDER REACTOR but not necessarily under the headings REACTORS, FAST or REACTORS, BREEDER.

General or broad headings are reserved for general summaries, reviews, comprehensive reports, and similar literature.

Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings; e.g., AMINO ACIDS rather than ACIDS, AMINO; HELIUM ISOTOPES He-4 rather than HELIUM—ISOTOPES He-4 or HELIUM—He-4 ISOTOPES. Note, however, that in some cases parenthetic modifying terms or inverted headings such as NEUTRONS, FAST, are used where the alphabetical arrangement of a direct entry would cause information to be scattered. In addition, organic compounds are usually entered in the index in the inverted form to facilitate grouping like or related compounds with the parent compounds; e.g., BENZENE, BROMO- rather than BROMOBENZENE. In general, the nomenclature used is that of the subject indexes to *Chemical Abstracts.*

Alphabetization

Subject headings are alphabetized word by word. Parenthetic qualifiers, numbers, and Greek letters within subject headings are disregarded in alphabetizing unless there are two or more headings that are otherwise identical, in which case the qualifier, numerical progression, or spelled names for the Greek letters determine the order.

Examples:

```
M-Capture
  see ELECTRON CAPTURE
MAGNESIUM
MAGNESIUM ALLOYS AND SYSTEMS
MANGANESE FLUORIDES
MANGANESE FLUORIDES MnF2
MESONS
MESONS (π)
MESONS (ρ)
1-PENTANOL
2-PENTANOL
```

Modifying Phrases

The modifiers appearing under a subject heading are written specifically to show the relation between the item being indexed and the heading. The modifier therefore contains a maximum of useful information. Although the modifier begins with the word judged to be of greatest use to the greatest number of users, there is still need for the searcher to consider all modifiers under the heading(s) of interest.

Modifiers usually form meaningful phrases when combined with the subject heading. Some are intended to be read following the subject heading, e.g., the entry HYDROGEN—sorption by charcoal should be read "hydrogen sorption by charcoal." As a result of placing the important word first, however, many modifiers must be rearranged for smooth reading, e.g., FORMALDEHYDE—yields in radiolysis of ethyl ether, effects of deuterium on, should be read "effects of deuterium on formaldehyde yields in radiolysis of ethyl ether" and URANIUM—crystal structure of, effect of cooling rate on allotropic transformations in, should be read "effect of cooling rate on allotropic transformations in crystal structure of uranium."

Special characters are added to modifiers in the fields of physics and reactor technology; if the modifier does not establish the experimental or theoretical character of a reference, a symbol (E), (T), or (E/T) is placed immediately after the modifying phrase and before the abstract number.

Physical States and Configurations of Materials

The specific physical state, if other than normal, or the geometric configuration of the material is included in the modifying phrase; e.g., information on liquid metals is indexed under the specific metal with "liquid" in the modifier and carbon crucibles is indexed under CARBON with "crucibles" appropriately placed in the modifier. The information on carbon crucibles is also indexed under CRUCIBLES.

Nomenclature of Inorganic Compounds

Inorganic compounds are indexed to subject headings in the direct form. Cations are listed in the order of increasing valence for polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., SODIUM ALUMINUM SILICATES and POTASSIUM SODIUM SULFATES. If more than one anionic species is presented in a compound, the anions are arranged alphabetically, e.g., BERYLLIUM FLUORIDE HYDROXIDES.

Nomenclature of Organic Compounds

Organic compounds are indexed by subject headings based on the indexes to *Chemical Abstracts* except in the area of enzymes, in which specific enzymes, named according to the 1964 recommendations of the International Union of Biochemistry, are used. In many cases nonproprietary names for drugs are used as subject headings, and cross references are made from the systematic chemical names. Subject headings for hormones appear in the inverted style at HORMONES.

Nomenclature of Life Sciences

Subject headings for plants are names of phyla with one exception: members of the Phylum Tracheophyta are indexed under class or subclass names. Scientific names (genus and species) are used as the initial, or file, word in the modifying phrase. Scientific names are omitted only when the name is not available in the literature or cannot be found in available references.

Subject headings for animals are the names of phyla with the following exceptions: (1) members of Phylum Arthropoda and Phylum Chordata are indexed under appropriate class name, and (2) common names are used for members of Class Mammalia.

Subject headings are entered for various classes of commodities, and specific products are identified in the file-word position of the modifier. In the following examples, approved subject headings are capitalized and typical modifier file words are listed in lower case.

Example 1	Example 2
CEREALS	MEATS
bread	beef
flour	fish
oats	mutton
rice	pork
rye	poultry
wheat	seafood

Diseases, pathological conditions, and in vitro studies of atypical cells and tissues are indexed under subject headings for the organism affected, under the appropriate anatomical structure of physiological phenomenon affected, and under the appropriate disease heading. Subject headings for diseases (defined as any deviation from the norm) are DISEASES; DISEASES, INFECTIOUS; DISEASES, NEOPLASTIC; DISEASES, PHYSIOLOGICAL; DISEASES, PLANT; and DISEASES, TRAUMATIC.

Diseases of mixed etiology are treated in the following manner: neoplastic diseases that are also classified as infectious or physiological are indexed under DISEASES, NEOPLASTIC; diseases in which a microorganism is the etiologic agent are classified under DISEASES, INFECTIOUS; physiological anomalies that are neither neoplastic nor infectious are indexed under DISEASES, PHYSIOLOGICAL; the acute radiation syndrome, nonspecific radiation injuries, trauma, and wounds or incisions inflicted mechanically are indexed under DISEASES, TRAUMATIC.

Specific diseases or pathological conditions are named in the file-word position of the modifier, in the author's terminology, and are set off from the remainder of the modifier by commas. Neoplasms are designated as benign or malignant in the file-word position when more specific information is not available.

Multicomponent Alloys and Other Systems

Multicomponent alloys and systems, except well-known trade names, are indexed under a subject heading for each component in the form "element systems" for nonmetals or "element alloys and systems" for metals. The modifier begins with element symbols for each component arranged alphabetically. In addition, if significance is placed on the base metal of the alloy, this is indicated by adding "-base" to the element symbol.

Example: A 1.5C, 12Cr, 0.25V, 0.8Mo, bal Fe alloy is indexed as

```
CARBON SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
CHROMIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V,...
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
MOLYBDENUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
VANADIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
```

Well-known alloys, such as ZIRCALOY-2, are indexed under the trade name; cross references from each component of the alloy to the trade name appear in cumulative indexes.

Multicomponent systems in which nonmetallic elements are present in large percentage and which are commonly referred to as systems or mixtures are indexed in a manner similar to alloys.

Example: A tungsten–silicon preparation is indexed as

```
TUNGSTEN ALLOYS AND SYSTEMS
  Si--W, ...
SILICON SYSTEMS
  Si--W, ...
```

Multicompound systems and mixtures of inorganic compounds are indexed under the subject heading for each component compound; the modifiers begin with an alphabetical listing of compound formulas.

Example: A lead titanate–lead zirconate mixture is indexed as

LEAD TITANATES
  $PbTiO_3$ --$PbZrO_3$
LEAD ZIRCONATES
  $PbTiO_3$ --$PbZrO_3$

A mixed system of compounds and elements is indexed by a combined form of the preceding conventions; e.g., a dispersion of copper and alumina would be indexed as

ALUMINUM OXIDES
Al_2O_3--Cu, ...
COPPER ALLOYS AND SYSTEMS
Al_2O_3--Cu, ...

Mixtures of organic compounds are indexed under subject headings for each component of the mixture; the modifiers begin with an alphabetical listing of compound names.

Example:

ACETIC ACID
acetic acid--BF_3, ...
BORON FLUORIDES
acetic acid--BF_3, ...

Example:

BENZENE, CHLORO-
bromophenol--chlorobenzene, ...
PHENOL, BROMO-
bromophenol--chlorobenzene, ...

If modifiers for alloys and systems are included with other modifiers under the same subject heading, they are filed last.

Example:

CARBON SYSTEMS
deposition on nuclear fuel
particles
molecular structure of
neutron total cross section for
sorptive properties for xenon
Young's modulus for
Al--C--Cr, superconductivity in
B--C, phase studies for
C--U--Zr, fabrication and
physical properties of

Nomenclature of High Energy Physics

Information on particle-particle events is indexed under subject headings for the specific particles involved. The modifier file word *interactions* is followed by the specific interaction written in symbolic form. Particle nomenclature and symbols follow that of Rosenfeld, et al. *Data on Particles and Resonant States,* UCRL-8030 (latest revision). For consistency the incident particle is always written first. The mass (in MeV) of a resonance state is included in parentheses after the symbol to avoid ambiguity. Hyperfragments are indicated in modifiers as in the following examples: Λ-He^5, Σ-H^3, $\Lambda\Lambda$-Be^{10}. The superscript on the right indicates the total number of baryons in the composite system.

Examples:

MESONS (π^-)
interactions $\pi^- + p \rightarrow \Lambda + K^+ + \pi^-$ at 6 GeV/c in
hydrogen bubble chamber, ΛK(1700) enhancement
in, (E)
BARYONS, RESONANCE (N*)
production of Δ^{++}(1236) and Δ^0(1236) from $K^- +$
$p \rightarrow K^- + p + \pi^+ + \pi^-$ interactions at 2.63 and
2.70 GeV/c, (E)
HYPERFRAGMENTS
binding energy of $\Lambda\Lambda$-He^6, three-body α--Λ--Λ
model for

Subject headings are also provided for specific models and theories.

Examples:

ELEMENTARY PARTICLE MODELS (TRIPLET)
hadron total cross sections in quark, numerical
analysis of
CURRENT ALGEBRA
PCAC hypothesis for A_1 and rho dominance in $\pi \rightarrow$
$e + \nu + \gamma$ decay
REGGE POLE THEORY
predictions for polarization in $K^- + p \rightarrow$ anti
$K^0 + n$, $\pi^- + p \rightarrow \pi^0 + n$, and $\pi^- + p \rightarrow$ eta $+ n$
interactions at high energies
SYMMETRY GROUPS
SU(2) × SU(4) intermediate-coupling model for
nucleon and hyperon isobars

Nomenclature of Reactor Technology

Subject headings for reactors are of three types:

(1) Specific reactors, e.g., ARGONNE RESEARCH REACTOR, SAXTON POWER REACTOR

(2) Reactors having a common physics or engineering characteristic, e.g., REACTORS, FAST; REACTORS, ORGANIC-COOLED; REACTORS, PRESSURIZED-WATER

(3) Reactors having a common purpose, e.g., REACTORS, POWER; REACTORS, RESEARCH

Information on specific reactors, type (1), is indexed under the one specific subject heading. Information on classes or types of reactors, types (2) (characteristics) and (3) (purpose), is indexed under all applicable headings. For example, information on a heavy-water-moderated organic-cooled power reactor is indexed under REACTORS, HEAVY WATER-MODERATED; REACTORS, ORGANIC-COOLED; and REACTORS, POWER.

Subject headings exist for selected reactor components, e.g., REACTOR FUEL ELEMENTS. When applicable, headings for components are indexed even though they may have been included in a modifier under a type (1) or (2) heading. The materials in reactor components are indexed when the information is peculiar to the material.

Modifier file words under reactor headings are of two primary types: one type expresses reactor characteristics, e.g., reactivity; the other, components, e.g., control rod. If no subject heading appears for a reactor component, the heading REACTORS is used, and the component is used as the modifier file word.

  - radiation monitoring during January through June 1971, 25:57996(R) (DPSPU-71-30-16)
  - radioactivity monitoring during 1969, 25:57985
- AIR
  - flow through concentric circular ducts separated by porous pipe, (E/T), 25:57645
  - heating by stabilized electric arcs at high pressure, characteristics of, (T), 25:59059
  - particles in French uranium mine, concentration and size of, (E), 25:57564
  - photon reactions with, scintillation induced by, 25:59119
  - air--H_2O, flow in vertical channels, gamma attenuation method for measuring void fraction in, 25:57648
- AIR LOCKS
  - door pairs for reactor containment structure, coupled fastening mechanism for, 25:60257(P)
- AIR SAMPLERS
  - design for monitoring plutonium-239 in laboratories, 25:57998 (NIRS-Pu-8)
- AIRCRAFT
  - radiation dose to man during travel on high-altitude supersonic, ionizing, 25:58138
- AIRGLOW
  - morphology of 6300-A, associated with nighttime F-region molecular ion density, (E/T), 25:58884
  - spectral emission in night, spectrophotometric data from Jan.-Mar., 1968 and Nov.-Dec., 1969, (E), 25:58883
  - spectral emission variations of (4-1) and (5-2) hydroxyl bands in night, Calgary data of seasonal and diurnal, (E), 25:58902
- ALANINE AMINOTRANSFERASE
  - radiation effects on activity in mitochondria of brain, liver, and heart of adrenalectomized rats, x, 25:57933
- ALARM SYSTEMS
  - design for accidental nuclear excursions, 25:57780
  - design of radiometric fire detection system, 25:57873(P)
- ALASKA
  - seismic activity of Amchitka Island region of, effects of Milrow Event on, 25:57597
- ALKALI METAL HALIDES
  - radiolysis of crystals of, role of external surface in, 25:57464
  - vacancies in, formation energies for individual, 25:60281 (ORO-3344-4)
- ALKALI METALS
  - electron reactions with, excitation and ionization in, (E), 25:58741
- ALKANES
  - beta-particle reactions with, mean energy loss per ion pair formed in, (E), 25:59122
  - surface tension of mixed, effects of composition on, 25:58387(R) (ANL-7823)
- ALKENES
  - radioinduced luminescence in alkane glasses, γ, 25:57463
- ALLENE
  - yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
- ALLOYS
  - analysis for cerium following chromatographic separation from interfering metals, photometric, 25:57338
  - physicochemical properties of solid, effects of ionic heating during diffusion welding on surface, 25:58233
  - radioinduced void formation in, conference on, 25:58304
  - radioinduced void formation in, review of fast neutron, 25:58305
- ALPHA PARTICLES
  - absorption by materials used in nuclear measurements, material assay by, 25:59640 (CONF-711002-, pp 272-82)
  - detection and discrimination from recoil protons in nuclear emulsions, processing method for, 25:57731
  - effects on electric conductivity of aluminum foils, analysis of recovery stages from, 25:59158
  - effects on ESR and optical transmission spectra of α-silicon carbide monocrystals, 25:59154
  - effects on germanium monocrystals in magnetic field, electric potential induced in, 25:59143
  - effects on rhenium at 5°K, annealing of, 25:59142
  - effects on stress rupture of Types 304 and 316 stainless steel, 25:58163(R) (AI-AEC-12859)
  - effects on tensile properties of IN-102 and Inconel 625, 25:58163(R) (AI-AEC-12859)
  - effects on tensile properties of vanadium-base alloys, 25:58163(R) (AI-AEC-12859)
  - emission from mixed plutonium isotopes, proportional counter measurement of, 25:57998 (NIRS-Pu-8)
  - reactions (α,n) in plutonium carbide and plutonium dioxide, Hauser-Feshbach calculation of neutron spectra from, 25:59708 (BNWL-B-109)
  - reactions (α,n) with carbon-13 and oxygen-17 and -18 at 1 to 5.5 MeV, excitation functions and Hauser--Feshbach

calculations of spectra from, (T), 25:59708 (BNWL-B-109)
reactions (α,p) with magnesium-24, p-γ angular correlations from, (E), 25:59761
reactions with carbon at 880 MeV, cross sections for production of beryllium-9 and -10 in, (E), 25:59733
reactions with light nuclei at low energies, cross sections and polarization effects in nucleon transfer, (T), 25:59831 (IFA-CRD-41)
scattering by lead-207 at 18 MeV with Coulomb excitation, gamma spectra from inelastic, (E), 25:59804
scattering by natural lead at 15 MeV with Coulomb excitation, gamma spectra from inelastic, (E), 25:59804
scattering by samarium-152 and -154 at 10 to 12 MeV with Coulomb excitation, cross sections for inelastic, (E), 25:59823
scattering by spinless nuclei, Regge-pole and partial-wave analysis of glory scattering in backward elastic, (T), 25:59846

ALPHA SOURCES
determination in biological materials, alpha spectra unfolding method for, 25:57362
determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
separation from radioactive sewage by coagulation with ferric hydroxide, 25:57556

ALPHA SPECTROMETERS
data unfolding method for ionization, for determination of alpha sources in biological materials, 25:57362
fabrication and testing of indium antimonide and lead oxide, 25:57807
performance of surface-barrier silicon, 25:57794 (INS-TCH-5)

ALUMINUM
activity in aluminum--titanium alloys, effects of hydrogenation on, 25:58220
bonding to lead telluride, methods for solid-state, 25:58207
bonding to stainless steel, method for diffusion, 25:58207
bonding to uranium fuel tubes, method for diffusion, 25:58207
determination by extraction using quinolinol melt and spectrography, 25:57312
determination in JRR-1 coolant water, 25:57320
determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
effects on complexonometric determination of rare earths, 25:57317
effects on periodic precipitation in silver--cadmium alloys, 25:58262
effects on thermostability of irradiated polyethylene, 25:57446
electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
etching of, mechanism studies on, 25:58244
heat transfer to contacting aluminum surfaces, temperature wave method for measurement of, 25:57644
heat transfer to contacting iron surfaces, temperature wave method for measurement of, 25:57644
helium-ion reactions at 45 to 90 keV/amu with, helium-isotope dependence of cross sections for K-shell ionization in, (E), 25:58776
mechanical properties of, effects of fatigue on, 25:58223
microstructure of, effects of fatigue on, 25:58223
photon reactions at 560 MeV, emulsion study of dependence on atomic weight for yields of π^+ and π^- from, (E), 25:59248
photon reactions with, secondary electron emission from, (E/T), 25:59107
proton stopping power at 20 to 1000 keV of, electronic, (T), 25:59124
radiation effects on anelastic properties of, effects of cold-working and annealing on neutron, 25:58338
radiation effects on electric conductivity of analysis of recovery stages from alpha-particle, 25:59158
radiation effects on void distribution in, relations of dislocations and impurities with neutron, 25:58298 (ORNL-TM-3493)
radiation effects on, relations of chromium, copper, and vanadium contents on recovery from fast neutron, 25:58303
radioinduced failures of tubing of, in ORNL 86-inch cyclotron, 25:59643 (ORNL-TM-3523)
radioinduced point defects in, effects of annealing on Stage I recovery from electron, 25:58341
radioinduced void formation in high-purity, effects of fluence and flux on fast neutron, 25:58311
radioinduced void formation in, fast neutron, 25:58310
spin-state mixing in superconducting, 25:58943
void formation in, by deformation, 25:58319
welding to steel, deposition of intermediate layers for, 25:58204

ALUMINUM ALLOYS AND SYSTEMS
Al--H, neutron diffusion constants for, (T), 25:59687
preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
Ag--Al--In, phase studies at 143 to 506°C, isothermal, 25:58287
Al--B, fracture in continuous monolayer and bilayer composites of, microradiographic studies of, 25:58400
Al--BN, preparation of metal--matrix composites of, methods for, 25:58363
Al--C, preparation of metal-matrix composites of, methods for, 25:58363
Al--Co--Cu--Fe-base--Ni, properties and structure of, effects of neodymium additions on, 25:58250
Al--Cr--Mo--W, development of cast, for turbine blades, 25:58203
Al--Cr--Ni-base--Ti, radiation effects on mechanical properties of, relations of temperature with neutron, 25:58295 (FRNC-TH-64)
Al--Cu, creep strength of, effects of zirconium additions on, 25:58239
Al--Cu, welding to steel, deposition of intermediate layers for, 25:58204
Al--Cu-base, oxidation at high temperatures, mechanisms of, 25:58171
Al--Cu-base--Si, oxidation at high temperatures, mechanisms of, 25:58171
Al--Ge--Nb, properties of superconducting, 25:58948
Al--Mn, structure of drops of, formed at high cooling rates, 25:58284
Al--Mo, structure of drops of, formed at high cooling rates, 25:58284
Al--Nb--Ni, preparation of fiber-strengthened composites of, method for, 25:58363
Al--Ni, void formation in intermetallic NiAl single crystals, relations with microstructure, 25:58318
Al--Ni-base, stability of intermetallic compounds and solid solutions in, thermal, 25:58224
Al--SiC, properties of carbide whisker reinforced composites of, 25:58361
Al--Sn--Ti-base--V, heat treatment of, using molten glass, 25:58199
Al--Ti, aluminum activity in, effects of hydrogenation on, 25:58220
Al--Ti-base--V, bonding of, method for diffusion, 25:58207
Al--Ti-base--V, drawing of, testing of lubricants for deep, 25:58195
Al--Ti-base--V, extrusion of thin-walled tubes of, development of method for, 25:58199
Al--Ti-base--V, rolling of sheets of, development of method for, 25:58199
Al--U-235, criticality parameters of hollow cylinders in water, (E/T), 25:60212
Al--W, structure of drops of, formed at high cooling rates, 25:58284

ALUMINUM ISOTOPES Al-27
deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
energy level at 0.84 MeV from magnesium-24 $(\alpha,p\gamma)$ reactions, lifetime for, (E), 25:59751
energy levels from carbon-12 (O-16,p) and magnesium-24 (α,p) reactions, high-spin, (E), 25:59761
energy levels from carbon-12 (O-16,p) reactions, high-spin, (E), 25:59714
neutrino scattering by, weak nucleon processes for impulse approximation for quasielastic forward, (T), 25:59397
neutron elastic and inelastic scattering at 7.96 and 9.05 MeV, cross sections for, (E/T), 25:59770
proton reactions (p,γ) near 1 MeV, precise γ-ray energies and Q-value for, (E), 25:59762
proton reactions at 6 to 52 MeV, cross sections for aluminum-26 and sodium-22 formation in, (E), 25:59753

ALUMINUM NITRIDES
effects on radioinduced polymerization of benzene or toluene, 25:57456
AlN--BN, thermal conductivity of sintered compacts of, at 1000 to 1600°C, 25:58385

ALUMINUM OXIDES
effects of doping agent of, on fission product retention by uranium oxide fuel particles, 25:58347 (JUL-730-RW)
electrolysis of, determination of current efficiency by neutron activation and silver-110 tracers, 25:58360
fatigue properties of, calculations from model of Griffith cracks, 25:58209 (AECL-3992)
preparation of spheroidized powders of, using plasma heating, 25:58187(T) (SCL-T-710281)
Al_2O_3--$AlPO_4$, performance as protective coatings on metals exposed to high-temperature flowing gases, 25:58375
Al_2O_3--CoO, preparation for high-temperature neutron dosimetry, 25:57723 (CONF-711002-, pp 82-5)
Al_2O_3--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)

ALUMINUM PHOSPHATES
Al_2O_3--$AlPO_4$, performance as protective coatings on metals exposed to high-temperature flowing gases, 25:58375
$AlPO_4$--ZrO_2, performance as protective coatings on metals exposed to high-temperature flowing gases, 25:58375

AMERICIUM
oxidation potential for trivalent--tetravalent, 25:57437
preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)

XUM

  preparation of thin films of, by electrophoresis and electrospraying, 25:58183 (CONF-711002-, pp 160-5)
  separation from curium by electromigration, 25:57520 (JINR-E6-5952)
  separation from curium by ion exchange chromatography on zirconium phosphate, 25:57551
  separation from other actinides by paper or thin-layer chromatography, 25:57553
  spectra of hexavalent, in dilute sodium carbonate solutions, absorption, 25:57403
AMERICIUM ISOTOPES
  cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)
AMERICIUM ISOTOPES Am-241
  decay scheme, 25:57998 (NIRS-Pu-8)
  determination in biological materials, alpha spectra unfolding method for, 25:57362
AMERICIUM ISOTOPES Am-243
  production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)
AMERICIUM OXIDES
  preparation of thin-film radiation sources of, by radiofrequency sputtering, 25:57651 (CONF-711002-, pp 147-59)
  AmO$_2$--Cu, preparation of thin-film radiation sources of, radiofrequency sputtering method for, 25:57651 (CONF-711002-, pp 147-59)
  AmO$_2$--Cu, sputtering of cermets of, for preparation of thin-film americium oxide radiation sources, 25:57651 (CONF-711002-, pp 147-59)
AMERICIUM SULFATES
  complexes with cobalthexaammine ion, preparation and structure of, 25:57403
AMIDE POLYMERS
  reactions of nylon, with fluorine, 25:57619 (RFP-1739)
AMIDES
  radioinduced polymerization of, at low doses, 25:57451(P)
AMINO ACIDS
  formation in early solar system by catalytic synthesis, (E/T), 25:58576
  formation in early solar system by catalytic synthesis, (E/T), 25:58575
AMINOPTERIN
  effects on yeast cells, correlation of x radiosensitivity with, 25:57927
AMMETERS
  development of automatic-ranging pico-, for reactor control and protection, 25:57899
AMMONIA
  analysis of analytical grade, for impurities by neutron activation, 25:57379
  preparation of, radiation effects on catalytic activity of iron in, 25:57444
  radiolysis of solid layers of undeuterated and deuterated, ESR study of electron, 25:57470
  spectra in 0.5-mm wavelength region, effects of deuterium and nitrogen-15 on rotational, 25:57424
AMMONIUM BROMIDES
  hexane--NH$_4$Br, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
AMMONIUM COMPOUNDS, SUBSTITUTED
  ammonium dioxovanadium(V) bisoxalate dihydrate, radiation effects on single crystals of, ESR studies on vanadyl ions produced by uv or x, 25:57449
  tetrakis(decyl)ammonium chloride, complexes with uranyl chloride, reactions with titanium chloride for reduction of uranyl ion, 25:57415
AMMONIUM RHENATES
  proton bombardment of, production of radioactive rhenium isotopes by, 25:57480 (JINR-P6-5955)
AMMONIUM URANYL NITRATES
  symmetry types of uniaxial and biaxial crystals of, 25:58703
AMPHIBIA
  Ambystoma tigrinum, radiation effects on ultrastructure of liver cells of, x, 25:58112
  Pleurodeles waltii, radiation effects on DNA and RNA synthesis in embryos of, effects of dose on x, 25:57944
  Triturus viridescens, radiation effects on participation of cells in limb regeneration, 25:58103
AMPLIFIERS
  circuits for satellite-borne low-power charge-sensitive FET, for proton spectrometry, 25:57821
  design and performance of charge-sensitive, for space applications of silicon detectors, 25:57792
  design for segmented ionization chamber, 25:57757(P)
  testing of charge-sensitive, circuits for programmable solid-state pulser for, 25:57896
ANGIOSPERMIDAE
  Astragalus sp., phosphorus-32 uptake by leaves and roots of, 25:57950
  Avena sativa, phosphorus-32 uptake by leaves and roots of, 25:57950
  Crepis capillaris, radioinduced chromosome aberrations in seed of, effects of time of onset of mitosis on frequency of fast neutron, γ, and x, 25:57968
  Fagopyrum sp., phosphorus-32 uptake by pure and mixed stands of, effects of season on, 25:57949
  Helianthus annuus, radiosensitivity of varieties of, seed exposure gamma, 25:58148
  Hordeum sp., radioinduced chlorophyll mutations in, protective effects of cysteine, thiourea, and urea against x, 25:57974
  Hordeum sp., radiosensitivity of chromosomes in seed of, grown at high altitudes, effects of uv-deficient light conditions on γ, 25:57969
  Lupinus sp., phosphorus-32 uptake by pure and mixed stands of, effects of season on, 25:57949
  Lupinus sp., radiation effects on germination and survival of pure and hybrid forms of, x, 25:58149
  Nicotiana xanthi, radiation effects on frequency of somatic recombinations in chlorophyll mutants of, γ, 25:57977
  Pisum sativum, radioinduced mutations in, following seed exposure, comparison of neutron and x, 25:57960
  Pisum sp., radiation effects on metabolism of amino acids and sugars in, gamma, 25:57931
  Pisum sp., radiation effects on phosphorus metabolism in, γ, 25:57941
  Quercus alba, radiation effects on density of leaf miners on shoots of, effects of dose on γ, 25:58092
  Quercus rubrum, radiation effects on microfungal populations in litter of, effects of dose on γ, 25:58150
  Triticum sp., radiation effects on female gametes and survival of, dose dependence of x, 25:58152
  Triticum sp., radiation effects on metabolism of amino acids and sugars in, gamma, 25:57931
  Triticum sp., radiation effects on phosphorus metabolism in, γ, 25:57941
  Zea sp., radiation effects on grain yield and uptake of nitrogen and phosphorus from fertilizers and soil by, γ, 25:58154
ANILINE
  vibration spectra of, pulsed neutron-scattering of, 25:58384
ANIMALS
  book: Protection of Animals Against Injury by Nuclear Weapons, 25:58026
  radiation effects on circulatory system of laboratory, pathology of, 25:58122
  tritium oxide toxic effects on species of, comparison of, 25:57916
  uranium distribution between skeletons of marine, and seawater, 25:57409
ANISOLE
  effects on γ-radioinduced polymerization of styrene in carbon tetrachloride or hexachlorobutadiene solutions, 25:57454
ANTHRACENE
  effects on γ-radioinduced polymerization of styrene in carbon tetrachloride or hexachlorobutadiene solutions, 25:57454
ANTIBIOTICS
  effects of hygromycin B, on frequency of x-radioinduced mutations in spores of Actinomyces hygroscopicus, 25:57964
ANTIBODIES
  detection of antinuclear, in mice, 25:60285 (RLO-2226-T-3-8)
  radioimmunoassay of virus, in blood serum, 25:57912
ANTIMONY
  analysis for oxygen by 14-MeV neutron activation and γ spectrometry, 25:57376
  neutron capture at 400 keV by natural, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
ANTIMONY ALLOYS AND SYSTEMS
  Ga--Sb, radiation damage in GaSb, review of, 25:59138
  In--Sb, radiation damage in InSb, review of, 25:59138
ANTIMONY IONS
  implantation in silicon carbide at 40 keV, 25:59171
  ranges and stragglings in silicon at 20 to 400 keV, calculations of, 25:59116
ANTINEOPLASTIC DRUGS
  effects on normal tissues in man during supervoltage radiotherapy, 25:58077
ARGININE
  radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931
ARGON
  argon-ion reactions with, energy spectra of electrons from, (T), 25:58733
  beta-particle reactions with, mean energy loss per ion pair formed in, (E), 25:59122
  electric discharges in alkali-metal-seeded, properties of high-current, 25:59023
  electron inelastic scattering at 10 keV, multiple ionization from, (E), 25:58754
  hydrogen-atom reactions with, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
  ionization in lunar atmosphere and associated properties, 25:58679
  oxygen-ion (O$^+$) reactions at 10 to 170 eV with, effects of excited states on charge exchange in, (E), 25:58763
  plasma jets of, electron density and temperature measurement using lasers, (E/T), 25:58987
  plasma jets of, interferometric determination of temperature in, (E), 25:58984

  plasma jets of, spectroscopic diagnostics of, 25:58991
  plasma of, in pseudo equilibrium with additions, interactions of, 25:59018
  positron annihilation in, time dependence of, (E), 25:58725
  proton reactions with, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
  reactions between atoms of, at 57 to 240 eV, energy spectra of ionization products from, (E), 25:58764
  solubility in sodium, 25:58387(R) (ANL-7823)
ARGON IONS
  effects on benzene vapor at 60 keV, yields from, 25:57469
  effects on germanium monocrystals at 10 to 30 keV, electron emission induced by, 25:59175
  effects on incidence of single- and double-strand breaks in phi X-174 replicative form of DNA, effects of LET on, 25:57952 (LBL-28)
  reactions with argon, energy spectra of electrons from, (T), 25:58733
  reactions with germanium crystals at 10 to 30 keV, angular dependence of, (E/T), 25:59146
ARGON ISOTOPES Ar-36
  energy levels of, calculation for α-hole, 25:59757
  production in stars from simple helium burning, (E), 25:58508
ARGON ISOTOPES Ar-40
  energy level at 2.13 MeV, lifetime for, (E), 25:59771
ARGON SYSTEMS
  Ar--H_2O, radiolysis of, charge exchange and transition reactions of hydrogen from electron, 25:57460
ARKANSAS
  fallout monitoring at Fayetteville, May 1966 to Jan. 1969, 25:57578
ARKANSAS NUCLEAR ONE POWER REACTOR, UNIT 2
  design parameters of, raised and additional data on, 25:59994 (DOCKET-50368-17)
  operations aspects of, revised and additional data on, 25:59994 (DOCKET-50368-17)
ARMY REACTORS (MH-1)
  physics calculations for MH-1A Core 2 and Core 3, 25:60203 (AD-721019)
ARMY REACTORS (PM-3)
  maintenance during 1970, 25:60206
  operation during 1970, 25:60206
ARSENIC
  determination in analytical reagents by neutron activation, 25:57379
  radioinduced production in germanium, effects on infrared absorption, 25:58343
  reactions with chromium and plutonium, 25:57413
ARSENIC IONS
  ranges and stragglings in silicon at 20 to 400 keV, calculations of, 25:59116
ARSENIC ISOTOPES AS-68
  beta and electron-capture decay of, branching ratios, gamma spectra, half-life, and log-ft value for, (E), 25:59747
ARSENIC ISOTOPES As-76
  beta decay of, gamma spectra, half-life, Kurie plots, and log-ft and Q values for, (E), 25:59748
ARSENIC ISOTOPES As-80
  beta decay of, branching ratios, gamma spectra, half-life, and log-ft values for, (E), 25:59749
ARSENIC SYSTEMS
  As--Ge--Te, radiation effects on crystal structure of glass-forming chalcogenide of, fast neutron, 25:58419
ASBESTOS
  reactions with fluorine, 25:57619 (RFP-1739)
ASPARTATE AMINOTRANSFERASE
  radiation effects on activity in mitochondria of brain, liver, and heart of adrenalectomized rats, x, 25:57933
ASTEROIDS
  capture by Jupiter, Deser--Laurent theory of gravitation for mechanism for, (T), 25:59585
ASTRONAUTS
  radiation dose to USSR Soyuz-9, preflight calculations of, 25:58006
  radiation hazards to, during prolonged duty on space stations, effects of shielding during solar flares on, 25:58025(T) (ORNL-tr-2490)
ASTRONOMY
  research projects conducted by Centre National d'Etudes Spatiales, Paris, 25:58444
ASTROPHYSICS
  conference on statistical thermodynamics in, Cardiff, Wales, 4/70, 25:58670
ATLANTIC OCEAN
  strontium-89 and strontium-90 deposition in, during 1970, 25:57981(R) (HASL-245(App.))
ATMOSPHERE
  book: Studies of Atmosphere and Ionosphere at Times of Unusual Solar Activity, (E), 25:58893
  cesium-137 content of Japanese, 1963 to 1971, 25:57579
  fallout monitoring during 1970, 25:57980(R) (HASL-245)
  fallout monitoring in Swedish, following 10th Chinese nuclear explosion, 25:57580
  fallout monitoring of Fayetteville, Arkansas, May 1966 to Jan. 1969, 25:57578
  fallout monitoring of Swedish, following Dec. 27, 1968 Chinese nuclear explosion, 25:57577
  particle penetration in, two-, three-, and four-group parallel, (E/T), 25:58828
  particle ratios at altitudes of 800 gm/cm^2 in, pion-to-proton and neutral-to-charged, (E), 25:58834
  pressure measurements in, for estimating nuclear explosion energy yield, 25:57606
  radio-noise bursts at 3 MHz from lightning-flash radiation, pulse characteristics of, (E), 25:58876
  radioactivity monitoring in, conference on, Obninsk, July 30 to Aug. 2, 1968, 25:57576
  radioactivity of off-site, following Schooner Event, monitoring of, 25:57574 (PNE-524)
  radioactivity of surface, in Central, North, and South America during March 1971, gross β, 25:57992
  radioactivity of surface, of Central, North, and South America during April 1971, gross β, 25:57984
  radioactivity of the Netherlands, during 1967, gross α, β, γ, 25:57575 (RA-42)
  radioisotope content of, over Central, North, and South America during 1970, 25:57981(R) (HASL-245(App.))
  strontium-90 content of Japanese, 1963 to 1971, 25:57579
  trough development at solar-activity maximum and minimum, relation with geomagnetic storms, (E), 25:58860
  tungsten-187 content of off-site, following Schooner Event, (E), 25:57574 (PNE-524)
  x-radiation spectra and flux in deep, effects of atmospheric scattering and absorption on auroral, (E), 25:58868
ATMOSPHERE EXPOSURE CHAMBERS
  development for plutonium aerosol inhalation studies on rats, 25:57998 (NIRS-Pu-8)
ATMOSPHERIC PRECIPITATION
  fallout monitoring during 1970, 25:57980(R) (HASL-245)
  radioactivity in Central, North, and South America during April 1971, gross β, 25:57984
  radioactivity in Central, North, and South America during March 1971, gross β, 25:57992
ATOMIC BEAMS
  injection into high-temperature plasma, penetration of, (T), 25:59030
  production of highly excited, review of methods for, 25:58691
ATOMIC ENERGY COMMISSION (USA)
  nuclear power development by, role of contractors in, 25:60017
ATOMIC ENERGY, LEGAL ASPECTS
  book: World Use of Atomic Energy. Questions of International Law, in Russian, 25:60296
  legislation on use of accelerator-produced radioisotopes and radium in industry and medicine in USA, Federal and State, 25:58028 (BRH/DMRE-71-4)
ATOMIC MODELS
  Hartree--Fock F/sup k/ integrals for, comparison with experiment, 25:58797
  performance for photoionization cross sections, evaluation of, 25:58684
  statistical, based on local Coulomb approximation, 25:58815
ATOMIC PHYSICS
  book: Topics in Modern Physics: A Tribute to Edward U. Condon, 25:58682
ATOMIC STRUCTURE
  angular momentum operators in j--j coupling, eigenfunctions for, 25:58801
  conference on theory of, Gif-sur-Yvette, France, 7/70, 25:58783
  electron correlation in, ways of introduction of, 25:58793
  energy level configuration interactions in, effective operators for, 25:58798
  group theory for (d+s)/sup n/p/sup m/ configurations, SU_3, 25:58787
  group theory for many-electron, possibility of noncompact, 25:58788
  group theory for radial wave functions, O(2,1), 25:58786
  group theory for, second use of G_2, 25:58785
  Hamiltonian for many-electron atoms, relativistic, 25:58799
  Hamiltonian function for, spatial eigenfunctions of spin-independent many-electron, 25:58791
  many-body problem solutions for pseudo-atoms, 25:58796
  S functions and symmetry principles for, 25:58790
  symmetrics in, stability of self-consistent, 25:58792
  symmetry relations for, reflection, 25:58784
  theory of, variational potentials and Lagrangian multipliers in pseudopotential, 25:58814
  wave function representation and reduced matrix elements for, 25:58789
  wave functions for open-shell, relativistic, 25:58800
ATOMS
  electron correlation functions for nonclosed-shell many-electron, structure and symmetry properties of, 25:58806
  electron fractional occupational numbers and transition probabilities in, statistical exchange in calculation of, 25:58718
  electron interactions in, evaluation of one-center repulsion integrals for, 25:58808
  electron reactions with closed-shell, construction of model potentials for, 25:58772
  electron reactions with, approximate analytical

  expressions and scaling relations for excitation and ionization cross sections for, 25:58740
  electron reactions with, review of energy resolution in, 25:58747
  electron reactions with, review of threshold laws for excitation and ionization in, 25:58745
  electron reactions with, semi-empirical formula for ionization cross sections for, 25:58738
  electron scattering at 10 to 100 keV by Z = 1 through 57 and 72 through 90, factors for, 25:58748
  electron scattering by, compound states in, (T), 25:58804
  electron screening in, correlation of constants for K-level, (T), 25:58817
  energy level transitions in, strong correlation between Cherenkov effect and properties of photon tachyons in disappearing Fresnel wave for dipole, (T), 25:59573
  energy level transitions of, probabilities for relativistic radiative bound--bound, 25:58816
  energy of free, containing one or two open shells, computer program for, 25:58709
  energy of ground-state two-electron, calculation using perturbation theory, 25:58818
  energy of many-electron, formula for relativistic, 25:58819
  energy-level transition probabilities and fractional occupation numbers in, statistical exchange in calculation of, 25:58718
  energy-level transitions of one- and two-electron, magnetic-dipole operator for calculation of, 25:58803
  hydrogen-atom reactions with, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
  interactions between excited and ground-state, frequency distribution of radiation emitted from, (T), 25:58807
  interactions between ground-state, linear-response theory including exchange for, 25:58809
  interactions in system of, many body theory for composite, 25:59232
  ion reactions in keV range with, effects of velocity and outer-shell configuration on production of K vacancies in, (E), 25:58756
  ion reactions with P-state, depolarization in, (T), 25:58746
  ion reactions with, energy spectra of electrons from, (T), 25:58733
  ion reactions with, merging-beams method for study of, 25:58744
  ion reactions with, review of charge exchange in, (E), 25:58743
  ionization in electric fields, review, 25:58691
  ionization of, many-body theory of auto-, 25:58802
  ionization potentials of, containing one to ten electrons, review of, 25:58715
  Lamb shift of, calculation for all atomic numbers, 25:58813
  photoionization cross sections for, atomic models for, 25:58684
  plasma oscillations in, existence and damping of, (T), 25:58820
  properties of highly excited, review, 25:58691
  properties of hydrogenic, use of factorization method and group theory in relativistic treatment of, 25:58821
  properties of, upper and lower bounds to expectation values for, (T), 25:58810
  proton reactions with, approximate analytical expressions and scaling relations for excitation and ionization cross sections for, 25:58740
  proton reactions with, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
  radiation emission from systems of N two-level, intensity of cooperative spontaneous, (T), 25:58812
  reactions between excited and ground-state, depolarization and excitation transfer in, (T), 25:58746
  reactions with diatomic molecules, adiabatic-approximation calculations of vibrational transition probabilities in, 25:58761
  reactions with diatomic molecules, reaction matrix method for calculation of transition probabilities in, 25:58762
  reactions with hot solid surfaces, harmonic-model analysis of, 25:58690
  reactions with molecules at thermal energies of highly excited, cross sections for ionization in, (T), 25:58750
  reactions with molecules with formation of long-lived complexes, angular distribution of products from, (T), 25:58773
  reactions with Morse oscillators, semiclassical treatment of collinear, 25:58727
  reactions with solid surfaces, review of Auger and resonance processes in, (E/T), 25:58692
  scattering at high energies, anomaly in differential cross sections for, (T), 25:58767
  spectra in magnetic fields, theory of quadratic Zeeman effect for, 25:58696
  spectra of, polynomial identity for vector operators for Lie algebra of SO(n) for quantum theory of, (T), 25:59538
  spectral hyperfine effects in, many-body theory for, 25:58794
  spin--orbit coupling in, Z dependence of, 25:58716
  theory of, with magnetic charges as models of hadrons, 25:59447
AURORAE
  electron energy spectra in, equipment for measuring, 25:57790
  mechanism of break-up of, relation to electric coupling between magnetosphere and ionosphere, (E/T), 25:58909
  occurrence of visual, relation to electrojet-current intensity in auroral boundaries, (E), 25:58857
  plasma instabilities in magnetospheric, review of, 25:58895
  proton energy spectra in, equipment for measuring, 25:57790
  pulsations of, correlation with cosmic radio-noise absorption, 1964--1968, (E/T), 25:58858
  spectral emission in, spectrophotometric data from Jan.-Mar., 1968 and Nov.-Dec., 1969, (E), 25:58883
  x-radiation penetration through atmosphere, effects of atmospheric scattering and absorption on, (E), 25:58868
AURORAL ZONE
  disturbances of, effects of unstable radiation zone on, (E/T), 25:58906
  particle precipitation patterns in high-latitude, energetic electron, proton, and helium-ion, 25:58896
  proton intensity in morning sector of, during slowly varying cosmic-noise absorption, (E), 25:58891
  pulsation time lag of cosmic-noise absorption in, behind simultaneous x-ray pulsations, luminosity, and micropulsations, (E/T), 25:58863
AUSTRALIA
  nuclear power development during July 1970 to June 1971, 25:60276(R) (NP-19036)
  nuclear power plant economics in, 25:59919
AUTORADIOGRAPHY
  method for high-speed measurement of alpha activity from polonium-210 or plutonium-239 on air filters, 25:57998 (NIRS-Pu-8)
  method for hot cell, of irradiated fast reactor fuel elements, 25:57693
  method for whole-body measurement of plutonium-239 distribution in mice and rats, 25:57998 (NIRS-Pu-8)
  performance for detection of carbon-14-labeled compounds, 25:57752
AVES
  Columba sp., radiation effects on chemical properties and ultrastructure of in vitro erythrocytes of, uv, 25:58113
  Gallus sp., immunization against Ascaridia using γ irradiated eggs, 25:57946
  Gallus sp., radioinduced formation of immunoglobulin-like proteins in bursectomized, x, 25:57934
1-AZIRIDINECARBOXAMIDE, N,N'-HEXAMETHYLENEBIS-
  effects on oogenesis and reproductive system of beet leafhoppers following exposure of adults and nymphs, 25:58093

B

BACTERIOPHAGES
  lambda, induction of prophage of, in Escherichia coli through conjugal transfer of uv-damaged F-prime sex factors, 25:57956
  N1, radiation effects on, protective effects of versene against γ and uv, 25:58032
  phi X 174, radiation effects on, protective effects of versene against γ and uv, 25:58032
  phi X 174, radioinduced mutations in, effects of oxygen, nitrogen, and thiourea on γ and x, 25:57971
  s/sub d/, radiation effects on, protective effects of versene against γ and uv, 25:58032
  T2, radiation effects on, protective effects of versene against γ and uv, 25:58032
BALANCES
  use in assay of materials used in nuclear measurements, 25:59640 (CONF-711002-, pp 272-82)
BARIUM
  content of foods in Kiev region of Soviet Union, 25:57987
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  electron reactions up to 1 keV with, total cross sections for ionization in, (E), 25:58777
  precipitation with bone mineral analog calcium hydroxylapatite by isomorphous cocrystallization, 25:57418
  separation from calcium by solvent extraction, 25:57304
  thermal emission properties on tantalum, 25:59177
BARIUM CERATES
  formation and phase behavior in barium oxide--cerium oxide system, 25:58405
BARIUM FLUORIDES
  performance and physical properties for charged-particle and gamma-ray detection, scintillation, 25:57817
BARIUM IONS
  spectra in solar granules, (E), 25:58594

XUM

BARIUM ISOTOPES Ba-133
- use as tracer to study losses from oxide coatings on lamp cathodes, 25:57660

BARIUM ISOTOPES Ba-137
- production of metastable, from cesium-137 generator using fixing agent, method for, 25:57484(P)

BARIUM ISOTOPES Ba-138
- electron scattering at 200 and 500 MeV, differential cross sections for, (E), 25:59793
- nuclear charge distribution from electron differential scattering cross sections at 200 and 500 MeV and least-squares analysis, (E/T), 25:59793

BARIUM ISOTOPES Ba-140
- determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
- distribution in skin tissues following cutaneous application, 25:57917

BARIUM OXIDES
- BaO--CeO$_2$, phase equilibria in, 25:58405

BARNWELL NUCLEAR FUEL PROCESSING PLANT
- construction of, evaluation of suspension of permit for, 25:57516 (DOCKET-50332-20)
- environmental studies for, 25:57516 (DOCKET-50332-20)

BARYONS
- decay baryons $\to$ baryons + π, current algebra sum rules in Glashow model for CP-violating amplitudes of, 25:59408
- form factors of, O(4,2) x SU(3) symmetry for electromagnetic, (T), 25:59548
- interactions in ultradense matter, (T), 25:58432
- interactions with antibaryons in quark model, failure of duality in, 25:59467
- interactions with baryons and mesons in nonchiral U(6) x U(6), duality diagrams and representation mixing for, 25:59549
- interactions with mesons and baryons at high energies, relation of coherent state method with quark models for, (T), 25:59448 (JINR-E2-6025)
- interactions with mesons, consistency conditions between SU(3) and exchange degeneracy in, 25:59493
- interactions with mesons, polarization predictions from double-Regge-pole exchange for, 25:59503
- interactions with pseudoscalar mesons, spin amplitudes for pseudoscalar meson and 1/2$^+$ baryon production in, (T), 25:59471 (CEA-N-1456)
- mass differences of octet, Nambu--Goldstone chiral symmetry breaking for electromagnetic, (T), 25:59541
- mass of, O(4,2) x SU(3) symmetry for, (T), 25:59548
- mass shifts of octet, linear SU(3) sigma model for correlation between eta $\to 3\pi$ decay, K mass shift, and $\Delta I = 1$, 25:59380

BARYONS (ANTIPARTICLES)
- interactions with baryons in quark model, failure of duality in, 25:59467

BARYONS, RESONANCE
- decay rates of, SU(3) predictions for, 25:59491
- existence of ($\Delta\Delta N$) $A > 4$, probability for, 25:59521
- production of $S_{11}(1525)$ in $\pi + N$ interactions, dispersion theoretic model for, 25:59486
- theory for, Regge trajectory with finite asymptotic phase in, (T), 25:59451

BARYONS, RESONANCE (N*)
- decay of N*(1500), spin--parity analysis from, 25:59307
- decay of N*(1700), spin--parity analysis from, 25:59307
- effects of $\Delta(1236)$ - $\Delta(1236)$ admixtures on deuteron form factors for $e + d \to e + d$ interactions, (T), 25:59367
- existence and properties of quasinuclear 2NantiN(2090), 2NantiN(2540), 2NantiN(2740), 2NantiN(2800), potential approach for, (T), 25:59500
- mass and width of Δ^{++} in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- mass and width of $\Delta^{--}(1236)$, $\Delta^{++}(1236)$, $N\pi\pi(1460)$, and $N\pi\pi(1712)$ in anti $p + p \to$ anti $p + p + \pi^+ + \pi^-$ interactions at 7 GeV/c, (E), 25:59267
- production in $e + N$ interactions and lepton interactions with nucleons, relativistic model for inelastic form factors, widths, and locations for, (T), 25:59337
- production of Δ^{++} in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- production of $\Delta^{--}(1236)$, $\Delta^{++}(1236)$, $N\pi\pi(1460)$, and $N\pi\pi(1712)$ in anti $p + p \to$ anti $p + p + \pi^+ + \pi^-$ interactions at 7 GeV/c, (E), 25:59267
- production of N*(1500) and N*(1700) in $\pi^+ + d \to$ p/sub s/ $+ p + \pi^+ + \pi^- + \pi^0$ at 7.0 GeV/c, diffraction dissociation mechanism for, 25:59307
- production of N*(1500) and N*(1700) in $\pi^- + p \to \pi^- + \pi^- + \pi^+ + p$ interactions at 7 and 25 GeV/c, diffraction dissociation mechanism for, 25:59307
- production of N*(1700) in $\pi + N \to \pi + \Lambda + K$ interactions at 7 GeV/c, 25:59307
- production of $n\pi^+\pi^-(1450)$ and $p\pi^+\pi^-(1450)$ enhancements in $K^- + d \to K^- + \pi^+ + \pi^- + n + p$ interactions at 12.6 GeV/c, (E), 25:59283
- production of $p\pi^-(1450)$ enhancement in $K^- + d \to K^- + \pi^- + 2p$ interactions at 12.6 GeV/c, (E), 25:59283
- production of $S_{11}(1530)$ in $\gamma + d \to$ eta $+ d$ interactions, amplitudes with anomalous thresholds for, (T), 25:59514
- production of $S_{11}(1530)$ in $\gamma + p \to$ eta $+ p$ interactions below 1 GeV/c, (T), 25:59514
- production of $\Sigma^-(1385)$ simultaneously with vector mesons in Λ and Σ^0 four-body final states in $K^- + n$ interactions at 4.48 GeV/c in deuterium bubble chamber, spin-density matrix elements for, (E), 25:59280
- reactions of Δ isobar with $A > 4$ nuclei, probability for multibaryon resonances from, 25:59521
- widths in $e + N$ and lepton interactions with nucleons, relativistic model for, (T), 25:59337

BARYONS, RESONANCE (Y*)
- decay of $\Sigma(1640)$ in deuterium bubble chamber, branching ratios for, (E), 25:59280
- decay $\Sigma^+(1385) \to \Sigma(\Lambda) + \pi$ in hydrogen bubble chamber, rate for, (E), 25:59284
- decay $\Sigma^+(1670) \to \Sigma^0 + \pi^+$ in hydrogen bubble chamber, rate for, (E), 25:59284
- decay $\Sigma^+(1915) \to \Sigma^0 + \pi^+$ in hydrogen bubble chamber, rate for, (E), 25:59284
- decay $\Sigma^+(2250) \to \Sigma^0 + \pi^+$ in hydrogen bubble chamber, rate for, (E), 25:59284
- mass and width of $\Sigma(1910)$ and $\Sigma(2030)$ from $K^- + N \to \Lambda + \pi$ interactions at 1 to 1.85 GeV/c, (E), 25:59303
- mass and width of $\Sigma^+(1385)$ and $\Sigma^+(1670)$ in $K^- + p \to \Lambda + \pi^+ + \pi^-$ interactions at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, (E), 25:59284
- mass and width of $\Sigma^+(1385)$, $\Sigma^+(1670)$, $\Sigma^+(1915)$, and $\Sigma^+(2250)$ in $K^- + p \to \Sigma^0 + \pi^+ + \pi^-$ interactions at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, (E), 25:59284
- production of Σ^* in $K^- + p \to p + \pi^-$ + anti K^0 interactions at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, (E), 25:59284
- production of $\Sigma(1640)$ in Λ four-body final states in $K^- + n$ interactions at 4.48 GeV/c in deuterium bubble chamber, mechanism for, (E), 25:59280
- production of $\Sigma^+(1385)$ and $\Sigma^+(1670)$ in $K^- + p \to \Lambda + \pi^+ + \pi^-$ interactions at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, (E), 25:59284
- production of $\Sigma^+(1385)$, $\Sigma^+(1670)$, $\Sigma^+(1915)$, and $\Sigma^+(2250)$ in $K^- + p \to \Sigma^0 + \pi^+ + \pi^-$ interactions at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, (E), 25:59284

BEAM SEPARATORS
- operation of dc electrostatic, international survey on, 25:59644 (RHEL/R-222)

BEARINGS
- design and performance of ball, for SNAP-8 turboalternator and pump, 25:57617 (N-71-26910)
- design of lubricant-immersed, for vertical-axis rotors, 25:57634(P)

BEAVER VALLEY POWER REACTOR, UNIT 1
- construction of, request for not suspending permit for, 25:59982 (DOCKET-50334-26)

BEHAVIOR
- radiation effects on operant, of rats following intraperitoneal injection of iodine-131 during gestation, 25:58100

BENZ[a]ANTHRACENE, 7,12-DIMETHYL-
- effects on mice, effects of deuterium on carcinogenic, 25:57920

BENZENE
- effects on chemical state of recoil phosphorus-32 from neutron-irradiated tripolyphosphate hexahydrate, 25:57495
- radioinduced polymerization of, effects of recoil atoms of carbon-14 produced from incorporated aluminum nitride on neutron, 25:57456
- radiolysis of vapor-phase, by argon, krypton, lead, neon, and xenon ions at 60 keV, effects of ion mass on yields from, 25:57469

BENZENE, DIVINYL-
- poly(divinylbenzene)--polystyrene, properties as carrier of stationary phase in chromatographic separations, 25:57527 (UJV-2557-Ch)

BENZOIC ACID, p-HYDROXY-
- complexes with phenylacetic acid and uranyl ions, stability of, 25:57402

BENZOIC ACID, VINYL ESTER
- reactions with solvated electrons, rate constant of, 25:57475

BERKELIUM
- oxidation potential for trivalent--tetravalent, 25:57437
- separation from other transplutonium elements and fission products by sorption on zirconium phosphate--silicate, 25:57530

BERKELIUM ISOTOPES Bk-249
- production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)

BERYLLIUM
- analysis for carbon and oxygen by γ activation, nondestructive, 25:57385
- deformation of crystals of, x-ray synergy method for study of defects in compressive, 25:58263
- effects on complexonometric determination of rare earths, 25:57317
- effects on periodic precipitation in silver--cadmium alloys, 25:58262
- fabrication of small-diameter wires of, development of method for, 25:58199
- photon reactions (γ,α) with, pulse-height spectra from, (E), 25:59734

BERYLLIUM ALLOYS AND SYSTEMS
- Be--Cu-base, oxidation at high temperatures, mechanisms of, 25:58171

- BERYLLIUM FLUORIDES
  - spectra in molten fluorides, Raman, 25:57298 (ORNL-4676, pp 73-138)
  - BeF$_2$--LiF, solvent properties of molten, for gaseous boron trifluoride, 25:57298 (ORNL-4676, pp 73-138)
  - BeF$_2$--LiF, thermodynamic properties of molten, 25:57298 (ORNL-4676, pp 73-138)
  - BeF$_2$--LiF--ThF$_4$, separation of cesium and rubidium from, by reductive extraction, 25:57298 (ORNL-4676, pp 73-138)
  - BeF$_2$--LiF--ThF$_4$--UF$_4$, heat transfer and thermophysical properties of, (E/T), 25:60015 (CRNL-4676, pp 21-72)
  - BeF$_2$--NaF, electric conductivity of molten and supercooled, 25:57298 (CRNL-4676, pp 73-138)
  - BeF$_2$--NaF, phase transitions in molten, 25:57298 (ORNL-4676, pp 73-138)
- BERYLLIUM IONS
  - reactions with celluloid films of multiply charged, film-thickness dependence of cross sections for electron capture and loss in, (E), 25:58695
  - wave functions for excited two-electron, Hulthen transform functions in approximation of, 25:58713
- BERYLLIUM ISOTOPES
  - abundance in primary cosmic radiation, (E), 25:58833
  - distribution in cosmic rays, effect of interstellar helium on, 25:59733
- BERYLLIUM ISOTOPES Be-7
  - energy levels from lithium-7 (He-3,t) reactions, widths for, (E), 25:59731
- BERYLLIUM ISOTOPES Be-8
  - energy levels from lithium-7 (He-3,d) reactions, widths for, (E), 25:59731
- BERYLLIUM ISOTOPES Be-9
  - deuteron reactions (d,α) at 0.9 to 2.2 MeV, differential cross sections and excitation functions for, (E), 25:59721
  - deuteron reactions (d,α) at 120 to 200 keV, energy levels of boron-11 from, (E), 25:59827 (CEA-R-4070)
  - deuteron reactions (d,p) and (d,t) at 120 to 200 keV, angular distributions and mechanisms for, (E/T), 25:59827 (CEA-R-4070)
  - deuteron reactions (d,p) at 2 to 10 MeV, distorted-wave analysis of proton polarization in, (T), 25:59722
  - energy-level transitions in π-mesic atoms of, cascade processes and x-ray emission in, (T), 25:58724
  - meson reactions (π^+,p) at 70 MeV, excitation energy spectra and upper limits for cross sections for, (E), 25:59710 (LA-DC-12781)
  - proton inelastic scattering with subsequent breakup, analysis of n-^{8}Be final-state interaction using effective-range approximation, (T), 25:59735
  - proton reactions (p,He-4), mechanisms for differential cross sections and angular distributions for, (E), 25:59711 (UCLA-10-P-18-32)
- BERYLLIUM ISOTOPES Be-12
  - energy level at 0.81 MeV from lithium-7 (Li-7,2p) reactions, (E), 25:59716
  - mass excess from lithium-7 (Li-7,2p) reactions, (E), 25:59716
- BERYLLIUM OXIDES
  - electron band structure from x-ray spectra, (E/T), 25:59178
  - ion transport numbers for, at 900 to 1180°C under low oxygen potentials, effects of ion radius on, 25:58379
- BERYLLIUM SULFATES
  - effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401
- BETA DECAY
  - asymmetry in mirror Gamow--Teller, binding-energy effects on ft, (T), 25:59852
  - theory for nuclei far from stability line, (T), 25:59836 (KURRI-TR-76, pp 3-6)
  - theory for, elementary particle treatment in, (T), 25:59397
  - theory of first-forbidden, gross, (T), 25:59868
- BETA PARTICLES
  - detection and measurement of low-energy, in biological materials, performance of semiconductor detectors for, 25:58064
  - dosimetry of, intercomparison of survey detectors for, 25:57782
  - dosimetry of, lithium fluoride--Teflon dosimeters for surface, 25:57837
  - effects from incorporated yttrium-90 on catalytic activity of iron in ammonia synthesis, 25:57444
  - effects on chromosomes of Chaetomorpha, effects of dose on aberrant, 25:58153
  - effects on germanium monocrystals in magnetic field, electric potential induced in, 25:59143
  - effects on mammalian cells following administration of tritium-labeled thymidine, 25:58086
  - reactions with alkane vapors and argon, mean energy loss per ion pair formed in, (E), 25:59122
  - reactions with mercury vapor, mean energy for formation of ion pairs in, (E), 25:59123
  - scattering by materials used in nuclear measurements, material assay by, 25:59640 (CONF-711002-, pp 272-82)
- BETA SOURCES
  - determination in mixtures with other β emitters by liquid scintillation counting, 25:57353
  - determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
  - distribution of low-energy, surface-barrier detector for measuring planar, 25:57769
  - separation from radioactive sewage by coagulation with ferric hydroxide, 25:57556
  - x radiation excitation in solids by, diffusion studies from, 25:57673
- BETA SPECTROMETERS
  - design and performance of low-background lithium-drifted germanium, for measurement of germanium-76 double beta decay, 25:57803
  - magnetic fields in, design of mutation NMR stabilizer for, 25:57824
- BETAINE
  - betaine--sucrose, use as release agent for evaporative production of carbon thin films, 25:58346 (CONF-711002-, pp 144-6)
- BETATRONS
  - description of B5M-25, for bremsstrahlung therapy, 25:59651
  - use in radiographic inspection of thick castings and welds, 25:57678 (INR-1204)
- BEVERAGES
  - wines, radiation processing effects on microflora in, additive effects of ultrasound on uv, 25:58158
- BIBLIOGRAPHIES
  - book: Isotopes: Bibliographies and Reference Tables. Volume III, 25:59697
  - on civil, industrial, and scientific uses for nuclear explosions, 25:57603 (TID-3522(Rev.9))
  - on industrial facilities and processes for heavy water production, 25:57652 (DAISE-70-8)
  - on nuclear science and technology: section 14 activation analysis, 25:57368 (AED-C-14-5)
  - on plasma physics and fusion reactors, 25:58955
  - on prestressed concrete pressure vessels for reactors, 25:57609 (AED-C-1-18)
- BIG ROCK POINT POWER REACTOR
  - technical specifications for, 25:59938 (DOCKET-50155-93)
- BIOLOGICAL MATERIALS
  - analysis for α, β, and γ emitters, methods used at CNEN, 25:57347 (RT/PROT-(71)9)
  - analysis for carbon-14, radiometric, 25:57364
  - analysis for cesium-137 by radiochemical isolation and γ spectrometry or beta detection, 25:57355
  - analysis for contaminants by heavy ion scattering, 25:57359
  - analysis for iodine-131 by isotopic exchange and scintillation counting, 25:57367
  - analysis for plutonium, radiochemical method for, 25:57998 (NIRS-Pu-8)
  - analysis for tin by neutron activation and rapid radiochemical separation, 25:57378
  - analysis for trace amounts of alpha sources, spectra unfolding method for, 25:57362
- BIOLOGICAL MODELS
  - development for gene loci in Drosophila chromosomes, 25:57975
  - use in studies of radioisotope transport kinetics in ecosystems, 25:57947 (CONF-710501-35)
- BIOMETRY
  - formulas for calculation of radioisotope excretion and retention time in man following acute or chronic intake, 25:57919
- BISMUTH
  - compatibility with brazing alloys at high temperatures, test program on, 25:58168 (ORNL-4676, pp 139-233)
  - determination by extraction using quinolinol melt and spectrography, 25:57312
  - determination in pure rare earth oxides, polarographic, 25:57311
  - diffusion in copper, beta-excited x-ray studies of, 25:57673
  - diffusion of trace amounts of thallium in molten, thermal, 25:58267
  - solubility in sodium at high temperatures, 25:58163(R) (AI-AEC-12859)
- BISMUTH ALLOYS AND SYSTEMS
  - Bi--In, density, diffusivity, and viscosity of, at 110 to 220°C, 25:58238
  - Bi--Li, solvent properties for neodymium and thorium, 25:57522 (ORNL-4676, pp 234-71)
  - Bi--Te, hardness of, 25:58253
  - Bi--U, magnetic transition temperature of U$_3$Bi$_4$, 25:59190
- BISMUTH ISOTOPES Bi-209
  - photofission at 0.1 to 5 GeV, giant resonance in yields and integral cross sections for, (E), 25:59794
  - photofission at 1000 MeV, mass yields from, (E), 25:59816
- BISMUTH ISOTOPES Bi-214
  - content in particles in French uranium mine air, (E), 25:57564
  - determination in presence of lead-214 and radium-226 by gamma spectrometry, 25:57365
- BLACK HOLES
  - existence in eclipsing binary beta Lyrae, (E/T), 25:58497
  - magnetic fields in, upper limits for, (T), 25:58498
- BLADDER
  - radiation effects on human, during therapy of gynecological neoplasms, effects of dose on cobalt-60

  contact γ, 25:58010
BLOOD
  circulation in human brain, use of xenon-133 scintigraphy for measurement of, 25:58058
  circulation studies using radioisotopes, intravenous semiconductor detector for, 25:57760(P)
  radiation effects on lymphocytes of, from chronic lymphocytic leukemia patients following extracorporeal exposure, γ, 25:58131 (CEA-CONF-1768)
  scintiscanning in mice, effects of pH on distribution of metastable indium-113 during, 25:58043
BLOOD PLASMA
  radioimmunoassay of epinephrine and norepinephrine in, double isotope method for, 25:57914
  radioimmunoassay of growth hormone in dog, 25:57909
  radioinduced quenching effect in, effectiveness as biological dosimeter in whole-body exposure, 25:58017
BLOOD SERUM
  radiation effects on lactate dehydrogenase activity in, of cervical cancer patients, effects of dose on γ, 25:57937
  radioimmunoassay of antibodies to virus antigens in, 25:57912
BLOOD VESSELS
  radiation effects on human, following therapy for thoracic diseases, 25:58147
  radiation injuries to laboratory animal, pathology of, 25:58122
BLUE STELLAR OBJECTS
  detection of galaxy associated, (E), 25:58539
BODY FLUIDS
  content in patients with renal hypertension, radioisotope dilution studies on, 25:57924
BOILERS
  design characteristics of superheating reactor core vessel, 25:60147(P)
  design of compact, for pressurized water reactors, 25:60144(P)
  design problems with fast reactor liquid sodium heated, 25:60077
  leak detection in sodium heated, design of hydrogen meter for, 25:60058(R) (ANL-7817)
  leaks in sodium-heated, evaluation of systems for detecting, 25:57632
  magnetite coatings in, relations of magnetite morphology with pressure drop, 25:58165(T) (AEC-tr-7237)
  performance of once-through NaK heated mercury, 25:60194 (N-71-27855)
  steam quality in power, rhenium-186 tracer method for measuring, 25:57674
  stress analysis of power reactor, finite element method for, 25:60142
BOILING
  heat transfer for film and transient, of subcooled water during free convection quenching of moving spheres, (E), 25:57642
BOLOMETERS
  development of nonisothermal superconducting, 25:58952
BOLTS AND NUTS
  failure of threaded, at nuclear facilities, data review on corrosion, fatigue, and galling, 25:57618 (ORNL-TM-3570)
BONDING
  methods for diffusion, review on, 25:58207
BONE MARROW
  effects of transplants of, on phosphorus-32 uptake by bone marrow, liver, and spleen of x-irradiated rats, 25:58123
  effects of transplants of, on recovery of x-irradiated mouse thymus, 25:58115
  effects on hematopoiesis following transplantation into spleen of irradiated mice, 25:58117
  radiation effects on mitosis in laboratory and wild rat, comparison of x, 25:58116
  radioprotective effects of extracts of, on survival of mice and rabbits, x, 25:58033
  scintigraphy using metastable technetium-99 colloids, 25:58053
  shielding of mouse, hematopoietic recovery following x irradiation with partial, 25:58124
  transplantation of osteogenic precursor cells of, to lethally irradiated hybrid mice, effects of hematopoietic cells on, 25:58121
BONES
  californium-252 distribution in rat, following intraperitoneal injection, 25:57922
  radiation effects on fluorine-18 uptake by fractured, 25:58105
  radiation effects on rat tibia, comparison of effects of dose on γ and x, 25:58102
  radiation effects on reimplantation of human mandibular, following surgical resection, x, 25:58132
BORON
  determination in glass by activation and prompt γ ray measurement, 25:57369(T) (RFP-Trans-83)
  preparation of standard thin-film layers of, by vacuum evaporation, 25:58182 (CONF-711002-, pp 122-33)
  radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
BORON CARBIDES
  crystal structure of carbon-saturated B_4C, 25:58344(R) (LA-4693)
BORON FLUORIDES
  solubility of gaseous, in fluoride melts, 25:57298 (ORNL-4676, pp 73-138)
BORON IONS
  implantation in silicon for use as charged-particle detectors, 25:57749
  ranges and stragglings in silicon at 20 to 400 keV, calculations of, 25:59116
  reactions with celluloid films of multiply charged, film-thickness dependence of cross sections for electron capture and loss in, (E), 25:58695
  wave functions for excited two-electron, Hulthen transform functions in approximation of, 25:58713
BORON ISOTOPES
  abundance in primary cosmic radiation, (E), 25:58833
  determination of, mass spectrometer for, 25:57890
BORON ISOTOPES B-11
  energy levels at 15.12, 15.80, and 16.7 MeV from beryllium-9 (d,α) reactions, spins, parities, and widths of, (E), 25:59827 (CEA-R-4070)
  neutron elastic and inelastic scattering at 14.1 MeV, coupled-channels calculation of angular distributions from, (T), 25:59720
  proton reactions (p,He-4), mechanisms for differential cross sections and angular distributions for, (E), 25:59711 (UCLA-10-P-18-32)
BORON ISOTOPES B-14
  mass excess of, predicted, (E), 25:59716
BORON ISOTOPES B-15
  mass excess of, predicted, (E), 25:59716
BORON NITRIDES
  crystal structure disorder in, effects of sintering on, 25:58359
  electron band structure from x-ray spectra, (E/T), 25:59178
  performance as lubricant for deep drawing nickel alloys and stainless steel, 25:58195
  sintering behavior of powdered, effects of powder preparation temperature on, 25:58358
  Al--BN, preparation of metal--matrix composites of, methods for, 25:58363
  AlN--BN, thermal conductivity of sintered compacts of, at 1000 to 1600°C, 25:58385
BORON SYSTEMS
  Al--B, fracture in continuous monolayer and bilayer composites of, microradiographic studies of, 25:58400
  B--graphite, diffusion of helium from irradiated, at 200 to 300°C, 25:58378
  B--plastics, properties of continuous filament reinforced, for use in space vehicles, 25:58422
BOSONS
  formalism for two-particle system with spins 0 and 1/2, quasipotential, (T), 25:59422 (JINR-E2-6046)
  interactions with spin-1/2 fermions in two-particle system, quasipotential equations for amplitude of, (T), 25:59422 (JINR-E2-6046)
  interactions with spinless bosons, radiative corrections to relativistic eikonal amplitude for scalar meson exchange in elastic, (T), 25:59453
  Regge poles for, properties of complex, 25:59434
  theory for dense system of, Brandow linked cluster expansion for, 25:59229
  theory for interacting system of, one-dimensional, 25:59230
  wave function for two-particle system with spins 0 and 1/2, quasipotential equations for, (T), 25:59422 (JINR-E2-6046)
BOSONS, INTERMEDIATE-VECTOR
  decay $W \to \mu + \nu$ from production in neutrino reactions (ν,μ^-W^+) with nuclei at high energies, 25:59410
  decay $W^+ \to \mu^+(e^+) + \nu$, μ^+ angular and momentum distributions for, (T), 25:59413
  production in neutrino reactions (ν,μ^-W^+) with nuclei at high energies, angular and energy distributions for, 25:59410
  production of W in $e^+ + e^-$ colliding-beam interactions, total cross sections for, 25:59383
  production of W^+ in $\nu + N \to \mu^- + W^+ + N$ interactions and ν reactions with iron, μ^- angular and momentum distributions for, (T), 25:59414
BRAIN
  fatty acid transport into, 25:60290 (UCLA-12-839)
  radiation dose to, during therapy of tinea capitis in children, use of Fricke dosimeter to measure absorbed x, 25:58012
  radiation effects on numbers of cysteine-rich glial cells in rat, effects of dose and head exposure on x, 25:58106
  radiation effects on ultrastructure of medullary tissue of rat, effects of dose on gamma, 25:58118
  radiotherapy of tumors of human, effectiveness of γ, 25:58069
  scintigraphy for measurement of blood circulation using injected xenon-133, 25:58058
  scintigraphy using metastable indium-113 and technetium-99-labeled pertechnetate, diagnostic value of, 25:58060
  scintigraphy using metastable technetium-99 for diagnosis of Schilder's disease, 25:58048

XUM

BRAZING ALLOYS
  development of bismuth-resistant, for molbydenum alloys, 25:58168 (ORNL-4676, pp 139-233)
BREMSSTRAHLUNG
  cross section for suprathermal proton, (T), 25:58837
  effects on leukocyte count, adrenal cortex, and thyroid of rats, 25:58107
  emission from silicon crystals under electron irradiation, (E), 25:59149
  emission of magnetic, gain from stimulated, (T), 25:58681
  production in backward $e^+ + e^- \to e^+ + e^- + m\gamma$ interactions at high energies, double-logarithmic approximation for cross sections for, (T), 25:59374
  production in backward $e^+ + e^-$ interactions at high energies, integral equation for cross sections from partial waves with multi-Regge poles for amplitudes of, (T), 25:59369
  production in electron reactions with metals, effects of target thickness and atomic number on, 25:59106
  production in $N + N \to N + N + \gamma$ interactions, review of, (E), 25:59241 (CONF-710915-2)
  reactions (γ,f) with bismuth-209 at 1000 MeV, mass yields from, (E), 25:59816
  reactions (γ,n) with calcium-40, nickel-60, and silicon-28 up to 35 MeV endpoint energy, excitation functions for, (E), 25:59772
  reactions (γ,n) with carbon-12, gold-197, iodine-127, manganese-55, and sodium-23, energy dependence of yields for, (E), 25:59815
  reactions (γ,n) with lead-208 at several hundred keV, cross section for, (E), 25:59778 (JAERI-Memo-4520)
  reactions (γ,n) with phosphorus-31 at 21.5 and 25.5 MeV, analysis for isospin effect in, (E/T), 25:59765
  reactions with carbon-12 at 4 GeV, real part of rho--N forward scattering amplitude and relative rho--ω production phase from, (E), 25:59252
  reactions with cesium-133 and lanthanum-139 at 250 MeV, analysis using residual nucleus method, (E), 25:59815
BROMINE
  determination as bromide using Chloramine-T, 25:57303
  determination in flour by heavy ion scattering, 25:57359
  determination of extracellular, in man, radioisotope dilution method for, 25:57924
  determination of trace amounts of, in pulp by neutron activation and γ spectrometry, 25:57383
  meson (π^-) inelastic scattering at 3.5 GeV/c with charged-particle evaporation, charged-particle energy spectra and angular distributions for, (E), 25:59822
BROMINE ISOTOPES Br-80
  isomeric transition in bromide--hexane systems, 25:57494
  isomeric transition in bromomethane, fragment distribution from, 25:57501
  reactions of recoil, from isomeric transition with methane, 25:57491
  reactions of recoil, from isomeric transition with bromomethane, 25:57492
BROMINE ISOTOPES Br-82
  reactions of recoil, from isomeric transition with bromomethane, 25:57492
  reactions of recoil, from isomeric transition with methane, 25:57491
BROOKHAVEN ALTERNATING-GRADIENT SYNCHROTRON (AGS)
  experimental facilities at, description of Yale--NAL CAMAC data acquisition system, 25:59658
BROOKHAVEN REACTOR
  loop operation in, experience with chemonuclear, 25:57610 (BNL-50293)
BROWNS FERRY POWER REACTOR, UNIT 1
  construction of, request for not suspending permit for, 25:59950 (DOCKET-50259-27)
BROWNS FERRY POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59950 (DOCKET-50259-27)
BROWNS FERRY POWER REACTOR, UNIT 3
  construction of, request for not suspending permit for, 25:59950 (DOCKET-50259-27)
BUBBLES
  diffusion in copper thin foils, effects of dislocations on, 25:58214 (RD/B/N-2023)
1,3-BUTADIENE
  yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
BUTANE
  reactions of solid, with iodine ion beams at 3000 to 50 eV, 25:57499
  yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
BUTANE, 1,2:3,4-DIEPOXY-
  effects of interaction with uv radiation on Neurospora, photoreactivation of mutagenic, 25:57954
BUTANE, 2,2-DIMETHYL-
  yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
BUTANE, 2-METHYL-
  radioinduced luminescence of glasses of, containing olefins, γ, 25:57463
1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-1-(2-THIENYL)-
  solvent properties for neptunium, 25:57535
2-BUTENE
  yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
BUTENYNE
  yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474

C

CABLES
  dielectric insulator for superconducting, performance of helium as, 25:58950
CADMIUM
  deformation of monocrystals of, dynamics of high-strain-rate, 25:58252
  determination in pure rare earth oxides, polarographic, 25:57311
  determination in Zircaloy-2 by extraction and spectrophotometry, 25:57326
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  mechanical properties of, effects of fatigue on, 25:58223
  microstructure of, effects of fatigue on, 25:58223
  photon reactions with, secondary electron emission from, (E/T), 25:59107
CADMIUM ALLOYS AND SYSTEMS
  Ag-base--Cd, precipitation in, effects of aluminum, beryllium, magnesium, scandium, and yttrium additions on periodic, 25:58262
  Cd--Mg, hardness of, 25:58253
CADMIUM ISOTOPES Cd-111
  neutron inelastic scattering at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797
CADMIUM ISOTOPES Cd-112
  neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797
CADMIUM TELLURIDES
  radiation effects on carrier content, Hall mobility, and photoconductivity of n- and p-type, 1.0-MeV electron and fission-neutron, 25:59161
CALCIUM
  abundance in solar corona, (E), 25:58605
  determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
  determination using glyoxal-bis(2-hydroxyanil), spectrophotometric, 25:57304
  electron reactions up to 1 keV with, total cross sections for ionization in, (E), 25:58777
  meson (μ^-) capture by, asymmetry coefficient for low-energy neutron angular distribution from, (E), 25:59738 (JINR-P1-6029)
  separation from other cations by solvent extraction, 25:57304
CALCIUM BROMIDES
  $CaBr_2$--hexane, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
CALCIUM CARBONATES
  $CaCO_3$--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
CALCIUM IONS
  excitation of Ca XV in solar corona, (E), 25:58605
CALCIUM ISOTOPES
  energy level transitions of, structural corrections in pair conversion coefficients in M1, (T), 25:59861
CALCIUM ISOTOPES Ca-39
  energy level at 2.80 MeV, lifetime for, (E), 25:59771
CALCIUM ISOTOPES Ca-40
  binding and single-particle energies of, RPA calculation using self-consistent starting energies and higher-order corrections in Goldstone expansion, (T), 25:59723
  deuteron reactions (d,p) at 7 to 12 MeV, DWBA and impulse-approximation analyses of, (T), 25:59848
  deuteron reactions (d,p) with, effects of deuteron D state on, (T), 25:59841(R) (ORO-4119-1)
  energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
  energy levels of, calculation for α-hole, 25:59757
  nucleon scattering at 14 MeV, optical-model analysis of, (T), 25:59744
  photon reactions (γ,n) up to 35 MeV endpoint energy, excitation functions for, (E), 25:59772
  production in stars from simple helium burning, (E), 25:58508
CALCIUM ISOTOPES Ca-45
  determination in soft tissues by liquid scintillation counting, 25:57361
  use as tracer to study losses from oxide coatings on lamp cathodes, 25:57660
CALCIUM ISOTOPES Ca-48
  proton reactions (p,γ) at 4 to 18 MeV, excitation function and gamma spectrum from, (E), 25:59742
  proton reactions $(p,n\gamma)$ near 2 MeV, γ and conversion electron spectra from, (E), 25:59756
CALCIUM OXIDES
  ion transport numbers for, at 900 to 1180°C under low oxygen potentials, effects of ion radius on, 25:58379
  CaO--La_2O_3, electric properties of solid electrolytes, 25:59193
  CaO--Nb_2O_5--SiO_2--TiO_2, liquidus of pseudo-ternary

  $CaO.Nb_2O_5$--$CaO.TiO_2$--SiO_2 plane of, 25:58390
  CaO--Y_2O_3, electric properties of solid electrolytes, 25:59193
  CaO--ZrO_2, electric properties of solid electrolytes, 25:59193

CALIFORNIUM
  oxidation potential for trivalent--tetravalent, 25:57437
  separation from other actinides by paper or thin-layer chromatography, 25:57553

CALIFORNIUM ISOTOPES Cf-252
  distribution in tissues of rats following intraperitoneal injection, 25:57922
  encapsulation of neutron sources of, properties of stainless steel and Zircaloy-2 for, 25:58242
  fission of, variance of number of neutrons emitted by individual fragments in spontaneous, (E), 25:59824
  production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)
  properties of neutron sources of, 25:57661

CALORIMETERS
  calibration of INR and SKODA, in low-intensity reactor radiation fields, 25:57875 (INR-1319)
  calibration of thermodiverter, for measuring heat generated by radiation, 25:57879
  design and operation of thermo-diverger, for use in reactors, 25:57878

CALUTRONS
  ion deposition and implantation systems for, description of, 25:57650 (CONF-711002-, pp 10-20)

CALVERT CLIFFS POWER REACTOR, UNIT 1
  construction of, request for not suspending permit for, 25:59974 (DOCKET-50317-28)
  site for, meteorological data for, 25:59975 (DOCKET-50317-29)

CALVERT CLIFFS POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59974 (DOCKET-50317-28)
  site for, meteorological data for, 25:59975 (DOCKET-50317-29)

CAMERAS
  design of automated, for hot cell metallography, 25:57627

CANADA
  pump production in, development of facilities for centrifugal, 25:57608 (70-CNA-658)

CARBIDES
  machining of refractory, effects of carbon content in corresponding ranges of homogeneity on electroerosion, 25:58356

CARBON
  abundance in sunspots, (E/T), 25:58589
  abundance of molecular, in delta Scu, (E), 25:58479
  activity in carbide fuels, effects of refractory metal additions on, 25:58163(R) (AI-AEC-12859)
  alpha reactions at 880 MeV, cross sections for production of beryllium-9 and -10 in, (E), 25:59733
  content in loop sodium, monitoring of, 25:58166(R) (AI-AEC-12980)
  determination by combustion in stream of nitrogen, oxidation, and gravimetry, 25:57349
  determination in beryllium by γ activation, nondestructive, 25:57385
  determination in liquid sodium, development of on-line meter for, 25:60058(R) (ANL-7817)
  determination in semiconductor-grade silicon by proton activation, 25:57396
  diffusion of oxygen through layers of, effects of electric field on, 25:58383
  diffusion of pyrolytic, in carbon felt, 25:58352 (Y-DA-2123(Rev.1))
  effects of interstitial, on stress rupture of Type 316 stainless steel, 25:58166(R) (AI-AEC-12980)
  effects on ductility of crystallized molybdenum wire, 25:58269
  effects on mechanical properties of molybdenum and tungsten single crystals, 25:58257
  effects on resistance of refractory carbides to electroerosion machining, 25:58356
  electron reactions at 0.3 to 1.1 MeV with foils of, transition radiation in light emitted by, 25:58686
  graphitization of fibers of, at high temperatures, mechanisms of, 25:58382
  graphitization of lamp black pitch, effects of temperature on, 25:58168 (ORNL-4676, pp 139-233)
  interactions with hydrogen in interstellar medium, cross sections for transitions of fine structure components of, (E/T), 25:58623
  joining of felt-type, development of methods for, 25:58352 (Y-DA-2123(Rev.1))
  neutron coherent atomic scattering amplitudes for, (E), 25:59696
  optical properties of foils of, from light emission during electron irradiation, 25:58686
  photon reactions (γ,α) with, pulse-height spectra from, (E), 25:59734
  photon reactions at 560 MeV, emulsion study of dependence on atomic weight for yields of π^+ and π^- from, (E), 25:59248
  photon scattering by, analysis for double scattering and glory effects in Compton, (T), 25:59703
  preparation of thin films of, method for, 25:58346 (CONF-711002-, pp 144-6)
  properties of felt-type, infiltrated with pyrolytic carbon, 25:58352 (Y-DA-2123(Rev.1))
  solubility in sodium at high temperatures, 25:58163(R) (AI-AEC-12859)
  transport in sodium--steel systems, kinetics of, (E), 25:60058(R) (ANL-7817)

CARBON BLACK
  carbon black--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
  carbon black--polystyrene, radiation effects on composites of, gamma, 25:58416(R) (RLO-2098-2)

CARBON DIOXIDES
  analysis of atmospheric, for carbon-14, radiometric, 25:57364
  electron reactions at 13 and 17 eV with, production of oxygen ions (O^-) by dissociative attachment in, (E), 25:58730
  electron reactions at 60 eV with, production of excited oxygen ions (O^+) in, (E), 25:58763
  electron reactions up to 300 eV with, cross sections for emission produced by dissociative excitation, excitation, and ionization in, (E), 25:58760
  electron reactions with, formation of metastable carbon monoxide and oxygen by dissociation in, (E), 25:58765
  electron reactions with, K--LL Auger spectra from, (E), 25:58736
  iodine-ion reactions at 12 MeV with, electron-capture and -loss cross sections for, (E), 25:58768
  radiolysis of gaseous, at high density, γ, 25:57461

CARBON IONS
  effects on swelling in Type 316 stainless steel at 20 MeV, relations with cold work, 25:58324
  effects on void formation in cobalt at 100 kV, 25:58325
  effects on void swelling in nickel, Type 316 stainless steel, and Nimonic PE 16 at 20 MeV, relations with dose, 25:58322
  effects on void swelling in Type 18/8/Ti stainless steel at 20 MeV, relations with temperature, 25:58323
  effects on void swelling in Type 316 stainless steel at 20 MeV, relations with temperature, 25:58321
  electron reactions with C^+, cross sections for ionization in, (E), 25:58769
  reactions with deuterium molecules, effects of thermal motion of molecules on charge exchange in, (T), 25:58752
  spectral emission line intensities of, in solar transition region, (E), 25:58599

CARBON ISOTOPES C-12
  carbon-12 reactions (C-12,α) at 22.0 to 35.5 MeV, differential cross sections, excitation functions, and spectra from, (E), 25:59717
  cluster states in, reaction-matrix theory of triangular and linear-chain, (T), 25:59724
  deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  deuteron inelastic scattering at 82 MeV, DWBA analysis of angular distributions from, (E), 25:59754
  deuteron reactions (d,p) at 80.2 MeV, DWBA analysis of differential cross sections for, (E), 25:59754
  electron reactions with, production of meson (π) in bound state from, 25:59355
  electron scattering at high energy, analysis using oblate deformed model, (T), 25:59729
  energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
  energy levels from inelastic scattering, deformation parameters for, (E), 25:59754
  energy levels of, calculation for giant resonance, (T), 25:59732
  energy-level transitions in μ^- and π-mesic atoms of, cascade processes and x-ray emission in, (T), 25:58724
  lithium-7 reactions (Li-7,2p) at 30 MeV, cross sections and Q-value spectra from, (E), 25:59716
  meson (π) scattering at 120 to 1200 MeV, angular distribution and total cross section for, (T), 25:59712
  meson (π^-) elastic scattering at 120 to 260 MeV, Coulomb--nuclear interference and differential cross sections for, (E), 25:59713
  meson (π^-) elastic scattering at 180 MeV, Glauber approximation for differential cross sections for, (E), 25:59523
  meson (π^-) radiative capture by, calculation using impulse approximation with Cohen-Kurath wave functions, (T), 25:59730
  meson reactions (π^+,p) at 70 MeV, excitation energy spectra and upper limits for cross sections for, (E), 25:59710 (LA-DC-12781)
  nitrogen-14 reactions (N-14,Li-6) at 60.0 MeV, energy spectrum from, (E), 25:59743
  oxygen-16 reactions (O-16,α) at 28.9 MeV, α-γ angular correlations from, (E), 25:59767
  oxygen-16 reactions (O-16,p) at 36 and 60 MeV, angular distributions and spectra from, (E), 25:59714
  oxygen-16 reactions (O-16,p) with, p-γ angular correlations from, (E), 25:59761
  photon reactions (γ,n) with, energy dependence of yield for, (E), 25:59815
  photon reactions at 4 GeV, real part of rho--N forward scattering amplitude and relative rho--ω production

XUM

    phase from, (E), 25:59252
  production in stars from simple helium burning, (E), 25:58508
  proton elastic scattering at 1 GeV, analysis using Glauber theory and α-particle model, (T), 25:59727
  proton reactions at 0.1 to 660 MeV, intranuclear cascade model for, (T), 25:59265 (JINR-P2-5991)
  proton reactions at 1 TeV, effect of intermediate resonance production on cross sections for elastic and inelastic, 25:59519
  reactions (C-12,α) with carbon-12 at 22.0 to 35.5 MeV, differential cross sections, excitation functions, and spectra from, (E), 25:59717
  reactions (C-12,xn) and (C-12,αxn) with tellurium-130 above 10 MeV/nucleon, excitation functions, compound nucleus production cross section energy dependence, angular momentum, and evaporation cross section ratio energy dependence for, (E), 25:59779 (JINR-P7-5912)
CARBON ISOTOPES C-13
  alpha reactions (α,n) at 1 to 5.5 MeV, excitation functions and Hauser--Feshbach calculations of spectra from, (T), 25:59708 (BNWL-B-109)
  effects on ir spectra of hydrogen cyanide, 25:57421
  energy levels at 3.86 MeV, lifetime for, (E), 25:59771
  energy levels from carbon-12 (d,p) reactions, spectroscopic factors for, (E), 25:59754
  meson (π^+) reactions (π^+,π^0) at 180 MeV, Glauber approximation for differential cross sections for, 25:59523
  reactions (C-13,xn) and (C-13,αxn) with tellurium-130 above 10 MeV/nucleon, excitation functions, compound nucleus production cross section energy dependence, angular momentum, and evaporation cross section ratio energy dependence for, (E), 25:59779 (JINR-P7-5912)
CARBON ISOTOPES C-14
  determination by combustion in nitrogen stream, oxidation, and scintillation counting, 25:57349
  determination in atmospheric carbon dioxide and biological samples, radiometric, 25:57364
  determination in carbonates by conversion to carbon dioxide and counting, 25:57358
  determination in labeled compounds, performance of scanners, autoradiographs, and liquid scintillation detectors for, 25:57752
  effects of recoils of, on polymerization of neutron-irradiated benzene or toluene, 25:57456
  fabrication of self-supporting targets of, methods for, 25:59639 (CONF-711002-, pp 134-43)
CARBON ISOTOPES C-17
  mass excess of, predicted, (E), 25:59716
CARBON MONOXIDES
  abundance in delta Sco, (E), 25:58479
  abundance in sunspots, (E/T), 25:58589
  deuterium-hydride scattering by, velocity dependence of total effective cross sections for, 25:58782
  deuterium-molecule scattering by, velocity dependence of total effective cross sections for, 25:58782
  electron reactions at 16 to 18 eV with, production of oxygen ions (O^-) by dissociative attachment in, (E), 25:58730
  electron reactions up to 300 eV with, cross sections for emission produced by dissociative excitation, excitation, and ionization in, (E), 25:58759
  electron reactions with, K--LL Auger spectra from, (E), 25:58736
  helium-atom scattering by, velocity dependence of total effective cross sections for, 25:58782
  reactions with amorphous uranium trioxide, 25:57417
CARBON SYSTEMS
  Al--C, preparation of metal-matrix composites of, methods for, 25:58363
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
  C--Mo--Ni, phase composition in molybdenum-rich solutions of, at 1200 to 1800°C, 25:58290
  C--Mo--Zr, phase studies of, 25:58273
  C--Mo-base, crystallization and carbide phase formation in, effects of carbon content on, 25:58282
  C--Ni, preparation of metal-matrix composites of, methods for, 25:58363
CARBONATES
  analysis for carbon-14 by conversion to carbon dioxide and counting, 25:57358
  polymers, reactions with fluorine, 25:57619 (RFP-1739)
CARCINOGENS
  effects on initiation of human umbilical cord leukocyte cell cultures, 25:57921
CARDIAC PACEMAKERS
  development of plutonium-238-fueled, fabrication and testing of prototype models for, 25:57657(R) (NUMEC-4189-6)
  heat source for, design of plutonium-238-fueled alpha-particle, 25:57668(P)
  testing of plutonium-238-fueled implantable, 25:57669
CAROTENOIDS
  radiation effects on synthesis of, in Japanese persimmons, effects of dose on electron, 25:57926
CASCADE IMPACTORS
  calibration for size measurement of submicron aerosol particles at low pressure, 25:57573 (ORNL-4226)
CASCADE SHOWERS
  production of intranuclear, in proton reactions with carbon-12 at 0.1 to 660 MeV, model for, (T), 25:59265 (JINR-P2-5991)
CASTING
  methods for actinide metal radiation targets, 25:59634 (CONF-711002-, pp 59-69)
CASTINGS
  inspection of thick, betatron radiography method for, 25:57678 (INR-1204)
CATALASE
  Moessbauer spectroscopy of, 25:60279(R) (NYO-3798-12)
CATTLE
  iodine-131 content of milk of, following ingestion of hay contaminated with Plowshare debris, 25:57948 (SWRHL-85-r)
CAVITIES
  construction of underground, for chemical and metallurgical processing, use of nuclear explosions for, 25:57604 (UCRL-73130)
  stemming conditions in underground nuclear explosion emplacement, method for pre-shot calculation of, 25:57607
CELL DIVISION
  radiation effects on, in epidermis of human mammary tumors, x, 25:58146
CELLOPHANE
  photon reactions (γ,α) in, pulse-height spectra from, (E), 25:59734
CELLS
  iodine-125-labeled gamma globulin uptake by intestinal epithelial, in neonatal rats, 25:60278 (NYO-3515-6)
  phagocytic response of rat lung, following exposure to uranium oxide, 25:57923
  radiation effects on ability of salamander limb, to participate in regeneration, 25:58103
  radiation effects on count of mouse bone marrow stem, effects of partial marrow shielding on x, 25:58124
  radiation effects on cricket neurosecretory, effects of nymph head exposure dose on x, 25:58095
  radiation effects on dog hypothalamus neurosecretory, acute whole-body x, 25:58129
  radiation effects on mammalian, review of effects of LET on charged particle, neutron, and x, 25:58089
  radiation effects on mammalian, review of relation between recovery and dose rate in, 25:58088
  radiation effects on numbers of rat brain cysteine-rich glial, effects of dose and head exposure on x, 25:58106
  radiation effects on sensitivity of lymphoid, to antisera in mouse bone marrow, x, 25:58120
  radiation effects on survival of mouse ascites tumor, sensitizing effects of iodoacetamide on, 25:58034
  radioinduced breaks in DNA of mammalian, review of repair mechanisms for uv and x, 25:57943
  radiosensitivity of melanoma, in comparison to HeLa cells, effects of cytoplasmic inclusions on x, 25:58085
  response to nucleic acid penetration, 25:60282(R) (ORO-3885-3)
  transplantation of osteogenic precursor, of bone marrow to lethally irradiated hybrid mice, effects of hematopoietic cells on, 25:58121
CELLS, CULTURED
  radiation effects on human umbilical cord leukocyte, comparison of effects of chemical carcinogens, viruses, and x, 25:57921
  radiation effects on mammalian, role of labeled DNA in lethal tritium beta, 25:58086
  radiation effects on mitotic activity of human cancer, additive effects of colchicine on γ, 25:58080
  radiation effects on survival of Chinese hamster and human liver, effects of incubation in conditioned medium on repair of x, 25:58081
  radioinduced death of mammalian, mechanism of tritium beta, 25:58086
  radioinduced interphasic death in human, following microbeam exposure of cytoplasm or nucleus, uv, 25:58084
CELLS, HeLa
  radiation effects on growth and mitotic index of, effects of 5-fluorouracil on uv, 25:58082
  radiosensitivity in comparison to melanoma cells, effects of cytoplasmic inclusions on x, 25:58085
  radiosensitivity of, effects of 5-fluorouracil on uv, 25:58082
CELLS, KB
  radiation effects on survival of, effects of cyclic AMP and hydrocortisone on uv, 25:58087
CELLULOID
  ion reactions with films of, film-thickness dependence of cross sections for electron capture and loss in, (E), 25:58695
CELLULOSE, CARBOXYMETHYL ETHER
  radiation effects on aqueous solutions of, at -170 to 25°C, 1-MeV electron, 25:57443
CENTRAL AMERICA
  fallout monitoring during 1970, 25:57981(R) (HASL-245(App.))

  radioactivity of surface atmosphere and precipitation sampled during March 1971, gross β, 25:57992
  radioisotope content of milk during March 1971, barium-140, cesium-137, iodine-131, strontium-89, and strontium-90, 25:57950
CENTRIFUGES
  bearings for, design of improved vertical-axis rotor, 25:57634(P)
  design of K-XII zonal, for purification of influenza virus, engineering drawings for, 25:57626
CERAMIC MATERIALS
  book: Radiation Effects on Glass and Ceramics, in Russian, 25:59147
CEREALS
  flour, analysis for bromine by heavy ion scattering, 25:57359
CEREBROSPINAL FLUID
  scintigraphy of flow kinetics of dog, use of indium-111-labeled albumin for, 25:58052
CERIUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  determination by paper chromatography using peroxide method, 25:57331
  determination in refractory alloys following chromatographic separation from interfering metals, photometric, 25:57338
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  oxidation potential for trivalent--tetravalent, 25:57437
  separation from fission products by electromigration following complexing with nitrilotriacetic acid, 25:57558
  separation from other rare earths by electrophoresis in Complexon III on cellulose or silica gel, 25:57299
  separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
  solubility in chromium at 1000 to 1800°C, metallographic, microhardness, and x-ray diffraction measurements on, 25:58237
CERIUM ALLOYS AND SYSTEMS
  Ce--Y-base, Kondo temperature and superconducting transition temperature of, effects of pressure on, 25:59195
CERIUM IONS
  energy level calculations for Ce III, using Hartree--Fock method, 25:58709
  luminescence in lanthanum and cerium phosphate phosphors, effects of thorium ions on, 25:59185
CERIUM ISOTOPES Ce-140
  energy levels of, determination of electromagnetic transition probabilities from mean lifetimes of, (E), 25:59776 (FRNC-TH-56)
CERIUM ISOTOPES Ce-144
  chemical state in seawater, effects of iron on, 25:57410
  content in rainwater at Fayetteville, Arkansas from May 1966 to Jan. 1969, 25:57578
CERIUM OXIDES
  BaO--CeO_2, phase equilibria in, 25:58405
  CeO_2--ThO_2, electric conductivity of $CeO_2 \cdot 3ThO_2$ solid solutions at 1000 to 1500°C and varying oxygen pressure, 25:58368
CERIUM PHOSPHATES
  luminescence of cerium and terbium ions in, effects of thorium ions on, 25:59185
CERN SYNCHROTRON
  power supplies for improvement program at, 25:59662
  power supply for main ring magnets of, 25:59663
CESIUM
  determination in seawater by AMP precipitation and emission photometry, 25:57301 (TID-25776)
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  effects on complexonometric determination of rare earths, 25:57317
  electromigration in molten chlorides, 25:57439
  electron reactions with, cross sections for ionization in, (T), 25:58738
  plasma of, ionization of nonequilibrium low-pressure, excited states in, (T), 25:59008
  plasma of, population of ionization levels in, 25:59034
  separation from MSBR fuel solvent by reductive extraction, 25:57298 (ORNL-4676, pp 73-138)
  separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
CESIUM IODIDES
  neutron reactions (n,a) and (n,p) at 12 to 22 MeV, analysis for pre-equilibrium emission mechanism in, (E/T), 25:59826
CESIUM ISOTOPES Cs-129
  evaluation for scintigraphy of myocardium in dogs, 25:58041 (UCLA-12-837)
CESIUM ISOTOPES Cs-133
  neutron capture at 400 keV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  photon reactions at 250 MeV, analysis using residual nucleus method, (E), 25:59815
CESIUM ISOTOPES Cs-134
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  determination in seawater by precipitation using AMP and γ counting, 25:57348 (TID-25777)
CESIUM ISOTOPES Cs-137
  content in Japanese atmosphere, 1963 to 1971, 25:57579
  content of milk in Europe, New Zealand, and USA during 1970, 25:57980(R) (HASL-245)
  detection of fission-product, use in locating holes in fuel cans, 25:58344(R) (LA-4693)
  determination in environmental samples by radiochemical isolation and γ spectrometry or beta detection, 25:57355
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  determination in seawater by precipitation using AMP and γ counting, 25:57348 (TID-25777)
  excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
  preparation of beta sources of, Elan-2B pilot plant for, 25:57482(T) (ORNL-tr-2535)
CESIUM URANIUM FLUORIDES
  crystal structure, 25:57298 (ORNL-4676, pp 73-138)
CESIUM URANYL NITRATES
  symmetry types of uniaxial and biaxial crystals of, 25:58703
CHALKS
  effects on thermostability of irradiated polyethylene, 25:57446
CHAPELCROSS REACTORS
  fuel element failure in Unit 2, recovery operations following, 25:59923
CHARCOAL
  sorptive properties of activated, for methyl iodide, (T), 25:60088
CHARGED-PARTICLE BEAMS
  interactions with plasma, diagnostic use of, 25:58994
  oscillations in modulated slightly relativistic, (T), 25:59211
CHARGED PARTICLES
  dechanneling by lattice defects in crystals, review, 25:59169
  detection and identification in ΔE--E telescopes, design and performance of analog equipment for, 25:57722 (CEA-R-4183)
  detection of, development of glass chamber detectors using liquid--liquid phase separation for, 25:57727
  detection of, physical properties and scintillation performance of barium fluoride for, 25:57817
  effects on mammalian cells, review of effects of LET on repair of, 25:58089
  energy loss distribution in single crystals of heavy positive, effects of channeling on, (T), 25:59150
  motion in approximately orthogonal electric and magnetic fields, (T), 25:59210
  motion in axially symmetric time-varying magnetic fields, (T), 25:59212
  motion in magnetic and varying electric fields, potential distribution in, (T), 25:59231
  motion in magnetosphere core, review of trapped, (E/T), 25:58910
  motion in medium, strong correlation between properties of photon tachyons of disappearing Fresnel wave and Cherenkov effect for, (T), 25:59573
  occurrence at lower latitudes of trapping region boundary, nonadiabatic behavior of, (E/T), 25:58907
  production of nonrelativistic doubly, in cosmic multicharged nuclei reactions with light nuclei above 700 MeV/nucleon in emulsions, energy distribution and mean energy for, (E), 25:59274
  radiations from spinless, in electromagnetic field with two waves traveling toward each other, (T), 25:59226
  ratio to neutral particles at altitudes of 800 gm/cm^2, (E), 25:58834
  scattering by single crystals, quantum/classical transition in, (T), 25:59157
  trapping in unstable radiation zone, (E/T), 25:58906
CHELATING AGENTS
  effectiveness of polycomplexon, for removing cobalt-60 from human skin in comparison to DTPA and EDTA, 25:57982
CHEMICAL REACTIONS
  yields in closed systems from, effects of initial conditions and rate constants on, 25:57411
  yields in open system, conditions determining, 25:57413
CHERENKOV RADIATION
  suppression of, Fourier transform criterion for, (T), 25:59219
CHIMERAS
  use of mouse radiation, for studies on osteogenic precursor cells of bone marrow, 25:58121
CHINON REACTORS (EDF-3)
  control system for, development of automatic, 25:59894
CHLORIDES
  electromigration of ions in molten, 25:57439
CHLORINE
  abundance in Orion Nebula, (E), 25:58593
  abundance in Sun, (E), 25:58593
  determination as chloride using Chloramine-T, 25:57303
  determination in analytical reagents by neutron activation, 25:57379
  determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395

XUM

  neutron coherent atomic scattering amplitudes for, (E), 25:59696
CHLORINE IONS
  abundance in Orion Nebula, (E), 25:58513
  effects on subsequent valence distribution of sulfur-35 ion implanted in sodium chloride crystals, 25:57503
  spectral lines in Orion Nebula due to, (E), 25:58513
CHLORINE ISOTOPES Cl-35
  electron reactions with, production of meson (π) in bound state from, 25:59355
  neutron capture by, gamma linear polarization and coincidence spectrum from thermal, (E), 25:59745
CHLORINE ISOTOPES Cl-36
  energy levels from chlorine-35 neutron capture, spin--parity assignments for, (E), 25:59745
  energy-level transitions from chlorine-35 neutron capture, E2/M1 mixing ratio for, (E), 25:59780 (KFK-1401)
  energy-level transitions from chlorine-35 neutron capture, E2/M1 mixing ratios for, (E), 25:59745
CHLOROPHYTA
  Chaetomorpha melagonium, radioinduced chromosome aberrations in, effects of dose on beta, 25:58153
  Chlamydomonas reinhardi, radiation effects on DNA synthesis in, dark repair of uv, 25:57925
5β-CHOLANIC ACID, 3,7,12-TRIOXO-
  effects on excretion of plutonium-239 by rats, 25:57998 (NIRS-Pu-8)
CHOLINESTERASE
  radiation effects on activity in brain and heart of rats, effects of adrenal hormones on x, 25:57929
CHROMIUM
  abundance in Am stars, (E/T), 25:58438
  activity in chromium--titanium alloys, effects of hydrogenation on, 25:58220
  complexes with 2,4-pentanedione, radiation effects on, study of thermal annealing mechanism in neutron, 25:57496
  complexes with 2,4-pentanedione, radioinduced transfer in chromium-51-doped, neutron, 25:57496
  complexes with 2,4-pentanedione, thermal transfer or exchange in chromium-51-doped, 25:57496
  content of foods in Kiev region of Soviet Union, 25:57987
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in fuel solutions of JRR-1, 25:57320
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  diffusion of molybdenum atoms in films of, ion--ion emission studies on, 25:58266
  effects on hardness of dispersion-hardening iron-base alloys, 25:58235
  effects on niobium nitride solubility in iron austenite, 25:58268
  effects on recovery of aluminum irradiated with fast neutrons, 25:58303
  electric conductivity of laser-evaporated films of, temperature coefficient of, 25:59186
  proton elastic scattering at 40 MeV, differential cross sections for, (E), 25:59739 (ORNL-TM-3591)
  radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
  reactions with arsenic and plutonium, 25:57413
  reactions with plutonium in presence of acetaldehyde and arsenite, 25:57411
  separation from plutonium by solvent extraction using TBP, 25:57357
  solubility in sodium at high temperatures, 25:58163(R) (AI-AEC-12859)
  solvent properties for cerium, neodymium, and praseodymium at 1000 to 1800°C, 25:58237
  solvent properties for nitrogen at high temperatures, 25:58249
CHROMIUM ALLOY COUPLES
  Cr--Ni-base/Ni-base--Si, development of thermocouple of, 25:57876
CHROMIUM ALLOYS AND SYSTEMS
  Al--Cr--Mo--W, development of cast, for turbine blades, 25:58203
  Al--Cr--Ni-base--Ti, radiation effects on mechanical properties of, relations of temperature with neutron, 25:58295 (FRNC-TH-64)
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
  Co-base--Cr--ThO_2, properties for use in turbine vanes, 25:58203
  Cr--Ni, porosity and pressure strength of boron-containing, for use as neutron absorber, 25:58255
  Cr--Ni, production of boron-containing neutron absorbers of, using powder metallurgy, 25:58255
  Cr--Ti, chromium activity in, effects of hydrogenation on, 25:58220
  Cr--Ti--V-base, radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
  Cr--W, uses for milling surface-hardened specimen by hard-facing process, 25:58196
  Cr--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
CHROMIUM ISOTOPES Cr-48
  energy levels of, calculation for α-hole, 25:59757
  production in stars from simple helium burning, (E), 25:58508
CHROMIUM ISOTOPES Cr-50
  preparation of radiation targets of, procedures for electrolytic, 25:59633 (CONF-711002-, pp 39-46)
  use as tracer in measuring erosion of high-pressure pipe fittings, 25:57662
CHROMIUM ISOTOPES Cr-51
  content in Columbia River sediments, (E), 25:57561 (TID-25786)
  exchange between chromium compounds and potassium trisoxalato chromate, 25:57490
  radioinduced or thermal transfer in doped chromium trisacetylacetone, neutron, 25:57496
  reactions of recoil, in neutron-irradiated chromium trisacetylacetone, 25:57496
  reactions of recoil, in neutron-irradiated potassium trisoxalato chromate, 25:57490
CHROMIUM ISOTOPES Cr-52
  helium-3 elstic scattering at 30 and 32 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  preparation of radiation targets of, procedures for electrolytic, 25:59633 (CONF-711002-, pp 39-46)
CHROMIUM ISOTOPES Cr-53
  helium-3 elastic scattering at 32 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  preparation of radiation targets of, procedures for electrolytic, 25:59633 (CONF-711002-, pp 39-46)
CHROMIUM ISOTOPES Cr-54
  preparation of radiation targets of, procedures for electrolytic, 25:59633 (CONF-711002-, pp 39-46)
CHROMOSOMES
  gene localization in Drosophila, for x-radioinduced suppressor mutations, 25:57975
  radiation effects on behavior of parthenogenetic wasp, x, 25:57962
  radiation effects on somatic crossing over in Drosophila X, effects of oxygen on x, 25:57959
  radioinduced aberration frequency in human peripheral lymphocyte, effectiveness as dosimeter in accidental exposure to radium-226, 25:58016
  radioinduced aberration frequency in peripheral human lymphocyte, effectiveness for measuring low-dose occupational exposures, 25:58015
  radioinduced aberration frequency of peripheral human lymphocyte, effectiveness as biological dosimeter of, 25:58013
  radioinduced aberrations in fibroblast and lymphocyte, of children with Fanconi's anemia, γ, 25:57973
  radioinduced aberrations in medical personnel, effects of dose, dose fractionation, and radiation source on γ, neutron, and x, 25:57972
  radioinduced aberrations of bacterial, role of DNA repair in recovery of, 25:57970
  radioinduced aberrations of Chaetomorpha, effects of dose on beta, 25:58153
  radioinduced aberrations of Crepis capillaris seed, effects of time of onset of mitosis on frequency of fast neutron, γ, and x, 25:57968
  radioinduced aberrations of human peripheral lymphocyte, effectiveness as biological dosimeter of, 25:58014
  radioinduced aberrations of, in human peripheral lymphocytes, review of, 25:57963
  radioinduced disjunction and loss of Drosophila X, use of frequency of, as dosimeter, 25:57999 (NP-18944)
  radioinduced DNA synthesis in Drosophila polytene, uv and x, 25:57951 (COO-1747-6)
  radiosensitivity of barley seed, from plants grown at high altitudes, effects of uv-deficient light conditions on γ, 25:57969
CHROMOSPHERE
  acoustic waves in, propagation of α spectrum of, (T), 25:58579
  electric conductivity in lower, (E/T), 25:58588
  flocculi in, effects of planets on distribution of calcium, (E), 25:58611
  heating of, due solar spicules, (T), 25:58619
  helium abundance in, (E), 25:58602
  model of, (E), 25:58602
  transition layer with corona, model for, (E/T), 25:58580
CIRCUITS
  analysis using computers, operational amplifier models for, 25:60289 (SC-RR-710628)
  design and performance of analog, for charged-particle identification in ΔE--E telescopes, 25:57722 (CEA-R-4183)
  design and performance of beam energy control and monitoring, for FN tandem Van de Graaff accelerators, 25:59653
  design for four-decade digital log ratemeter, 25:57893

XUM

CITRIC ACID
  radiolysis in nitric acid--strontium nitrate solutions, γ, 25:57457 (ARH-2163)
CLAYS
  analysis for trace amounts of elements by resonance neutron activation and γ spectrometry, 25:57375
CLOTHING
  decontamination of footwear, worn in nuclear facilities, design and operation of ultrasonic equipment for, 25:57629
COAL
  economics of, cost--benefit analysis of, 25:59921
COATINGS
  book: Radiation Stability of Lacquer Coatings, 25:58420
COAXIAL CABLES
  filters for, method for design of near-optimum, 25:57892
COBALT
  compatibility with fuel capsule materials at high temperatures, 25:57654(R) (DP-1279)
  complexes, radiation effects on trisoxinato-, reactions of recoil cobalt-60 from, 25:57493
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in cobalt alloys, spectrographic, 25:57313
  determination in iron meteors, pyrite, and pyroxene by neutron activation and γ spectrometry, 25:57386
  determination in nickel, radiometric, 25:57356
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  diffusion in plutonium and plutonium alloys, tracer studies of, 25:58212 (NRCN-268)
  effects on hardness of dispersion-hardening iron-base alloys, 25:58235
  effects on mechanical properties of molybdenum single crystals, 25:58257
  effects on oxidation of hexavalent neptunium by potassium persulfate, 25:57412
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
  radioinduced void formation in hcp and fcc phases of, 100-kV carbon-ion and 1-MV electron, 25:58325
  solubility in sodium hydroxide--sodium nitrate solutions, 25:58177
COBALT ALLOYS AND SYSTEMS
  analysis for main components, spectrographic, 25:57313
  crystal structure of, electron microscopy and optical studies on relation of physical properties to, 25:58403
  oxidation resistance of WI-52, at 1500 to 2000°C in air, 25:58203
  preparation of high-strength heat-resistant superalloys of, review of methods for, 25:58203
  Al--Co--Cu--Fe-base--Ni, properties and structure of, effects of neodymium additions on, 25:58250
  Co--Fe-base--Mo, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
  Co--Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
  Co--Fe-base--W, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
  Co--V, structural transformations in molten, relations of vacancy mechanisms with eutectic--peritectic, 25:58281
  Co--WC, dynamic behavior of cemented, effects of defects on, (T), 25:58380
  Co--WC, production and properties of, 25:58261
  Co--WC, solubility in sodium hydroxide--sodium nitrate solutions, 25:58177
  Co--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  Co-base--Cr--ThO_2, properties for use in turbine vanes, 25:58203
  Co-base--Fe--Mo--Ti, magnetic properties of wires of, 25:59197
  Co-base--Nb, microstructure of decomposing supersaturated solid solutions, 25:58280
COBALT ISOTOPES Co-56
  beta and electron-capture decay of, γ spectra from, (E), 25:59763
  beta decay of, β--γ circular polarization correlations and Coulomb and Fermi matrix elements in, (E), 25:59746
COBALT ISOTOPES Co-57
  chemical state in seawater, effects of iron on, 25:57410
  preparation of Moessbauer sources of, 25:59203
COBALT ISOTOPES Co-58
  beta decay of, β--γ circular polarization correlations and Coulomb and Fermi matrix elements in, (E), 25:59746
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  exchange between compounds and trisoxinatocobalt(III), 25:57493
COBALT ISOTOPES Co-60
  availability for use as heat source, 25:57654(R) (DP-1279)
  content in Columbia River sediments, (E), 25:57561 (TID-25786)
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  inhalation of cobalt oxide-incorporated, biological half-life and radiation dose in man following, 25:57995 (CONF-711013-1)
  radiation field from source of, in irradiation facility, measurements of, 25:57631
  reactions of recoil, in neutron-irradiated trisoxinatocobalt, 25:57493
  removal from skin, effectiveness of DTPA, EDTA, and polycomplexon for, 25:57982
  use as tracer in measuring erosion of high-pressure pipe fittings, 25:57662
COBALT OXIDES
  inhalation of cobalt-60-labeled, biological half-life and radiation dose in man following, 25:57995 (CONF-711013-1)
  Al_2O_3--CoO, preparation for high-temperature neutron dosimetry, 25:57723 (CONF-711002-, pp 82-5)
  MgO--CoO, preparation for high-temperature neutron dosimetry, 25:57723 (CONF-711002-, pp 82-5)
COINCIDENCE CIRCUITS
  design of two-fold, with subnanosecond outputs, 25:57786
COLCHICINE
  effects on mitotic activity of cultured cancer cells following γ irradiation, 25:58080
COLLIMATORS
  design and performance for scintigraphy with low-energy radioisotopes, 25:57891
COLLISION PROCESSES
  theory of high-energy atomic, review, 25:58775
COLUMBIA RIVER
  radioisotope content in waters of, effects of chemical, mineral, and physical characteristics of streambed sediments on, (E), 25:57561 (TID-25786)
COMETS
  hydrogen occurrence surrounding, Ogo-5 observations of, (E), 25:58574
  solar-wind effects on tails of, (E), 25:58581
COMPOSITE MATERIALS
  preparation of metal--matrix, methods for, 25:58363
COMPTON EFFECT
  cross section for second harmonic generation in, for partially coherent radiation, (T), 25:59225
COMPUTATIONAL MODULAR SYSTEMS
  description for compressed storage of data from multiparameter experiments, 25:59667
COMPUTER PROGRAMS
  CODINETE 25, for thermal neutron diffusion length in moderators, FORTRAN 2, 25:60226 (LFEN-NI.-60-a)
  COLAPS, for group-averaged discrete-ordinate neutron cross section tables, in FORTRAN for CDC 6600, 25:59843 (SC-DR-710320)
  development for dose calculations for high-energy gamma and x radiotherapy, 25:58008
  development for dose calculations for high-energy electron therapy, 25:58009
  development for dosimetry in high-energy gamma and x radiation therapy, 25:58020
  development for dosimetry in high-energy gamma and x radiation therapy, 25:58021
  development for studies on radioisotope transport kinetics in ecosystems, 25:57947 (CONF-710501-35)
  EDIT, for group-averaged discrete-ordinate neutron and gamma cross section tables, in FORTRAN for CDC 6600, 25:59843 (SC-DR-710320)
  ELRAFT, for calculation of secondary events in fault tree analysis of power reactor accidents, FORTRAN for CDC 6600, 25:60134
  FGCD, for storage and retrieval of Gerber punched card program disks, 25:60287 (SC-M-710408)
  FLINA, for stable and transient flow characteristics of boiling sodium in liquid metal cooled reactors, 25:60112 (CEA-CONF-1797)
  for evaluating high-order vertex parts in perturbation theory, algorithms for γ-algebra of electromagnetic form factors for, 25:59360
  for laboratory quality control, FORTRAN IV for IBM 360, 25:57611 (CTC-51)
  ISIS, for analysis of experimental fission data, 25:59773 (AD-721481)
  listing of nuclear accident analysis, 25:60127
  MODIFY, for group-averaged discrete-ordinate cross section tables, in FORTRAN for CDC 6600, 25:59843 (SC-DR-710320)
  ORRIBLE, for flow and temperature distribution in LMFBR fuel rod bundles, FORTRAN, 25:60062 (ORNL-TM-3516)
  RFSP, for determination of neutron spectra from activation data, 25:57725 (KFKI-71-22)
  RIVA, for double differential cross sections, scattering matrix, and integrated cross sections for neutron scattering by heavy water, in FORTRAN, 25:59671 (IFA-DNBR-3)
  SASSI, for calculation of neutron scattering from spherical optical potential, in FORTRAN IV for IBM 360,

25:59842 (RT/FI-(71)6)
  STP-1, for calculation of fission product production in coolant sodium, 25:58163(R) (AI-AEC-12859)
  THERMOS-MUG, for thermal neutron physics constants for reactors, 25:60225 (JAERI-Memo-4394)
  TOFA, for torsional frequency analysis, in FORTRAN for CDC 6600, 25:60057 (AECL-3994)
  TRUMP, for analysis of temperature distribution in three dimensions, 25:60260 (AECL-3783(Rev.1))
  WIGL2, for solution of one-dimensional two-group space-time diffusion equations, self-initializing version of, 25:60209 (DUN-7538)
COMPUTERS
  development at Chicago Univ, 25:60270(R) (COO-2094-7)
  development at Chicago Univ, 25:60271(R) (COO-2094-8)
  interfacing to CAMAC systems, characteristics of, 25:57885
  use of hybrid, for real time reactor simulation, 25:60218
  uses in automation of chemistry laboratories, 25:60293 (UCRL-72001)
CONCRETES
  deformation and ultimate strength of prestressed, under triaxial stress, 25:58415 (FRNC-TH-61)
  density measurements during vibrocompaction, radiometric densimeter for, 25:57869
  radioactivation of shielding, at JINR synchrocyclotron, 25:59657
CONNECTICUT YANKEE POWER REACTOR
  contol system for, design modifications of, 25:59899
  instrumentation for, design modifications of, 25:59899
CONTAMINATION
  monitoring environmental trace-gas, use of microwave rotational spectroscopy in, 25:60294 (UCRL-73197)
CONTROL SYSTEMS
  comparison of manual and visual, 25:60288 (SC-RR-710502)
  design characteristics for gas flow, for use with gas turbines, 25:60073(P)
  development of computer, for operating wood impregnating and irradiating facility, 25:57628
COPPER
  adhesion to (111) crystal surface of nickel, LEED study on, 25:58270
  bonding to lead telluride, methods for solid-state, 25:58207
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in analytical reagents by neutron activation, 25:57379
  determination in fuel solutions of JRR-1, 25:57320
  determination in pure rare earth oxides, polarographic, 25:57311
  determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  diffusion of bismuth in, beta-excited x-ray studies of, 25:57673
  diffusion of bubbles in thin foils of, effects of dislocations on, 25:58214 (RD/B/N-2023)
  dislocation mobility at 44°K in, 25:60265 (CALT-767-P-3-16)
  effects on recovery of aluminum irradiated with fast neutrons, 25:58303
  electron reactions at 12 to 30 keV with, depth distribution of x-ray production in, (E), 25:58685
  electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
  heat transfer from moving spheres of, in subcooled water, studies of film and transition boiling, (E), 25:57642
  helium-ion reactions at 45 to 90 keV/amu with, helium-isotope dependence of cross sections for L-shell ionization in, (E), 25:58776
  mechanical properties of, effects of fatigue on, 25:58223
  microstructure of, effects of fatigue on, 25:58223
  photon reactions at 560 MeV, emulsion study of dependence on atomic weight for yields of π^+ and π^- from, (E), 25:59248
  photon reactions with, secondary electron emission from, (E/T), 25:59107
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  radioinduced void formation in, 1-MV electron, (E/T), 25:58327
  radioinduced void formation in, fast neutron, 25:58310
  recovery from sulfide copper ores, use of underground nuclear explosions in, 25:57604 (UCRL-73130)
  separation from plutonium by solvent extraction using TBP, 25:57357
  separation of decontaminated, from nuclearly fractured ores, solvent extraction-electrowinning method for, 25:57523 (ORNL-4677)
  sintering of dendritic and spherical powders of, effects on end-product microstructure, 25:58389(R) (SRO-552-8)
  stability of MSRE salt sampling bucket of, 25:58168 (ORNL-4676, pp 139-233)
  welding to steel, deposition of intermediate layers for, 25:58204
COPPER ALLOYS AND SYSTEMS
  analysis for niobium using magneson, photometric, 25:57315
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  radiation damage in, interaction of coherent precipitates with fast-neutron and electron, 25:59163
  Ag-base--Cu--In, bonding to lead telluride, methods for solid-state, 25:58207
  Al--Co--Cu--Fe-base--Ni, properties and structure of, effects of neodymium additions on, 25:58250
  Al--Cu, creep strength of, effects of zirconium additions on, 25:58239
  Al--Cu, welding to steel, deposition of intermediate layers for, 25:58204
  Al--Cu-base, oxidation at high temperatures, mechanisms of, 25:58171
  Al--Cu-base--Si, oxidation at high temperatures, mechanisms of, 25:58171
  AmO_2--Cu, preparation of thin-film radiation sources of, radiofrequency sputtering method for, 25:57651 (CONF-711002-, pp 147-59)
  AmO_2--Cu, sputtering of cermets of, for preparation of thin-film americium oxide radiation sources, 25:57651 (CONF-711002-, pp 147-59)
  Be--Cu-base, oxidation at high temperatures, mechanisms of, 25:58171
  Cu--epoxy resin, radiation effects on strength of joints of, gamma, 25:58416(R) (RLO-2098-2)
  Cu--Ni, welding to steel, deposition of intermediate layers for, 25:58204
  Cu--Si, welding to steel, deposition of intermediate layers for, 25:58204
  Cu--Sn, welding to steel, deposition of intermediate layers for, 25:58204
  Cu--W, crystallization of electron beam-refined composites of, 25:58285
  Cu--Zn, welding to steel, deposition of intermediate layers for, 25:58204
  Cu-base--Si, oxidation at high temperatures, mechanisms of, 25:58171
COPPER IONS
  spectra in x-irradiated alkali metal chlorides, ESR, 25:59201
COPPER ISOTOPES Cu-61
  energy levels from nickel-60 (p,γ) reactions, branching ratios and spin-parity assignments for, (E), 25:59764
COPPER ISOTOPES Cu-63
  helium-3 elastic scattering at 30 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  proton reactions (p,γ) at 2 to 18 MeV, gamma spectra from, (E), 25:59742
COPPER ORES
  processing of sulfide, using underground nuclear explosions, 25:57604 (UCRL-73130)
COPPER SULFATES
  $CuSO_4$--$FeSO_4$--$Fe_2(SO_4)_3$--$ZnSO_4$, complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)
CORROSION
  measurement of railroad equipment, use of radioisotopes for, 25:57672
CORROSION LOOPS
  inspection of sodium fluoroborate salt, postoperation, 25:60015 (ORNL-4676, pp 21-72)
  particulate content of sodium in, after 4000 hr operation at 500°C, 25:58170 (RD/B/N-1998)
CORUNDUM
  use in testing abrasion resistance of refractory alloys and materials, 25:58386
COSMIC GAMMA SOURCES
  detection of, performance of large satellite-borne lithium-drifted germanium detectors for, 25:57791
COSMIC PARTICLES
  acceleration of relativistic electron, (T), 25:58830
  beryllium isotopes distribution in, effect of interstellar helium on, 25:59733
  detection and measurement, coupling functions applicable to underground meson telescopes for, 25:58822
  intensity of muons above 3.48 and 7.12 GeV/c, absolute, 25:58826
  intensity variations of primary and secondary muons at high energies, 25:58827
  interactions $\nu + N$ at high energies, μ spectra from, (T), 25:59417
  interactions of cosmic muons at large zenith angles at sea level, 25:59343
  interactions of muons to 1 TeV, cross sections for electromagnetic, 25:59246
  isotope abundance in primary, beryllium, boron, and lithium, (E), 25:58833
  nuclei reactions with light nuclei above 700 MeV/nucleon in emulsions, energy distribution and mean energy of nonrelativistic doubly charged particle production in multicharged, (E), 25:59274
  penetration of parallel groups of, in atmosphere, (E/T), 25:58828
  spectra of 20- to 1000-GeV muons at sea level, 25:59245
  spectra of relativistic electron, (T), 25:58830
COSMIC RADIATION
  effects on interstellar loop structures, (T), 25:58640
  emission during flares from red dwarfs, (T), 25:58443
  gamma background, between 0.7 and 4.5 MeV at balloon altitudes, (E), 25:58832
  gamma flux in, Cosmos-135 measurements of, (E), 25:58835

- intensity of 0.511-MeV gamma line during epoch of meteor streams, (E), 25:58836
- intensity of primary gamma, in vicinity of Earth, (E), 25:58831
- intensity of, rigidity dependence of Forbush decreases and 11-year variations in, (E/T), 25:58823
- intensity variation at 1954 solar minimum, streaming-associated anomalous solar diurnal, (E), 25:58824
- intensity variations of, evaluation of evidence of sidereal time period in, (E/T), 25:58825
- screening of instrumentation in magnetosphere, charge and potential from, (T), 25:59115

COSMIC RADIO SOURCES
- distance to 3C 58, (E), 25:58651
- distribution of, 25:58666
- distribution of extragalactic, (T), 25:58659
- identification of 50, from the Ohio survey, (E), 25:58558
- identification of PKS 1415-24 with AP Lib, (E), 25:58658
- lunar occultation of, (E), 25:58538
- magnetic-field scale in extended extragalactic, (T), 25:58532
- polarization of extended extragalactic, (T), 25:58532
- radiation mechanism for, (T), 25:58526
- radio flux density of Virgo A at 10 to 30 cm, (E), 25:58525
- spectra of compact, at galactic center, (E), 25:58555
- spectra of compact, effects of induced Compton scattering by thermal electrons in, (T), 25:58527
- spectra of, absorption at 21 cm, (E), 25:58651
- spectral analysis of 5C1, (E), 25:58531
- structure in Sgr A, (E), 25:58555
- structure of Sagittarius A, (E/T), 25:58624
- structure of, lunar occultation studies for angular, (T), 25:58529

COSMIC-RAY SPECTROMETERS
- performance of large satellite-borne lithium-drifted germanium, 25:57791

COSMIC RAY TELESCOPES
- coupling functions applicable to underground meson, procedure for primary, 25:58822

COSMIC SHOWERS
- intensity and distribution of muon, underground, 25:59247
- properties of EAS core at 10^{15} eV, (E), 25:59249
- secondary particle distribution in fireball model, double-peaked structure of, 25:59529

COSMIC X-RAY SOURCES
- Cyg X-1, optical identification with HD 226868, (E), 25:58554
- Cyg X-3, model featuring excitation of radial vibrations in white dwarf, (E/T), 25:58552
- Cyg XR-1, eclipsing binary model for, (E), 25:58553
- Cyg XR-2, distance to, (E), 25:58548
- distribution of, (T), 25:58565
- evolution from pulsars in binary systems, (T), 25:58424
- GX 340 + 0, spectrum from 1 to 10 keV, (E), 25:58534
- identification of, (E), 25:58530
- Pup A, spectra of, (E), 25:58561
- Sco X-1, high-frequency oscillations in x-ray flux from, (E), 25:58536
- Sco X-1, short-period oscillation in optical and x-ray flux from, (E), 25:58535
- spectra of Cyg XR-2, soft x-ray, (E), 25:58548
- Vel X, spectra of, (E), 25:58561

COSMOLOGY
- arrow of time in, (T), 25:58672
- big-bang, evidence for, (T), 25:58666
- constant of, (T), 25:58661
- deceleration parameter in, (T), 25:58666
- dissipative processes in early Universe, (T), 25:58669
- evolution and thermodynamic irreversibility, (T), 25:58672
- gravitational constant in, decreasing, (T), 25:58667
- localizability of particles in de Sitter space, (T), 25:58660
- luminosity evolution in, (T), 25:58666
- mass in, nature of, (T), 25:58667
- matter density in, (E/T), 25:58635
- models for, matter effects in, (T), 25:58669
- models for, time scale of expansion in Friedmann, (T), 25:58663
- time asymmetry in, (T), 25:58671

COUNTERCURRENT SEPARATION PROCESSES
- equipment for separation of stable oxygen isotopes from heavy water, design and operation of, 25:57675

CRAB NEBULA
- flux from, 10 μm, (E), 25:58541

CRACKS
- propagation of Griffith, thermodynamic-kinetic model of, 25:58209 (AECL-3992)

CREATININE
- determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)

CREEP
- determination of in-reactor, from stress relaxation experiments, 25:58209 (AECL-3992)

CRITICAL ASSEMBLIES
- critical mass of homogeneous water moderated spherical uranium-235, with mixed natural uranium and water reflector, (T), 25:60220
- criticality of water moderated, effects of 20 to 250°C on, 25:60161
- fission products in Core 3000 and Core 4000 of STEK Assembly, reactivity worth measurements for, 25:60159 (RCN-150)
- multiplication factors for hollow cylindrical water moderated highly enriched aluminum--uranium-235, (E/T), 25:60212
- multiplication factors for unmoderated and unreflected, collision probability method calculations of, (E/T), 25:60230
- physics measurements in ZPR, preparation of fissionable foils for, 25:58180 (CONF-711002-, pp 70-6)
- physics measurements in ZPR-6, ZPR-9, and ZPPR, for liquid metal cooled fast reactors, 25:60005(R) (ANL-7854)
- physics parameter measurements in SNEAK and SUAK, comparison of calculations with integral, 25:60036 (EURFNR-945)
- safety analysis of ETRC, reevaluation of initial, (T), 25:60149 (ANCR-1002)

CROSS SECTIONS
- correction for velocity of total scattering, from beam experiments, 25:58757
- data libraries for group-averaged discrete-ordinate, computer programs for, 25:59843 (SC-DR-710320)
- library for charged particle, description of LRL evaluated, (E), 25:59783 (UCRL-50400(Vol.4))
- measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)

CRYSTAL RIVER POWER REACTOR, UNIT 3
- construction of, request for not suspending permit for, 25:59969 (DOCKET-50302-26)

CRYSTALS
- atom locations in, channeling-effect technique for study of, 25:59167
- charged-particle dechanneling by lattice defects in, review, 25:59169
- content of nonmetallic, in high-temperature sodium loops, 25:58170 (RD/B/N-1998)
- ion channeling and blocking in, review of, 25:59151
- ion channeling in, review, 25:59165
- ion channeling in, review of principles and applications of, 25:59167
- proton and ion channeling in, calculations of electronic and nuclear stopping powers for, 25:59129
- rare gas release during annealing of ion-bombarded ionic, review of stages of, 25:58412
- surface energy and work function of smooth faces of metallic mono-, (T), 25:59194
- transmission in, scattering of laser beams by electron beams in anomalous, (T), 25:59228

CURIUM
- oxidation potential for trivalent--tetravalent, 25:57437
- separation from americium by electromigration, 25:57520 (JINR-E6-5952)
- separation from americium by ion exchange chromatography on zirconium phosphate, 25:57551
- separation from other actinides by paper or thin-layer chromatography, 25:57553

CURIUM ALLOYS AND SYSTEMS
- Cm--Ir, preparation of intermetallic $CmIr_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)
- Cm--Pt, preparation of intermetallic $CmPt_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)
- Cm--Rh, preparation of intermetallic $CmRh_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)

CURIUM ISOTOPES Cm-244
- production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)

CURIUM OXIDES
- compatibility with refractory capsule materials at high temperatures, 25:57658(R) (ORNL-4723)
- fabrication of radioisotope fuels of, use of gadolinium oxide as stand-in for development of methods for, 25:57653 (DP-1270)
- preparation of sized particles of, ion exchange carbonization method for, 25:57658(R) (ORNL-4723)
- thermal capacity of, development of equipment for measuring, 25:57658(R) (ORNL-4723)

CURRENT ALGEBRA
- charge-current commutator in quantum electrodynamics, equal-time, 25:59566
- field algebra, review on, 25:59324
- hyperon (Ω^-) decay in, 25:59398
- PCAC hypothesis from s-wave threshold amplitudes of $\gamma + N \to \pi^0 + N$ interactions, (E/T), 25:59373
- review on developments in, 25:59323

CYANOGEN
- abundance in delta Scu, (E), 25:58479
- abundance in sunspots, (E/T), 25:58589

CYCLOHEXANE
- radiolysis of, kinetics of, 25:57473

CYCLOPHOSPHAMIDE
- effects on incidence of cleft palate and oligodactylia in mouse embryos following in utero exposure, 25:58127

CYCLOPROPANE
- radiolysis of clathrate hydrates of, stability of radicals from γ, 25:57476

CYCLOTRON RADIATION
- emission from nonequilibrium plasma, effects of spatial

XUM

dispersion on, (T), 25:59097

CYCLOTRONS
  beam extraction system for ORNL 86-inch, failure of aluminum tubing in, 25:59643 (ORNL-TM-3523)
  experimental facilities at Texas A and M, description of on-line programmable data acquisition interface for, 25:59665

CYSTAMINE
  effects on redox potential in muscles of dogs, mice, and rats following injection, correlation between dose and, 25:58031
  radioprotective effects on dogs, mice, and rats, correlation between effects on muscle redox potential and, 25:58031

CYSTEINE
  radioprotective effects against chlorophyll mutations in barley, x, 25:57974

CYTOCHROME C
  Moessbauer spectroscopy of, 25:60279(R) (NYO-3798-12)

CYTOPLASM
  radiation effects on cultured human cell, following microbeam exposure in relation to incidence of interphasic death, uv, 25:58084
  radiosensitivity effects of structure of HeLa and melanoma cell, electron microscopy of x, 25:58085

D

DACTINOMYCIN
  effects on DNA and RNA stability and synthesis and on growth in gamma-irradiated Tetrahymena pyriformis, effects of concentration on, 25:58091

DATA ACQUISITION SYSTEMS
  description of CAMAC, 25:57883
  description of CAMAC Branch Highway, 25:57881
  description of computer-controlled CAMAC, for low-energy nuclear physics at ANL, 25:57884
  description of fast single-ADC, for pulse height analysis, 25:59668
  description of fully automatic, for photonuclear cross sections, 25:59772
  description of Sandia time-shared on-line, for radiation research, 25:59666
  design and performance of high-count rate two-parameter, for gamma spectra of neutron capture resonances, 25:57806
  development for ORNL fusion experiments, 25:59075 (ORNL-TM-3593)
  development of reactor protection system, 25:60208
  interfacing of CAMAC, to small computers, 25:57885
  operation of CAMAC Branch Highway and Dataway, signal standards for, 25:57880
  operation of CAMAC Dataway, standards for control language for, 25:57882
  performance of computerized automatic, in nuclear materials safeguards system, 25:57704 (GULF-RT-A-10826)
  status of CAMAC, November 1970, 25:57888

DATA DISPLAY SYSTEMS
  description of Sandia time-shared on-line, for radiation research, 25:59666

DATA PROCESSING SYSTEMS
  development of reactor protection system, 25:60208

DAVIS-BESSE POWER REACTOR
  construction of, request for not suspending permit for, 25:59987 (DOCKET-50346-20)

DECONTAMINATION
  equipment for biological, chemical, and radioactive, of objects and persons, design and operation of motor vehicle, 25:57622(P)
  equipment for footwear worn in nuclear facilities, design and operation of ultrasonic, 25:57629
  methods for process equipment from radiochemical separations plants, 25:57517 (DP-1266)
  procedures for power reactor component maintenance and replacement, 25:60099
  requirements for power reactor component maintenance and replacement, 25:60099

DENSIMETERS
  design of beta radiometric, for measuring dust collected on filters, 25:57870
  design of gamma radiometric, for selecting head lettuce for harvesting, 25:57871(P)
  design of radiometric, for flowing powders in reservoir, 25:57872(P)
  design of radiometric, for studying vibrocompacting of concretes, 25:57869
  use of photo-, in assay of materials used in nuclear measurements, 25:59640 (CONF-711002-, pp 272-82)

DETONATION WAVES
  propagation in plasma, relativistic theory for, 25:59043

DEUTERIUM
  carbon-ion (C^-) reactions with molecular, effects of thermal motion of molecules on charge exchange in, (T), 25:58752
  determination by combustion in stream of hydrogen, oxidation, and ir spectrometry, 25:57349
  deuterium-hydride scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
  deuterium-molecule scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
  deuteron reactions (d,dp) at 20.7 MeV, DWBA and PWBA analyses of coincidence cross sections for, (E/T), 25:59699
  deuteron reactions (d,n) and (d,p) at 10 and 11.5 MeV, analyzing powers for, (E), 25:59700
  effects on carcinogenicity of 7,12-dimethylbenz [a]-anthracene in mice, 25:57920
  effects on ferroelectric properties of potassium acid phosphate crystals, (T), 25:59196
  effects on fractionation factors for lyonium and lyate ions in methanol, 25:57427
  effects on ir spectra of acetylene, 25:57433
  effects on ir spectra of hydrogen cyanide, 25:57421
  effects on isotopic exchange between ethane and hydrogen on nickel catalyst, 25:57428
  effects on mandelaldehyde--2-hydroxyacetophenone isomerization, 25:57431
  effects on PMR spectra of divalent beryllium in aqueous solutions, 25:57429
  effects on reaction between galvinoxyl and trihydrogalvinoxyl in cyclohexane, 25:57432
  effects on rotational constants for hydrogen cyanide, 25:57423
  effects on rotational spectra of ammonia in 0.5-mm wavelength region, 25:57424
  effects on self-diffusion of methane and diffusion of methane in argon and neon, 25:57434
  effects on vibrational spectra of chloroethane, 25:57422
  helium-3 reactions (He-3,tp) and (He-3,He-3p) at 27 MeV, PWBA analysis of coincidence spectra from, (E/T), 25:59694
  helium-atom scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
  Lamb shift of, 25:58813
  neutron capture at 0.025 eV, cross sections for two-quantum radiative, (T), 25:59527
  neutron elastic scattering by, dispersion relations for unphysical cuts in nuclear structure studies of, (T), 25:59691 (LA-DC-12958)
  nuclear magnetic resonance in solid and liquid, relaxations in pulsed, (E/T), 25:59202
  photon scattering by, analysis for double scattering and glory effects in Compton, (T), 25:59703
  reactions with hydrogen molecules of atomic, differential cross sections for deuterium hydride formation in, (E), 25:58778
  reactions with sodium (3^2P) atoms of molecular, cross sections for excitation in, (E), 25:58778
  scattering by molecules of molecular, velocity dependence of total effective cross sections for, 25:58782
  separation from hydrogen on cathode and diffusion sides of palladium--silver foils, factors for, 25:57538

DEUTERIUM HYDRIDES
  deuterium-hydride scattering by, velocity dependence of total effective cross sections for, 25:58782
  deuterium-molecule scattering by, velocity dependence of total effective cross sections for, 25:58782
  helium-atom scattering by, velocity dependence of total effective cross sections for, 25:58782
  scattering by molecules, velocity dependence of total effective cross sections for, 25:58782
  scattering by rare gases at 300 to 3500 m/sec, total effective cross sections for, (E), 25:58781

DEUTERIUM SYSTEMS
  D--Nb--Ti, deuterium distribution fluctuations in $NbTi_2D$, 25:58278
  D--T, laser heating of plasma of, (T), 25:58965

DEUTERONS
  binding energy from dispersion relations for mass--energy form factors, 25:59526
  binding energy of singlet-state, 25:59518
  binding energy of, separable potentials for, (T), 25:59517
  effects on metal foils at MeV ranges, design of low-temperature facility for studies of, 25:57620 (RISO-204)
  form factors for $e + d \to e + d$ interactions, effect of $\Delta(1236) - \Delta(1236)$ configuration admixtures on, (T), 25:59367
  form factors of, vector mesonic correction to electromagnetic, 25:59379
  interactions anti d + d 13.3 GeV/c, total cross sections for, (E), 25:59275
  interactions anti n + d, total cross sections for, (E), 25:59275
  interactions anti $p + d \to p + \pi^+ + 2\pi^- + \pi^0$ at 5.5 GeV/c in deuterium bubble chamber, cross sections for anti $p + n \to \pi^+ + 2\pi^- + \pi^0$ interactions, rate for single rho production, upper limit for double rho production, cross sections, and angular and momentum distributions in, (E), 25:59276
  interactions anti p + d at 6.65 GeV/c, CPT invariance test from ratio of total cross sections of anti d + p interactions at 13.3 GeV/c to total cross sections of, (E), 25:59275
  interactions $d + n \to (nn) + p$ at 2 to 160 MeV, three-body separable potential for, 25:59510
  interactions $d + p \to (np) + p$ at 2 to 160 MeV, three-body separable potential for, 25:59510

- interactions $d + p \to (pp) + n$ at 2 to 160 MeV, three-body separable potential for, 25:59510
- interactions $d + p \to p + d$ at 2 to 160 MeV, three-body separable potential for, 25:59510
- interactions $e + d \to e + d$, effect of $\Delta(1236) - \Delta(1236)$ configuration admixtures on deuteron form factors for, (T), 25:59367
- interactions $e + d$, Tamagaki and Hamada--Johnston potentials for elastic, 25:59335
- interactions $\gamma + d \to \mathrm{eta} + d$, amplitudes with anomalous thresholds for ω exchange and S_{11} contributions to, (T), 25:59514
- interactions $K^- + d \to K^- + d$ at 810 to 1110 MeV/c, angular distributions for, (E), 25:59302
- interactions $K^- + d \to K^- + p + n$ at 810 to 1110 MeV/c, angular distributions for, (E), 25:59302
- interactions $K^- + d \to K^- + \pi^- + 2p$ at 12.6 GeV/c, production of $p\pi^-(1450)$ enhancement, cross sections for $K + \pi \to K + \pi$ interactions, production cross sections for Ξ^- and Ω^-, and cross sections for, (E), 25:59283
- interactions $K^- + d \to K^- + \pi^+ + \pi^- + n + p$ at 12.6 GeV/c, production of $n\pi^+\pi^-(1450)$ and $p\pi^+\pi^-(1450)$ enhancements, production cross sections for Ω^- and Ξ^-, and cross sections for, (E), 25:59283
- interactions $K^- + d \to \pi^- + \Lambda + p$, Λp mass spectra in, 25:59522
- interactions $n + d$, calculation of doublet scattering length using rank-four separable potential, (T), 25:59707
- interactions of, comparison of models for relation of amplitude for nucleon production in nucleon interactions with amplitude for deuteron production in, (T), 25:59514
- interactions $p + d \to p + d$ at 70 GeV, emulsion study of differential cross sections and slope parameters for, (E), 25:59273
- interactions $p + d$ at 12.8 GeV/c, Glauber multiple scattering model for elastic, (E/T), 25:59269
- interactions $\pi^+ + d \to d + \pi^+ + \pi^+ + \pi^-$ at 13 GeV/c, dual diffractive model for, (E/T), 25:59480
- interactions $\pi^+ + d \to p + p + \pi^+ + \pi^-$ at 7 GeV/c, production of $g^0(1670)$ in, (E), 25:59288
- interactions $\pi^+ + d \to$ p/sub s/ $+ p + \pi^+ + \pi^- + \pi^0$ at 7.0 GeV/c, production and decay of N*(1500) and N*(1700) in, 25:59307
- interactions $\pi^+ + d \to \pi^+ + d$ at 40 and 60 MeV, use of impulse approximation for calculation of differential cross sections for, (E), 25:59484
- interactions $\pi^+ + d \to \pi^+ + n + p$ at 40 and 60 MeV, use of impulse approximation for calculation of differential cross sections for, (E), 25:59484
- interactions $\pi^+ + d$ at 2.7 and 3.1 GeV/c in bubble chamber, resonance production in five- and six-charged-particle final states in, (E), 25:59282
- interactions $\pi^- + d$ at 9 GeV/c, Glauber multiple scattering model for elastic, (E/T), 25:59269
- reactions (d,α) with beryllium-9 at 0.9 to 2.2 MeV, differential cross sections and excitation functions for, (E), 25:59721
- reactions (d,α) with beryllium-9 at 120 to 200 keV, energy levels of boron-11 from, (E), 25:59827 (CEA-R-4070)
- reactions (d,α) with lithium-6 at 400 to 960 keV using polarized beam, analyzing power for, (E), 25:59737
- reactions (d,dp) with deuterium at 20.7 MeV, DWBA and PWBA analyses of coincidence cross sections for, (E/T), 25:59699
- reactions (d,He-3) with neon-20, coupled-channel analysis for inelastic effects in, (T), 25:59758
- reactions (d,n) and (d,p) with deuterium at 10 and 11.5 MeV, analyzing powers for, (E), 25:59700
- reactions (d,n) with helium-3, formalism for polarized particles in, (T), 25:59837 (LA-4492)
- reactions (d,n) with tritium at 0.2 to 1 MeV using polarized beam, analyzing power for, (E), 25:59705
- reactions (d,n) with tritium at 0.5 to 7 MeV, compound-nucleus analysis of differential and total cross sections and neutron polarization from, (T), 25:59706
- reactions (d,n) with tritium, formalism for polarized particles in, (T), 25:59837 (LA-4492)
- reactions (d,p) and (d,t) with beryllium-9 at 120 to 200 keV, angular distributions and mechanisms for, (E/T), 25:59827 (CEA-R-4070)
- reactions (d,p) with beryllium-9 at 2 to 10 MeV, distorted-wave analysis of proton polarization in, (T), 25:59722
- reactions (d,p) with calcium-40 at 70 to 12 MeV, DWBA and impulse-approximation analyses of, (T), 25:59848
- reactions (d,p) with calcium-40, effects of deuteron D state on, (T), 25:59841(R) (ORO-4119-1)
- reactions (d,p) with carbon-12 at 80.2 MeV, DWBA analysis of differential cross sections for, (E), 25:59754
- reactions in lead at 0.85 to 1.7 GeV/c, neutron yield from, (E), 25:59820
- reactions with nuclei, DWBA treatment of finite-range effects in calculation of differential cross sections for stripping, (T), 25:59854
- scattering by gold layers on vanadium, measurement of layer thickness by, 25:59640 (CONF-711002-, pp 272-82)
- scattering by nuclei at 80 MeV, optical-model analysis of angular distributions from elastic, (E), 25:59754
- scattering by nuclei at 82 MeV, DWBA analysis of angular distributions from inelastic, (E), 25:59754

- DEUTERONS (anti d)
  - interactions anti d + d 13.3 GeV/c, total cross sections for, (E), 25:59275
  - interactions anti d + p at 13.3 GeV/c, CPT invariance test from ratio of total cross sections of anti p + d interactions at 6.65 GeV/c to total cross sections of, (E), 25:59275
- DEXTRAN
  - radiosterilization of powders of, chemical and physical changes induced in γ, 25:58160
- DIABLO CANYON POWER REACTOR, UNIT 2
  - construction of, request for not suspending permit for, 25:59958 (DOCKET-50275-16)
- DIAMONDS
  - radioinduced defects in, review of, 25:59137
  - use in testing abrasion resistance of refractory alloys and materials, 25:58386
- DIET
  - radioisotope content of human, in EURATOM countries during 1969, 25:57979 (EUR-4667)
- DIFFERENTIAL EQUATIONS
  - resolution of hierarchy of Green function for fermions, 25:59218
  - solution of partial, using symbolic style of Algol, 25:59216
- DIFFUSION
  - measurement in solids by beta excitation of x rays, 25:57673
  - short-circuiting effects in solids, 25:58209 (AECL-3992)
- 1,3-DIOXOLANE
  - radiolysis of hydrates of, EPR studies on free radicals from γ, 25:57465
- DISEASES, INFECTIOUS
  - tinea capitis, radiotherapy in children, use of Fricke dosimeter to measure absorbed x-ray dose to brain during, 25:58012
  - vaccinia, radioinduced lesions in mouse and rat, similarity between normal and, 25:58128
- DISEASES, NEOPLASTIC
  - adenomas, radiotherapy of human thyroid, use of iodine-131 for post-surgical interstitial, 25:58056
  - cancer, radiotherapy of human cervical, effects of adrenal cortex extract on, 25:58035
  - carcinomas, radioinduced squamous cell, in rat tibia, comparison of γ and x, 25:58102
  - carcinomas, radiotherapy of human gynecological, effects of dose on injuries to bladder and rectum during contact cobalt-60 γ, 25:58010
  - carcinomas, radiotherapy of human skin, effectiveness of x, 25:58068
  - carcinomas, radiotherapy of human thyroid, using interstitial iodine-131, possibility of contamination of environment, 25:58079
  - carcinomas, radiotherapy of human, role of antitumor immune mechanisms of normal tissues in, 25:58072
  - carcinomas, radiotherapy of pulmonary, review of complications and effectiveness in cobalt-60 γ and sieve and super-high voltage x, 25:58137
  - carcinomas, radiotherapy of uterine cervical, effectiveness of intracavitary radium, super-high voltage x, and telecobalt γ, 25:58070
  - conference on intestinal, 25:58029
  - diagnosis of human liver, comparison of effectiveness of angiography, radioisotope scanning, and ultrasound tomography for, 25:58044
  - malignant, radiotherapy of human breast, survival rate following post-surgical γ, 25:58071
  - malignant, radiotherapy of human breast, survival rate following pre-surgical gamma and x, 25:58073
  - malignant, radiotherapy of human gynecologic, occurrence of vesicovaginal fistula following, 25:58135
  - malignant, radiotherapy of human, effectiveness of high-energy electron and x, 25:58076
  - melanomas, radiodiagnosis of human eye, phosphorus-32 uptake test for, 25:58063
  - melanomas, radiodiagnosis of human eye, using phosphorus-32 uptake and semiconductor detectors, 25:58064
  - myelomas, radioinduced heterotopic bone formation in lungs of man with, x, 25:58133
  - osteosarcomas, growth dynamics of radioinduced, in beagle dogs following injection of plutonium-239, radium isotopes, strontium-90, and thorium-228, 25:57918
  - radiodiagnosis in human lungs, evaluation of scintigraphic methods for, 25:58040 (UCLA-12-834)
  - radioinduction in rats, effects of age and sex on whole-body x, 25:58097(T) (ORNL-tr-2521)
  - radiotherapy of human, hazards to normal tissues from combined antineoplastic drug therapy and supervoltage, 25:58077
  - sarcomas, radiation effects on growth of transplanted mouse, effects of dose on electron and x, 25:58083
  - sarcomas, radiation effects on phospholipase A activity in dog Sticker, γ, 25:57940
  - sarcomas, radioinduced osteogenic, osteoplastic, and spindle cell, in rat tibia, comparison of γ and x, 25:58102
  - scintigraphy of human liver, using gallium-67, 25:58045
  - tumors, radiation effects on cell division in epidermis of human mammary, x, 25:58146
  - tumors, radiotherapy of human brain, effectiveness of γ,

XUM

25:58069
  tumors, radiotherapy of human cervical, cytology and histology of epithelium following γ, radium, and x, 25:58140
  tumors, radiotherapy of human dose distribution planning for megavolt, 25:58007
  tumors, radiotherapy of remnants of human cervix uteri, following external γ or x radiotherapy, effectiveness of small radiation sources for, 25:58074
DISEASES, PHYSIOLOGICAL
  deoxycitidinuria, incidence among uranium mining personnel, role of age in, 25:58145
  Fanconi's anemia, effects on frequency of γ radioinduced chromosome aberrations in children, 25:57973
  hyperthyroidism, radiotherapy of human, using interstitial iodine-131, possibility of contamination of environment through, 25:58079
  radiodiagnosis in human lungs, evaluation of scintigraphic methods for, 25:58040 (UCLA-12-834)
DISEASES, TRAUMATIC
  radiation injuries, evaluation of biochemical indicators of, 25:58126
  radiation injuries, treatment of, induced in human skin following therapy, 25:58038
  radiation sickness, cardiovascular changes in laboratory animals during, 25:58122
  radiation sickness, radiation effects on sensitivity of man to pharmaceuticals for treatment of, 25:58142
  radioinduced dermatitis, effectiveness of topical 5-fluorouracil for treatment of human, 25:58037
  shock, effects of sublethal hemorrhagic, on survival of mice following subsequent whole-body irradiation, 25:58109
  wounds, monitoring for plutonium, design of collimated alpha detector for, 25:57998 (NIRS-Pu-8)
DISPERSE SYSTEMS
  dynamic behavior of inhomogeneous, (T), 25:58380
DISPERSION RELATIONS
  meson (π) production in $\gamma + N \to \pi + N$ interactions, vector meson dominance for invariant amplitudes of, 25:59351
  review on, 25:59425
  test of forward, review on experimental, 25:59424
DOGS
  radiation effects on neurosecretory cells in hypothalamus of, acute whole-body x, 25:58129
  radioinduced osteosarcoma growth dynamics in beagle, following injection of plutonium-239, radium isotopes, strontium-90, and thorium-228, 25:57918
  redox potential in muscles of, effects of cystamine on, 25:58031
  tritium oxide toxic effects on, 25:57916
DONALD C. COOK POWER REACTOR, UNIT 1
  containment system for, requested additional data on, 25:59972 (DOCKET-50315-48)
  containment systems for, performance evaluation of, 25:59973 (DOCKET-50315-49)
  cooling system for, requested additional data on, 25:59972 (DOCKET-50315-48)
  radioactive waste disposal system for, revised and additional data on, 25:59972 (DOCKET-50315-48)
DONALD C. COOK POWER REACTOR, UNIT 2
  containment system for, requested additional data on, 25:59972 (DOCKET-50315-48)
  containment systems for, performance evaluation of, 25:59973 (DOCKET-50315-49)
  cooling system for, requested additional data on, 25:59972 (DOCKET-50315-48)
  radioactive waste disposal system for, revised and additional data on, 25:59972 (DOCKET-50315-48)
DOUNREAY FAST REACTOR
  cooling system for, failure location and repair in primary, 25:60078
DRESDEN POWER REACTOR, UNIT 1
  emergency core cooling system for, performance evaluation of, 25:59935 (DOCKET-50010-96)
DRESDEN POWER REACTOR, UNIT 2
  control system for, maintenance requirements for unplanned shutdown from spurious signal in pressure of, 25:59917
  fuel elements for, performance evaluation of, 25:59941 (DOCKET-50237-203)
DRESDEN POWER REACTOR, UNIT 3
  operation of, request for not suspending license for, 25:59947 (DOCKET-50249-105)
DRUGS
  analysis for iodine by radioisotope x-ray fluorescence, use of Ross filters in, 25:57322
DUANE ARNOLD POWER REACTOR
  construction of, request for not suspending permit for, 25:59979 (DOCKET-50331-28)
DUSTS
  mass of, collected on filters, beta radiometric gage for measuring, 25:57870
  radioactivity of the Netherlands atmospheric, during 1967, gross α, β, γ, 25:57575 (RA-42)
DYES
  radiation effects on decoloration of textile, synergistic effects of oxidants on γ, 25:57452
  radiosensitizing effects on nerve fibers, uv, 25:57942
DYSPROSIUM
  complexes with HEDTA, dissociation constants for, 25:57537
  determination in fluorite by solvent extraction and spectrography or fluorimetry, 25:57332
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  energy levels of, identification of 4f/sup N-1/$6s^2$6p configurations in, 25:58706
  optical properties at 1.13 to 3.96 eV, 25:59187
  oxidation potential for trivalent--tetravalent, 25:57437
DYSPROSIUM ALLOYS AND SYSTEMS
  Dy--Ho, phase studies of, 25:58274
  Dy--Ho--Y, phase studies of, 25:58274
DYSPROSIUM IONS
  wave functions for Dy^{2+}, analytical self-consistent-field calculations of, 25:58698
DYSPROSIUM ISOTOPES Dy-160
  energy-level transitions in, sign of amplitude mixing ratio for, (E), 25:59819
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
DYSPROSIUM ISOTOPES Dy-161
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
DYSPROSIUM ISOTOPES Dy-163
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
  preparation of monocrystalline, by grain growth annealing, 25:58184 (CONF-711002-, pp 181-90)
DYSPROSIUM ISOTOPES Dy-164
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
DYSPROSIUM OXIDES
  reduction to metal using thorium with simultaneous distillation separation, 25:58184 (CONF-711002-, pp 181-90)

E

EARTH
  electric currents in, correlation with geomagnetic-field daily, lunar, and disturbance variations, (E/T), 25:58889
  temperature changes due to fusion energy in years 2000 to 2020, 25:58956
EARTHQUAKES
  discrimination between underground nuclear explosions and, using seismic P-wave spectra, 25:57599
  discrimination between underground nuclear explosions and, using short period seismic array data, 25:57600
  effects on BWR-type nuclear power plants, models for simulating dynamic, (T), 25:57598
  occurrence in Amchitka Island region, effects of Milrow Event on, 25:57597
  occurrence near Nevada Test Site during 1950 to 1971, (E), 25:57589 (CGS-746-12)
ECHINODERMATA
  Asterine gibbosa, radiosensitivity of hermaphrodite gonads of, studies on differential x, 25:58090
ECOSYSTEMS
  contamination by DDT, mathematical analysis of probability under various conditions, 25:60262 (BNWL-SA-3977(Rev.))
  radioisotope transport through, use of biological models and computer calculations for measurements of kinetics of, 25:57947 (CONF-710501-35)
EDDY CURRENT TESTING
  method for electrically-conducting tubes and reactor fuel rods, 25:57692(P)
  method for welded joints in reactors, 25:57680 (ORNL-TM-3561)
  probe for coating crack detection in Rover fuel elements, design of masked, 25:57659
EDWIN I. HATCH POWER REACTOR, UNIT 1
  construction of, request for not suspending permit for, 25:59976 (DOCKET-50321-24)
EDWIN I. HATCH POWER REACTOR, UNIT 2
  design parameters of, revised and additional data on, 25:59992 (DOCKET-50366-16)
  design parameters of, revised and additional data on, 25:59993 (DOCKET-50366-17)
  operations aspects of, revised and additional data on, 25:59992 (DOCKET-50366-16)
  operations aspects of, revised and additional data on, 25:59993 (DOCKET-50366-17)
EINSTEINIUM
  oxidation potential for trivalent--tetravalent, 25:57437
EINSTEINIUM ISOTOPES Es-253
  production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)
ELECTRIC ARCS
  design of wall-stabilized argon, for vacuum uv spectroscopy, 25:59006
  gas heating by stabilized, at high pressures, calculation of characteristics of, 25:59059
  plasma diagnostics in free-burning, spectroscopic, (E/T), 25:58958
  properties in strong magnetic fields, (E/T), 25:59005
  use of spark gap, for laser beam pulsing, 25:59076(T) (UCRL-Trans-10556)

ELECTRIC CONDUCTIVITY
- measurement and numerical analysis of, from 4 to 300°K, 25:58929 (FRNC-TH-72)
- temperature coefficient of, dynamic method for measurement cf, 25:58241

ELECTRIC CONDUCTORS
- design of superconducting, 25:58954(P)
- design of, including superconducting material, 25:58953(P)

ELECTRIC CURRENTS
- measurement of subpicoampere to microampere, design of MOSFET current-to-frequency converter for, 25:57894

ELECTRIC DISCHARGE
- book: Plasma Physics and Problems of Controlled Thermonuclear Synthesis, 25:58957
- cathode sheath in disturbed magnetoplasma, (T), 25:59035
- conference on gas discharges, international, London, 9/70, 25:59009
- electron avalanches in hydrogen, losses from, 25:59010
- electron energy balance equation for positive column, self magnetic fields in, (T), 25:59038
- potential breakdown in low-pressure hydrogen, (E), 25:59022
- potential breakdown in, computer simulation of, (E/T), 25:59004
- properties cf high-current, in alkali-metal-seeded rare gases, 25:59023
- wave interactions in, ion acoustic and ionization, (E/T), 25:59098

ELECTRIC POWER
- operation of systems of, effect of magnetic storms cn, (E/T), 25:58887
- production in UK, forecasts to year 2000, 25:57633
- transmission systems for, development of underground, 25:60109

ELECTRIC PROBES
- design of masked eddy current, for detection of coating cracks in Rover fuel elements, engineering drawings for, 25:57659
- performance for plasma potential measurements, (E), 25:58992
- performance for turbulent plasma diagnostics, probe geometry effects on, (E), 25:58983
- performance of double, effect of electron and ion drifts on, (T), 25:58981
- performance of hot and cold, for plasma diagnostics, (E), 25:58986
- properties cf cylindrical Langmuir, in low-density plasmas, 25:58999
- theory of cooled spherical electrostatic, in continuum gas, 25:58982
- use of double microfield, for plasma diagnostics, (E), 25:58990

ELECTRODYNAMICS
- electric field strength in, effects of upper limit on electron energy eigenvalues and wave functions in superheavy nuclei, (T), 25:59554
- time asymmetry in, (T), 25:58671

ELECTROJETS
- effects of auroral, cn heating of thermospheric winds, (T), 25:58864
- electron drift in equatorial, effect of magnetic activity cn, (E/T), 25:58905
- electrostatic plasma instabilities in equatorial, (E/T), 25:58900
- intensity in auroral bounderies, relation to visual aurorae occurrence, (E), 25:58857
- mechanism of auroral, description of electric-discharge, (E/T), 25:58909

ELECTROLYTIC CELLS
- design of mercury cathode, for stable working potential, 25:60295(T) (UCRL-Trans-10548)
- design of quartz, for studies of sulfur compounds, 25:58387(R) (ANL-7823)

ELECTROMAGNETIC FIELDS
- charged-particle radiative polarization in, with two waves traveling toward each other, (T), 25:59226
- interactions $\gamma + e \to \gamma\ (2\gamma) + e$ in constant, spectral and angular distributions for Compton and induced Compton, (T), 25:59368
- mesons in, gauge-invariant Lagrangian for massive vector, (T), 25:59555
- plasma motion in hf, nonlinear theory of, 25:59037
- radiation scattering in linearized Einstein--Maxwell, (T), 25:59606
- theory for system of gravitational field, massless scalar field and, solutions in, (T), 25:59587
- theory for, prcjective solution of integral equations for, 25:59214
- wave functions for, reduction in free space of, 25:59347

ELECTROMAGNETIC LENSES
- design of quadrupole, as low-resolution spectrometers and magnetic rigidity band-pass filters, 25:57901

ELECTROMAGNETIC SEPARATION
- equipment for isotope, description of 180° ORSIS, 25:57650 (CONF-711002-, pp 10-20)
- equipment fcr, description of laboratory-type, 25:57649 (CONF-711002-, pp 1-9)

ELECTROMAGNETIC WAVES
- absorption by cold plasma, boundary effects on, (T), 25:59084 (CEA-CONF-1827)
- absorption in cylindrical column of cold magnetized plasma, (T), 25:59088
- damping in inhomogeneities in cold collisicnless plasma, (T), 25:59081(T) (AEC-tr-7272)
- interactions with plasma, effect on microinstabilities for anisotropic ion temperatures, 25:59083 (CEA-CONF-1826)
- propagation of large-amplitude TM, in magnetoactive plasma, (T), 25:59094
- propagation of wave tails from bounded oscillating electric charge, second approximation to Einstein--Maxwell equations for, 25:59350
- propagation on inhomogeneous plasma columns, surface, (E/T), 25:59100
- scattering on turbulent plasma, shf, (T), 25:58996
- sudden enhancements of field of, correlation with solar x-ray bursts, (E), 25:58888
- sudden phase anomalies in 223-Hz, correlation with solar x-ray bursts, (E), 25:58888
- transformation into plasma waves, coupled equations for, (T), 25:59105

ELECTROMAGNETISM
- theory for, classical field deformation of Poincare group for space--time torsion in, 25:59531
- theory of, self-interaction in finite, (T), 25:59221

ELECTRON BEAMS
- effectiveness for therapy, dosimetry and energy studies related to, 25:58075
- interactions with magnetized plasmas, heating in, (E), 25:58972
- interactions with plasma, density effects on wave transformation in, (E/T), 25:59104
- interactions with plasma, Doppler shifts at cyclotron frequency in, (E), 25:58997
- motion in crossed fields, boundary conditions for, (T), 25:58688

ELECTRON CAPTURE
- internal bremsstrahlung emission in, survey of research on, 25:59885

ELECTRON GAS
- correlation energy evaluation in magnetic field, grand-partition-function method for, (T), 25:59223

ELECTRON MICROSCOPES
- use of high-voltage, to simulate fast neutron-induced void swelling in metals, 25:58326
- void formation in specimens in high-vcltage, (T), 25:58316

ELECTRON MICROSCOPY
- conference on, 25:57910
- dislocation contrast in high voltage, 25:60292 (UCRL-20700)
- methods and uses of scanning, for studies of fractures in welds, 25:58215 (Y-DA-4280)

ELECTRON MULTIPLIER TUBES
- delay time of Bendix 4028 Channeltron, effects of aging on, 25:57895
- description for use with electrostatic analyzers for measurement of auroral electrons and protons, 25:57790
- gain of Bendix 4028 Channeltron, effects of aging cn, 25:57895

ELECTRON PAIRS
- production in e + e interactions, infinite-momentum quantum electrodynamic model for number and momentum distributions, total cross sections and amplitudes for, (T), 25:59345

ELECTRON SOURCES
- design of crossed-field, for injection into linacs, 25:59659(P)

ELECTRONIC FILTERS
- design of near-optimum, for coaxial transmission lines, 25:57892

ELECTRONS
- acceleration of relativistic cosmic, (T), 25:58830
- angular distribution at 350 to 1200 km at low latitude, (E), 25:58904
- channeling in crystals, review, 25:59165
- dosimetry in therapy, computer programs for, 25:58009
- effectiveness for therapy of neoplasms in man, additive effects of x radiation on, 25:58076
- effects of pulsed, on aqueous solutions of periodate, study of transient species from, 25:57466
- effects of pulsed, on aqueous, oxygenated, or pure pentane, absorption spectral studies of species from, 25:57458(R) (COO-1116-17)
- effects on alloys, interaction of coherent precipitates with damage in, 25:59163
- effects on antimony-doped germanium at 4 MeV, thermal-conductivity study of, 25:59134
- effects on aqueous solutions of carboxymethyl cellulose and gelatin at 1 MeV, 25:57443
- effects on argon--water systems, reactions of hydrogen from, 25:57460
- effects on carrier content, Hall mobility, and photoconductivity of n- and p-type cadmium telluride at 1 MeV, 25:59161
- effects on cathodoluminescence spectrum of beta-silicon carbide at 3.5 MeV, (E/T), 25:59139
- effects on doped n-type gallium arsenide at 1.5 to 2.0 MeV, effects of annealing on electric properties and photoluminescence spectra following, 25:59156
- effects on electric conductivity of rubidium chloride and potassium chloride--rubidium chloride crystals,

XUM

25:59172
effects on gold--15 at. percent silver alloys, crowdions induced in, (T), 25:59153
effects on gold--15 at. percent silver alloys, evidence for crowdion formation in, 25:59162
effects on growth of transplanted sarcomas in mice, effects of dose on, 25:58083
effects on induction of single-strand breaks in DNA of human lymphocytes, kinetics of repair of, 25:57958
effects on ir absorption of polished gallium arsenide at 1.5 MeV, spectral studies on, (E/T), 25:59155
effects on liquid propane of 35-MeV pulses of, solvated electrons induced in, 25:57468
effects on microstructure of graphite at 200 kV, 25:58168 (ORNL-4676, pp 139-233)
effects on n- and p-type silicon at 10 to 100 keV, subthreshold, 25:59127
effects on n-type germanium at 5°K, radiation annealing of defects induced in, 25:59132
effects on nucleic acid fragments in aqueous solutions, 25:57930
effects on point defect production in aluminum, relations of annealing with Stage I recovery from, 25:58341
effects on production of krypton fluorides, 25:57455
effects on silica and germania, ESR studies of defects induced in, 25:59174
effects on silicon surface-barrier detectors at 200 keV to 1 MeV, 25:57907
effects on silicon, review of defects produced in, 25:59135
effects on solid ammonia at 0.2 to 6 keV, ESR study of centers induced in, 25:57470
effects on surrounding tissues during human tumor therapy, effects of body inhomogeneities on, 25:58141
effects on synthesis of carotenoids in Japanese persimmons, effects of dose on, 25:57926
effects on tantalum foils at 1.0 to 3.2 MeV, anisotropy of swelling energy for production of Frenkel defects in, 25:59125 (JUL-729-FF)
effects on void formation in cobalt at 1 MV, 25:58325
effects on void formation in copper at 1 MV, (E/T), 25:58327
effects on void formation in neutron-irradiated nickel, 25:58333
effects on void formation in neutron-irradiated nickel, 25:58330
effects on void formation in nickel in high-voltage electron microscope at 280 to 600°C, 25:58328
effects on void formation in solids in high-voltage electron microscope, (T), 25:58316
effects on void formation in stainless steel at 1 MeV, relations with helium content, 25:58329
effects on void swelling in nickel in high-voltage electron microscope, 25:58326
emission from germanium bombarded by rare-gas ions, 25:59175
emission from germanium bombarded by rare-gas ions, angular dependence of secondary, (E/T), 25:59146
g-2 factor measurement in high field, sixth-order quantum electrodynamic contribution from, (E), 25:59560
interactions $e + d \to e + d$, effect of $\Delta(1236) - \Delta(1236)$ configuration admixtures on deuteron form factors for, (T), 25:59367
interactions $e + d$, Tamagaki and Hamada--Johnston potentials for elastic, 25:59335
interactions $e + e \to e + e + \pi^+ + \pi^-$, hadron electrodynamics in resonance model for, 25:59386
interactions $e + e$ at wide angles in quantum electrodynamics, 25:59354
interactions $e + e$ in colliding beams, differential cross sections for hadron production in deep inelastic, (T), 25:59371
interactions $e + e$, hadron production in deep inelastic $e + \gamma$ interactions in inelastic, (T), 25:59333 (JINR-E2-6036)
interactions $e + e$, infinite-momentum quantum electrodynamic model for number and momentum distributions, total cross sections, and amplitudes for production of electron pairs in, (T), 25:59345
interactions $e + e$, Regge-pole-theory prediction of scaling in hadron production in, (T), 25:59376
interactions $e + e$, two-photon generation mechanism for angular distributions and production cross sections for π^0 production in, (T), 25:59370
interactions $e + \gamma$ in inelastic $e + e$ interactions, hadron production in deep inelastic, (T), 25:59333 (JINR-E2-6036)
interactions $e + N$ in parton model, scaling in deep inelastic, 25:59431
interactions $e + N$, relativistic model for inelastic form factors, widths, and locations of N^* production in, (T), 25:59337
interactions $e + p \to e + \pi^0 + p$, differential cross sections for, (E), 25:59353
interactions $e + p \to e + \pi^0 + p$, test of dip mechanisms in hadron interactions using, (T), 25:59346
interactions $e + p$ up to 18 GeV at 18 to 34°, form factors, scaling, and cross sections for inelastic, (E), 25:59242
interactions $e + p$, asymptotic scaling of structure functions for, 25:59342
interactions $e + p$, field theory for Compton scattering amplitude and duality in deep inelastic current, (T), 25:59363
interactions $e + p$, hadron electrodynamics in resonance model for, 25:59386
interactions $e + p$, radiative corrections to inelastic, 25:59366
interactions $e + p$, two-photon generation mechanism for angular distributions and production cross sections for π^0 production in, (T), 25:59370
interactions $e + p$, vector dominance model for inelastic, 25:59365
interactions $e + p$, wee parton model for single-particle production, 25:59387
interactions $e^+ + e^- \to 3\pi$, relation between amplitudes for $\pi^0 \to 2\gamma$, $\gamma + \gamma \to 3\pi$, and, 25:59357
interactions $e^+ + e^- \to e^+ + e^- + \gamma + \gamma$, cross sections for π^0, eta, and eta' production in, 25:59389
interactions $e^+ + e^- \to e^+ + e^- + \gamma + \gamma$, proposal for experimental study of $\pi^0\gamma\gamma$, eta $\gamma\gamma$, and $X^0\gamma\gamma$ vertices from, 25:59253
interactions $e^+ + e^- \to e^+ + e^- + m\gamma$ at high energies, double-logarithmic approximation for bremsstrahlung cross sections for backward, (T), 25:59374
interactions $e^+ + e^- \to$ eta$^0(X^0) + \gamma$ in vector meson region, vector dominance model with linear and quadratic mixing of eta and X^0 for cross sections for, (T), 25:59377
interactions $e^+ + e^- \to N +$ anti N, production of S(1727), S(1414), d(1382), and d(1855) in colliding-beam, (T), 25:59358
interactions $e^+ + e^- \to p +$ anti p, scaling law for proton form factors for, 25:59361
interactions $e^+ + e^- \to p +$ anything, hadron electrodynamics in resonance model for, 25:59386
interactions $e^+ + e^- \to$ phi $\to \pi^- + \pi^+ + \gamma$, conformal symmetry for, 25:59542
interactions $e^+ + e^- \to \pi^0 + \gamma$ in vector meson region, vector dominance model for cross sections for, (T), 25:59377
interactions $e^+ + e^-$ at 1.4 to 2.4 GeV, analysis of elastic, (E), 25:59250
interactions $e^+ + e^-$ at 1.4 to 2.4 GeV, cross sections for multiple particle production in, (E), 25:59251
interactions $e^+ + e^-$ at high energies, integral equation for cross sections from partial waves with multi-Regge poles for bremsstrahlung amplitudes in backward, (T), 25:59369
interactions $e^+ + e^-$ in colliding beams, contribution to total cross section from bremsstrahlung mechanism for differential cross section for hadron production in, (T), 25:59375
interactions $e^+ + e^-$ in colliding beams, differential cross sections for hadron production in deep inelastic $e + e$ interactions from, (T), 25:59371
interactions $e^+ + e^-$ in crossed beams, Landau--Lifshitz process for cross sections for hadron production in, (T), 25:59334 (LNF-71/14)
interactions $e^+ + e^-$, cross section for heavy lepton production in, (T), 25:59390
interactions $e^+ + e^-$, Regge-pole-theory prediction of scaling in hadron production in, (T), 25:59376
interactions $e^+ + e^-$, total cross sections for W and e^+ production in colliding-beam, 25:59383
interactions $e^- + N \to e^- + N$ at high energies and low momentum transfers, Compton scattering cross sections for two-photon-exchange contribution to, (T), 25:59372
interactions $\gamma + e \to \gamma\ (2\gamma) + e$ in constant electromagnetic field, spectral and angular distributions for Compton and induced Compton, (T), 25:59368
interactions $\gamma + e$ with electron beams in crystals, anomalous transmission in, (T), 25:59228
interactions with hadrons at high energies, suppression of electromagnetic corrections to, (T), 25:59372
interactions with suprathermal protons, bremsstrahlung from, (T), 25:58837
motion in uniform magnetic field, synchrotron motion with radiation reaction for longitudinal velocity of, (T), 25:59359
propagator under harmonic force, functional integration methods for, 25:59349
radioinduced production of ammoniated, in aqueous solutions of hydrogen--potassium amide, 25:57477
reactions of organic monomers with solvated, rate constants of, 25:57475
reactions with alkali metal atoms, ionization in, (E), 25:58741
reactions with alkali metals, helium, and mercury atoms, excitation in, (E), 25:58741
reactions with atoms and ions having closed shells, construction of model potentials for, 25:58772
reactions with atoms and molecules, review of energy resolution in, 25:58747
reactions with atoms, approximate analytical expressions and scaling relations for excitation and ionization cross sections for, 25:58740
reactions with atoms, review of threshold laws for excitation and ionization in, 25:58745
reactions with atoms, semi-empirical formula for ionization cross sections for, 25:58738
reactions with barium, calcium, and strontium up to 1

keV, total cross sections for ionization in, (E), 25:58777
  reactions with carbon and nitrogen ions, cross sections for ionization in, (E), 25:58769
  reactions with carbon dioxide up to 300 eV, cross sections for emission produced by dissociative excitation, excitation, and ionization in, (E), 25:58760
  reactions with carbon dioxide, formation of metastable carbon monoxide and oxygen by dissociation in, (E), 25:58765
  reactions with carbon foils at 0.3 to 1.1 MeV, transition radiation in light emitted by, 25:58686
  reactions with carbon monoxide up to 300 eV, cross sections for emission produced by dissociative excitation, excitation, and ionization in, (E), 25:58759
  reactions with carbon-12, production of meson (π) in bound state from, 25:59355
  reactions with cesium and helium atoms, cross sections for ionization in, (T), 25:58738
  reactions with chlorine-35, production of meson (π) in bound state from, 25:59355
  reactions with copper at 12 to 30 keV, depth distribution of x rays produced in, (E), 25:58685
  reactions with diatomic molecules, selection rule for Σ^+--Σ^- transitions in, 25:58732
  reactions with gaseous molecules, K--LL Auger spectra from, (E), 25:58736
  reactions with germanium, secondary emission from, 25:58683 (FRNC-TH-49)
  reactions with hydrogen and oxygen molecules up to 350 eV, cross sections for vacuum ultraviolet emission from dissociative excitation in, (E), 25:58728
  reactions with hydrogen atoms, Glauber amplitudes for excitation of ns and np levels in, (T), 25:58766
  reactions with hydrogen molecules at 100 eV, cross section for Lyman-α emission in, (E), 25:58729
  reactions with metals at 12.5 to 22 MeV, bremsstrahlung yields from, 25:59106
  reactions with molecules, mechanisms for production of spurious dissociative attachment peaks in, 25:58730
  reactions with neon-20, production of meson (π) in bound state from, 25:59355
  reactions with oxygen ions up to 1 keV, cross sections for ionization in, (E), 25:58774
  reactions with oxygen molecules at 10, 15, and 20 eV, differential cross sections for excitation in, (E), 25:58732
  reactions with oxygen molecules up to 300 eV, cross sections for ultraviolet emission produced by dissociative excitation in, (E), 25:58758
  reactions with oxygen-containing molecules at 60 eV, production of excited oxygen ions (O^+) in, (E), 25:58763
  reactions with thin silicon crystals at 7 to 10 MeV, bremsstrahlung spectra from, (E), 25:59149
  scattering by argon at 10 keV, multiple ionization from inelastic, (E), 25:58754
  scattering by atoms having Z = 1 through 57 and 72 through 90 at 10 to 100 keV, factors for, 25:58748
  scattering by barium-138 at 200 and 500 MeV, differential cross sections for, (E), 25:59793
  scattering by carbon-12 at high energy, analysis using oblate deformed model, (T), 25:59729
  scattering by gases and solids of polarized, cross-section formulas for, 25:58687
  scattering by helium-4, analysis using Brueckner and Jastrow methods, 25:59704
  scattering by neodymium-142 at 129.4, 199.3, 299.1, and 499.5 MeV, differential cross sections for, (E), 25:59793
  scattering by nuclei through giant resonance and quasielastic regions, strong-coupling particle--hole analysis of, (T), 25:59869
  scattering by nuclei, radiative corrections for elastic, 25:59880
  scattering by oriented holmium-165 at 160.6 to 452.2 MeV, cross sections and electric charge distributions from elastic, (E), 25:59796
  scattering from atoms and molecules, compound states in, (T), 25:58804
  spectra from polarized μ decay, 25:59404
  spectra of relativistic cosmic, (T), 25:58830
  theory for free, strong correlation between Cherenkov effect and properties of photon tachyons in disappearing Fresnel wave in, (T), 25:59573
ELECTROPHORESIS
  method for preparation of radiation targets, 25:58183 (CONF-711002-, pp 160-5)
ELECTROSTATIC ANALYZERS
  description for use with channel electron multipliers for measurement of auroral electrons and protons, 25:57790
ELEMENTARY PARTICLE MODELS
  cascade evaporation, Monte Carlo method for calculating π and N reactions with nuclei at 0.01 to 100 GeV in, 25:59508(T) (ORNL-tr-2514)
  dual quark, functional integral approach to, 25:59435
  dual resonance, one-loop amplitudes in Neveu--Schwarz, 25:59433
  dual resonance, quark diagrams for loop terms in, 25:59445
  dual resonance, quark interpretation in operator formalism of, 25:59441
  dual resonance, removal of trajectory degeneracy in, 25:59457
  dual resonance, zeros of multiparticle amplitudes in, 25:59625
  dual, connections of average multiplicity and average perpendicular momentum for interactions at high energies in, 25:59322 (NP-19024)
  dual, five-point function for anti p + n $\to 2\pi^- + \pi^+$ interactions at rest in, 25:59465
  dual--cut, for unstable particles, 25:59439
  dyon, scale invariance breaking and Regge trajectories for hadrons in, 25:59430
  isobar, planar duality constraints on multibody, 25:59446
  Lee, decays of interfering unstable V-particles in, nonexponential, 25:59438
  Lee, properties of, 25:59575
  multi-Regge, connections of average multiplicity and average perpendicular momentum for interactions at high energies in, 25:59322 (NP-19024)
  multiperipheral, connections of average multiplicity and average perpendicular momentum for interactions at high energies in, 25:59322 (NP-19024)
  one-pion-exchange, effective mass spectrum for π system in $\pi + N \to m\pi + N$ interactions in, 25:59496
  optical, particle interactions at intermediate energies for equivalence of Regge and, 25:59421 (COO-2009-30)
  parton, Galilean invariance in infinite momentum frame for, 25:59431
  quark--parton, form factors of nucleons in, 25:59391
  quartet and three-triplet, urbaryon transitions for nonleptonic hyperon decays in, 25:59423
  sigma, six-π amplitude to fourth order in momenta in nonlinear, 25:59456
  statistical thermodynamic, asymptotic form of transverse-momentum distribution of secondary particles from strong interactions at high energies in, 25:59427
  statistical, Lorentz-invariant and -noninvariant momentum space in thermodynamic, 25:59432
  vector dominance, cross sections for $e^+ + e^- \to \pi^0 + \gamma$ and $e^+ + e^- \to$ eta(X^0) + γ interactions in vector meson region in, 25:59377
  vector dominance, k^2 dispersion relation for invariant amplitudes of π production in $\gamma + N \to \pi + N$ interactions in, 25:59351
  Veneziano, amplitude for $A + \pi \to A + \pi$ interactions in, 25:59464
  Veneziano, finite energy sum rules in dual, 25:59450
  Veneziano, group theory for structure of generalized, 25:59628
  Veneziano, Radon transforms for structure of generalized amplitudes in, 25:59627
  Veneziano, representations for π form factor and photon coupling to vector mesons in, 25:59352
ELEMENTARY PARTICLE MODELS (TRIPLET)
  hadron mass spectra and bound states in quark, 25:59426
  interactions $\gamma + n \to \gamma + n$ and $\gamma + p \to \gamma + p$ in extended quark, differential and total cross sections for, 25:59378
  quark diagrams in, size of dual loop term from, 25:59445
  review on quark, 25:59437
ELEMENTARY PARTICLES
  canonical states at infinite momentum, light-like and space-like representations for transformation properties of, (T), 25:59321 (JINR-E2-5993)
  electromagnetic interactions of, generalization of Cook formalism for Fock space for two-body Coulomb, (T), 25:59580
  form factors of, algorithms for γ-algebra of electromagnetic, (T), 25:59360
  formalism for two-particle system with spins 0 and 1/2, quasipotential, (T), 25:59422 (JINR-E2-6046)
  helicity states at infinite momentum, light-like and space-like representations for transformation properties of, (T), 25:59321 (JINR-E2-5993)
  interaction of unstable, 25:59616
  interactions at high energies, configuration-space representation for, 25:59617
  interactions at high energies, connections of average multiplicity and average perpendicular momentum in models for, (T), 25:59322 (NP-19024)
  interactions at high energies, Lorentz-invariant and -noninvariant momentum space in statistical model for, 25:59432
  interactions at high energies, polarization properties of particles produced in, (T), 25:59328
  interactions at intermediate energies, equivalence of Regge and optical models for, (T), 25:59421 (COO-2009-30)
  interactions in two-particle system with spin 0 and 1/2, quasipotential equations for amplitude of, (T), 25:59422 (JINR-E2-6046)
  interactions near phase-space boundary, Feynman relation for particle production in inclusive, 25:59332
  interactions of arbitrary-mass and -spin, crossing symmetry of partial waves, tests of crossing-symmetric models, and multivariable expansion of amplitudes for, (T), 25:59619
  interactions of spinning, lightlike, continuous-spin, and

XUM

spacelike representations of Poincare group for analysis in Lorentz partial waves of amplitudes of, (T), 25:59532
interactions of spinning, Lorentz basis of Poincare group for timelike, lightlike, and spacelike momenta for partial-wave analysis of amplitudes of, (T), 25:59533
interactions of zero-spin, equal-mass, upper bound on absorptive part of elastic, (T), 25:59630
interactions of, eikonal approximation for inelastic, 25:59330
interactions of, generalization of Cook formalism for Fock space for two-body Yukawa, (T), 25:59580
interactions of, sum rules for cross sections of inclusive, 25:59331
interactions of, violation of Pomeranchuk theorem and odd-signature amplitude for, 25:59329
motion in refracting medium, (T), 25:59325
production in interactions at high energies, polarization properties for, (T), 25:59328
production in interactions at high energies, two-bump structure of angular distributions for multiple, (T), 25:59327
reactions with A = 3 nuclei at high energies, relativistic Feynman graphs in momentum representation for method for calculating amplitudes of, (T), 25:59528
strong interactions at high energies, statistical thermodynamic models for asymptotic form of transverse-momentum distribution of secondary particles from, (T), 25:59427
strong interactions at high energies, two-particle correlations in inclusive, 25:59436
strong interactions at high energies, two-Reggeon exchange contribution to amplitudes of, (T), 25:59618
strong interactions at large momentum transfer, properties of inclusive, 25:59444
strong interactions of, point-source static model for renormalized field product for Bjorken limit and Ward identity for, (T), 25:59564
symmetries for review on group theory for, 25:59530
theory for dyons, 25:59447
transformation properties of canonical and helicity states at infinite momentum for, light-like and space-like representations for, (T), 25:59321 (JINR-E2-5993)
wave function for two-particle system with spins 0 and 1/2, quasipotential equations for, (T), 25:59422 (JINR-E2-6046)
weak interactions of, relation of hadronic mesons to isospin selection rules in, 25:59393
weak interactions of, relation with Lagrangian for n + p → d + γ interactions for effective Lagrangian for nonleptonic, (T), 25:59418
weak interactions of, two- and four-component neutrino theories from leptonic and semileptonic, (T), 25:59407

ELEMENTARY PARTICLES (TRIPLET)
binding of quarks to hydrogen and helium ions, electronic structure of molecular, 25:59344
existence of quarks in hydrogen and helium molecules, (T), 25:59344
search for quarks, low-temperature techniques for, (E), 25:59240
strong interactions at high energies in quark, relation with coherent state method for, 25:59448 (JINR-E2-6025)

ELEMENTS
determination by recoilless resonance absorption or scattering of γ rays, 25:57354(P)
determination of trace amounts of heavy, in bulk light material, nuclear scattering methods for, 25:57360
determination of trace amounts of light, in heavy bulk materials, nuclear reaction methods for, 25:57360
electron scattering at 10 to 100 keV by Z = 1 through 57 and 72 through 90, factors for, 25:58748

EMBRYOS
cleft palate and oligodactylia induction in mouse, following in utero exposure to cyclophosphamide, 25:58127
radiation effects on DNA and RNA synthesis in amphibian, effects of dose on x, 25:57944
radiation effects on incidence of cleft palate and oligodactylia in mouse, in utero exposure x, 25:58127

ENVIRONMENT
radioactivity from artificial and natural sources in relation to human populations, 25:57994
radioactivity of Aiken, S. C. and Oak Ridge, Tenn. during 1969, 25:57985

ENZYMES
effects on incision and excision of uv-irradiated Escherichia coli DNA, 25:57928
effects on release of nucleotides from uv-irradiated Escherichia coli DNA, 25:57928
properties of uv-endonuclease and uv-exonuclease from Micrococcus luteus responsible for excision of photoproducts, 25:57935
role in repair of uv- and x-radioinduced breaks in DNA of mammalian cells, 25:57943

EPITHELIUM
radiation effects on human, following therapy for cervical tumors, cytology and histology of γ, radium, and x, 25:58140

EPOXY RESINS
Cu--epoxy resin, radiation effects on strength of joints of, gamma, 25:58416(R) (RLO-2098-2)
epoxy resin--stainless steel, radiation effects on strength of joints of, gamma, 25:58416(R) (RLO-2098-2)
epoxy--graphite, tensile properties of fiber-reinforced composites of, 25:58382

ERBIUM
complexes with HEDTA, dissociation constants for, 25:57537
energy levels of, identification of 4f/sup N-1/6s^{2}6p configurations in, 25:58706
oxidation potential for trivalent--tetravalent, 25:57437

ERBIUM ISOTOPES Er-166
neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802

ERBIUM ISOTOPES Er-168
neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802

ERBIUM ISOTOPES Er-170
preparation of monocrystalline, by grain growth annealing, 25:58184 (CONF-711002-, pp 181-90)

ERBIUM OXIDES
reduction to metal using thorium with simultaneous distillation separation, 25:58184 (CONF-711002-, pp 181-90)

ERYTHROCYTES
radiation effects on chemical properties and ultrastructure of in vitro pigeon, uv, 25:58113
radiation effects on count of, in medical personnel in Japan during 1969, survey of, 25:58134
radiation effects on survival of chromium-51-labeled human, in vivo following exposure in vitro, γ, 25:58136

ETHANE, CHLORO-
spectra of, effects of deuterium on vibrational, 25:57422

ETHER, BUTYL VINYL
reactions with solvated electrons, rate constant of, 25:57475

ETHER, ISOBUTYL VINYL
radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)

ETHER, ISOPROPYL VINYL
radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)

ETHYLENE
radiolysis of gaseous, in presence of 2-methylpropene, yields from γ, 25:57474
reactions with solvated electrons, rate constant of, 25:57475

ETHYLENE, CHLORO-
radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)

ETHYLENE, CHLORO-, POLYMERS
reactions of O rings of, with fluorine, 25:57619 (RFP-1739)

ETHYLENE GLYCOL
radioprotective effects on Escherichia coli, γ, 25:58157

ETHYLENE OXIDE
radiolysis of clathrate hydrates of, stability of radicals from γ, 25:57476

ETHYLENE POLYMERS
positron emission from positron-bombarded, 25:58681
radiation effects on thermostability of, effects of antioxidants and fillers on, 25:57446
radioinduced disorientation of, gamma, 25:58417
radiolysis of low-density, effects of antioxidants on thermooxidative degradation in γ, 25:57462
Al$_2$O$_3$--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
CaCO$_3$--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
carbon black--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
glass fibers--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
MgO--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
NaAlSiO$_4$--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
polyethylene--silicon oxides, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)

EUMYCOTA
Neurospora sp., radiation effects on, effects of diepoxybutane on photoreactivation of mutagenic uv, 25:57954
radiation effects on populations of microfungi in litter of red oak, effects of dose on γ, 25:58150
Saccharomyces cerevisiae, radioinduced mutations in, studies on genetic control of uv and x, 25:57976
Ustilago maydis, radiation effects on genetic repair and synthesis of nitrate reductase in, uv, 25:57955
yeasts, radiosensitivity of, correlation of aminopterin sensitivity with x, 25:57927
yeasts, radiosterilization of wine, additive effects of

ultrasound on uv, 25:58158

EUROPE
  fallout monitoring during 1970, 25:57980(R) (HASL-245)
  nuclear power plants in, development of, 25:59901
  radioisotope content of diet during 1969, cesium-137 and strontium-90, 25:57979 (EUR-4667)

EUROPIUM
  determination in fluorite by solvent extraction and spectrography or fluorimetry, 25:57332
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  oxidation potential for trivalent--tetravalent, 25:57437
  separation from neodymium and samarium in chloride solution by solvent extraction using DEHPA in heptane, factors for, 25:57543
  separation from other rare earths by electrophoresis in Complexon III on cellulose or silica gel, 25:57299
  separation from sodium perchlorate solution by solvent extraction into organic solvents using dibutyl ethylenediphosphonate, 25:57544

EUROPIUM ISOTOPES
  determination by neutron activation and γ spectroscopy, 25:57391

EUROPIUM ISOTOPES Eu-153
  nuclear spin--spin interaction in europium oxide, indirect, (E/T), 25:59200

EUROPIUM OXIDES
  effects on structure of γ-irradiated sodium oxide--tellurium oxide glasses, EPR spectral studies on, 25:57447
  europium-153 spin--spin interaction in EuO, indirect, (E/T), 25:59200

EVAPORATORS
  design for continuous concentration of radioactive waste water, 25:57900(P)
  thermodynamic behavior of multiflash, model for calculation of, 25:57616 (LFEN-NI.-54-a)

EXPERIMENTAL BREEDER REACTOR-II
  core materials for, production of helium by nuclear reactions in, 25:58163(R) (AI-AEC-12859)
  flowmeter for, performance of permanent magnet flow-through liquid sodium, 25:60182
  fuel element cladding failures in, sodium soluble isotopic tagging methods for location of sodium bonded, (T), 25:60083 (ANL-7785)
  fuel elements for, detection and identification methods for leaking, (E), 25:60082 (ANL-7782)
  instrumentation for, development of fission product monitoring, 25:60005(R) (ANL-7854)
  operations during August 1971, 25:60005(R) (ANL-7854)
  physics measurements for, 25:60005(R) (ANL-7854)

EXPLOSIONS
  shock waves from above-ground and underground, finite difference method for calculation of, 25:57594 (UCRL-73369)

EXPLOSIVES
  shipping by rail or motor vehicle, US Dept. of Transportation regulations for, 25:57710

EXPONENTIAL PILES
  core configuration for STSF-9, 25:60156(R) (GULF-RT-A-10800)
  criticality calculations for STSF-9, 25:60156(R) (GULF-RT-A-10800)
  neutron spectra in STSF-9, (E/T), 25:60156(R) (GULF-RT-A-10800)

EXTRACELLULAR SPACE
  analysis of human, for bromine, potassium, and sodium, radioisotope dilution method for, 25:57924

EXTRACTION APPARATUS
  design and operation of jet-mixed liquid--liquid column-type, 25:57623(P)
  design for separating impurities from sodium coolants for analysis, 25:57624(P)

EYES
  radiodiagnosis of melanomas in human, phosphorus-32 uptake test for, 25:58063
  radiodiagnosis of melanomas of human, using phosphorus-32 uptake and semiconductor detectors, 25:58064

F

FALLOUT
  deposition on North America in Jan. 1964, effects of major stratospheric--tropospheric mass exchanges on, 25:57572(R) (COO-1340-24)
  effects on strontium-90 content of plants and soils in East Germany from 1960 through 1963, 25:57986
  monitoring in atmosphere over Sweden following 10th Chinese nuclear explosion, 25:57580
  monitoring in Central, North, and South America during 1970, 25:57981(R) (HASL-245(App.))
  monitoring in EURATOM countries during 1969, 25:57979 (EUR-4667)
  monitoring in Europe, New Zealand, and USA during 1970, 25:57980(R) (HASL-245)
  monitoring in Swedish atmosphere following Dec. 27, 1968 Chinese nuclear explosion, 25:57577
  monitoring in western hemisphere during 1971, 25:57984
  monitoring of Schooner Event, data from off-site environmental, 25:57574 (PNE-524)
  radioisotope content of milk samples collected in Central, North, and South America during April 1971, barium-140, cesium-137, iodine-131, strontium-89, and strontium-90, 25:57983

FAST FLUX TEST FACILITY
  control system for, development of standards for, 25:60180
  fuels for, development of methods for chemical analysis for, 25:58344(R) (LA-4693)
  in-pile loops for, development of on-line meter modules for impurity monitoring in, 25:60058(R) (ANL-7817)
  instrumentation for, development of standards for, 25:60180
  structural elements of, effects of stainless-steel property data on rules for design of, 25:60115 (HEDL-SA-164)

FAST TEST REACTOR
  accidents in, analysis of aerosol distributions in containment structures following, (E/T), 25:60148 (AI-69-Memo-95)
  containment structures for, distribution of accident released aerosols in, (E/T), 25:60148 (AI-69-Memo-95)
  coolant for, monitoring and sampling system for liquid sodium, 25:60005(R) (ANL-7854)
  core vessel for, effects of stored fuel on neutron flux in, (T), 25:60055(R) (ORNL-TM-3573)
  flowmeter for, development of eddy current probe liquid sodium, 25:60184
  flowmeter for, development of permanent magnet probe liquid sodium, 25:60183
  instrumentation for, development of, 25:60005(R) (ANL-7854)
  neutron flux monitor guide tubes for, shielding of low-level, (T), 25:60055(R) (ORNL-TM-3573)
  shielding for, discrete ordinates analysis of core support grid-plate, (E/T), 25:60055(R) (ORNL-TM-3573)
  shielding for, effects of composition on neutron transmission of thermal, (T), 25:60055(R) (ORNL-TM-3573)
  shielding of, effects of sodium coolant holes configuration on neutron streaming in grid-plate, (E), 25:60158 (ORNL-TM-3514)
  shutdown margin measurements for, two frequency reactor noise method for, (T), 25:60043

FASTENERS
  failure of threaded, at nuclear facilities, data review on corrosion, fatigue, and galling, 25:57618 (ORNL-TM-3570)

FECES
  analysis for α, β, and γ emitters, methods used at CNEN, 25:57347 (RT/PROT-(71)9)

FEDERAL REPUBLIC OF GERMANY
  power plants in, development predictions to 1980, 25:59889
  power reactor development program in, 25:60012 (JUL-775-RG)
  power reactors for, design characteristics and economic aspects of gas cooled fast breeder, 25:60013 (KFK-1375)
  radioactive waste processing and disposal in, 25:57540

FEEDBACK SYSTEMS
  development of pulsed, for radiation detectors, 25:57812

FERMI FAST BREEDER REACTOR
  operations during May 1971, 25:59908 (DOCKET-50016-130)

FERMI POWER REACTOR, UNIT 2
  effluents from, effects on environment of chemical, radioactive, and thermal, 25:59986 (DOCKET-50341-34)
  site for, geological and meteorological data for, 25:59986 (DOCKET-50341-34)

FERMIONS
  collective modes in Fermi liquids, 25:58920
  field theory for, spinor hyperplane, (T), 25:59553
  formalism for two-particle system with spins 0 and 1/2, quasipotential, (T), 25:59422 (JINR-E2-6046)
  interaction of many-body system of, resolution of hierarchy of Green function for, 25:59218
  interactions with spin-0 bosons in two-particle system, quasipotential equations for amplitude of, (T), 25:59422 (JINR-E2-6046)
  theory for ground-state energy of system of, 25:59233
  theory for interacting system of, one-dimensional, 25:59230
  wave function for two-particle system with spins 0 and 1/2, quasipotential equations for, (T), 25:59422 (JINR-E2-6046)

FERMIUM
  oxidation potential for trivalent--tetravalent, 25:57437

FERMIUM ISOTOPES Fm-257
  production by target irradiation in HFIR and processing in TRU, 25:57524 (ORNL-TM-3343)

FERTILIZERS
  analysis for molybdenum by atomic absorption spectrophotometry, 25:57306

FIELD THEORY
  scalar fields in, solutions for system of gravitational, electromagnetic, and massless, 25:59587
  spinor hyperplane, for fermions, 25:59553

FILTERS
  design parameters of research reactor cooling system,

XUM

- 25:60157 (INR-1316)
  - dust collection by membrane, beta radiometric gage for measuring, 25:57870
  - performance of research reactor cooling system, 25:60157 (INR-1316)
  - radioactivity of air, high speed autoradiographic method for measurement of polonium-210 or plutonium-239, 25:57998 (NIRS-Pu-8)
- FINS
  - effects of cooling, on heat transfer from tubular fuel elements in central channel of natural uranium gas-cooled reactor, (E/T), 25:57639 (JUL-753-RB)
- FIRES
  - detection of, radiometric system for, 25:57873(P)
- FISSION
  - asymmetry in, liquid-drop calculation of mass parameter for, (T), 25:59874
  - data analysis of, computer program for, 25:59773 (AD-721481)
  - R-matrix parameters for interfering resonances with two channels for, ambiguities in, 25:59829 (COO-2022-11)
  - theory of phase transitions in, in state-independent pairing-plus-quadrupole model in cluster representation, (T), 25:59867
- FISSION FRAGMENTS
  - mass yields from bismuth-209 photofission, (E), 25:59816
  - neutron emission by californium-252, variance of, (E), 25:59824
- FISSION PRODUCTS
  - activity of plutonium-239 and uranium-236, analysis of data on, beta and gamma, 25:59813
  - deposition in reactor containment buildings, effects of heat transfer characteristics on, (T), 25:60111(R) (BMI-1917)
  - deposition on MSRE graphite, evaluation by Auger electron spectroscopy, 25:58168 (ORNL-4676, pp 139-233)
  - determination in cover gas for sodium coolant, development of methods for, 25:60058(R) (ANL-7817)
  - diffusion from graphite, mechanism for, 25:58367 (EUR-4327)
  - diffusion from uranium dioxide fuel particles, effects of aluminum oxide and niobium oxide doping on, 25:58347 (JUL-730-RW)
  - effects on determination of oxygen and nitrogen by neutron activation, 25:57390
  - fast neutron fission yields of measurement in, liquid metal cooled fast breeder reactors of, (E), 25:60035(R) (ANL-7824)
  - production in liquid metal cooled fast breeder reactors, measurement of, (E), 25:60035(R) (ANL-7824)
  - reactions of, design of loop for study of fissiochemical, 25:57613 (JAERI-Memo-4446)
  - reactivity worths of fast reactor, integral measurement of, (E/T), 25:60034 (AE-428)
  - reactivity worths of fast reactor, measurement of, 25:60159 (RCN-150)
  - release in reactor coolant loss accidents, evaluation of source-term guidelines for estimation of, 25:60111(R) (BMI-1917)
  - removal by sodium thiosulfate in ice cubes of ice condenser reactor containment systems, (E), 25:60124
  - separation from uranium, properties of styrene--divinylbenzene polymers for chromatographic, 25:57527 (UJV-2557-Ch)
  - separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
  - separation of rare earths and yttrium from, by electromigration following complexing with nitrilotriacetic acid, 25:57558
  - separation of ruthenium tetroxide from, by ferric oxide--silica filters, 25:57532
  - solubility in ceramic reactor fuels, measurement of, 25:58411(R) (GEAP-12217)
- FLOWMETERS
  - development of eddy current probe liquid sodium, 25:60184
  - development of permanent magnet probe liquid sodium, 25:60183
  - performance of permanent magnet flow-through liquid sodium, 25:60182
- FLUID FLOW
  - analysis in reactors, book on, 25:60222
  - effects of low Mach number, on acoustically-induced vibration of slender rods in fluid-filled tube, (E/T), 25:57621 (TRG-Report-2141)
  - electrohydromagnetic instability of superposed, 25:58842
  - magnetohydrodynamic boundary layer, plane nonstationary, 25:58847
  - magnetohydrodynamic duct, optimal distribution of tensor of specific resistance of working substance in, (T), 25:58845
  - magnetohydrodynamic turbulent, considering Hall effect, (T), 25:58849
  - magnetohydrodynamic, stability of compression shocks in channel flow, 25:58848
  - magnetohydrodynamic, two-dimensional channel flow in nonuniform magnetic fields, (T), 25:58843
  - velocity of, radiometric equipment and method for measuring, 25:57667(P)
- FLUIDS
  - neutron scattering spectrum of simple, theory of, 25:59678
- FLUORIDES
  - purification of molten, method for continuous, 25:57522 (ORNL-4676, pp 234-71)
- FLUORINATION
  - equipment for, corrosion and development of frozen-wall, 25:57522 (ORNL-4676, pp 234-71)
- FLUORINE
  - determination as fluoride using Chloramine-T, 25:57393
  - radioinduced reactions with krypton, electron or proton, 25:57455
  - reactions with glovebox construction materials, test results on, 25:57619 (RFP-1739)
- FLUORINE IONS
  - reactions with neon and nitrogen molecules in keV range, production of K vacancies in, (E), 25:58756
- FLUORINE ISOTOPES F-18
  - energy levels from nitrogen-14 (α,γ) reactions, lifetimes, spin--parity assignments, and widths for 4p--2h rotational, (E), 25:59715
  - energy-level transitions from nitrogen-14 (α,γ) reactions, branching ratios and strengths for E2, (E), 25:59715
  - radiation effects on uptake by fractured bone, radiography of x, 25:58105
- FLUORITES
  - analysis for rare earths by solvent extraction and spectrography or fluorimetry, 25:57332
- FOOD
  - analysis for mercury by neutron activation and radiochemical separation, 25:57392
  - analysis for trace elements, review on methods for, 25:57913
  - radioactive contamination of, from artificial and natural sources in relation to human populations, 25:57994
  - radioactivity in Switzerland during 1969, 25:57989
  - radioactivity in Switzerland during 1970, 25:57988
  - radioisotope content in Kiev region of Soviet Union, 25:57987
  - trace element content in Kiev region of Soviet Union, 25:57987
- FORBUSH DECREASES
  - rigidity dependence in cosmic-ray intensity, comparison with 11-year variation, (E/T), 25:58823
- FORENSIC SCIENCE
  - activation analysis uses in, 25:57373
  - activation analysis uses in, 25:57374
- FORKED RIVER POWER REACTOR, UNIT 1
  - design parameters of, revised and additional data on, 25:59991 (DOCKET-50363-18)
  - operations aspects of, revised and additional data on, 25:59991 (DOCKET-50363-18)
- FORMALDEHYDE
  - radiosensitizing effects on Escherichia coli, γ, 25:58157
- FORMATES
  - effects on chemical state of recoil phosphorus-32 from neutron-irradiated tripolyphosphate hexahydrate, 25:57495
- FORT CALHOUN POWER REACTOR, UNIT 1
  - construction of, request for not suspending permit for, 25:59964 (DOCKET-50285-49)
- FORT ST. VRAIN POWER REACTOR, UNIT 1
  - construction of, request for not suspending permit for, 25:59955 (DOCKET-50267-34)
- FREQUENCY METERS
  - design and construction of four-decade digital log, 25:57893
- FRUCTOSE
  - radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931
- FRUITS
  - persimmons, radiation effects on synthesis of carotenoids in Japanese, effects of dose on electron, 25:57926
- FUEL CAPSULES
  - fabrication of plutonium-238 heat source, for cardiac pacemaker, welding methods for, 25:57657(R) (NUMEC-4189-6)
  - materials for, research progress on development of, 25:57654(R) (DP-1279)
- FURAN, TETRAHYDRO-
  - radiolysis of hydrates of, EPR studies on free radicals from γ, 25:57465
- FURNACES
  - heating elements for, fabrication and performance of zirconium dioxide, 25:58357
  - wear of refractory linings in, tracer techniques for measurement of, 25:57677
- FUSED SALTS
  - corrosive effects on MSRE materials, status of loop tests on, 25:58168 (ORNL-4676, pp 139-233)
  - sound velocity in, effects of entropy on, 25:57298 (ORNL-4676, pp 73-138)

G

- GADOLINIUM
  - complexes with HEDTA, dissociation constants for, 25:57537
  - determination in silicate rocks by neutron activation,

  - low-energy photon detector for, 25:57387
  - electron spin resonance spectra in gold, crystal-field fine structure in, 25:59192
  - energy level interactions in Gd IV, 4f--5d, (T), 25:58697
  - energy levels of, identification of 4f/sup N-1/$6s^2 6p$ configurations in, 25:58706
  - magnetic equation of state near Curie point, (E), 25:59181
  - optical properties at 1.13 to 3.96 eV, 25:59187
  - oxidation potential for trivalent--tetravalent, 25:57437
  - photochemistry of dilute sulfuric acid solutions of, formation of hydrates of peroxides in, 25:57416
- GADOLINIUM ALLOYS AND SYSTEMS
  - Au-base--Gd, electron spin resonance spectra in single crystals of, crystal-field fine structure in, 25:59192
  - Gd--Sm, magnetic properties at 77 to 1100°K, 25:59176
- GADOLINIUM ISOTOPES
  - energy level transitions of, structural corrections in pair conversion coefficients in M1, (T), 25:59861
- GADOLINIUM OXIDES
  - fabrication of radioisotope fuel forms of, as stand-in for curium-244 oxide, hot pressing method for, 25:57653 (DP-1270)
  - magnetic susceptibility and transformation temperatures of cubic and monoclinic, effects of substoichiometry on, 25:59198
- GAGES AND METERS
  - design of static detector, 25:60275 (MHSMB-24)
- GALAXIES
  - blue stellar objects associated with, (E), 25:58539
  - colors of compact, (E), 25:58648
  - distribution of compact, spatial, (E), 25:58648
  - evolution of nuclei of, from quasars, (T), 25:58626
  - formation of, from chain fragmentation of quasags, (T), 25:58523(T) (CSIRO-Trans-10650)
  - fragmentation in nuclei of active, (T), 25:58668
  - identification of AP Lib with PKS 1514-24, (E), 25:58658
  - identification of young, criteria for, (T), 25:58625
  - infrared photometry of NGC 4151, 25:58654
  - mass distribution function for clusters of, (E), 25:58643
  - mass--luminosity ratio for elliptical and lenticular, (E/T), 25:58635
  - mass-to-light ratio for clusters of, (E), 25:58643
  - model for, collective instabilities and waves in, (T), 25:58656
  - model for, normal modes problem in self-consistent plane-parallel slab, (T), 25:58656
  - origin of, (T), 25:58666
  - photometry of nucleus of NGC 3627, (E), 25:58633
  - radio emission from core sources in, at 1415 MHz, (E), 25:58642
  - radio emission from quasi-stellar, (T), 25:58523(T) (CSIRO-Trans-10650)
  - radio interferometric study of Maffei 2, at 21 cm and adjacent continuum, (E), 25:58632
  - spectra of AP Lib, (E), 25:58658
  - spectra of compact, (E), 25:58648
  - spectral line intensities of nuclei of, (T), 25:58629
  - stability of spherical, (T), 25:58430
  - star distribution in spiral, supernovae and young Population I, (T), 25:58646
  - stellar evolution of M31, disk-population, (E/T), 25:58491
  - stellar populations in, (T), 25:58636
- GALLIUM
  - determination by extraction using quinolinol melt and spectrography, 25:57312
  - effects on complexonometric determination of rare earths, 25:57317

  - dosimetry in human phantom, isodose curves for whole-body, 25:58004
  - dosimetry in therapy, computer programs for, 25:58021
  - dosimetry in therapy, computer programs for, 25:58020
  - dosimetry of mixed neutrons and, thermoluminescent dosimeter for, 25:57849
  - dosimetry of, 1970 IAEA international glass dosimetry intercomparison for calibration of dosimeters for, 25:57838
  - dosimetry of, energy calibration of dosimeters for, 25:57859
  - dosimetry of, G--M detector for environmental, 25:57721 (AECL-3989)
  - dosimetry of, intercomparison of survey detectors for, 25:57782
  - dosimetry of, lithium fluoride--Teflon dosimeters for surface, 25:57837
  - dosimetry of, maintenance of electron equilibrium in calibration of dosimeters for, 25:57860
  - dosimetry of, performance of Fricke dosimeter for, 25:57862
  - dosimetry of, performance of silicon detectors for, 25:57850
  - dosimetry of, standard for design of pocket ionization chamber for personnel, 25:57830
  - dosimetry of, thermally stimulated exoelectron emission dosimeter for, 25:57836
  - effectiveness for sterilization of powders of dextran, 25:58160
  - effectiveness of cobalt-60, for therapy of human brain tumors, 25:58069
  - effectiveness of telecobalt, for therapy of uterine cervical carcinomas, 25:58070
  - effects on alkane glasses containing olefins, luminescent, 25:57463
  - effects on aqueous solutions of hydrogen--potassium amide, production of long-lived ammoniated electrons in, 25:57477
  - effects on bacteriophage phi X174, effects of oxygen, nitrogen, and thiourea on mutagenic, 25:57971
  - effects on bacteriophages, protective effects of versene against, 25:58032
  - effects on berry seed, cuttings, and entire plants, effects of dose and species on, 25:58151
  - effects on catalytic activity of iron in ammonia synthesis, 25:57444
  - effects on chemical and physical properties of dextran, dose dependence of, 25:58160
  - effects on chromosomes in seed of Crepis capillaris, effects of time of onset of mitosis on frequency of aberrant, 25:57968
  - effects on chromosomes of barley seed grown at high altitudes, effects of uv-deficient light conditions on frequency of aberrant, 25:57969
  - effects on chromosomes of fibroblasts and lymphocytes of children with Fanconi's anemia, aberrant, 25:57973
  - effects on chromosomes of medical personnel, effects of dose and dose fractionation on aberrant, 25:57972
  - effects on citric acid in nitric acid--strontium nitrate solutions, 25:57457 (ARH-2163)
  - effects on clathrate hydrates of cyclopropane, ethylene oxide, and propylene oxide, stability of radicals from, 25:57476
  - effects on corn, grain yield, and uptake of nitrogen and phosphorus from fertilizers and soil following seed exposure, 25:58154

XUM

effects on count and morphology of lymphocytes from chronic lymphocytic leukemia patients following extracorporeal exposure of blood, 25:58131 (CEA-CONF-1768)
effects on decoloration of textile dye solutions, synergistic effects of oxidants on, 25:57452
effects on density of leaf miner infestations on white oak shoots, effects of dose on, 25:58092
effects on development of Ceratitis larvae, ecdysone restoration following inhibitory, 25:58094
effects on disorientation of polymer molecules, 25:58417
effects on DNA and RNA stability and synthesis and on growth in Tetrahymena pyriformis, additive effects of dactinomycin concentration and dose on, 25:58091
effects on Drosophila, antagonistic effects of vibrations on mutagenic, 25:57953
effects on eggs of Ascaridia galli used for chicken immunization, 25:57946
effects on elastic precursor decay in lithium fluoride single crystals, 25:59126
effects on Escherichia coli, protective effects of ethylene glycol against, 25:58157
effects on Escherichia coli, sensitizing effects of formaldehyde and thimersol against, 25:58157
effects on frequency of somatic recombinations in chlorophyll mutants of tobacco, 25:57977
effects on frequency vs temperature characteristics of synthetic-quartz AT resonators, 25:57906
effects on frozen aqueous solutions of alkali halides, ESR studies of hydrogen atoms and hydroxyl radicals from, 25:57467
effects on gaseous carbon dioxide at high density, 25:57461
effects on gaseous ethylene in presence of 2-methylpropene, yields from, 25:57474
effects on high-purity germanium, donor--vacancy complexes formed in, 25:59133
effects on human bladder and rectum during therapy of gynecological neoplasms, effects of dose from cobalt-60 applicators on pathological, 25:58010
effects on human breast neoplasms, effects of post-surgical dose on therapeutic, 25:58071
effects on human breast neoplasms, pre-surgical therapeutic, 25:58073
effects on human epithelium following therapy for cervical tumors in relation to recurrance incidence, cytological and histological studies on, 25:58140
effects on hydrates of cyclic ethers, EPR studies on free radicals from, 25:57465
effects on incidence of single- and double-strand breaks in phi X-174 replicative form of DNA, effects of LET on, 25:57952 (LBL-28)
effects on intestinal and spleen colony formation and survival of mice, effects of oxygen on RBE for, 25:57997 (LBL-314)
effects on intestinal mucosa in mice, regeneration following pathological, 25:58111
effects on lactate dehydrogenase activity in serum and vaginal tissues of cervical cancer patients, effects of dose on, 25:57937
effects on low-density polyethylene, effects of antioxidants on thermooxidative degradation in, 25:57462
effects on magnetic thin-film recording systems, 25:57908
effects on metabolism of amino acids and sugars in pea and wheat plants and their offspring, 25:57931
effects on microfungal populations in litter of red oak, effects of dose on, 25:58150
effects on mitotic activity of cultured human cancer cells, additive effects of colchicine on, 25:58080
effects on nutrative properties of fish, 25:58162
effects on oogenesis and reproductive system of beet leafhoppers following exposure of adults and nymphs, 25:58093
effects on oxidation state of recoil phosphorus-32 from neutron-irradiated tripolyphosphate hexahydrate, 25:57495
effects on phospholipase A activity in lysosomes, microsomes, and mitochondria in Sticker sarcoma of dogs, 25:57940
effects on phosphorus metabolism in pea and wheat plants and in first and second filial generations, 25:57941
effects on photodeformation effects in heat-treated germanium, 25:59128
effects on polymer composites and metal--epoxy resins, 25:58416(R) (RLO-2098-2)
effects on polymerization of monomers under superdry conditions, 25:57450 (ORC-3667-1)
effects on polymerization of solid trioxane, kinetics of, 25:57453
effects on polymerization of styrene in carbon tetrachloride or hexachlorobutadiene solutions, effects of additives on, 25:57454
effects on potassium antimonate and sodium hexafluorantimonate, ESR spectra of radicals from, 25:57445
effects on potassium bicarbonate single crystals at 77°K, ESR study of free radicals induced by, 25:57471
effects on rat tibia, effects of dose on neoplastic and pathological, 25:58102
effects on serum content of immunoglobulins in swine, 25:58104
effects on silicon carbide resistors, (E), 25:57903
effects on sodium chloride crystals after electric field treatment, kinetics of F-center growth in, (E/T), 25:59164
effects on spleen weight in mice, effects of dose fractionation on whole-body cobalt-60, 25:58108
effects on sprouting of potatoes during storage, 25:58159
effects on structure of sodium--tellurium glasses, EPR studies on effects of metal oxide additives on, 25:57447
effects on sunflower seeds, effects of variety on, 25:58148
effects on survival of Azotobacter chroococcum, effects of cell age and concentration on, 25:58156
effects on survival of chromium-51-labeled human erythrocytes in vivo following exposure in vitro, 25:58136
effects on ultrastructure of medullary tissue of rat brain, effects of dose on, 25:58118
effects on valence distribution of ion-implanted sulfur-35 in sodium chloride crystals, 25:57503
effects on water, effects of thallium sulfate on yields from, 25:57472
emission from mixed plutonium isotopes, scintillation spectrometer measurement of, 25:57998 (NIRS-Pu-8)
emission from NP 0532, upper limits for pulsed, (E), 25:58542
emission from pulsar--nebula complex, time-dependent transient, (T), 25:58550
fluence and flux density measurement of low-energy, germanium detector for, 25:57768
intensity of 0.3- to 2.7-MeV cosmic, (E), 25:58836
intensity of 0.511-MeV cosmic, during epoch of meteor streams, (E), 25:58836
intensity of cosmic primary, in vicinity of Earth, (E), 25:58831
intensity of cosmic, Cosmos-135 measurements of, (E), 25:58835
measurement of seabed, development of equipment and method for in-situ, 25:57586
monitoring in Indian soils during 1964 to 1970, 25:57567
monitoring of atmospheric, following Schooner Event, 25:57574 (PNE-524)
reactions (γ,f) with thorium-232 near threshold energy, angular distribution for, (E), 25:59786
reactions with air, scintillation induced by, 25:59119
spectra at balloon altitudes of cosmic, between 0.7 and 4.5 MeV, (E), 25:58832
spectra from decay of radioisotopes, tables of, 25:59785
spectra from neutron capture, high-count rate two-parameter system for measurement of, 25:57806
spectral characteristics of 0.3- to 2.7-MeV cosmic, (E), 25:58836
spectral characteristics of cosmic, Cosmos-135 measurements of, (E), 25:58835
use for therapy of lung carcinomas, review of complications and effectiveness in, 25:58137
use in radiographic quality control, efficiency of method for, 25:57696

GAMMA-RAY ASTRONOMY
research between 1962 and 1970 in, (E), 25:58533

GAMMA SOURCES
characteristics of radiometric testing equipment, effects on defect detection, 25:57701
determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
fabrication for radiography, standard for, 25:57665
preparation and properties of cobalt-57, for Moessbauer studies, 25:59203
shielding for radiography, standard for, 25:57664
use with neutron source in method for measuring fluid flow, 25:57667(P)

GAMMA SPECTROMETERS
coincidence techniques using lithium-drifted germanium--thallium-activated sodium iodide pair, for high-energy gamma rays, 25:57804
data from scintillation, response matrix for analysis of, 25:57795(T) (LB/G-3075)
design and performance of Compton, for intense pulsed sources in high-level backgrounds, 25:57813
fabrication and testing of 60-cm^3 well-type lithium-drifted germanium, for activation analysis, 25:57805
fabrication and testing of high-purity p-type germanium, 25:57820
fabrication and testing of high-purity-germanium n--i--p detectors for, 25:57811
fabrication and testing of well-type lithium-drifted germanium, with <5μ dead layer, 25:57799
fabrication and testing of, made from high-purity germanium, 25:57814
performance of germanium semiconductor, 25:57822
performance of whole-body, comparison of, 25:57823
preamplifiers for, application of pulsed feedback techniques to, 25:57812
testing of encapsulated lithium-drifted germanium, in liquid nitrogen, assembly for, 25:57800

GAMMA SPECTROSCOPY
spectra analysis in, computer methods for, 25:57810

XUM

- control system for gas turbines, 25:60073(P)
- magnetohydrodynamic, current and potential distributions at high magnetic field strengths, (T), 25:58844
- magnetohydrodynamic, distribution discontinuities in thin layers, 25:58850
- magnetohydrodynamic, energy equation and radiative transfer equation solutions in, 25:58851
- magnetohydrodynamic, mixed three-dimensional, in longitudinal field, (T), 25:59047

GAS TURBINE ENGINES
- performance of aircraft, radiographic methods for measuring dynamic, 25:57689

GASES
- conference on gas discharges, international, London, 9/70, 25:59009
- electric discharge in, computer simulation of breakdown potential, (E/T), 25:59004
- electron scattering by magnetic, cross-section formulas for polarized-, 25:58687
- heating by stabilized electric arcs at high pressures, calculation of characteristics of, 25:59059
- hydrogen-atom and -ion (H^-) reactions with, summary of experimental data on electron capture and loss in, 25:58742
- ion reactions with, review of excited-atom formation by charge exchange in, 25:58691
- kinetic theory of, polynomial expansion method for problems involving relativistic Maxwellian distribution, 25:59053
- neutron scattering spectrum of ideal and real, theory of, 25:59678
- physics of ionized, Yugoslav summer school in July 1970 on, 25:58739
- proton reactions with, summary of experimental data on electron capture and loss in, 25:58742
- reactions of atomic beams of, with hot solid surfaces, harmonic-model analysis of, 25:58690
- sorption on tungsten in strong electric field, field-ion microscopic study of, 25:58246
- spectra of, heated by hard uv or energetic particles, (T), 25:58629
- transport of dilute, with internal degrees of freedom, generalized master equation for, 25:59224

GASTROINTESTINAL TRACT
- californium-252 distribution in rat, following intraperitoneal injection, 25:57922

GELATIN
- radiation effects on aqueous solutions of, at -170 to 25°C, 1-MeV electron, 25:57443

GENES
- radiation effects on behavior of parthenogenetic wasp, x, 25:57962

GENTILLY POWER REACTOR
- control systems of, design characteristics of, 25:59929
- operations for, 25:59929

GEOMAGNETIC FIELDS
- activity index in, relation to Pi2 micropulsation occurrences observed at high latitude, (E), 25:58903
- activity of, correlation with interplanetary plasma and magnetospheric parameters, (E/T), 25:58886
- activity of, effect on electron drift in equatorial electrojet region, (E/T), 25:58905
- effect on elf and vlf radio-wave propagation under daytime ionosphere near 1 to 4 kHz, (T), 25:58873
- effect on radio-wave reflection and transmission in ionosphere, numerical calculations of, (T), 25:58869
- interaction with charged particles, processes of, (E/T), 25:58910
- model of, solar proton trajectory calculations in Williams and Mead, (E/T), 25:58861
- pulsations in, relation of Pi2 occurrences to magnetic bays and magnetic activity, (E), 25:58903
- theory for nearly symmetric kinematic and hydromagnetic dynamos in, (T), 25:58846
- variations during quiet and disturbed days, H component for 1964 daily, (E/T), 25:58874
- variations in, correlation of electric currents in Earth with daily, lunar, and disturbance, (E/T), 25:58889

GERBILS
- thyroid gland function in, use of iodine-131 in studies of, 25:57915

GERMANIUM
- effects on complexonometric determination of rare earths, 25:57317
- electron emission induced by rare-gas ions at 10 to 30 keV on monocrystals of, 25:59175
- electron reactions with, secondary emission from, 25:58683 (FRNC-TH-49)
- electron secondary emission induced by rare-gas ions at 10 to 30 keV, angular dependence of, (E/T), 25:59146
- etching of, mechanism studies on, 25:58244
- lithium precipitation centers in crystal of, effects of oxygen vacancy clusters on, 25:57735
- oxidation in air, water, and hydrogen peroxide, 25:58244
- pair formation in, temperature dependence of average energy for electron--hole, 25:57739
- preparation of high-purity crystals of, for semiconductor detectors, 25:57787
- proton dechanneling in, (E/T), 25:59130
- purification of crystals of, using lead getter, 25:57736
- radiation damage regions in, crystallinity of fission-neutron and ion-, (E/T), 25:59140
- radiation effects on infrared absorption by, relations of displaced atoms and radioinduced impurities with in-pile, 25:58343
- radiation effects on photodeformation effect in heat-treated n- and p-type, γ, 25:59128
- radiation effects on thermal conductivity in n- to p-type conversion region of antimony-doped, 4-MeV electron, 25:59134
- radioinduced defects in n- and p-type, annealing and energy level spectrum of 660-MeV proton, 25:59159
- radioinduced defects in n-type, at 5°K, radiation annealing 1.1-MeV electron, 25:59132
- radioinduced donor--vacancy complexes in high-purity, effects of heat treatment of gamma, 25:59133
- radioinduced electric potential in monocrystals in magnetic field, α- and β-, 25:59143
- reactions of recoil atoms of, research progress on, 25:57487(R) (COO-1713-25)

GERMANIUM ALLOYS AND SYSTEMS
- Al--Ge--Nb, properties of superconducting, 25:58948
- As--Ge--Te, radiation effects on crystal structure of glass-forming chalcogenide of, fast neutron, 25:58419
- Ge--Si-base, radioinduced disorder in p-type, Rutherford-backscattering study of helium-ion, 25:59136

GERMANIUM ISOTOPES Ge-68
- energy levels from arsenic-68 decay, spin--parity assignments for, (E), 25:59747

GERMANIUM ISOTOPES Ge-70
- proton reactions (p,3n) at 30 to 55 MeV, cross sections for, (E), 25:59747

GERMANIUM ISOTOPES Ge-76
- neutron reactions (n,2n) at 14.7 MeV, isomer ratio in, (E), 25:59766

GERMANIUM OXIDES
- radioinduced intrinsic and impurity defects in, ESR study of, 25:59174

GLASS
- analysis for boron by neutron activation and prompt γ ray measurement, 25:57369(T) (RFP-Trans-83)
- book: Radiation Effects on Glass and Ceramics, in Russian, 25:59147
- properties of radiation-shielding, 25:58421
- radiation effects on structure of sodium oxide--tellurium oxide, EPR studies on effects of metal oxide additives on γ, 25:57447
- radioinduced luminescence of olefin-containing alkane, γ, 25:57463
- reactions of foamed, with fluorine, 25:57619 (RFP-1739)
- uses in nuclear engineering and research, 25:58421

GLASS TEXTILES
- glass fibers--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
- glass fibers--polysulfones, radiation effects on composites of, gamma, 25:58416(R) (RLO-2098-2)

GLOVE BOXES
- materials for, reactions with fluorine, 25:57619 (RFP-1739)

GLOW DISCHARGES
- plasma acceleration in toroidal, in radial magnetic fields, (E/T), 25:59002

GLUTAMIC ACID
- radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931

GLYCINE
- radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931

GLYCINE, N-(CARBOXYMETHYL)-N'-(2-HYDROXYETHYL)-N,N'-ETHYLENEDI-
- complexes with rare earths, dissociation constants for, 25:57537

GOLD
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- determination by extraction using quinolinol melt and spectrography, 25:57312
- determination simultaneously with selenium and tellurium in water by neutron activation, 25:57370
- helium-ion stopping power calculation for channeling in, 3-MeV, 25:59129
- ionization cross sections of, measurement of, 25:58344(R) (LA-4693)
- layer thickness measurement on vanadium by deuteron backscatter, 25:59640 (CONF-711002-, pp 272-82)
- preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
- preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
- proton stopping power at 20 to 1000 keV of, electronic, (T), 25:59124
- separation from platinum by solvent extraction using triphenylguanidinium chloride, 25:57554

GOLD ALLOYS AND SYSTEMS
- Ag--Au-base, radioinduced crowdions in, comments on evidence for electron, 25:59162
- Ag--Au-base, radioinduced crowdions in, stabilization of electron, (T), 25:59153
- Au--Pd--Te, superconductivity in simple cubic intermetallic (Au/sub 1-x/Pd/sub x/)Te_2, 25:58928 (CALT-822-37)

  Au-base--Gd, electron spin resonance spectra in single crystals of, crystal-field fine structure in, 25:59192
GOLD CHLORIDES
  effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401
GOLD ISOTOPES Au-197
  neutron capture at 30 keV to 1.4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  photofission at 0.1 to 5 GeV, giant resonance in yields and integral cross sections for, (E), 25:59794
  photon reactions (γ,n) with, energy dependence of yield for, (E), 25:59815
  proton reactions (p,γ) at 4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
GONADS
  radiosensitivity of hermaphrodite, of Asterina gibbosa, studies on differential, 25:58090
GRANITES
  uranium distribution in, from Central Kazakhstan, statistical analysis of, 25:57583
GRAPHITE
  analysis of pyrolytic, for lanthanum, neodymium, tantalum, and tungsten by neutron activation and counting of delayed β and γ coincidences, 25:57389
  crystal lattice dynamics in, 25:58168 (ORNL-4676, pp 139-233)
  density of, effects of processing method on, 25:58168 (ORNL-4676, pp 139-233)
  diffusion of gaseous fission products from, mechanism for, 25:58367 (EUR-4327)
  diffusion of molten zirconium in, at 1860 to 2250°C, effects of graphite lattice parameters on, 25:58245
  fission product deposition in MSRE, evaluation by Auger electron spectroscopy, 25:58168 (ORNL-4676, pp 139-233)
  performance as lubricant for deep drawing of nickel alloys and stainless steel, 25:58195
  permeability of, effects of pyrolytic carbon sealing on, 25:58168 (ORNL-4676, pp 139-233)
  preparation of thin foils of, for electron microscopy, ion beam thinning method for, 25:58350 (RD/B/N-2020)
  properties of molded, effects of coke starting mixtures on mechanical, physical, and thermal, 25:58366 (CEA-CONF-1820)
  radiation effects on dimensions of test specimens of, in-pile, 25:58168 (ORNL-4676, pp 139-233)
  radiation effects on dimensions of, neutron, 25:58366 (CEA-CONF-1820)
  radiation effects on dislocations in, 200-kV electron, 25:58168 (ORNL-4676, pp 139-233)
  radioinduced paramagnetic center in, specific heat--magnetic field study of neutron, 25:59148
  stability of MSRE moderator elements of, evaluation of, 25:58168 (ORNL-4676, pp 139-233)
GRAPHITE BROMIDES
  crystal structure of lamellar, 25:58404
GRAPHITE SYSTEMS
  B--graphite, diffusion of helium from irradiated, at 200 to 300°C, 25:58378
  epoxy--graphite, tensile properties of fiber-reinforced composites of, 25:58382
  graphite--plastics, properties of continuous filament reinforced, for use in space, 25:58422
GRAVITATION
  constant of, decrease in, (T), 25:58667
  formalism for, Lorentz covariant and second quantized, 25:59547
  graviton mass in field theory of, 25:59601
  Lagrangians in, solutions of equations with quadratic, (T), 25:59603
  predictions of Deser--Laurent theory of, 25:59585
  space--time in, measurement method for Riemannian structure of, 25:59608
  theory for, classical field deformation of Poincare group for space--time curvature in, 25:59531
  theory of, Lorentz-invariant scalar, 25:59590
  variational principle of Einstein, general formulation of tetrad, 25:59600
GRAVITATIONAL FIELDS
  effects of solar, on radio-wave deflection, (E), 25:58662
  effects on Carnot cycles, (T), 25:58673
  energy density for neutrino--, positive, 25:59589
  particle quantization in external, (T), 25:59599
  radiation scattering in linearized Einstein--Maxwell, (T), 25:59606
  theory for system of electromagnetic field, massless scalar field and, solutions in, (T), 25:59587
  theory for, Newman--Penrose formalism comparison with classical, 25:59593
GRAVITATIONAL RADIATION
  detection of high-frequency, review of, (E), 25:59604
  detection of, survey of research in, (T), 25:59607
  emission from supermassive disks undergoing fragmentation, (T), 25:58668
  graviton interactions in Lorentz covariant and second quantized formalism, 25:59547
  red shift in, equivalence with temperature shift in Moessbauer effect for, (T), 25:59596
  sources of high-frequency, review of, (E), 25:59604
GRAVITY WAVES
  propagation in ionospheric F2 layer, TID excitation from internal acoustic-, (E/T), 25:58872
GROSSWELZHEIM SUPERHEAT REACTOR
  fuel elements for, welding methods for fabrication of, 25:58205
GROUND
  motion from seismic events, method for calculating linear dynamic response of buildings to, 25:57592 (JAB-99-70)
  motion induced by explosions, finite difference method for calculation of, 25:57594 (UCRL-73369)
  motion of Amchitka Island, from underground nuclear explosions, method for prediction of, 25:57602 (SC-RR-69-376)
GROUP THEORY
  Lie algebra of SO(n), polynomial identity for vector operators for, 25:59538
  permutation degeneracy in four electrons in quantum mechanics, (T), 25:59235
  Poincare group deformation by classical fields, 25:59531
  Poincare group for elementary particle interactions, lightlike, continuous-spin, and spacelike representations of, 25:59532
  Poincare group for timelike, lightlike, and spacelike momenta for partial-wave analysis of amplitudes of interactions of spinning particles, 25:59533
  review for particle symmetries, 25:59530
  scattering amplitudes in, structure of generalized Veneziano, 25:59628
  topological group deformation in, 25:59531
GULF OF MEXICO
  uranium geochemistry in, 25:57587
GUNDREMMINGEN POWER REACTOR
  maintenance during July 1971, 25:59914 (TID-25818)
  operation during July 1971, 25:59914 (TID-25818)

H

H.B. ROBINSON POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59951 (DOCKET-50261-74)
HI REGIONS
  distribution in central region of Galaxy, (E), 25:58652
  distribution in Milky Way, (E), 25:58651
  helium-ion abundance in, (E/T), 25:58630
  hydroxyl (OH) transition in, excitation temperatures of 18-cm, (E), 25:58560
HII REGIONS
  distribution in Milky Way, (E/T), 25:58528
  mapping at 2.695 GHz of M17 and S2 L14MO P12, 25:58557
  relation to Wolf--Rayet stars, (E), 25:58477
  spectra of W49 A, detection of anomalous interstellar recombination line in, (E), 25:58563
HADRONS
  interactions and properties of, (E/T), 25:59326
  interactions at high energies in quantum field theory, quasi-potential theory of, 25:59442
  interactions at high energies, two-particle correlations in inclusive strong, 25:59436
  interactions at high energies, two-Reggeon exchange contribution to amplitudes of, (T), 25:59618
  interactions at large momentum transfer, properties of inclusive, 25:59444
  interactions of composite, resonance model for electromagnetic, 25:59386
  interactions of, bilocal field operators for, 25:59583
  interactions of, π^0 electroproduction as test of dip mechanisms in, (T), 25:59346
  interactions of, scaling law in dual-resonance model for high-energy deep inelastic, (T), 25:59428
  interactions with electrons at high energies, suppression of electromagnetic corrections to, (T), 25:59372
  interactions with hadrons at high energies, statistical thermodynamic models for asymptotic form of transverse-momentum distribution of secondary particles from, (T), 25:59427
  interactions with hadrons, parton model for heavy lepton production in, 25:59401
  interactions with hadrons, point-source static model for renormalized field product for Bjorken limit and Ward identity for, (T), 25:59564
  interactions with leptons, parton model for semi-inclusive, 25:59401
  interactions with photons, hadron electrodynamics in resonance model for, 25:59386
  interactions with photons, parity rule and helicity conservation in rho^0 production in, 25:59384
  mass spectra and bound states in quark model, 25:59426
  model for, atoms with magnetic charges as, 25:59447
  model of, scale invariance breaking and Regge trajectories in dyon, 25:59430
  production in deep inelastic e + e interactions in colliding beams, differential cross sections for, (T), 25:59371
  production in deep inelastic e + γ interactions in inelastic e + e interactions, (T), 25:59333 (JINR-E2-6036)
  production in e + e and $e^+ + e^-$ interactions, Regge-pole-theory prediction of scaling in, (T), 25:59376
  production in e + p interactions, wee parton model for

XUM

  single, 25:59387
  production in $e^+ + e^-$ and virtual $\gamma + \gamma$ interactions in colliding beams, differential cross sections for hadron and two-electron production in deep inelastic e + e interactions from total cross sections for, (T), 25:59371
  production in $e^+ + e^-$ interactions in colliding beams, contribution to total cross section from bremsstrahlung mechanism for differential cross section for, (T), 25:59375
  production in $e^+ + e^-$ interactions in crossed beams, Landau--Lifshitz process for cross sections for, (T), 25:59334 (LNF-71/14)
  production in p + p interactions at high energies, charge-conservation model for multiple, (T), 25:59512
  symmetry properties from asymptotic identification in local gauge theory, internal, 25:59545
HAFNIUM
  determination by spectrography, elimination of effect of sample composition on, 25:57330
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  effects on electric properties of lanthanum boride, temperature dependence of, 25:59183
  effects on electric properties of lanthanum hexaboride, 25:59182
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  separation from sulfate solutions obtained from zirconium ores by extraction with cyclohexanone solutions of thiocyanic acid, 25:57533
HAFNIUM ALLOYS AND SYSTEMS
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  Hf--Nb, electric conductivity from 4 to 300°K, 25:58929 (FRNC-TH-72)
  Hf--Pt-base--Rh--Ti--W, hardness of crystallized, effects of annealing at high temperatures on, 25:57658(R) (ORNL-4723)
  Hf--U, liquidus and solidus curves for, calculations for, 25:58292
  Hf--Zr, liquidus and solidus curves for, calculations for, 25:58292
HAFNIUM CARBIDES
  machining of, effects of carbon content in corresponding ranges of homogeneity on electroerosion, 25:58356
HANFORD PRODUCTION REACTORS
  protection systems for, description of data acquisition and processing equipment and procedures for, 25:60208
HASTELLOY C
  compatibility with irradiated cobalt-60 fuels at 850 to 1000°C, 25:57654(R) (DP-1279)
  testing of fuel capsules of, at 1000°C, results of long-term, 25:57654(R) (DP-1279)
HASTELLOY N
  compatibility with Haynes 25 alloy in fused sodium fluoroborate mixture at 460 to 605°C, 25:58169 (ORNL-TM-3488)
  corrosion by high-pressure high-temperature steam, 25:58168 (ORNL-4676, pp 139-233)
  corrosion by sodium fluoride--sodium fluoroborate coolant salts at high temperatures, 25:58168 (ORNL-4676, pp 139-233)
  corrosion of modified, by molten MSRE fuel salts, 25:58168 (ORNL-4676, pp 139-233)
  radiation effects on mechanical properties of, relations of hafnium, niobium, and titanium additions with neutron, 25:58168 (ORNL-4676, pp 139-233)
  radiation effects on MSRE control rod thimble of, in-pile, 25:58168 (ORNL-4676, pp 139-233)
  stability of rods of, from MSRE sampling assembly, 25:58168 (ORNL-4676, pp 139-233)
  weldability of hafnium- and zirconium-modified, using Hastelloy N weld filler, 25:58168 (ORNL-4676, pp 139-233)
HASTELLOY X
  compatibility with irradiated cobalt-60 fuels at 850 to 1000°C, 25:57654(R) (DP-1279)
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
  oxidation at 1000 to 1125°C in air, 25:57654(R) (DP-1279)
  testing of fuel capsules of, at 1000°C, results of long-term, 25:57654(R) (DP-1279)
HAYNES 25 ALLOY
  compatibility with Hastelloy N in fused sodium fluoroborate mixture at 460 to 605°C, 25:58169 (ORNL-TM-3488)
  compatibility with irradiated cobalt-60 fuels at 850 to 1000°C, 25:57654(R) (DP-1279)
  testing of fuel capsules of, at 1000°C, results of long-term, 25:57654(R) (DP-1279)
HAYNES 188 ALLOY
  oxidation at 1000 to 1125°C in air, 25:57654(R) (DP-1279)
HEART
  radiation effects on human, following therapy for thoracic diseases, 25:58147
  radiation injuries to laboratory animal, pathology of, 25:58122
  scintigraphy of myocardium of dog, evaluation of cesium-129 and potassium-43 for, 25:58041 (UCLA-12-837)
HEAT
  storage methods for, during power plant reduced load operation, 25:60143(P)
HEAT EXCHANGERS
  design and fabrication of improved helical-type, 25:57630(P)
  performance of tubular, effects of twisted tapes on thermal, 25:57643
  stability of materials in MSRE, evaluation of, 25:58168 (ORNL-4676, pp 139-233)
HEAT EXCHANGERS (GAS-LIQUID)
  design characteristics of secondary, for gas cooled reactors, 25:60074(P)
HEAT EXCHANGERS (LIQUID-LIQUID)
  design evaluation of sodium intermediate reactor, using austenitic or ferritic steel, 25:57614 (KFK-1387)
  design problems with liquid sodium cooled fast reactor intermediate, 25:60077
HEAT PIPES
  testing of lithium, research progress on in-pile, 25:57615(R) (LA-4746)
  use in nuclear thermionic fuel elements, 25:60199(P)
HEAT-RESISTING ALLOYS AND METALS
  abrasion resistance of, comparison of gas-borne corundum and diamond wheels for testing, 25:58386
  machining of cylindrical apertures in, by electroerosion, 25:58193
HEAT SOURCES
  materials for, research progress on development of, 25:57654(R) (DP-1279)
HEAT TRANSFER
  analysis in reactors, book on, 25:60222
  burnout in transient boiling, (E/T), 25:57647
  coefficients of forced-convection, for tubular heat exchangers, effects of twisted tapes on, 25:57643
HEAT TRANSFER SYSTEMS
  spinning disks for cooling pond, evaluation of, 25:60023
HEATED EFFLUENTS
  effects on environment of U.S. of power reactor, 25:60001
  effects on environment of U.S. power reactor, 25:60002
HEATERS
  testing of high-flux, in flowing sodium, 25:58163(R) (AI-AEC-12859)
HELIUM
  abundance in chromosphere and solar prominences, (E), 25:58602
  abundance in O and B stars, (T), 25:58472
  abundance in planetary nebulae, (E/T), 25:58446
  burning in 10 solar mass Population I stars, (T), 25:58465
  burning in stars, element production from, (E/T), 25:58508
  conference on, at very low temperatures, Grenoble, France, 3/70, 25:58913
  dielectric insulator properties for superconducting power cables, 25:58950
  diffusion from irradiated boron--graphite at 200 to 300°C, 25:58378
  effects in combination with sodium on stress rupture of Types 304 and 316 stainless steel at 900 to 1200°F, 25:58167(R) (AI-AEC-12987)
  effects of high-temperature, on mechanical properties of Type 304 and 316 stainless steel, 25:58163(R) (AI-AEC-12859)
  electric discharges in alkali-metal-seeded, properties of high-current, 25:59023
  electron reactions with, cross sections for ionization in, (T), 25:58738
  electron reactions with, excitation in, (E), 25:58741
  electron reactions with, model potentials for, 25:58772
  energy level populations in low-current arcs, (E), 25:59017
  energy levels of, calculation using Hulthen orbital approximations, 25:58713
  energy levels of, extension of Hylleraas expansion for ground-state, 25:58795
  helium-ion reactions with, energy spectra of electrons from, (T), 25:58733
  hydrogen-ion (H_2^+ and H_3^+) reactions at 10 to 130 keV with, excitation of autoionizing levels in, (E), 25:58779
  interaction with solar wind, helium$^+$ ion abundance from photoionization of interstellar, (E/T), 25:58855
  ionization in lunar atmosphere and associated properties, 25:58679
  nucleosynthesis in pulsating massive main-sequence stars, (T), 25:58434
  phase diagram for, in interior of Jupiter and Saturn, (E), 25:58675
  phonon interactions in liquid, (T), 25:59204
  plasma of, metastable densities in neutron environment, (E/T), 25:59003
  plasma of, production of quiescent, in skipping magnetic fields, (E), 25:59055
  positron annihilation in, time dependence of, (E), 25:58725
  production by neutron reactions with elements, evaluation

of in-pile, 25:58163(R) (AI-AEC-12859)

- properties of, upper and lower bounds to expectation values for, (T), 25:58810
- proton reactions at 10 to 130 keV with, excitation of autoionizing levels in, (E), 25:58779
- radioinduced production in alloys and metals by nuclear reactions, 25:58166(R) (AI-AEC-12980)
- radioinduced production in alloys and metals by nuclear reactions, 25:58167(R) (AI-AEC-12987)
- radioinduced production in cladding materials, neutron, 25:58336
- radioinduced production in silver foils, fast neutron, 25:58334
- radioinduced release from neutron-irradiated nickel, 25:58335
- reactions at 5 to 300°K between metastable 2^3S atoms of, total cross sections for metastable destruction and ionization in, 25:58731
- reactions between atoms of, at 145 to 300 eV, energy spectra of ionization products from, (E), 25:58764
- scattering by lithium fluoride (001) surface, (E), 25:58694
- scattering by molecules, velocity dependence of total effective cross sections for, 25:58782
- solubility in molten lithium beryllium fluorides, 25:57298 (ORNL-4676, pp 73-138)
- solubility in sodium, 25:58387(R) (ANL-7823)
- spectra in O and B stars, (T), 25:58472
- spectra of dense plasma of, contours and intensity of, 25:59016
- spectra of, in solar prominences, (E), 25:58604
- structure of He--quark molecules, electronic, 25:59344
- wave functions for excited and ground states of, 25:58710
- wave functions for excited states of, Hulthen transform functions in approximation of, 25:58713

HELIUM HYDRIDES

- binding energy for excited states of ionized, calculation using exchange perturbation theory, 25:58702

HELIUM IONS

- abundance in H I regions, (E/T), 25:58630
- channeling in gold at 3 MeV, stopping-power calculation for, 25:59129
- effects on intestinal and spleen colony formation and survival of mice, effects of oxygen on RBE for, 25:57997 (LBL-314)
- effects on metal foils at MeV ranges, design of low-temperature facility for studies of, 25:57620 (RISO-204)
- effects on silicon and silicon--germanium at 275 and 1610 keV, Rutherford-backscattering study of disorder induced in, 25:59136
- effects on uranium carbide fuel pellets at cyclotron energies, 25:58163(R) (AI-AEC-12859)
- electron recombination with molecular, effects of metastable--metastable collisions on, (E), 25:58714
- level populations for, in gaseous nebulae, (T), 25:58516
- reactions with aluminum at 45 to 90 keV/amu, helium-isotope dependence of cross sections for K-shell ionization in, (E), 25:58776
- reactions with copper, molybdenum, and silver at 45 to 90 keV/amu, helium-isotope dependence of cross sections for L-shell ionization in, (E), 25:58776
- reactions with helium, energy spectra of electrons from, (T), 25:58733
- reactions with oxygen molecules at 100 eV to 4 keV, energy losses and energy-level transitions in, (E), 25:58753
- reactions with tungsten at 45 to 90 keV/amu, helium-isotope dependence of cross sections for M-shell ionization in, (E), 25:58776
- scattering from amorphous tungsten oxide surface at 275 keV, spectra of low-angle, (E/T), 25:58689

HELIUM ISOTOPES He-3

- binding energy of, effect of charge asymmetric potentials on, (T), 25:59701
- Boltzmann transport equation for quasi particles in liquid, derivation of hydrodynamics from, 25:59215
- deuteron reactions (d,n) with, formalism for polarized particles in, (T), 25:59837 (LA-4492)
- forces in liquid, Landau theory for two-body effective, (T), 25:59850
- meson (μ^-) capture by, elementary particle treatment of, (T), 25:59397
- neutron capture at 0.025 eV, cross sections for two-quantum radiative, (T), 25:59527
- particle reactions at high energies, relativistic Feynman graphs in momentum representation for method for calculating amplitudes of, (T), 25:59528
- proton reactions (p,pd) at 35 MeV, effect of neutron pickup on quasi-free scattering, (E), 25:59702
- reactions (He-3,$\alpha\gamma$) with silicon-28 at 8.2 MeV, spectra from, (E), 25:59751
- reactions (He-3,d) and (He-3,t) with lithium-7 at 15 MeV, deuteron and triton spectra from, (E), 25:59731
- reactions (He-3,d) with strontium-88 at 24.78 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 25:59750
- reactions (He-3,p) with odd--even nuclei, isospin effects on angular distributions from, (T), 25:59741
- reactions (He-3,t) with titanium-46 at 37.7 MeV, DWBA analysis including tensor force of, (E), 25:57901
- reactions (He-3,tp) and (He-3,He-3p) with deuterium at 27 MeV, PWBA analysis of coincidence spectra from, (E/T), 25:59694
- role in tritium beta radioinduced death of mammalian cells, 25:58086
- scattering by A = 48 to 64 nuclei at 29 to 35 MeV, optical-model analysis of differential cross sections for elastic, (E), 25:59769
- He-3--He-4, current flow in liquid, surface-state lifetimes and, 25:58911
- He-3--He-4, light scattering by superfluid mixtures, 25:58916
- He-3--He-4, mass and spin diffusion near lambda line in dilute mixtures, 25:58926
- He-3--He-4, sum rules for binary solution and effective interactions between helium-3 quasiparticles in superfluid helium-4, 25:58924
- He-3--He-4, thermal capacity of liquid, at lambda transition, 25:58919

HELIUM ISOTOPES He-4

- characteristic properties of superfluid, (T), 25:58918
- critical phenomena in liquid, phenomenological theory on, 25:58912
- critical velocities in superfluid flow through pinholes, (E), 25:58921
- current flow in liquid, surface-state lifetimes and, 25:58911
- dissipation in flowing superfluid film, potential-probe measurements of, 25:58925
- electron scattering by, analysis using Brueckner and Jastrow methods, (T), 25:59704
- energy levels of, fine structure interval 2^3P_0--2^3P_1 in atomic, (E), 25:58720
- flow dissipation equation in liquid II, 25:58927
- hydrodynamics and size effects in superfluid, (T), 25:58915
- light scattering by superfluid, 25:58916
- meson (π^-) scattering by, contribution of multiple scattering to total cross section for, 25:59524
- meson (π^+) scattering by, contribution of multiple scattering to total cross section for, 25:59524
- nuclear center-of-mass coordinate in Block--Horowitz theory for, (T), 25:59832 (JINR-E4-5890)
- phase coherence in superfluid, (T), 25:58914
- photon reactions (γ,d) with, dispersive calculation using Omnes--Muskhelishvili equation of cross sections for, (T), 25:59698
- photon scattering by, analysis for double scattering and glory effects in Compton, (T), 25:59703
- properties of ions and vortices in, (T), 25:58917
- surface second sound in liquid, 25:58931
- thermal capacity of liquid, at lambda transition, 25:58919
- transfer rate of liquid II film, dependence on pressure head, film height, and substrate, (E), 25:58922
- transport properties in superfluid, (T), 25:58914
- vortex in superfluid, core structure of quantized, (T), 25:58923
- He-3--He-4, current flow in liquid, surface-state lifetimes and, 25:58911
- He-3--He-4, light scattering by superfluid mixtures, 25:58916
- He-3--He-4, mass and spin diffusion near lambda line in dilute mixtures, 25:58926
- He-3--He-4, sum rules for binary solution and effective interactions between helium-3 quasiparticles in superfluid helium-4, 25:58924
- He-3--He-4, thermal capacity of liquid, at lambda transition, 25:58919

HELIUM ISOTOPES He-5

- energy level at 20 MeV from tritium (d,n) reactions, spin--parity assignments for, (T), 25:59706

HELIUM SYSTEMS

- He--N, ion production and loss processes in plasma of, (E), 25:59014
- He--Ne, atomic metastable densities in neutron environment, (E/T), 25:59003

HEMATOPOIESIS

- radiation effects on adult, neonatal, and weanling mouse, protective effects of tibial shielding against x, 25:58110
- radiation effects on mouse, effects of partial marrow shielding on x, 25:58124
- radiation effects on, in mouse spleen following transplantation of bone marrow, 25:58117

HEMOGLOBIN

- Moessbauer spectroscopy of, 25:60279(R) (NYO-3798-12)

HEXANE

- yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474
- $CaBr_2$--hexane, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- hexane--$HgBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- hexane--$MgBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- hexane--NH_4Br, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- hexane--$SrBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- hexane--$ZnBr_2$, bromine-80m isomeric transition in,

  - reactions of recoils from, 25:57494
- HEXOKINASE
  - radiation effects on activity in brain and heart of rats, effects of adrenal hormones on x, 25:57929
- HIGH-TEMPERATURE LATTICE TEST REACTOR
  - physics measurements on molten salt reactor lattices in, 25:60015 (ORNL-4676, pp 21-72)
- HOLMIUM
  - complexes with HEDTA, dissociation constants for, 25:57537
  - oxidation potential for trivalent--tetravalent, 25:57437
  - spectra of, Zeeman effect in, (E), 25:58708
- HOLMIUM ALLOYS AND SYSTEMS
  - Dy--Ho, phase studies of, 25:58274
  - Dy--Ho--Y, phase studies of, 25:58274
- HOLMIUM IONS
  - energy levels of Ho II, 25:58708
- HOLMIUM ISOTOPES Ho-165
  - electron elastic scattering at 160.6 to 452.2 MeV by oriented, cross sections and electric charge distributions from, (E), 25:59796
  - neutron capture at 400 keV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  - proton elastic scattering at 5 to 10 MeV by aligned, deformation parameter and spectra from, (E), 25:59788
- HORMONES
  - ecdysone, restoring effects on pupation of Ceratitis larvae following γ-radioinduced inhibition, 25:58094
- HORMONES, ADRENAL
  - cortisone, effects on ultrastructure of cells in thymus gland of mice, 25:58114
  - deoxycorticosterone acetate, radioprotective effects against ulceration in rabbit skin, x, 25:58036
  - effects on enzyme activity in brain and heart of x-irradiated rats, 25:57929
  - epinephrine, radiation effects on excretion of, by man, effects of ACTH on, 25:57938
  - epinephrine, radioimmunoassay in blood plasma, 25:57914
  - hydrocortisone, effects on survival of uv-irradiated KB cells, 25:58087
  - norepinephrine, radiation effects on excretion of, by man, effects of ACTH on, 25:57938
  - norepinephrine, radioimmunoassay in blood plasma, 25:57914
- HORMONES, PITUITARY
  - adrenocorticotropin, effects on excretion of catecholamines by man following irradiation, 25:57938
  - growth hormone, radioimmunoassay in dog plasma, 25:57909
- HORMONES, THYROID
  - triiodothyronine, effectiveness of iodine-131-labeled, for scintiscanning of human liver in comparison to colloidal gold-198 and iodine-131-labeled thyroxine, 25:58050
- HOT CELLS
  - camera for metallographic studies in, 25:57627
  - inert atmosphere systems for fuel examination, development of, 25:58344(R) (LA-4693)
- HUNGARY
  - radioisotopes in agriculture in, 25:57911
  - safety regulations for nuclear personnel in, evaluation of, 25:58027
- HUTCHINSON ISLAND POWER REACTOR, UNIT 1
  - construction of, request for not suspending permit for, 25:59983 (DOCKET-50335-20)
- HYDRAZOIC ACID
  - production and destruction in Purex Process, 25:57511 (BNWL-B-121)
- HYDROCARBONS
  - formation in early solar system by catalytic synthesis, (E/T), 25:58576
  - formation in early solar system by catalytic synthesis, (E/T), 25:58575
- HYDROCHLORIC ACID
  - analysis of analytical grade, for impurities by neutron activation, 25:57379
  - corrosive effects on joints of tantalum--titanium-base alloys at 90°C, 25:58176
  - solvent properties for mixed oxide fuels at high pressures, 25:58344(R) (LA-4693)
  - HCl--HNO_3, properties of etchant of, for uranium dioxide, 25:58244
- HYDROCYANIC ACID
  - rotational constants for, effects of deuterium on, 25:57423
  - spectra of, effects of carbon-13 and deuterium on ir, 25:57421
- HYDROGEN
  - abundance in Maffei 2, (E), 25:58632
  - determination by combustion in stream of nitrogen, oxidation, and gravimetry, 25:57349
  - determination in liquid sodium, development of on-line meter for, 25:60058(R) (ANL-7817)
  - determination in MSRE pump bowl gas, 25:57298 (ORNL-4676, pp 73-138)
  - diffusion through oxide-coated metals, 25:57298 (ORNL-4676, pp 73-138)
  - distribution of interplanetary, solar-cycle effects on cone, (T), 25:58578
  - effects of neutral, on collision broadening in stellar spectra, 25:58509
  - electron interactions in excited molecules of, sigma-pi, (T), 25:58711
  - electron reactions at 100 eV with molecular, cross section for Lyman α emission in, (E), 25:58729
  - electron reactions up to 350 eV with molecular, cross section for Lyman-α production by dissociative excitation in, (E), 25:58728
  - electron reactions with atomic, Glauber amplitudes for excitation of ns and np levels in, (T), 25:58766
  - energy levels in, semiclassical quantum theory calculation of shift of 2s, 25:59221
  - energy levels of atomic, beam--foil measurements of lifetimes of, 25:58722
  - energy spectra of bound-state atomic, finite- and infinite-dimensional local irreducible representations of O(3) symmetry for, (T), 25:59536
  - energy-level densities in ionized gas of, calculation using static screened Coulomb potential, 25:58721
  - energy-level transitions in molecular, moments for Lyman, as function of internuclear distance, (T), 25:58699
  - equation for atomic, formal equivalence to harmonic-oscillator equation, 25:59227
  - interactions of interstellar, with solar wind, (T), 25:58615
  - interactions with carbon and oxygen in interstellar medium, (E/T), 25:58623
  - iodine-ion reactions at 12 MeV with molecular, electron-capture and -loss cross sections for, (E), 25:58768
  - ionization fronts in interstellar, instability of weak, (T), 25:58627
  - ionization in lunar atmosphere and associated properties, 25:58679
  - level populations for, in gaseous nebulae, (T), 25:58516
  - lithium-ion reactions at 10 to 110 keV with molecular, polarization of Hβ line produced by dissociation and excitation in, (E), 25:58780
  - meson (μ^-) capture by gaseous, field theoretical basis for weak-interaction theory for, (T), 25:59397
  - monitoring in liquid sodium, development of diffusion tube detector for, 25:57877
  - neutron capture at 0.025 eV, cross sections and photon angular and spectral distributions for two-quantum radiative, (T), 25:59527
  - neutron coherent atomic scattering amplitudes for, (E), 25:59696
  - occurrence surrounding comets, Ogo-5 observations of, (E), 25:58574
  - phase diagram for, in interior of Jupiter and Saturn, (E), 25:58675
  - photon reactions with atomic, calculation of radial transition matrix elements for multi-, 25:58770
  - plasma of, potential breakdown in low-pressure discharges, (E), 25:59022
  - positron annihilation in, time dependence of, (E), 25:58725
  - positron reactions with atomic, theory of generalized variational bounds for positronium formation in, 25:58755
  - properties of atom of, use of factorization method and group theory in relativistic treatment of, 25:58821
  - proton reactions at high energies with atomic, total inelastic and charge-exchange cross sections for, (E), 25:58775
  - proton reactions at low energies with atomic, formal theory of, 25:58771
  - proton reactions with 2s atoms of, transition to ground state in, (T), 25:58746
  - proton reactions with atomic, Glauber amplitudes for excitation of ns and np levels in, (T), 25:58766
  - Rayleigh--Schroedinger perturbation theory for atomic, reasons for failure of, 25:58811
  - reactions of radiolytic, in argon--water systems, 25:57460
  - reactions with atoms of atomic, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
  - reactions with deuterium atoms of molecular, differential cross sections for deuterium hydride formation in, (E), 25:58778
  - reactions with gases of atomic, summary of experimental data on electron capture and loss in, 25:58742
  - reactions with hydrogen molecules and rare gas atoms of atomic, review of charge exchange in, (E), 25:58743
  - reactions with lithium, plans for studies on, 25:58387(R) (ANL-7823)
  - reactions with molybdenum trioxide and tungsten trioxide to prepare molybdenum and tungsten, 25:58189
  - reactions with sodium (3^2P) atoms of molecular, cross sections for excitation in, (E), 25:58778
  - scattering states of two-dimensional atomic, finite- and infinite-dimensional local irreducible representations of O(3) symmetry for, (T), 25:59536
  - separation from deuterium on cathode and diffusion sides of palladium--silver foils, factors for, 25:57538
  - separation from heavy water by isotope exchange with deuterium, 25:57545(P)
  - solubility in molten lithium beryllium fluorides, 25:57298 (ORNL-4676, pp 73-138)
  - sorption by delta-phase zirconium hydride at 650 to 800°C, kinetics of, 25:58373
  - spectra of atoms of, produced by γ-radiolysis of aqueous solutions of alkali halides, 25:57467

XUM

  spectral emission of extraterrestrial Lyman-α, Ogo-5 observations of, (E), 25:58574
  structure of H--quark molecules, electronic, 25:59344
  ultraviolet absorption spectra of molecular, Beutler--Fano shape in predissociation during measurement of, 25:58717
  wave functions for, study with noncompact group O(2,1), 25:58786
HYDROGEN IONS (H^-)
  reactions with gases, summary of experimental data on electron capture and loss in, 25:58742
HYDROGEN IONS (H_2^+)
  Green function for, exact, 25:58704
  reactions with helium at 10 to 130 keV, excitation of autoionizing levels in, (E), 25:58779
  reactions with oxygen molecules at 100 eV to 4 keV, energy losses and energy-level transitions in, (E), 25:58753
HYDROGEN IONS (H_3^+)
  density matrices for, configuration-interaction calculations of first-order, 25:58712
  reactions with helium at 10 to 130 keV, excitation of autoionizing levels in, (E), 25:58779
HYDROGEN PEROXIDES
  analysis of analytical grade, for impurities by neutron activation, 25:57379
  reactions with hexavalent and pentavalent neptunium in nitric acid solutions, 25:57414
HYDROGEN SYSTEMS
  Al--H, neutron diffusion constants for, (T), 25:59687
  H_2--KNH_2, radiolysis of aqueous solutions of, production of long-lived ammoniated electrons from γ, 25:57477
  H--V, hydride precipitation in, electron microscopy studies on, 25:58407
  H--W, heat transfer by aerosols of, measurement by extinction parameters at high temperatures, 25:57641
HYDROMAGNETIC WAVES
  interactions with plasma, reflection and transmission of, (T), 25:59093
HYDROXYL (HO)
  abundance in delta Scu, (E), 25:58479
  abundance in sunspots, (E/T), 25:58589
  radio emission from, associated with long-period variable stars, search for, (E), 25:58466
  spectra in nightglow, June-Dec., 1968 and June-Oct., 1969, (E), 25:58883
  spectra of, produced by γ-radiolysis of aqueous solutions of alkali halides, 25:57467
  spectral excitation of 18-cm transition of, in W12, temperature of, (T), 25:58560
  variations in night airglow observed at Calgary, (4-1) and (5-2) seasonal and diurnal, (E), 25:58902
HYDROXYLAPATITE
  precipitation of barium, radium, and strontium with, by isomorphous cocrystallization, 25:57418
HYPERONS
  decay in three-triplet and quartet model, urbaryon transitions for nonleptonic, 25:59423
  decays of, dispersion relations, current algebra, and PCAC for nonleptonic weak, 25:59409
  decays of, Regge theory for resonance contribution to s- and p-wave amplitudes for nonleptonic, 25:59420
  thermodynamics of stars composed of, (T), 25:58521
HYPERONS (Λ)
  decay $\Lambda \to p + \pi^-$ in hydrogen bubble chamber, lifetime and branching ratio for, (E), 25:59260
  decay of, violation of $\Delta I = {}^1/_2$ rule in nonleptonic, 25:59405
  decays of, Regge theory for resonance contribution to s- and p-wave amplitudes for nonleptonic, 25:59420
  interactions Λ + N, charge-symmetry breaking in, (T), 25:59515
  interactions Λ + p, cross sections for elastic, (T), 25:59525
  interactions $\pi + \Lambda \to \pi + \Lambda$ in Veneziano model, positive width and S-wave scattering length in, 25:59473
  lifetime of, (E), 25:59260
  magnetic moment from $\Lambda^0 \to p + \pi^-$ decay, (E), 25:59294
  production in four-body final states in $K^- + n$ interactions at 4.48 GeV/c in deuterium bubble chamber, (E), 25:59280
  production in $\pi^- + p \to \Lambda^0 + K^0$ interactions at 1.07 GeV/c, (E), 25:59294
HYPERONS (Ω^-)
  decay of, current algebra for p-wave amplitudes and $\Delta T = {}^1/_2$ rule predictions for nonleptonic, (T), 25:59398
  decay of, current algebra for rate predictions for semileptonic, (T), 25:59398
  decay $\Omega^- \to \Lambda + K^-$, current algebra for asymmetry parameter for, (T), 25:59398
  decay $\Omega^- \to \Xi + \pi$, current algebra for determination of Ω^- spin from asymmetry parameter for, (T), 25:59398
  decay $\Omega^- \to \Xi^-(\Xi^{*-}) + \gamma$, current algebra for rates for, (T), 25:59398
  production in $K^- + d \to K^- + \pi^- + 2p$ and $K^- + d \to K^- + \pi^+ + \pi^- + n + p$ interactions at 12.6 GeV/c, cross sections for, (E), 25:59283
  spin of, current algebra for asymmetry parameter for $\Omega^- \to \Xi + \pi$ decay for determination of, (T), 25:59398
HYPERONS (Σ)
  decay of, violation of $\Delta I = {}^1/_2$ rule in nonleptonic, 25:59405
  decays of, Regge theory for resonance contribution to s- and p-wave amplitudes for nonleptonic, 25:59420
  interactions Σ + N at low energies, parameters for, (T), 25:59525
HYPERONS (Σ^-)
  decay $\Sigma^- \to n + e + \nu$ in hydrogen bubble chamber, branching ratio for, (E), 25:59261
HYPERONS (Σ^0)
  production in four-body final states in $K^- + n$ interactions at 4.48 GeV/c in deuterium bubble chamber, (E), 25:59280
HYPERONS (Σ^+)
  decay $\Sigma^+ \to n + e + \nu$ in hydrogen bubble chamber, branching ratio for, (E), 25:59261
HYPERONS (Ξ)
  decay of, violation of $\Delta I = {}^1/_2$ rule in nonleptonic, 25:59405
  decays of, Regge theory for resonance contribution to s- and p-wave amplitudes for nonleptonic, 25:59420
HYPERONS (Ξ^-)
  production in $K^- + d \to K^- + \pi^- + 2p$ and $K^- + d \to K^- + \pi^+ + \pi^- + n + p$ interactions at 12.6 GeV/c, cross sections for, (E), 25:59283
HYPOPHOSPHITES
  effects on chemical state of recoil phosphorus-32 from neutron-irradiated tripolyphosphate hexahydrate, 25:57495

I

ICE
  analysis for selenium by neutron activation and radiochemical separation, 25:57394
  effects of dirty, on ultraviolet absorption by interstellar grains, (T), 25:58637
IMINO GROUP
  abundance in delta Scu, (E), 25:58479
  abundance in sunspots, (E/T), 25:58589
IMMUNE REACTIONS
  role of antitumor, of normal tissues in effectiveness of radiotherapy of human carcinomas, 25:58072
IMMUNOGLOBULINS
  radiation effects on swine serum contents of, γ, 25:58104
IN-PILE LOOPS
  design of gas-flow, for fissiochemical studies, 25:57613 (JAERI-Memo-4446)
  operation of BNL chemonuclear, experience in, 25:57610 (BNL-50293)
  power increase in indium--gallium irradiation, methods for, (E), 25:60170
INCONEL
  corrosion by molten sodium fluoride--sodium fluoroborate solution, 25:57298 (ORNL-4676, pp 73-138)
INCONEL X
  drawing of, testing of lubricants for deep, 25:58195
INCONEL 600
  compatibility with irradiated cobalt-60 fuels at 850 to 1000°C, 25:57654(R) (DP-1279)
  corrosion by sodium fluoride--sodium fluoroborate coolant salts at high temperatures, 25:58168 (ORNL-4676, pp 139-233)
  crack initiation and growth in, effects of low-cycle fatigue on, (E), 25:60061(R) (GEAP-10207-24)
  testing of fuel capsules of, at 850 to 1000°C, results of long-term, 25:57654(R) (DP-1279)
  weld defects in, morphology of, 25:58215 (Y-DA-4280)
INCONEL 625
  radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
INDIA
  nuclear power development in, role of research centers in, 25:60018
  nuclear power plant development in, status of, 25:59891
  radiation monitoring of soils of, 1964 to 1970, 25:57567
  seismology research in, review on developments in, 25:57591 (INIS-mf-71, pp 181-98)
INDIAN POINT POWER REACTOR, UNIT 1
  personnel for, exposure to airborne radioactivity of maintenance, 25:59934 (DOCKET-50003-92)
INDIAN POINT POWER REACTOR, UNIT 2
  operation of, license for, 25:59945 (DOCKET-50247-51)
  radioactive effluents from, analysis of normal and accident condition, 25:59946 (DOCKET-50247-52)
INDIAN POINT POWER REACTOR, UNIT 3
  construction of, request for not suspending permit for, 25:59965 (DOCKET-50286-39)
INDIUM
  diffusion of trace amounts of thallium in molten, thermal, 25:58267
  superconducting transition temperature of pure, determination by electrical resistance, magnetic susceptibility, and heat-capacity measurements of, 25:58949
  superconducting transitions in films of, resistivity anomalies from liquid helium contact, (E), 25:58937
INDIUM ALLOYS AND SYSTEMS
  Ag--Al--In, phase studies at 143 to 506°C, isothermal, 25:58287

- Ag-base--Cu--In, bonding to lead telluride, methods for solid-state, 25:58207
- Bi--In, density, diffusivity, and viscosity of, at 110 to 220°C, 25:58238
- Ga--In, structure of molten, quasi-eutectic, 25:58276
- Hg-base--In, diffusion in, continuous resistivity monitoring in capillary-reservoir cell for measuring, 25:58210 (IS-T-490)
- In--Sb, radiation damage in InSb, review of, 25:59138
- In-base--Pb, electron deceleration by dislocations in superconducting, (E), 25:58932
- In-base--Zn, structure of eutectic of, conditions to produce broken lamellar, 25:58286

INDIUM ISOTOPES
- determination by neutron activation and γ spectroscopy, 25:57391

INDIUM ISOTOPES In-111
- use of albumin-incorporated, for scanning cerebrospinal fluid flow kinetics in dogs, 25:58052

INDIUM ISOTOPES In-113
- distribution of metastable, during blood pool and liver scintiscanning in mice, effects of pH on, 25:58043
- evaluation of albumin aerosol-incorporated metastable, for scintigraphy of human lung ventilation, 25:58040 (UCLA-12-834)
- evaluation of metastable, for diagnostic scintigraphic studies, 25:58060

INDIUM ISOTOPES In-115
- neutron capture at 30 keV to 1.4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
- proton reactions (p,γ) at 4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801

INDIUM SULFATES
- effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401

INFRARED RADIATION
- absorption by irradiated germanium, relations with displaced atoms and radioinduced arsenic, gallium, and selenium in target, 25:58343
- map of galactic nucleus, (E), 25:58639

INSECTA
- Cameraria hamadryadella, radiation effects on density of, on white oak shoots, effects of dose on γ, 25:58092
- Ceratitis capitata, radioinduced inhibition of pupation of, ecdysone restoration following γ, 25:58094
- Circulifer tenellus, radiation effects on oogenesis and reproductive system of, following exposure of adults and nymphs, γ, 25:58093
- Drosophila melanogaster, radiation effects on small competing populations of, following exposure of successive generations, x, 25:57961
- Drosophila melanogaster, radiation effects on somatic crossing over in X chromosome of, effects of oxygen on x, 25:57959
- Drosophila melanogaster, radioinduced DNA synthesis in polytene chromosomes of, uv and x, 25:57951 (COO-1747-6)
- Drosophila melanogaster, radioinduced loss of chromosome X in, use of frequency of, as dosimeter, 25:57999 (NP-18944)
- Drosophila melanogaster, radioinduced mutations in, antagonistic effects of vibrations on gamma, 25:57953
- Drosophila melanogaster, radioinduced suppressor mutations in, localization of site in chromosomes of x, 25:57975
- Drosophila melanogaster, survival of larvae of, heterozygous for x-radioinduced mutations, effects of population density on, 25:57966
- Gryllus domesticus, radiation effects on neurosecretory cells in, effects of nymph head exposure dose on x, 25:58095
- Muscidifurax raptor, radiation effects on behavior of genes and chromosomes of, x, 25:57962
- weevils, radiosterilization of first and second generation, minimum dose for x, 25:58161

INSTRUMENTS
- design and operation of radiometric, review on, 25:57868
- design for simultaneous measurement of electric resistivity and radioactivity in boreholes, 25:57571(P)

INTERFEROMETERS
- use in assay of materials used in nuclear measurements, 25:59640 (CONF-711002-, pp 272-82)

INTERMETALLIC COMPOUNDS
- phase transitions in β-tungsten structure of A_3B, induced by band Jahn--Teller effect, (T), 25:58272

INTERSTELLAR MATERIAL
- composition of, (E), 25:58512
- cooling processes for, (E/T), 25:58623
- gas motions in disk of the Galaxy, (T), 25:58649
- grain alignment by galactic magnetic field, (T), 25:58647
- hydrogen interaction with solar-wind plasma and solar euv radiation, effect on interstellar magnetic-field location, (T), 25:58631
- ionization fronts in, instability of weak, (T), 25:58627
- solar-wind interaction with hydrogen in, (T), 25:58615
- spin states of atoms and molecules of, (T), 25:58665
- surface roughness of grains of, model for, (T), 25:58637
- temperature of, (E), 25:58651
- ultraviolet absorption by, (E/T), 25:58489

INTESTINES
- conference on neoplasms of human, 25:58029
- radiation effects on human, during therapy of gynecological neoplasms, effects of dose on cobalt-60 contact γ, 25:58010
- radioinduced injuries of mucosa of mouse, regeneration following gamma and x, 25:58111

INVARIANCE PRINCIPLES
- charge conjugation violation from rho^0 interference in $\omega \to \pi^+ + \pi^- + \pi^0$ decay, 25:59552
- charge conservation model for multiple hadron production in p + p interactions at high enegies, (T), 25:59512
- charge conservation model for $p + p \to 2p + m\pi^+ + m\pi^-$ interactions at high energies, (T), 25:59512
- CP conservation in $K_2^0 \to \pi^+ + \pi^- + \pi^0$ decay, spark chamber study of Dalitz plot for test of, (E), 25:59258
- CP violating amplitudes for baryon $\to$ baryon + π transitions, current algebra sum rules in Glashow model for, 25:59408
- CP violation in (K^0--anti K^0) system, second-order weak effect for parameters of, (T), 25:59540
- CP violation in $K_1^0 \to \pi^+ + \pi^- + \pi^0$ decay, spark chamber, 25:59259
- CP violation in weak interactions, quantum electrodynamics effects on, 25:59539
- CPT invariance test from ratio of total cross sections of anti p + d interactions at 6.65 GeV/c to total cross sections of anti d + p interactions at 13.3 GeV/c, (E), 25:59275
- isospin invariance in backward π + N interactions from threshold to 13 GeV/c, 25:59287
- isospin invariance in $n + d \to \pi^0 + d$ interactions from threshold to 720 MeV, (E/T), 25:59268
- parity violation in π + N interactions from longitudinal polarization of recoil nucleon, 25:59487
- scale invariance breaking in dyon model for hadrons, 25:59430
- time reversal invariance in unitarity limit of $K_2^0 \to \mu^+ + \mu^-$ decay, 25:59543

IODINE
- deposition in reactor containment buildings, heat transfer model for analysis of, 25:60111(R) (BMI-1917)
- determination as iodide using Chloramine-T, 25:57303
- determination as iodide using silver halide electrode, potentiometric, 25:57314
- determination in drugs by radioisotope x-ray fluorescence, use of Ross filters in, 25:57322
- determination using graphite--platinum electrode system, biamperometric, 25:57302
- positron annihilation at 80 to 180 keV, cross sections and spectra from single-quantum, (E), 25:58723
- removal by sodium thiosulfate in ice cubes of ice condenser reactor containment systems, (E), 25:60124
- separation of iodide, iodate, and periodate forms of, by paper, ion-exchange, and thin-layer chromatography and electrophoresis, 25:57559

IODINE IONS
- reactions of beams of, with solid butane at 3000 to 50 eV, 25:57459
- reactions with molecules at 12 MeV, electron-capture and -loss cross sections for, (E), 25:58768
- reactions with nitric oxide and oxygen molecules, effects of thermal motion of molecules on charge exchange in, (T), 25:58752

IODINE ISOTOPES I-125
- incorporation in difluoresceinylmercury compounds for use in diagnosis of ischemically injured tissues, 25:58047(P)

IODINE ISOTOPES I-127
- neutron capture at 400 keV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
- photon reactions (γ,n) with, energy dependence of yield for, (E), 25:59815

IODINE ISOTOPES I-131
- content in off-site milk following Schooner Event, (E), 25:57574 (PNE-524)
- content of cows' milk following ingestion of hay contaminated with Plowshare debris, 25:57948 (SWRHL-85-r)
- determination in biological materials by isotopic exchange and scintillation counting, 25:57367
- determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
- diagnostic value for serial scintigraphy of human thyroid gland, 25:58056
- effectiveness for post-surgical interstitial therapy of human thyroid adenomas, 25:58056
- effectiveness of rose bengal-incorporated, for scanning liver for diagnosis of adenomas, 25:58046
- effectiveness of triiodothyronine-incorporated, for scintiscanning of human liver in comparison to colloidal gold-198 and iodine-131-labeled thyroxine, 25:58050
- effects on operant behavior and thyroid gland of rats following intraperitoneal injection during gestation, 25:58100
- exchange between alkali metal iodides and substituted aryl iodides, effects of electrolytic dissociation on,

XUM

  25:57425
  excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
  incorporation in difluoresceinylmercury compounds for use in diagnosis of ischemically injured tissues, 25:58047(P)
  preparation of carrier-free, 25:57559
  radiation effects on clearance rate in skin of man and rabbits, x, 25:58125
  release in TRU processing of HFIR targets, 25:57524 (ORNL-TM-3343)
  use for interstitial therapy of thyroid carcinomas and hyperthyroidism in man, possibility of contamination of environment through, 25:58079
  use in thyroid functional activity studies of gerbils, 25:57915
  use of bromsulphalein-incorporated, for scanning human liver function, 25:58042
IODINE ISOTOPES I-132
  excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
IODINE ISOTOPES I-135
  monitoring in liquid sodium, development of method for, 25:60058(R) (ANL-7817)
ION-ACOUSTIC WAVES
  interactions with ionization waves in discharges, (E/T), 25:59098
ION BEAMS
  energy-level abundances in, method for measurement of excited, 25:58763
  production by laser irradiation of thin foils, 0.1-GeV, 25:59341
  use in preparation of thin graphite foils for electron microscopy, 25:58350 (RD/B/N-2020)
ION EXCHANGE MATERIALS
  development of EDE-10P type, based on fluoropolymers, 25:57555
  efficiency of macroreticular, in TBP solvent cleanup in Purex Process, 25:57509 (ARH-SA-58)
ION SOURCES
  performance of high-current hollow-cathode, for Hall accelerators, 25:59080
  space charge neutralization at, electron beam, (T), 25:58688
IONIZATION
  theory of auto-, many-body, 25:58802
IONOSPHERE
  book: Studies of Atmosphere and Ionosphere at Times of Unusual Solar Activity, (E), 25:58893
  D region, investigation during sunrise of, model of, (E/T), 25:58899
  E region, electron drift in equatorial electrojet, effect of magnetic activity on, (E/T), 25:58905
  E region, winds induced by auroral electrojet heating in, (T), 25:58864
  electric coupling with magnetosphere, relation to polar magnetic disturbances and auroral break-up, (E/T), 25:58909
  electrojet-current intensity in auroral forms in, relation to visual aurorae occurrence, (E), 25:58857
  electron content enhancements in, relation to simultaneous sudden frequency deviations during solar-flare events, (E), 25:58901
  electron-density irregularities in, relation to electrostatic plasma instabilities in equatorial electrojets, (E/T), 25:58900
  F region, electron drift in equatorial electrojet, effect of magnetic activity on, (E/T), 25:58905
  F region, ion density in nighttime, morphology of 6300-A airglow associated with molecular, (E/T), 25:58884
  F2 layer, height variations in peak, semiannual, (E/T), 25:58879
  F2 layer, interaction with internal acoustic-gravity waves, (E/T), 25:58872
  F2 layer, irregularities in, Hall drift and daytime west-east electric-field explanation of upward-moving, (E/T), 25:58877
  ion diffusion in weakly ionized homogeneous, test ambipolar, (E/T), 25:58862
  irregularities in subequatorial, upward-moving, (E/T), 25:58877
  magnetic-storm effects in, (T), 25:58865
  particle event over polar cap in March 1970, observation of solar, (E), 25:58892
  plasma instabilities in, review of, 25:58895
  proton density in midlatitude, associated with magnetic storms, dynamics of thermal, (E), 25:58867
  pulsation time lag of cosmic-noise absorption in auroral, behind simultaneous x-ray pulsations, luminosity, and micropulsations, (E/T), 25:58863
  radio-wave absorption in, phase-integral calculation of reflected, (T), 25:58875
  radio-wave absorption in, regular and irregular winter anomaly in midlatitude, (E/T), 25:58880
  radio-wave propagation in, magneto-ionic mode coupling of hf, (T), 25:58871
  radio-wave propagation in, magneto-ionic mode coupling of hf, (T), 25:58870
  radio-wave propagation under daytime, geomagnetic-field effect on 1 to 4 kHz elf and vlf, (T), 25:58873
  radio-wave reflection and transmission in, effect of geomagnetic field on, (T), 25:58869
  radio-wave reflection and transmission in, variation of penetrating and non-penetrating modes in, thin-film optical method for height and frequency, (T), 25:58878
  sporadic E, thickness from phase advance on echoes from F region, (E), 25:58881
IONS
  channeling and blocking in crystals, review of, 25:59151
  channeling in crystals, review, 25:59165
  channeling in crystals, review of principles and applications of, 25:59167
  diffusion in weakly ionized plasma, test ambipolar, (E/T), 25:58862
  effects on incidence of single- and double-strand breaks in phi X-174 replicative form of DNA, effects of LET on, 25:57952 (LBL-28)
  effects on semiconductors, review of, 25:59173
  effects on silicon and germanium, crystallinity and damaged regions in, (E/T), 25:59140
  effects on void formation at high temperatures, use to simulate fast neutron, 25:58320
  electron reactions with closed-shell, construction of model potentials for, 25:58772
  energy loss distribution in single crystals of heavy positive, effects of channeling on, (T), 25:59150
  energy losses at low energies in solids, calculation using screened Coulomb potential, 25:59124
  energy of free, containing one or two open shells, computer program for, 25:58709
  energy of many-electron, formula for relativistic, 25:58819
  energy-level transitions of one- and two-electron, magnetic-dipole operator for calculation of, 25:58803
  implantation in binary III--V semiconductors, review, 25:59168
  implantation in solids, channeling-effect technique for study of, 25:59167
  implantation in solids, review of range distributions in, 25:59166
  interactions in system of, many body theory for composite, 25:59232
  ionization potentials of, containing one to ten electrons, review of, 25:58715
  physics of gaseous, Yugoslav summer school in July 1970 on, 25:58739
  properties of two-electron, solution of delta-function model for, 25:58805
  reactions with atoms in keV range, effects of velocity and outer-shell configuration on production of K vacancies in, (E), 25:58756
  reactions with atoms, energy spectra of electrons from, (T), 25:58733
  reactions with atoms, merging-beams method for study of, 25:58744
  reactions with atoms, review of charge exchange in, (E), 25:58743
  reactions with gaseous and metal-vapor targets, review of excited-atom formation by charge exchange in, 25:58691
  reactions with molecules, additive rule for charge-exchange cross sections for, 25:58768
  reactions with molecules, Doppler broadening due to thermal motion of molecules in beam experiments on, (T), 25:58752
  reactions with P-state atoms, depolarization in, (T), 25:58746
  reactions with solid surfaces, review of Auger and resonance processes in, (E/T), 25:58692
  reactions with solids, review of angular and energy distributions and yields from sputtering in, 25:58693
IRIDIUM ALLOYS AND SYSTEMS
  Cm--Ir, preparation of intermetallic $CmIr_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)
IRIDIUM ISOTOPES
  determination by neutron activation and γ spectroscopy, 25:57391
IRIDIUM ISOTOPES Ir-191
  energy levels from Coulomb excitation and platinum-191 electron-capture decay, spin--parity assignments for, (E), 25:59805
  energy-level transitions from Coulomb excitation and platinum-191 electron-capture decay, branching and mixing ratios, conversion coefficients, multipolarities, and probabilities for, (E), 25:59805
  nuclear g-factor for isomeric, NMR measurement of, (E), 25:59807
  oxygen-16 inelastic scattering at 25 to 65 MeV with Coulomb excitation, gamma spectra from, (T), 25:59805
IRIDIUM ISOTOPES Ir-192
  nuclear g-factor for, NMR measurement of, (E), 25:59807
IRON
  abundance in Am stars, (E/T), 25:58438
  bonding to lead telluride, methods for solid-state, 25:58207
  content of particulate, in operational high-temperature sodium loops, 25:58170 (RD/B/N-1998)
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination by potentiometric titration using potassium chlorate, 25:57309
  determination in fuel solutions of JRR-1, 25:57320
  determination in sodium, spark mass spectrometric, 25:58163(R) (AI-AEC-12859)

- determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
- determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
- effects on chemical states of radioisotopes in seawater, 25:57410
- effects on mechanical properties of molybdenum single crystals, 25:58257
- etching by selective cavitation, method for, 25:58190
- mechanical properties of, effects of fatigue on, 25:58223
- microstructure of, effects of fatigue on, 25:58223
- neutrino reactions with, angular and momentum distributions of μ^+ and e^+ in direct production of lepton pairs in, (T), 25:59415
- neutrino reactions with, μ^- angular and momentum distributions for μ^- and W^+ production in, (T), 25:59414
- production of, lanthanum-140 tracer method for measuring agglomerate mixing efficiency of sintering facility for, 25:57659
- production of, use of process heat reactors for, 25:60200
- proton reactions at 400 GeV, Monte Carlo calculations of nucleon- and meson (π)-induced star and flux distributions from, (T), 25:59507 (ORNL-4673)
- radiation effects on catalytic activity of, in ammonia synthesis, 25:57444
- radiation effects on solubility in sodium at high temperatures, in-pile, 25:58163(R) (AI-AEC-12859)
- radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
- reactions of trivalent, with silicic acid in aqueous solutions, spectrophotometric study of, 25:57406
- separation from plutonium by solvent-extraction using TBP, 25:57357
- solvent properties of austenitic, for niobium nitride, effects of chromium, manganese, nickel, and silicon on, 25:58268
- spectra of, collision broadening effects of neutral hydrogen on, (T), 25:58509
- spectral lines of, wavelengths of 68 solar, (E), 25:58595

IRON ALLOYS AND SYSTEMS
- analysis for niobium using magneson, photometric, 25:57315
- coating with molybdenum and tungsten for corrosion protection, chemical vapor deposition method for, 25:58168 (ORNL-4676, pp 139-233)
- Al--Co--Cu--Fe-base--Ni, properties and structure of, effects of neodymium additions on, 25:58250
- C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
- C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
- Co--Fe-base--Mo, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
- Co--Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
- Co--Fe-base--W, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
- Co-base--Fe--Mo--Ti, magnetic properties of wires of, 25:59197
- Fe--Ni--V, electric, magnetic, and mechanical properties of $Ni_3(Fe,V)$ solid solutions, 25:59188
- Fe--V, analysis for vanadium following ion exchange chromatographic separation, potentiometric, 25:57339
- Fe--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
- Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232

IRON ISOTOPES Fe-52
- energy levels of, calculation for α-hole, 25:59757
- production in cyclotrons, evaluation of methods for recovery from targets in, 25:57486
- production in stars from simple helium burning, (E), 25:58508

IRON ISOTOPES Fe-56
- energy levels from (γ,n) reactions at threshold, review of doorway, (E), 25:59784 (UCRL-73336)
- neutrino scattering by, weak nucleon processes for impulse approximation for quasielastic forward, (T), 25:59397
- photon reactions (γ,n) at threshold, review of cross sections and photon doorways for, (E), 25:59784 (UCRL-73336)
- proton reactions at 1 TeV, effect of intermediate resonance production on cross sections for elastic and inelastic, 25:59519

IRON ISOTOPES Fe-57
- energy levels from (γ,n) reactions at threshold, review of doorway, (E), 25:59784 (UCRL-73336)
- photon reactions (γ,n) at threshold, review of cross sections and photon doorways for, (E), 25:59784 (UCRL-73336)

IRON ISOTOPES Fe-59
- determination in water by polarography or scintillation γ spectrometry, 25:57346 (IFA-FR-82)
- radiation effects on incorporation in lymphoid cells of mice, effects of antiserum on x, 25:58120
- radiation effects on relation between total uptake and uptake by heme and nonheme fractions of bone marrow and spleen of mice, x, 25:58119

IRON ORES
- analysis for vanadium following ion exchange chromatographic separation, potentiometric, 25:57339

IRON OXIDES Fe_2O_3
- effects on thermostability of irradiated polyethylene, 25:57446

IRON SULFATES
- $CuSO_4$--$FeSO_4$--$Fe_2(SO_4)_3$--$ZnSO_4$, complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)
- $Fe_2(SO_4)_3$--UO_2SO_4, complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)

IRRADIATION FACILITIES
- design of improved, incorporating oxygen removal method, 25:57625(P)
- design of low-temperature, for studies of heavy-ion bombardment effects on metal foils, 25:57620 (RISO-204)
- design of spiral-flow gamma, for sterilizing liquids and sewage, 25:57636(P)
- operation of gamma, for irradiating wood, computer control system for, 25:57628
- radiation conditions in cobalt-60, measurements of, 25:57631

ISOTOPE EFFECTS
- calculations of relative deuterium--tritium, in absence of large tunneling factors, 25:57430
- use in ordering of carbon--hydrogen bond strengths, 25:57426

ISOTOPE SEPARATION METHODS
- development in Federal Republic of Germany, 25:57666
- separation cascades for, theory for optimum multicomponent nonsymmetric, 25:57670

ISOTOPES
- book: Isotopes: Bibliographies and Reference Tables. Volume III, 25:59697
- determination by recoilless resonance absorption or scattering of γ rays, 25:57354(P)

J

JAMES A. FITZPATRICK POWER REACTOR
- construction of, request for not suspending permit for, 25:59981 (DOCKET-50333-32)
- cooling system for, test and inspection of main steam isolation valve discs and recirculation bypass valves of, 25:59980 (DOCKET-50333-31)
- pressure vessel nozzle for, quality assurance program evaluation of damage to, 25:59980 (DOCKET-50333-31)

JAPAN
- geologic deposits at base of Mt. Obora, measurement of radioactivity in, 25:57566
- nuclear power plant construction in, civil engineering aspects of, 25:59895
- nuclear power plant development in, projections of, 25:59906
- nuclear power plants in, economic and safety aspects of, 25:59905
- nuclear power plants in, effects of uranium enrichment technology on development of, 25:59904
- nuclear power plants in, petroleum industry competition for development of, 25:59903
- power reactors in, fuel cycle economics for, 25:59928
- radiation effects on blood cell counts in medical personnel in, during 1969, survey of, 25:58134
- radiation processing of food in, status of research on, 25:58159
- radioisotope contents in atmosphere of, during 1963 to 1971, measurements of cesium-137 and strontium-90, 25:57579

JAPANESE ADVANCED THERMAL REACTOR
- design parameters for, 25:59902
- safety aspects of, 25:59902

JAPANESE EXPERIMENTAL FAST REACTOR
- buildings for, construction schedule for, 25:60190
- buildings for, design parameter and stress loading requirements for, 25:60189
- containment structure for, construction schedule for, 25:60190
- containment structure for, design parameters and stress loading requirements for, 25:60188
- cooling system for, design parameters of double loop liquid sodium, 25:60175
- core for, design parameters of, 25:60176
- design parameters of, 25:60177
- fuel elements for, design parameters of, 25:60176
- loading machine for, 25:60174
- remote handling equipment for, 25:60174
- site for, excavation and preparation of, 25:60190

JOSEPH M. FARLEY POWER REACTOR, UNIT 1
- site for, use of runway for aircraft operation on, 25:59988 (DOCKET-50348-27)

XUM

JOSEPH M. FARLEY POWER REACTOR, UNIT 2
  site for, use of runway for aircraft operation on, 25:59988 (DOCKET-50348-27)
JUPITER (PLANET)
  asteroid capture by, Deser--Laurent theory of gravitation for mechanism for, (T), 25:59585
  interior of, phase diagrams of hydrogen and helium in, (E), 25:58675

K

KALPAKKAM POWER REACTORS
  construction of, unique engineering features of, 25:59892
KAOLINS
  effects on thermostability of irradiated polyethylene, 25:57446
KASHIMA POWER REACTOR, UNIT 1
  emergency core cooling system for, performance of, 25:59897
KEWAUNEE POWER REACTOR
  construction of, request for not suspending permit for, 25:59970 (DOCKET-50305-26)
KIDNEYS
  californium-252 distribution in rat, following intraperitoneal injection, 25:57922
  radiation effects on adenine nucleotides in rat, x, 25:57936
KRYPTON
  determination of radioactive, released from fuel elements by gas chromatography and γ spectrometry, continuous, 25:57344 (CEA-R-4218)
  oxygen-ion (O$^+$) reactions at 10 to 170 eV with, effects of excited states on charge exchange in, (E), 25:58763
  radioinduced reactions with fluorine, electron or proton, 25:57455
  solubility in sodium, 25:58387(R) (ANL-7823)
KRYPTON FLUORIDES
  radioinduced production from fluorine and krypton, electron or proton, 25:57455
KRYPTON IONS
  effects on benzene vapor at 60 keV, yields from, 25:57469
  effects on germanium monocrystals at 10 to 30 keV, electron emission induced by, 25:59175
  reactions with germanium crystals at 10 to 30 keV, angular dependence of, (E/T), 25:59146
KRYPTON ISOTOPES Kr-85
  separation from other krypton isotopes by ion implantation in aluminum, 25:57650 (CONF-711002-, pp 10-20)

L

LA CROSSE BOILING-WATER REACTOR
  cooling system for, corrosion of A335 P11 steel in, 25:59932 (DOCKET-1155-137)
  instrumentation of, power testing of automatic gain control system for, 25:59931 (DOCKET-1155-136)
  personnel for, use and protection factors for respiratory protective equipment for, 25:59933 (DOCKET-1155-138)
LA SALLE COUNTY POWER REACTOR, UNIT 1
  design parameters of, revised and additional data on, 25:59995 (DOCKET-50373-10)
  operations aspects of, revised and additional data on, 25:59995 (DOCKET-50373-10)
LA SALLE COUNTY POWER REACTOR, UNIT 2
  design parameters of, revised and additional data on, 25:59995 (DOCKET-50373-10)
  operations aspects of, revised and additional data on, 25:59995 (DOCKET-50373-10)
LABORATORIES
  description of CNEN plutonium, 25:58351 (RT/ING-(70)30)
LABORATORY EQUIPMENT
  design for measuring thermodynamic properties of liquid metals, engineering drawings for, 25:57635
  shipping of Mark II Test Assembly, vibration testing of equipment for, 25:57612 (HEDL-TME-71-114)
LACQUERS
  book: Radiation Stability of Lacquer Coatings, 25:58420
LACTATE DEHYDROGENASE
  radiation effects on activity in serum and vaginal tissues of cervical cancer patients, effects of dose on γ, 25:57937
LANTHANUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  complexes with HEDTA, dissociation constants for, 25:57537
  determination in pyrolytic graphite by neutron activation and counting of delayed β and γ coincidences, 25:57389
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
  separation from fission products by electromigration following complexing with nitrilotriacetic acid, 25:57558
  separation from transuranium elements by electromigration, 25:57520 (JINR-E6-5952)
LANTHANUM BORIDES
  electric properties of LaB$_6$, effects of hafnium, rhenium, tantalum, and tungsten additions on, 25:59182
  electric properties of LaB$_6$, temperature dependence of effects of hafnium, rhenium, tantalum, and tungsten additions on, 25:59183
LANTHANUM IONS
  energy levels of La III, (E), 25:58707
LANTHANUM ISOTOPES La-135
  energy levels of, determination of electromagnetic transition probabilities from mean lifetimes of, (E), 25:59776 (FRNC-TH-56)
LANTHANUM ISOTOPES La-139
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
  photon reactions at 250 MeV, analysis using residual nucleus method, (E), 25:59815
LANTHANUM ISOTOPES La-140
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  production from barium-140, colloid-filtration method for, 25:57352
  use as tracer for measuring mixing efficiency of sintering facility for producing iron agglomerate, 25:57659
LANTHANUM OXIDES
  effects on structure of γ-irradiated sodium oxide--tellurium oxide glasses, EPR spectral studies on, 25:57447
  CaO--La$_2$O$_3$, electric properties of solid electrolytes, 25:59193
LANTHANUM PHOSPHATES
  luminescence of cerium and terbium ions in, effects of thorium ions on, 25:59185
LANTHANUM SELENIDES
  dissociation energy of, 25:57435(R) (COO-1029-39)
LARVAE
  survival of Drosophila, heterozygous for x-radioinduced mutations, effects of population density on, 25:57966
LASER RADIATION
  reactions with thin foils, 0.1-GeV ions from, 25:59341
LASERS
  performance for heating deuterium--tritium plasmas, (T), 25:58965
  pulsing of, spark gaps for, 25:59076(T) (UCRL-Trans-10556)
  use for controlled thermonuclear research, 25:59054 (MATT-782)
  use for electron density and temperature measurements in argon plasma jets, (E/T), 25:58987
  use for plasma heating, prospects for, 25:59057
  use in controlled thermonuclear research, review of, 25:59058
LAWRENCIUM
  oxidation potential for trivalent--tetravalent, 25:57437
LEAD
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  alpha inelastic scattering at 15 MeV with Coulomb excitation of natural, gamma spectra from, (E), 25:59804
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in pure rare earth oxides, polarographic, 25:57311
  deuteron reactions at 0.85 to 1.7 GeV/c, neutron yield from, (E), 25:59820
  diffusion of trace amounts of thallium in molten, thermal, 25:58267
  fabrication of targets of, for heavy-ion energy loss measurements, 25:59639 (CONF-711002-, pp 134-43)
  photon reactions at 560 MeV, emulsion study of dependence on atomic weight for yields of π^+ and π^- from, (E), 25:59248
  photon reactions with, secondary electron emission from, (E/T), 25:59107
  preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
  proton reactions of 0.85 to 1.7 GeV/c, neutron yield from, (E), 25:59820
  separation from plutonium by solvent extraction using TBP, 25:57357
  superconducting transition temperature of deformed lattice of, anomalous behavior of, 25:58933
LEAD ALLOYS AND SYSTEMS
  In-base--Pb, electron deceleration by dislocations in superconducting, (E), 25:58932
LEAD CHLORIDES
  KCl--PbCl$_2$, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)
  KCl--PbCl$_2$, spectra at 590°C, Raman, 25:58387(R) (ANL-7823)
LEAD IONS
  effects on benzene vapor at 60 keV, yields from, 25:57469
LEAD ISOTOPES
  neutron pairing in, equilibrium, (T), 25:59833 (JINR-E4-5907)
LEAD ISOTOPES Pb-204
  energy-level transitions from Coulomb excitation,

  - probabilities for, (E), 25:59804
  - neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797
- LEAD ISOTOPES Pb-206
  - energy level at 2645.3 keV from Coulomb excitation, lifetime for, (E), 25:59804
  - energy levels at 3957.6 and 4027.2 keV from mercury-204 $(\alpha,2n)$ reactions, E2 transition probabilities for, (E), 25:59818
  - energy-level transitions from Coulomb excitation, probabilities for, (E), 25:59804
- LEAD ISOTOPES Pb-207
  - alpha inelastic scattering at 18 MeV with Coulomb excitation, gamma spectra from, (E), 25:59804
  - energy levels from (γ,n) reactions at threshold, review of doorway, (E), 25:59784 (UCRL-73336)
  - energy levels from Coulomb excitation, lifetimes for, (E), 25:59804
  - energy-level transitions from Coulomb excitation, probabilities for, (E), 25:59804
  - oxygen-16 inelastic scattering at 70 MeV with Coulomb excitation, gamma spectra from, (E), 25:59804
  - photon reactions (γ,n) at threshold, review of cross sections and photon doorways for, (E), 25:59784 (UCRL-73336)
- LEAD ISOTOPES Pb-208
  - deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  - energy levels from (γ,n) reactions at threshold, review of doorway, (E), 25:59784 (UCRL-73336)
  - energy levels of, spins and parities of, (E), 25:59778 (JAERI-Memo-4520)
  - energy-level transitions from Coulomb excitation, probabilities for, (E), 25:59804
  - isovector potential strength in, estimation from partial muon capture, (T), 25:59808
  - photon reactions (γ,n) at several hundred keV, cross section for, (E), 25:59778 (JAERI-Memo-4520)
  - photon reactions (γ,n) at threshold, review of cross sections and photon doorways for, (E), 25:59784 (UCRL-73336)
- LEAD ISOTOPES Pb-214
  - determination in presence of bismuth-214 and radium-226 by gamma spectrometry, 25:57365
- LEAD TELLURIDES
  - bonding to alloys and metals, methods for solid-state, 25:58207
- LEAK DETECTORS
  - design and operation of photographic, for monitoring sealed radium sources, 25:57707
  - design and performance of, for sodium-heated steam generators, 25:57632
  - design of electric, 25:60286 (SC-DR-710418)
- LEPTONS
  - decay of heavy, angular correlations of charged particles from, (T), 25:59390
  - interactions of polarized, photon radiation during weak, (T), 25:59402
  - interactions of, two- and four-component neutrino theories from leptonic and semileptonic, (T), 25:59407
  - interactions with hadrons, inclusive parton model for semi-inclusive, 25:59401
  - interactions with nucleons, relativistic model for inelastic form factors, widths, and locations of N* production in, (T), 25:59337
  - production of heavy, in $e^+ + e^-$ colliding-beam interactions, cross section for, (T), 25:59390
  - production of heavy, in hadron interactions with hadrons in parton model, 25:59401
  - production of l^+--l^- pairs in neutrino reactions with iron, angular and momentum distributions of μ^+ and e^+ in direct, (T), 25:59415
  - production of l^+--l^- pairs in neutrino reactions with nuclei, angular and momentum distributions of μ^+ and e^+ in direct, (T), 25:59415
- LEUKOCYTES
  - radiation effects on count of, in medical personnel in Japan during 1969, survey of, 25:58134
  - radiation effects on cultured human umbilical cord, comparison of effects of chemical carcinogens, viruses, and x, 25:57921
- LIGHT
  - bending near sun, effects of torsion on, (T), 25:59605
  - effects on electrophysiological activity of nerve fibers, molecular basis of, 25:57942
- LIGHT COMMUNICATION SYSTEMS
  - design for power modulator for linac, 25:59660(P)
- LIGHT SOURCES
  - oxide coatings on lamp cathode, radioisotope tracer studies of losses from barium--calcium, 25:57660
- LIGHTNING
  - radiation from electrical discharges during complete flash of, pulse characteristics of, (E), 25:58876
- LIMERICK POWER REACTOR, UNIT 1
  - cooling system for, additional data on secondary, 25:59990 (DOCKET-50352-22)
  - design parameters for, revised and additional data on, 25:59990 (DOCKET-50352-22)
  - emergency core cooling system for, performance evaluation for, 25:59990 (DOCKET-50352-22)
  - operation of, effects on ecosystems of, 25:59989 (DOCKET-50352-21)
  - radioactive effluents from, calculations for annual, 25:59990 (DOCKET-50352-22)
- LIMERICK POWER REACTOR, UNIT 2
  - cooling system for, additional data on secondary, 25:59990 (DOCKET-50352-22)
  - design parameters for, revised and additional data on, 25:59990 (DOCKET-50352-22)
  - emergency core cooling system for, performance evaluation for, 25:59990 (DOCKET-50352-22)
  - operation of, effects on ecosystems of, 25:59989 (DOCKET-50352-21)
  - radioactive effluents from, calculations for annual, 25:59990 (DOCKET-50352-22)
- LINEAR ACCELERATORS
  - beam injector for electron, 25:59659(P)
  - description of ML-15M II 15-MeV electron, for therapy, 25:59661
  - experimental facilities at Kharkov 300-MeV electron, description of, 25:59646
  - performance of prototype electron, in nondestructive analysis of nuclear materials, 25:57704 (GULF-RT-A-10826)
  - power modulator for, infrared light data link for controlling, 25:59660(P)
- LINEAR ENERGY TRANSFER
  - effects on incidence of radioinduced single- and double-strand breaks in phi X-174 replicative form of DNA, 25:57952 (LBL-28)
  - relation to radiation quality factor, 25:58005
- LIQUID METAL FAST BREEDER REACTOR
  - accidents in, review of U.S. safety programs on, 25:60132
  - breeding distribution in, activation method for measurement of, 25:60050
  - coolant boiling in sodium cooled, development of detection methods for, 25:60089
  - coolant boiling in, development of high temperature acoustic sensors for detection of, 25:60090
  - coolant for, benchmark measurements on shielding effects of sodium, 25:60055(R) (ORNL-TM-3573)
  - coolant for, monitoring and sampling system for liquid sodium, 25:60005(R) (ANL-7854)
  - core meltdown accidents in, methods for analysis of mechanical work energy produced during, (T), 25:60121
  - development during August 1971, 25:60005(R) (ANL-7854)
  - fission product yields in, measurement of, (E), 25:60035(R) (ANL-7824)
  - fuel cycle development for, 25:57507(R) (ANL-7799)
  - fuel element cladding for, testing of stainless steel, 25:58163(R) (AI-AEC-12859)
  - fuel element failures in, development of methods for detection of, 25:60058(R) (ANL-7817)
  - fuel elements for, performance of, 25:60005(R) (ANL-7854)
  - fuel rod bundles in, ORRIBLE code for flow and temperature distribution in, 25:60062 (ORNL-TM-3516)
  - fuels for, development and radiation testing of, 25:58344(R) (LA-4693)
  - fuels for, development of methods for chemical analysis for, 25:58344(R) (LA-4693)
  - fuels for, reprocessing methods for, 25:60005(R) (ANL-7854)
  - instrumentation for, development of, 25:60005(R) (ANL-7854)
  - physics parameters of, calculation of, (T), 25:60042
  - power distribution in, activation method for measurement of, 25:60050
  - safety aspects for, heat transfer and fluid flow analysis for, 25:60005(R) (ANL-7854)
  - safety aspects of, review of U.S. programs on, 25:60132
  - shutdown margin measurements for, two frequency reactor noise method for, (T), 25:60043
  - steam generators for, design of hydrogen meter for leak detection in, 25:60058(R) (ANL-7817)
  - transfer function measurements for, analysis of space dependent effects in, (T), 25:60041
- LIQUIDS
  - radiosterilization of, design of spiral-flow gamma facility for, 25:57636(P)
  - vapor bubble nucleation in superheated, research on, 25:58387(R) (ANL-7823)
- LITHIUM
  - effects on complexonometric determination of rare earths, 25:57317
  - preparation of standard thin-film layers of, by vacuum evaporation, 25:58182 (CONF-711002-, pp 122-33)
  - proton stopping power at 20 to 1000 keV of, electronic, (T), 25:59124
  - purification of heat-pipe, methods for, 25:57615(R) (LA-4746)
  - reactions with hydrogen, plans for studies on, 25:58387(R) (ANL-7823)
- LITHIUM ALLOYS AND SYSTEMS
  - Bi--Li, solvent properties for neodymium and thorium, 25:57522 (ORNL-4676, pp 234-71)
  - Li--LiBr--RbBr--Se, thermodynamic properties of, emf measurements of, 25:58387(R) (ANL-7823)
  - Li--S, phase studies of, 25:58387(R) (ANL-7823)
  - Li--Te, phase studies of, 25:58387(R) (ANL-7823)
- LITHIUM BERYLLIUM FLUORIDES
  - reactions of molybdenum or niobium fluorides in molten,

  kinetics of, 25:57298 (ORNL-4676, pp 73-138)
  solvent properties of molten, for helium and hydrogen, 25:57298 (ORNL-4676, pp 73-138)
LITHIUM BROMIDES
  Li--LiBr--RbBr--Se, thermodynamic properties of, emf measurements of, 25:58387(R) (ANL-7823)
LITHIUM CHLORIDES
  copper (II) in ESR spectra in, 25:59201
  KCl--LiCl, plutonium oxidation in molten, chronopotentiometric study of, 25:57420
LITHIUM FLUORIDES
  elastic precursor decay in single crystals of, effects of point defects on, 25:59126
  helium-atom scattering by (001) surface of, (E), 25:58694
  radiation effects on elastic precursor decay in single crystals of, gamma, 25:59126
  BeF$_2$--LiF, solvent properties of molten, for gaseous boron trifluoride, 25:57298 (ORNL-4676, pp 73-138)
  BeF$_2$--LiF, thermodynamic properties of molten, 25:57298 (ORNL-4676, pp 73-138)
  BeF$_2$--LiF--ThF$_4$, separation of cesium and rubidium from, by reductive extraction, 25:57298 (ORNL-4676, pp 73-138)
  BeF$_2$--LiF--ThF$_4$--UF$_4$, heat transfer and thermophysical properties of, (E/T), 25:60015 (ORNL-4676, pp 21-72)
LITHIUM IONS
  electron reactions with, model potentials for, 25:58772
  implantation in silicon for use as charged-particle detectors, 25:57749
  reactions with hydrogen molecules at 10 to 110 keV, polarization of Hβ line produced by dissociation and excitation in, (E), 25:58780
  wave functions for excited two-electron, Hulthen transform functions in approximation of, 25:58713
LITHIUM ISOTOPES
  abundance in primary cosmic radiation, (E), 25:58833
LITHIUM ISOTOPES Li-6
  deuteron reactions (d,α) at 400 to 960 keV using polarized beam, analyzing power for, (E), 25:59737
  lithium-6 reactions (Li-6,2α) at 6.0 MeV, angle--energy contours and energy spectra from, (E), 25:59718
  meson reactions $(\pi^+,2p)$ at 70 MeV, excitation spectra for, (E), 25:59709 (LA-DC-12389)
  proton inelastic scattering by, approximate G-matrix calculations for, (T), 25:59858
  reactions (Li-6,2α) with lithium-6 at 6.0 MeV, angle--energy contours and energy spectra from, (E), 25:59718
LITHIUM ISOTOPES Li-7
  helium-3 reactions (He-3,d) and (He-3,t) at 15 MeV, deuteron and triton spectra from, (E), 25:59731
  lithium-7 reactions (Li-7,2p) at 30 MeV, cross sections and Q-value spectra from, (E), 25:59716
  reactions (Li-7,2p) with carbon-12 and lithium-7 at 30 MeV, cross sections and Q-value spectra from, (E), 25:59716
LITHIUM ISOTOPES Li-8
  production in proton reactions with nuclear emulsions at 28 GeV, energy spectra of, (E), 25:59278
LITHIUM MOLYBDENUM FLUORIDES
  crystal structure, 25:57298 (ORNL-4676, pp 73-138)
LIVER
  californium-252 distribution in rat, following intraperitoneal injection, 25:57922
  function of human, use of iodine-131-labeled BSP and gamma camera in tests of, 25:58042
  radiation effects on adenine nucleotides in rat, x, 25:57936
  radiation effects on cells of rat, mechanism for x, 25:58130
  radiation effects on ultrastructure of cells in salamander, effects of dose on x, 25:58112
  scintigraphy for diagnosis of adenoma, effectiveness of iodine-131-labeled rose bengal and metastable technetium-99-labeled sulfur colloid for, 25:58046
  scintigraphy of neoplasms of human, uptake of gallium-67 citrate for, 25:58045
  scintigraphy of reticuloendothelial system function in patients with hematological diseases, use of metastable technetium-99 colloids for, 25:58053
  scintigraphy using metastable technetium-99-labeled sulfur colloids, diagnostic value of, 25:58060
  scintigraphy using selenium-75-labeled methionine for localization of lesions, 25:58054
  scintiscanning in mice, effects of pH on distribution of metastable indium-113 during, 25:58043
  scintiscanning of human, effectiveness of iodine-131-labeled triiodothyronine for, 25:58050
  tumor diagnosis in human, comparison of effectiveness of angiography, radioisotope scanning, and ultrasound tomography for, 25:58044
LOOPS
  design of sodium chemistry, 25:58163(R) (AI-AEC-12859)
  operation and performance of sodium supply, 25:58163(R) (AI-AEC-12859)
  operation for sodium quality control, development of methods for, 25:58166(R) (AI-AEC-12980)
  operation of forced-convection, for testing compatibility of Hastelloy N with molten MSRE coolant salts, 25:58168 (ORNL-4676, pp 139-233)
  operation of sodium, for fission product deposition studies, 25:58163(R) (AI-AEC-12859)
LOS ALAMOS MESON PHYSICS FACILITY
  development of, May--July 1971, 25:59641(R) (LA-4753)
  experimental facilities at, proposed use of CAMAC system for interfacing in, 25:59654
  experimental facilities for nuclear chemistry research, 25:59642 (LA-DC-12795)
  research program for, nuclear chemistry, 25:59642 (LA-DC-12795)
  research program, May--July 1971, 25:59641(R) (LA-4753)
LUBRICANTS
  performance of railroad equipment, use of radioisotopes for measuring, 25:57672
LUNAR MATERIALS
  classification of, (E), 25:58678
  composition and physical characteristics of, review of Apollo 11, 12, and 14 and Luna 16 data of, 25:58677
  mineralogy of, (E), 25:58678
  texture of, (E), 25:58678
LUNGS
  carcinomas of human, biology of in situ, 25:60269 (COO-1826-17)
  phagocytic response of in vitro cells from rat, effects of uranium oxide on, 25:57923
  plutonium contamination of human, multiwire proportional detector for measuring, 25:57773
  plutonium-239 deposition in human, development of large proportional and scintillation detectors for measurement of, 25:57998 (NIRS-Pu-8)
  plutonium-239 distribution studies of human, development of laminated lucite plate phantom for, 25:57998 (NIRS-Pu-8)
  radiation dose to human, following acute or chronic inhalation of insoluble plutonium-239, 25:58001 (UCRL-73388)
  radiation dose to human, following inhalation of cobalt-60-labeled cobalt oxide, 25:57995 (CONF-711013-1)
  radioinduced heterotopic bone formation in human, x, 25:58133
  radioinduced heterotopic bone formation in rabbit, effects of adrenocortical hormones on x, 25:58133
  radiotherapy of carcinomas of, review of complications and effectiveness in cobalt-60 γ and sieve and super-high voltage x, 25:58137
  scintigraphy for evaluation of blood perfusion, ventilation, and localization of neoplasms in human, 25:58040 (UCLA-12-834)
LUTETIUM
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  oxidation potential for trivalent--tetravalent, 25:57437
LUTETIUM ISOTOPES
  determination by neutron activation and γ spectroscopy, 25:57391
LYMPH NODES
  radiation dose to human pulmonary, following acute or chronic inhalation of insoluble plutonium-239, 25:58001 (UCRL-73388)
  radiation dose to human pulmonary, following inhalation of cobalt-60-labeled cobalt oxide, 25:57995 (CONF-711013-1)
LYMPH SYSTEM
  scintigraphy for localization of neoplasms, comparison between radiography and, 25:58055
LYMPHOCYTES
  chromosome aberration frequency in peripheral human, effectiveness as biological dosimeter of, 25:58013
  radiation effects on count and morphology of, from chronic lymphocytic leukemia patients following extracorporeal exposure of blood, electron microscopy of γ, 25:58131 (CEA-CONF-1768)
  radioinduced chromosome aberrations in human peripheral, review of, 25:57963
  radioinduced single-strand breaks in DNA of human, kinetics of repair of electron, 25:57958
LYNCHBURG TEST REACTOR
  control and protection system for, description of automatic-ranging picoammeter for, 25:57899
  protection system for, description of solid state instrumentation for, 25:60186
LYSINE
  radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931
LYSOSOMES
  radiation effects on permeability of rat nervous system, x, 25:58098
  radiation effects on phospholipase A activity in dog sarcoma, γ, 25:57940

M

MACHINING
  dividing head angles in, use of INDEX 8 computer program in calculation of, 25:60273 (LA-4421)
  elctroerosion method for metals, 25:58193
MAGNESIUM
  determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
  effects on periodic precipitation in silver--cadmium alloys, 25:58262
  neutron elastic and inelastic scattering at 7.97 MeV by

natural, cross sections for, (E/T), 25:59770
- preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
- proton reactions at 6 to 52 MeV with natural, cross sections for aluminum-26 and sodium-22 formation in, (E), 25:59753
- radioinduced void formation in, fast neutron, 25:58310

MAGNESIUM ALLOYS AND SYSTEMS
- Cd--Mg, hardness of, 25:58253
- Mg-base--Y, oxide particle identification in, after heat treatment in air, 25:58293

MAGNESIUM BROMIDES
- hexane--$\mathrm{MgBr_2}$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- KBr--$\mathrm{MgBr_2}$, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)

MAGNESIUM IODIDES
- KI--$\mathrm{MgI_2}$, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)

MAGNESIUM IONS
- x-ray spectra of solar, (E), 25:58583

MAGNESIUM ISOTOPES Mg-23
- energy level at 451 keV, lifetime of, (E), 25:59719

MAGNESIUM ISOTOPES Mg-24
- abundance in solar atmosphere, (E), 25:58597
- alpha reactions (α,p) with, p-γ angular correlations from, (E), 25:59761
- deuteron inelastic scattering at 82 MeV, DWBA analysis of angular distributions from, (E), 25:59754
- energy levels from carbon-12 (O-16,α) reactions, negative-parity rotational, (E), 25:59767
- energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
- energy levels of, calculation for α-hole, 25:59757
- production in stars from simple helium burning, (E), 25:58508

MAGNESIUM ISOTOPES Mg-25
- abundance in solar atmosphere, (E), 25:58597

MAGNESIUM ISOTOPES Mg-26
- abundance in solar atmosphere, (E), 25:58597

MAGNESIUM OXIDES
- ion transport numbers for, at 900 to 1180°C under low oxygen potentials, effects of ion radius on, 25:58379
- sintering of, parameters for activated, 25:58200
- vaporization of calcium oxide-stabilized, in air at 1900 to 2200°C, 25:58345
- MgO--CoO, preparation for high-temperature neutron dosimetry, 25:57723 (CONF-711002-, pp 82-5)
- MgO--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)

MAGNET COILS
- design for thermonuclear torus device JFT-1, 25:59079

MAGNETIC ANALYZERS
- design of, using chromatic aberration in magnetic quadrupole lenses, 25:57901

MAGNETIC FIELDS
- charged particle motion in axially symmetric time-varying, (T), 25:59212
- effect on interacting electron gas, statistical mechanics of, (T), 25:59223
- effects of poloidal, on fundamental modes of oscillations of a polytrope, (T), 25:58507
- electrodynamics of planetary and stellar, Hall effect in, (T), 25:58849
- electron motion in uniform, synchrotron motion with radiation reaction for longitudinal velocity of, (T), 25:59359
- grain alignment by galactic, interstellar, (T), 25:58647
- lines of force in galactic, motion of, (T), 25:58657
- motions in sunspots, (E), 25:58598
- relation with magnetospheric substorm occurrences and solar-wind plasma parameters, (E), 25:58856
- strength of, in black holes, (T), 25:58498
- variations of, relation to magnetotail electron flux, magnetic activity, and radiation zone parameters, (E/T), 25:58852(T) (LA-tr-71-69)

MAGNETIC MATERIALS
- electron scattering by gaseous and solid, cross-section formulas for polarized-, 25:58687
- electrostatic interactions between magnetic electrons on neighboring ions in, temperature dependent, (T), 25:59189
- neutron diffraction polarization in scattering from, (T), 25:59681

MAGNETIC MIRROR MACHINES
- plasma equilibrium and confinement in DECA IIB, (E), 25:58958 (CEA-CONF-1807)
- plasma heating at second harmonic of electron cyclotron frequency, (E), 25:58971
- plasma heating by electron beam injection, (E), 25:58972
- plasma heating in Heliotron C, ohmic, (E), 25:58963
- plasma heating in, stochastic model of ECR, (T), 25:58968
- plasma trapping from atomic beam interactions with ECR-heated targets, (T), 25:58969

MAGNETIC MONOPOLES
- theory of atoms with magnetic charges as models of hadrons, 25:59447

MAGNETIC RECORDING SYSTEMS
- radiation effects on thin-film, gamma and neutron, 25:57908

MAGNETIC STORMS
- association with March 1970 solar particle event, observation over polar cap and in radiation belt, (E), 25:58892
- effect of Dec. 17, 1970, on conjugate magnetospheric pulsations and noise near plasmapause, (E), 25:58898
- effect on behavior of interplanetary plasma and magnetosphere, (E/T), 25:58886
- effects in ionosphere and magnetosphere, (T), 25:58865
- effects on electric-power systems operation, (E/T), 25:58887
- effects on geomagnetic-field daily variations, (E/T), 25:58874
- mechanism of polar, relation to electric coupling between magnetosphere and ionosphere, (E/T), 25:58909
- occurrence of magnetospheric substorms, relation with interplanetary magnetic-field and solar-wind plasma parameters, (E), 25:58856
- relation to atmospheric trough development at solar-activity maximum and minimum, (E), 25:58860
- relation to Pi2 micropulsation occurrences observed at high latitude, July 12-Aug.16, 1968, (E), 25:58903
- relation to variations in high-latitude trapping boundary of 100 to 200 keV protons, polar, (E), 25:58866
- relation with plasmapause position, electron-precipitation-associated, (E/T), 25:58897

MAGNETITES
- morphology and effects of coatings of, in boilers, 25:58165(T) (AEC-tr-7237)

MAGNETOHYDRODYNAMIC GENERATORS
- construction and operation of induction, with liquid-metal working fluid, 25:58840

MAGNETOHYDRODYNAMICS
- differential equations for, Algol system for solving, 25:59216

MAGNETOPAUSE
- plasma interaction with, parameters of interplanetary, (E/T), 25:58886
- proton trajectories at, using geomagnetic-field model, (E/T), 25:58861
- solar-wind plasma penetration to low altitudes through high-latitude cusp in, (E/T), 25:58882

MAGNETOSHEATH
- particle penetration to low altitudes through cusps of dayside magnetosphere, electron and proton, (E/T), 25:58882
- plasma interaction with, parameters of interplanetary, (E/T), 25:58886

MAGNETOSPHERE
- aerodynamic parameters of, satellite data-associated empirical determination of, (E/T), 25:58908
- charged-particle motion in core of, review of trapped, (E/T), 25:58910
- charged-particle occurrence at lower latitudes of trapping region boundary of, nonadiabatic behavior of, (E/T), 25:58907
- electric coupling with ionosphere, relation to polar magnetic disturbances and auroral break-up, (E/T), 25:58909
- electric currents in, quadrupole method for measurement of, (E/T), 25:58885
- electron precipitation from, correlation with vlf emissions and plasmapause position, (E/T), 25:58897
- magnetic-storm effects in, (T), 25:58865
- particle penetration to low altitudes through cusps of dayside, magnetosheath electron and proton, (E/T), 25:58882
- particle precipitation into high-latitude auroral zone from, patterns of energetic, 25:58896
- plasma instabilities in, review of, 25:58895
- plasma interaction with, parameters of interplanetary, (E/T), 25:58886
- properties of, review of, (E/T), 25:58910
- proton density associated with magnetic storms in, dynamics of thermal, (E), 25:58867
- proton trajectories at magnetopause and magnetotail using geomagnetic-field model, (E/T), 25:58861
- pulsations and noise analyses in conjugate, following Dec. 17, 1970 geomagnetic storm, (E), 25:58898
- radiation zone in, unstable, (E/T), 25:58906
- ring current in, location of, (T), 25:58854
- screening of cosmic instrumentation in, charge and potential from, (T), 25:59115
- variations in high-latitude trapping boundary of 100 to 200 keV protons associated with polar magnetic substorms, (E), 25:58866

MAGNETOTAIL
- electric flux of, relation to solar wind, magnetic activity, and radiation zone parameters, (E/T), 25:58852(T) (LA-tr-71-69)
- electromagnetic processes in, review of, (E/T), 25:58910
- plasma instabilities in plasma sheet in, review of, 25:58895
- plasma interaction with, parameters of interplanetary, (E/T), 25:58886
- proton trajectories at, using geomagnetic-field model, (E/T), 25:58861
- simulation using plasma in magnetic field of line dipole, (E/T), 25:58859

MAGNETS
  field calculations for, modified scalar potential in boundary-value problems in, 25:59647
MAINE YANKEE POWER REACTOR
  contol system for, design modifications of, 25:59899
  instrumentation for, design modifications of, 25:59899
  startup of, effects on regional power supply of delay in, 25:59956 (DOCKET-50271-63)
MAMMARY GLANDS
  radiation dose distribution in, during pendulum and tangential therapy, calculation and comparison of γ, 25:58003
  scintigraphy for localization of neoplasms, effectiveness of mercury-197, phosphorus-32, and selenium-75 for, 25:58051
MAN
  cobalt-60-labeled cobalt oxide biological half-life in, following inhalation, 25:57995 (CONF-711013-1)
  conference on neoplasms of intestine of, 25:58029
  epidermis thickness in relation to age, body site, and sex, 25:58000 (RD/B/R-1934)
  medical care following radiation accidents, program for regional, 25:58039
  plutonium hazards in, review, 25:57998 (NIRS-Pu-8)
  radiation dose field in hip and neck of, comparison of calculated and experimental proton, 25:58023
  radiation dose to brain of, during therapy of tinea capitis, use of Fricke dosimeter to measure absorbed x, 25:58012
  radiation dose to gonads and head of, during full-denture radiography using conventional and tomographic methods, 25:58022
  radiation dose to lungs and pulmonary lymph nodes of, following inhalation of cobalt-60-labeled cobalt oxide, 25:57995 (CONF-711013-1)
  radiation dose to lungs and pulmonary lymph nodes of, following acute and chronic inhalation of insoluble plutonium-239, 25:58001 (UCRL-73388)
  radiation dose to, during travel on high-altitude supersonic aircraft, ionizing, 25:58138
  radiation dose to, effectiveness of activation and biological detectors for measuring accidental exposure neutron, 25:58019
  radiation dose to, effectiveness of chromosome aberration frequency in peripheral lymphocytes for measuring low-level occupational, 25:58015
  radiation dose to, following accidental exposure to radium-226, use of chromosome aberration frequency in peripheral lymphocytes to calculate, 25:58016
  radiation dose to, from color television receivers in USA, estimation of genetically significant x, 25:58011
  radiation dosimetry in phantom of, isodose curves for whole-body γ and x, 25:58004
  radiation dosimetry in tissues of, concepts and units for ionizing, 25:58002
  radiation dosimetry in, effectiveness of chromosome aberration frequency in peripheral lymphocytes for, 25:58013
  radiation dosimetry in, effectiveness of chromosome aberration frequency in peripheral lymphocytes for, 25:58014
  radiation effects on blood vessels and heart in, following therapy for thoracic diseases, 25:58147
  radiation effects on cell division in epidermis of mammary tumors of, x, 25:58146
  radiation effects on central nervous system of, review of research on, 25:58143
  radiation effects on electrophoretic pattern of proteins in saliva of, 25:57945
  radiation effects on epithelium in, following therapy for cervical tumors, cytology and histology of γ, radium, and x, 25:58140
  radiation effects on excretion of catecholamines by, effects of ACTH on, 25:57938
  radiation effects on iodine-131 clearance rate in skin of, x, 25:58125
  radiation effects on lactate dehydrogenase activity in serum and vaginal tissues of, with cervical cancer, effects of dose on γ, 25:57937
  radiation effects on lymphocytes of, with lymphocytic leukemia following extracorporeal exposure of blood, γ, 25:58131 (CEA-CONF-1768)
  radiation effects on normal tissues of, during supervoltage radiotherapy, additive effects of antineoplastic drugs on, 25:58077
  radiation effects on reimplantation of mandible in, following surgical resection, x, 25:58132
  radiation effects on sensitivity to pharmaceuticals, ionizing, 25:58142
  radiation effects on survival of chromium-51-labeled erythrocytes of, in vivo following exposure in vitro, γ, 25:58136
  radiation effects on tumor surrounding tissues in, during therapy, effects of body inhomogeneities on electron and x, 25:58141
  radiation effects on, following therapy for cervical cancer, effects of adrenal cortex extract on, 25:58035
  radiation hazards to, in industry and medicine, review on, 25:58139
  radiodermatitis in, effectiveness of 5-fluorouracil for treatment of, 25:58037
  radioinduced chromosome aberrations in fibroblasts and lymphocytes of, effects of Fanconi's anemia on frequency of γ, 25:57973
  radioinduced chromosome aberrations in peripheral lymphocytes of, review of, 25:57963
  radioinduced heterotopic bone formation in lungs of, x, 25:58133
  radioinduced injuries to skin of, methods for treatment of, 25:58038
  radioinduced myocardial and pulmonary injuries in, following cobalt-60 γ and sieve and super-high voltage x radiotherapy of pulmonary carcinomas, review of, 25:58137
  radioisotope content of diet of, in EURATOM countries during 1969, 25:57979 (EUR-4667)
  radioisotope excretion and retention time following acute or chronic intake, cesium-137, iodine-131, iodine-132, plutonium-239, radium-226, strontium-90, tellurium-132, uranium-233, uranium-234, and tritium, 25:57919
  radioisotope uptake and retention in tissues of, development of radiation protection standards from data on, 25:58024 (CONF-711104-1)
  radiotherapy of adenomas of thyroid gland in, effectiveness of post-surgical interstitial iodine-131, 25:58056
  radiotherapy of breast neoplasms in, survival rate following post-surgical γ, 25:58071
  radiotherapy of breast neoplasms in, survival rate following pre-surgical gamma and x, 25:58073
  radiotherapy of carcinomas in, role of antitumor immune mechanisms of normal tissues in, 25:58072
  radiotherapy of carcinomas of skin of, effectiveness of x, 25:58068
  radiotherapy of gynecologic neoplasms in, occurrence of vesicovaginal fistula following, 25:58135
  radiotherapy of gynecological carcinomas in, effects of dose on injuries to bladder and rectum during cobalt-60 contact γ, 25:58010
  radiotherapy of neoplasms in, effectiveness of high-energy electron and x, 25:58076
  radiotherapy of tumor remnants in cervix uteri of, following external γ or x radiotherapy, effectiveness of small radiation sources for, 25:58074
  radiotherapy of tumors in, dose distribution planning for megavolt, 25:58007
MANGANESE
  content of foods in Kiev region of Soviet Union, 25:57987
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in analytical reagents by neutron activation, 25:57379
  determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
  determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  effects on hardness of dispersion-hardening iron-base alloys, 25:58235
  effects on niobium nitride solubility in iron austenite, 25:58268
MANGANESE ALLOYS AND SYSTEMS
  Al--Mn, structure of drops of, formed at high cooling rates, 25:58284
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  Mn--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
MANGANESE ISOTOPES Mn-52
  beta decay of, β--γ circular polarization correlations and Coulomb and Fermi matrix elements in, (E), 25:59746
MANGANESE ISOTOPES Mn-54
  content in Columbia River sediments, (E), 25:57561 (TID-25786)
MANGANESE ISOTOPES Mn-55
  photon reactions (γ,n) with, energy dependence of yield for, (E), 25:59815
MANGANESE OXIDES
  effects on structure of γ-irradiated sodium oxide--tellurium oxide glasses, EPR spectral studies on, 25:57447
MANY BODY PROBLEM
  angular momentum reduction in three-body problem, nonexhaustive restatement of, 25:59206 (LYCEN-7118)
  forces in, theory of two-body effective, (T), 25:59850
  Goldstone linked-cluster series in, factorization and folded diagrams in, 25:59865
  integral equations for d + n bound state and scattering problem for arbitrary-rank potential, derivation of coupled, (T), 25:59707
  localized states in phase space, (T), 25:59234
MARS (PLANET)
  ionosphere below 80 km, ion-chemistry model during solar-proton event, (T), 25:58676
MASS LAW
  application of Weizsaecker, to nuclei far from stability line, (E/T), 25:59836 (KURRI-TR-76, pp 3-6)

- MASS SPECTROMETERS
  - characteristics of on-line, tabulation of, 25:59835 (KURRI-TR-76, pp 1-2)
  - design of 60° sector, for gas analysis, 25:57890
  - design of, using chromatic aberration in magnetic quadrupole lenses, 25:57901
- MATERIALS TESTING, DESTRUCTIVE
  - methods for zirconium alloy fuel cladding and pressure tubes, 25:58209 (AECL-3992)
- MATHEMATICAL PHYSICS
  - eigenvalue problems for Lagrangian systems, 25:59052
  - factorization method in, 25:59227
  - Monte Carlo event generation method for multi-peripheral models, 25:59213
- MATRICES (MATHEMATICS)
  - bounds on bipartite graphs, 25:60274 (LA-4744)
- MATTER
  - forms of superdense, in stars, (T), 25:58520
  - pressure and temperature of, in Universe, (T), 25:58520
  - properties of ultradense, (T), 25:58432
- MATTER, ANTI-
  - annihilation radiation from, in meteor streams, (E), 25:58836
- MEATS
  - fish, radiation processing of, effects on toxicity in rats, 25:58162
- MECHANICS
  - analogies between statistical, and Euclidean quantum field theory, 25:59622
  - book: Scattering, Reactions, and Disintegrations in Nonrelativistic Mechanics (in Russian), 25:59612
- MEDICAL PERSONNEL
  - radiation effects on blood cell counts in, in Japan during 1969, survey of, 25:58134
  - radioinduced chromosome aberrations in, effects of dose, dose fractionation, and radiation source on γ, neutron, and x, 25:57972
- MEDICINE
  - book: Handbook for Technologists of Nuclear Medicine, 25:58049
  - personnel training programs for nuclear, 25:60263 (BRH/DMRE-71-5)
  - program for regional management of radiation accidents, 25:58039
  - radiation uses in, criteria for benefits and hazards of, 25:58030
- MEMBRANES
  - material transfer through, ideal tracer theory for, 25:60261 (BNL-50299)
- MENDELEVIUM
  - oxidation potential for trivalent--tetravalent, 25:57437
- MERCHANT VESSELS
  - construction of nuclear powered, radiation safety aspects of, 25:60204
  - design of nuclear powered, radiation safety aspects of, 25:60204
- MERCURY
  - abundance on surfaces of peculiar A stars, (E/T), 25:58462
  - beta-particle reactions with vapor of, mean energy for formation of ion pairs in, (E), 25:59123
  - determination in fish and other environmental samples by neutron activation and radiochemical separation, 25:57392
  - determination in fish, nuclear scattering method for, 25:57360
  - electron reactions with, excitation in, (E), 25:58741
  - preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)
- MERCURY (PLANET)
  - perihelion of, effects on differential rotation of Sun on advance of, (T), 25:58622
- MERCURY ALLOYS AND SYSTEMS
  - Hg-base--In, diffusion in, continuous resistivity monitoring in capillary-reservoir cell for measuring, 25:58210 (IS-T-490)
- MERCURY BROMIDES
  - hexane--$HgBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
- MERCURY, [(o-CARBOXYPHENYL)THIO]ETHYL-
  - sodium salt, radiosensitizing effects on Escherichia coli, γ, 25:58157
- MERCURY ISOTOPES
  - energy level transitions in, calculation of internal conversion coefficients for, (T), 25:59787
- MERCURY ISOTOPES Hg-197
  - evaluation of dichloride-incorporated, for scanning human mammary gland for localization of neoplasms, 25:58051
- MERCURY ISOTOPES Hg-203
  - beta decay of, beta--gamma angular correlations in, (E), 25:59795
- MESIC ATOMS
  - energy-level transitions in μ^- and π^-, cascade processes and x-ray emission in, (T), 25:58724
  - production of π^-, from electron reactions with nuclei, 25:59355
- MESONS
  - classification in ladder U(6,6) symmetry, (T), 25:59546
  - classification in representations of SU(4) x O(3) group, 25:59551
  - coupling to photons, Veneziano-type representations for, (T), 25:59352
  - decay of, model with intermediate vector meson for total radiative corrections to G/sub β//supV//G/sub μ/ ratio for, (T), 25:59416
  - decays of, relation between soft-pion mass and amplitudes for leptonic, 25:59399
  - exchange in interactions of two spinless bosons, radiative corrections to relativistic eikonal amplitude for, (T), 25:59453
  - exchange of vector, in N + N interactions, radiative corrections to relativistic eikonal amplitude for, (T), 25:59453
  - existence of I = 2, relation of selection rules for weak interactions to, 25:59393
  - field theory for massive vector, gauge-invariant Lagrangian for electromagnetic and quantum, (T), 25:59555
  - interactions of equal-mass scalar, localizability and single-particle exchange amplitudes for, 25:59454
  - interactions with $1/2^+$ baryons, spin amplitudes for pseudoscalar meson $1/2^+$ baryon production in, (T), 25:59471 (CEA-N-1456)
  - interactions with baryons, consistency conditions between SU(3) and exchange degeneracy in, 25:59493
  - interactions with baryons, polarization predictions from double Regge pole exchange for, 25:59503
  - interactions with mesons and baryons at high energies, relation of coherent state method with quark models for, (T), 25:59448 (JINR-E2-6025)
  - interactions with mesons and baryons in nonchiral U(6) x U(6), duality diagrams and representation mixing for, 25:59549
  - interactions with spinless bosons, radiative corrections to relativistic eikonal amplitude for scalar meson exchange in elastic, (T), 25:59453
  - mass formulas in ladder U(6,6) symmetry, (T), 25:59546
  - production of scalar, in γ + N interactions, classical charge-symmetric field theory for cross sections for, (T), 25:59338
  - production of vector, simultaneously with $\Sigma^-(1385)$ in Λ and Σ^0 four-body final states in K^- + n interactions at 4.48 GeV/c in deuterium bubble chamber, spin-density matrix elements for, (E), 25:59280
  - quantum field theory for spin-two, LSZ formulation of, 25:59570
- MESONS (eta)
  - decay eta $\to 2\pi + \gamma$, hard-meson current algebra and PCAC model for width of, 25:59443
  - decay eta $\to 3\pi$, linear SU(3) sigma model for correlation between baryon $\Delta I = 1$ mass shifts, K mass shift and, 25:59380
  - decay eta $\to 3\pi^0$ in heavy-liquid bubble chamber, branching ratio and amplitude for, (E), 25:59244
  - decay eta $\to \gamma + \gamma$ from production in $e^+ + e^-$ interactions, proposed experimental study of, 25:59253
  - decay eta $\to \gamma\gamma$ in heavy-liquid bubble chamber, branching ratio for, (E), 25:59244
  - decay eta $\to \pi^+ + \pi^- + \pi^0$ in heavy-liquid bubble chamber, analysis of, (E), 25:59244
  - mass and width in five- and six-charged-particle final states in π^+ + d interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
  - mixing angle for eta and eta' in five- and six-body final states in π^+ + d interactions at 2.7 and 3.1 GeV/c in bubble chamber, SU(3), (E), 25:59282
  - mixing of eta and X^0 for cross sections of $e^+ + e^- \to$ eta(X^0) + γ interactions in vector meson region, linear and quadratic, (T), 25:59377
  - production in $e^+ + e^- \to e^+ + e^-$ + eta, eta $\to \gamma + \gamma$ interactions, cross sections for, 25:59389
  - production in five- and six-charged-particle final states in π^+ + d interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
  - production of eta^0 in $e^+ + e^- \to$ eta^0 + γ interactions in vector meson region, vector dominance model with linear and quadratic mixing of eta and X^0 for cross sections of, (T), 25:59377
- MESONS (f)
  - decay of interfering f--background, statistical tensors for angular distributions of, 25:59461
  - production in anti p + p $\to 2\pi^+ + 2\pi^-$ interactions at 2.5 GeV/c, (E), 25:59271
- MESONS (K)
  - decay K $\to 2\pi$, violation of $\Delta I = {}^1/_2$ rule in, 25:59405
  - decay K $\to 3\pi$, violation of $\Delta I = {}^1/_2$ rule in, 25:59405
  - decay K $\to \pi + l + \nu$, bounds on form factors of, 25:59411
  - decay K $\to \pi + l + \nu$, lower bound on lambda/sub +/ in, (T), 25:59392 (ORO-3992-69)
  - decay of, model with intermediate vector meson for total radiative corrections to G/sub β//supV//G/sub μ/ ratio for, (T), 25:59416
  - interactions anti K + N at 0 to 1400 MeV/c, energy-dependent multichannel M-matrix fits to partial-wave analyses of, (T), 25:59476
  - interactions K + N, empirical analysis of differences and sums of angular distributions for duality in, (T), 25:59477
  - interactions K + N, modified Pomeranchuk theorem for lower bounds on elastic and charge-exchange, 25:59474
  - interactions K + $\pi \to$ K + π in K^- + d $\to K^- + \pi^-$ + 2p interactions at 12.6 GeV/c, cross sections for, (E), 25:59283

XUM

  interactions $K + \pi$ from $K^+ + p \to K^0(K^+) + \pi^0(\pi^-) + \Delta^{++}$ interactions at 2.5 to 5.0 GeV, rotation of symmetry axis in, 25:59502
  interactions $K + \pi$, CDD poles in effective range formula for form factors of, 25:59466
  interactions $\pi + K$, exact inequalities involving S- and P-wave partial-wave amplitudes and derivatives for, (T), 25:59452
  mass shift of, linear SU(3) sigma model for correlation between eta $\to 3\pi$ decay, octet baryon $\Delta I = 1$ mass shifts, and, 25:59380
  theory for KN system, quasipotential formalism for field-theoretic and phenomenological analysis in, (T), 25:59422 (JINR-E2-6046)
MESONS (K^-)
  interactions $K^- + d \to K^- + d$ at 810 to 1110 MeV/c, angular distributions for, (E), 25:59302
  interactions $K^- + d \to K^- + p + n$ at 810 to 1110 MeV/c, angular distributions for, (E), 25:59302
  interactions $K^- + d \to K^- + \pi^- + 2p$ at 12.6 GeV/c, production of $p\pi^-(1450)$ enhancement, cross sections for $K + \pi \to K + \pi$ interactions, production cross sections for Ξ^- and Ω^-, and cross sections for, (E), 25:59283
  interactions $K^- + d \to K^- + \pi^+ + \pi^- + n + p$ at 12.6 GeV/c, production of $n\pi^+\pi^-(1450)$ and $p\pi^+\pi^-(1450)$ enhancements, production cross sections for Ω^- and Ξ^-, and cross sections for, (E), 25:59283
  interactions $K^- + d \to \pi^- + \Lambda + p$, Λp mass spectra in, 25:59522
  interactions $K^- + N \to \Lambda + \pi$ at 1 to 1.85 GeV/c, partial-wave analysis of, (E), 25:59303
  interactions $K^- + n \to \pi^- + \Lambda$ and $\pi^+ + n \to K^+ + \Lambda$, duality and exchange degeneracy from finite-energy sum rules for, 25:59501
  interactions $K^- + n$ at 3 GeV/c, differential cross sections for two-body, (E), 25:59291
  interactions $K^- + n$ at 4.48 GeV/c in deuterium bubble chamber, $\Sigma(1640)$ and A_2 production, and simultaneous production of vector mesons and $\Sigma^-(1385)$ in Λ and Σ^0 four-body final states in, (E), 25:59280
  interactions $K^- + n$ at 810 to 1110 MeV, angular distributions for elastic, (E), 25:59302
  interactions $K^- + N$ at intermediate energy, dual structure of amplitudes for, 25:59504
  interactions $K^- + p \to$ anti $K^0 + n$ at 800 to 1200 MeV/c, partial-wave analysis of, (E/T), 25:59293
  interactions $K^- + p \to$ anti $K^0 + n$, test of semi-local duality in backward, (E), 25:59482
  interactions $K^- + p \to K + \Xi$ at 2 to 5 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
  interactions $K^- + p \to K^- + p$ at 800 to 1200 MeV/c, partial-wave analysis of, (E/T), 25:59293
  interactions $K^- + p \to K^- + \pi^0 + p$, dual + Pomeron analysis of, 25:59490
  interactions $K^- + p \to K^+ + \Xi^-$ at high energies, two-Reggeon cuts and exotic exchange in, (T), 25:59618
  interactions $K^- + p \to K^-$(anti K^0) + p(n) near 1.670 GeV in hydrogen bubble chamber, differential cross sections for, (E), 25:59281
  interactions $K^- + p \to \Lambda(\Sigma^0) + \pi^+ + \pi^-$ at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, Σ^{+*} production in, (E), 25:59284
  interactions $K^- + p \to p + \pi^- +$ anti K^0 at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, Σ^{+*} production in, (E), 25:59284
  interactions $K^- + p \to p + \pi^- +$ anti K^0 at 4.6 and 5.0 GeV/c in hydrogen bubble chamber, quasi-two-body cross sections for, (E), 25:59284
  interactions $K^- + p \to \pi^- + \pi^+ + \Lambda$, Veneziano five-point function model for, 25:59488
  interactions $K^- + p \to \pi^+ + \Sigma^-$ at 2 to 16 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
  interactions $K^- + p$ at 4.6 and 5.0 GeV/c in hydrogen bubble chamber, quasi-two-body cross sections for production of two charged particles and $\Lambda(\Sigma^0)$ in, (E), 25:59284
  interactions $K^- + p$, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
  production in $p + p$ interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
MESONS (K^0)
  CP violation in (K^0--anti K^0) system, second-order weak effect for parameters of, (T), 25:59540
  decay $K_1^0 \to 2\gamma$, search for, (E), 25:59264
  decay $K_1^0 \to 2\pi$, dispersion relations, current algebra, and PCAC for, 25:59409
  decay $K_1^0 \to \mu^+ + \mu^-$, rate of, 25:59419
  decay $K_1^0 \to \pi^+ + \pi^- + \pi^0$, spark chamber study of CP violation in, (T), 25:59259
  decay $K_2^0 \to 2\gamma$, branching ratio for, (E), 25:59264
  decay $K_2^0 \to 2\gamma$, CP-violating rate for, 25:59419
  decay $K_2^0 \to \mu^+ + \mu^-$, CP violation in, 25:59544
  decay $K_2^0 \to \mu^+ + \mu^-$, rate of, 25:59419
  decay $K_2^0 \to \mu^+ + \mu^-$, T invariance in unitarity limit of, 25:59543
  decay $K_2^0 \to \pi^+ + \pi^- + \gamma$, CP-violating rate for, 25:59419
  decay $K_2^0 \to \pi^+ + \pi^- + \pi^0$, spark chamber study of Dalitz plot for test of $\Delta I = {}^1/_2$ rule and CP conservation in, (E), 25:59258
  decay of, equivalence of Lee--Sugawara sum rules and selection rules for nonleptonic, 25:59396
  interactions $K_2^0 + p \to K_1^0 + p$ at 3 and 6 GeV/c, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
  interactions $K_2^0 + p \to K_1^0 + p$ at high energies, asymptotical properties of amplitude of, (T), 25:59494
MESONS (anti K^0)
  interactions anti $K^0 + N \to K + \Xi$ at 2 to 5 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
MESONS (K^+)
  decay $K^+ \to e + \nu$, test of V--A theory of weak interactions in spark chamber study of branching ratio for, (E), 25:59256
  decay $K^+ \to \pi + \pi + e + \nu$, low-energy $\pi\pi$ phase shifts and form factors from, 25:59263
  decay $K^+ \to \pi^+ + \pi^+ + e^- +$ anti ν, test of $\Delta S = \Delta Q$ rule in, (E), 25:59262
  decay $K^+ \to \pi^+ + \pi^- + e^+ + \nu$, rate of, (E), 25:59262
  interactions $K^+ + N \to K^0 + p + p$ at 5.5 GeV/c, partial cross section and momentum transfer distribution for, (E), 25:59305
  interactions $K^+ + n \to K^+ + \pi^- + p$ and $K^+ + n \to K^0 + \pi^+ + \pi^- + p$ at 9 GeV/c in deuterium bubble chamber, cross sections and mass spectra from, (E), 25:59318
  interactions $K^+ + n \to K^+ + \pi^- + p$ at 3 GeV/c, unitarized Veneziano model for, 25:59478
  interactions $K^+ + p \to$ anti $\Lambda + p + p$ at 8.25 GeV/c, Veneziano model for, (E/T), 25:59295
  interactions $K^+ + p \to$ anti $\Sigma^0 + p + p$ at 8.25 GeV/c, cross sections for, (E), 25:59295
  interactions $K^+ + p \to K^0 + \pi^0 + \Delta^{++}$ at 2.5 to 5.0 GeV, rotation of symmetry axis in $K + \pi$ interactions from, 25:59502
  interactions $K^+ + p \to K^+ + \pi^0 + p$, dual + Pomeron analysis of, 25:59490
  interactions $K^+ + p \to K^+ + \pi^- + \Delta^{++}$ at 2.5 to 5.0 GeV, rotation of symmetry axis in $K + \pi$ interactions from, 25:59502
  interactions $K^+ + p$ at 5 GeV/c, cross sections and angular correlations for six- and seven-body states in, (E), 25:59299
  interactions $K^+ + p$ at 8.25 GeV/c, cross sections for Y^* and N^* production in, (E), 25:59295
  interactions $K^+ + p$ below 600 MeV/c, s- and p-wave scattering lengths for, (T), 25:59489
  interactions $K^+ + p$, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
  production in $p + p$ interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
MESONS (μ)
  capture by atoms, cascade processes and x-ray emission in, (T), 25:58724
  decay of polarized, electron energy spectrum from, 25:59404
  decay of, two- and four-component neutrino theories from, (T), 25:59407
  energy losses of 10^5- to 10^8-MeV, in matter, numerical solutions to kinetic equation for, (T), 25:59400
  intensity and distribution in cosmic showers underground, 25:59247
  intensity of cosmic, absolute, (E), 25:58826
  intensity variations of primary and secondary cosmic, at high energies, 25:58827
  interactions of cosmic, at large zenith angles at sea level, electromagnetic, 25:59343
  interactions to 1 TeV of cosmic, cross sections for electromagnetic, (E), 25:59246
  production from kaon and pion decay in atmosphere, trivial, (E/T), 25:58828
  production in cosmic $\nu + N$ interactions at high energies, spectra for, (T), 25:59417
  spectra of 20- to 1000-GeV cosmic, at sea level, 25:59245
MESONS (μ^-)
  capture by calcium and sulfur, asymmetry coefficient for low-energy neutron angular distribution from, (E), 25:59738 (JINR-P1-6029)
  capture by gaseous hydrogen, field theoretical basis for weak-interaction theory for, (T), 25:59397
  capture by helium-3, elementary particle treatment of, (T), 25:59397
  production in $\nu + N \to \mu^- + W^+ + N$ interactions and ν reactions with iron, angular and momentum distributions for, (T), 25:59414
  spectra from neutrino reactions (ν,μ^-W^+) with nuclei and $W \to \mu + \nu$ decay, 25:59410
MESONS (μ^+)
  decay $\mu^+ \to e^+ + e^+ + e^-$, spark chamber study of upper limit for branching ratio for, (E), 25:59254(T) (BNL-tr-449)
  emission in $W^+ \to \mu^+ + \nu$ decay, angular and momentum distributions for, (T), 25:59413
  production in neutrino reactions with iron, angular and momentum distributions for, (T), 25:59415
  production in neutrino reactions with nuclei, angular and momentum distributions for, (T), 25:59415

XUM

- decay $\omega \to 2\pi$, interference of rho $\to \pi^+ + \pi^-$ with, 25:59552
- decay $\omega \to 3\pi$, hard-meson current algebra and PCAC model for width of, 25:59443
- decay $\omega \to$ eta + $\gamma/\omega \to$ neutrals, branching ratio for, (E), 25:59320
- decay $\omega \to \pi^0 + \gamma$, branching ratio for, (E), 25:59320
- decay $\omega \to \pi^0 + \pi^0 + \gamma/\omega \to$ neutrals, branching ratio for, (E), 25:59320
- decay $\omega \to \pi^+ + \pi^- + \pi^0$ from $\pi^+ + p \to \pi^+ + p + \omega$ interactions at 3.7 GeV/c, charge asymmetry on Dalitz plot of, (E), 25:59308
- decay $\omega \to \pi^+ + \pi^- + \pi^0$, charge asymmetry in Dalitz plot of, 25:59468
- decay $\omega \to \pi^+ + \pi^- + \pi^0$, search for C violation from rho^0 interference in, 25:59552
- exchange contributions to $\gamma + d \to$ eta + d interactions, amplitudes with anomalous thresholds for, (t), 25:59514
- interference with rho in photoproduction processes, phase of rho propagator in, 25:59348
- mass and width in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- mixing of rho--ω in photon reactions (γ, e^+e^-) with nuclei, vector dominance model for, 25:59364
- photoproduction on carbon-12 at 4 GeV, relative rho--ω phase in, (E), 25:59252
- production in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282

MESONS (phi)

- decay phi $\to 3\pi$, hard-meson current algebra and PCAC model for width of, 25:59443
- decay rho $\to \mu^+ + \mu^-$, branching ratio for, (E), 25:59310
- mass and width from $\pi^- + p \to K^+ + K^- + n$ interactions at 11.04 GeV/c in optical spark chamber, (E), 25:59301

MESONS (π)

- capture by atoms, cascade processes and x-ray emission in, (T), 25:58724
- form factor for, Veneziano-type representations for, (T), 25:59352
- form factors from current algebra, Regge poles, and Veneziano model, axial-vector, 25:59356
- interactions $A + \pi \to A + \pi$, Veneziano amplitude for, (T), 25:59464
- interactions $\gamma + \pi \to \pi + \pi$, hard-meson current algebra and PCAC model for γ--3π coupling constant and form factor for, 25:59382
- interactions $K + \pi \to K + \pi$ in $K^- + d \to K^- + \pi^- + 2p$ interactions at 12.6 GeV/c, cross sections for, (E), 25:59283
- interactions $K + \pi$ from $K^+ + p \to K^0(K^+) + \pi^0(\pi^-) + \Delta^{++}$ interactions at 2.5 to 5.0 GeV, rotation of symmetry axis in, 25:59502
- interactions $K + \pi$, CDD poles in effective range formula for form factors of, 25:59466
- interactions of, nonlinear sigma model for six-point function for, 25:59456
- interactions $\pi + K$, exact inequalities involving S- and P-wave partial-wave amplitudes and derivatives for, (T), 25:59452
- interactions $\pi + \Lambda \to \pi + \Lambda$ in Veneziano model, positive width and S-wave scattering length in, 25:59473
- interactions $\pi + N \to$ eta + N, dispersion theoretic model for $S_{11}(1525)$ resonance and cross sections for, 25:59486
- interactions $\pi + N \to m\pi + N$, one-pion-exchange model for effective mass spectrum of π system in, (T), 25:59496
- interactions $\pi + N \to \pi + \Lambda + K$ at 7 GeV/c, production of N*(1700) in, 25:59307
- interactions $\pi + N$ at high and superhigh energies, Monte Carlo method with energy--momentum conservation law for analytical approximations for reconstruction of inelastic, (T), 25:59472 (JINR-P2-6022)
- interactions $\pi + N$ at threshold to 13 GeV/c, predictions of isospin invariance in backward, (E/T), 25:59287
- interactions $\pi + N$ in pre-asymptotic region, angular distributions and amplitude structure for inelastic, (T), 25:59457
- interactions $\pi + N$, complex Regge poles in backward, (T), 25:59495
- interactions $\pi + N$, generalized potential and P_{33} phase shift for, 25:59485
- interactions $\pi + N$, invariant amplitudes in unphysical region for, 25:59481
- interactions $\pi + N$, low-energy $\pi + \pi$ interaction from phase shifts for, 25:59463
- interactions $\pi + N$, modified Pomeranchuck theorem for lower bounds on cross sections for elastic, 25:59474
- interactions $\pi + N$, parity violation from longitudinal polarization of recoil nucleon in, 25:59487
- interactions $\pi + N$, reconstruction of amplitudes from experimental data for, 25:59498
- interactions $\pi + p$ at high energies, experimental test of Pomeranchuk theorem in, 25:59424
- interactions $\pi + \pi$ at high energies, two-Reggeon cuts and exotic exchange in, 25:59618
- interactions $\pi + \pi$ from elastic πN phase shifts, low-energy, 25:59463
- interactions $\pi + \pi$ from $\pi^+ + p \to \Delta^{++} + \pi^+ + \pi^-$ interactions at 8 GeV/c, S-wave resonance effects in, (E/T), 25:59296
- interactions $\pi + \pi$ from $\pi^- + p \to \pi^+ + \pi^- + n$ interactions, S-wave phase shift for, (E), 25:59306
- interactions $\pi + \pi$ in current algebra, bootstrap of rho and sigma from amplitudes for, 25:59469
- interactions $\pi + \pi$, CDD poles in effective range formula for form factors of, 25:59466
- interactions $\pi + \pi$, effective chiral Lagrangians from current-algebra calculations of off-shell amplitude for, 25:59455
- interactions $\pi + \pi$, finite energy sum rules for Veneziano amplitude of, 25:59450
- interactions $\pi + \pi$, phase shifts and form factors from $K^+ \to \pi + \pi + e + \nu$, 25:59263
- interactions $\pi + \pi$, S-wave phase shift in model of SU(3) x SU(3) symmetry breaking, 25:59550
- interactions $\pi + \pi$, scattering lengths from chiral invariant Lagrangian with massive gauge fields for, 25:59449
- interactions $\pi + \pi$, unitarity sum rule in Veneziano model for, 25:59462
- production in bound state in electron reactions with nuclei, 25:59355
- production in $\gamma + N \to \pi + N$ interactions, vector meson dominance of k^2 dispersion relation for invariant amplitudes for, (T), 25:59351
- production in proton reactions with iron at 400 GeV, Monte Carlo calculations of star and flux distributions from, (T), 25:59507 (ORNL-4673)
- production in $\pi + N \to m\pi + N$ interactions, one-pion-exchange model for effective mass spectrum for, (T), 25:59496
- radius of, $\pi^+ \to e^+ + \nu + e^+ + e^-$ decay for electromagnetic, (T), 25:59412
- ratio to protons at altitudes of 800 gm/cm^2, non EAS-associated, (E), 25:58834
- reactions with nuclei at 0.01 to 100 GeV, cascade evaporation model for Monte Carlo method for calculating, (T), 25:59508(T) (ORNL-tr-2514)
- reactions with nuclei, absorption and dispersion corrections to πN optical potential for, 25:59516
- Regge trajectory and residues for, 25:59460
- scattering by carbon-12 at 120 to 1200 MeV, angular distribution and total cross section for, (T), 25:59712
- theory for πN system, quasipotential formalism for field-theoretic and phenomenological analysis in, (T), 25:59422 (JINR-E2-6046)

MESONS (π^-)

- capture by carbon-12, calculation using impulse approximation with Cohen-Kurath wave functions, (T), 25:59730
- decay $\pi^- \to \mu^- +$ anti ν, mass of ν from μ^- polarization in, 25:59257
- interactions $\pi^- + d$ at 9 GeV/c, Glauber multiple scattering model for elastic, (E/T), 25:59269
- interactions $\pi^- + p \to A_2^- + p$ at 3.9 and 16 GeV/c in bubble chamber, A_2^- production mechanism in, (E), 25:59279
- interactions $\pi^- + p \to$ eta + n at 1.6 and 2.3 GeV/c, angular distribution predictions for, (T), 25:59477
- interactions $\pi^- + p \to$ eta + n, complex A_2 Regge trajectory for analyzing, (T), 25:59479
- interactions $\pi^- + p \to K^0 +$ anti $K^0 + n$ at 12 GeV/c, generalized Veneziano model for, (T), 25:59492
- interactions $\pi^- + p \to K^+ + K^- + n$ at 11.04 GeV/c, mass and width of phi from optical spark chamber study of, (E), 25:59301
- interactions $\pi^- + p \to K^+ + \Sigma^-$ at 2 to 16 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
- interactions $\pi^- + p \to \Lambda^0 + K^0$, $\Lambda^0 \to p + \pi^-$ at 1.07 GeV/c, Λ^0 magnetic moment from, (E), 25:59294
- interactions $\pi^- + p \to n + \pi^+ + \pi^-$ at 7 GeV/c, production of $g^0(1670)$ in, (E), 25:59288
- interactions $\pi^- + p \to n + X^0$, $X^0 \to \gamma + \gamma$ at 1.6 GeV/c, (E), 25:59290
- interactions $\pi^- + p \to p + MM^-$ at 3.25 GeV/c with high momentum transfer, differential cross sections for rho$^-$ production in, (E), 25:59312
- interactions $\pi^- + p \to p + \pi^+ + \pi^- + \pi^- + \pi^0$ at 13 and 20 GeV/c, multi-Regge model for, (E/T), 25:59300
- interactions $\pi^- + p \to \pi^0 + n$ at 2 to 5 GeV/c, partial wave amplitudes for, (E/T), 25:59304
- interactions $\pi^- + p \to \pi^0 + n$ at 3.67 and 4.83 GeV/c, Regge trajectory and isospin invariance in, (E), 25:59289
- interactions $\pi^- + p \to \pi^- +$ anything at 8 to 24.8 GeV/c in bubble chamber, cross sections for, (E), 25:59319
- interactions $\pi^- + p \to \pi^- + p$ at 3.0 to 5.0 GeV/c and 55 to 130°, scintillation counter and spark chamber study of angular distributions for, (E), 25:59285
- interactions $\pi^- + p \to \pi^- + p$, spin amplitudes for, (T), 25:59471 (CEA-N-1456)
- interactions $\pi^- + p \to \pi^+ + \pi^- + n$, S-wave $\pi\pi$ phase shift from, (E), 25:59306
- interactions $\pi^- + p \to \pi^- + \pi^- + \pi^+ + p$ at 7 and 25 GeV/c, production and decay of N*(1500) and N*(1700) in, 25:59307
- interactions $\pi^- + p \to$ rho^0 + n at 11 GeV/c, Regge-pole

  analysis of, (E/T), 25:59499
  interactions $\pi^- + p \to \text{rho}^0 + n$ at 7 GeV/c in bubble chamber, angular distributions from, (E), 25:59286
  interactions $\pi^- + p$ at 2 to 5 GeV/c, partial wave amplitudes for elastic, (E/T), 25:59304
  interactions $\pi^- + p$ at 3.25 GeV/c in hydrogen bubble chamber, rho$^-$ and rho^0 peripheral production cross sections and cross sections for two-prong, (E), 25:59314
  production in $p + p$ interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
  reactions $(\pi^-, 2\pi^-\pi^+)$ and $(\pi^-, 3\pi^- 2\pi^+)$ with nuclei at 17 and 45 GeV in emulsions, mean free paths for coherent, (E), 25:59313
  reactions with light nuclei at 4 GeV/c in freon bubble chamber, cross sections and mass distributions for coherent production of $\pi^+2\pi^-$ system in, (E), 25:59316
  scattering by bromine and silver at 3.5 GeV/c with charged-particle evaporation, charged-particle energy spectra and angular distributions for inelastic, (E), 25:59822
  scattering by carbon-12 at 120 to 260 MeV, Coulomb--nuclear interference and differential cross sections for elastic, (E), 25:59713
  scattering by carbon-12 at 180 MeV, Glauber approximation for differential cross sections for elastic, 25:59523
  scattering by helium-4, contribution of multiple scattering to total cross section for, 25:59524
MESONS (π^0)
  decay $\pi^0 \to 2\gamma$, relation between amplitudes for $\gamma + \gamma \to 3\pi$, $e^+ + e^- \to 3\pi$, and, 25:59357
  decay $\pi^0 \to \gamma + \gamma$ from production in $e^+ + e^-$ interactions, proposed experimental study of vertex for, 25:59253
  decay $\pi^0 \to \gamma + \gamma$, $\pi^+ \to e^+ + \nu + e^+ + e^-$ decay for amplitude of, 25:59412
  interactions $\pi^0 + \pi^0 \to \pi^0 + \pi^0$ constraints imposed by analyticity, crossing, and positivity on s- and d-wave, 25:59458
  interactions $\pi^0 + \pi^0$ below threshold, lower bound on amplitude for, 25:59459
  production in $e + e$, $e + p$, and $p + p$ interactions, two-photon generation mechanism for angular distributions and cross sections for, (T), 25:59370
  production in $e + p \to e + \pi^0 + p$ interactions, differential cross sections for, (E), 25:59353
  production in $e^+ + e^- \to e^+ + e^- + \pi^0$, $\pi^0 \to \gamma + \gamma$ interactions, cross sections for, 25:59389
  production in $e^+ + e^- \to \pi^0 + \gamma$ interactions in vector meson region, vector dominance model for cross sections for, (T), 25:59377
  production in $\gamma + N \to \pi^0 + N$ interactions, PCAC hypothesis from s-wave threshold amplitudes of, (E/T), 25:59373
MESONS (π^+)
  decay $\pi^+ \to e^+ + \nu + e^+ + e^-$, ratio of axial to vector form factor for $\pi^+ \to e^+ + \nu + \gamma$ decay, π electromagnetic radius, and sign of $\pi^0 \to \gamma + \gamma$ amplitude from, (T), 25:59412
  decay $\pi^+ \to e^+ + \nu + e^+ + e^-$, spark chamber study of upper limit for branching ratio for, (E), 25:59255(T) (BNL-tr-451)
  decay $\pi^+ \to e^+ + \nu + \gamma$, $\pi^+ \to e^+ + \nu + e^+ + e^-$ decay for ratio of axial to vector form factor for, (T), 25:59412
  decay $\pi^+ \to e^+(\mu^+) + e^+ + e^- + \nu$, integral probability for, (T), 25:59412
  interactions $\pi^+ + d \to d + \pi^+ + \pi^+ + \pi^-$ at 13 GeV/c, dual diffractive model for, (E/T), 25:59480
  interactions $\pi^+ + d \to p + p + \pi^+ + \pi^-$ at 7 GeV/c, production of $g^0(1670)$ in, (E), 25:59288
  interactions $\pi^+ + d \to$ p/sub s/ $+ p + \pi^+ + \pi^- + \pi^0$ at 7.0 GeV/c, production and decay of N*(1500) and N*(1700) in, 25:59307
  interactions $\pi^+ + d \to \pi^+ + d$ at 40 and 60 MeV, use of impulse approximation for calculation of differential cross sections for, (E), 25:59484
  interactions $\pi^+ + d \to \pi^+ + n + p$ at 40 and 60 MeV, use of impulse approximation for calculation of differential cross sections for, (E), 25:59484
  interactions $\pi^+ + d$ at 2.7 and 3.1 GeV/c in bubble chamber, resonance production in five- and six-charged-particle final states in, (E), 25:59282
  interactions $\pi^+ + n \to K^+ + \Lambda$ and $K^- + n \to \pi^- + \Lambda$, duality and exchange degeneracy from finite-energy sum rules, 25:59501
  interactions $\pi^+ + n \to \text{rho}^0 + p$ at 7 GeV/c in bubble chamber, angular distributions from, (E), 25:59286
  interactions $\pi^+ + p \to 2\pi^+ + \pi^- + p$ at 5 GeV/c, analysis of angular distributions in A_1 and A_2 regions in, (T), 25:59475
  interactions $\pi^+ + p \to \Delta^{++} + \text{eta}^0$ at 5 GeV/c, cross sections and spin-density matrix elements for, 25:59297
  interactions $\pi^+ + p \to \Delta^{++} + \pi^0$ at 5 GeV/c, cross sections and spin-density matrix elements for, 25:59297
  interactions $\pi^+ + p \to \Delta^{++} + \pi^+ + \pi^-$ at 8 GeV/c, S-wave resonance effects in $\pi + \pi$ interactions from, (E/T), 25:59296
  interactions $\pi^+ + p \to p + \pi^+$ at 5 GeV/c, cross sections and spin-density matrix elements for, (E), 25:59297
  interactions $\pi^+ + p \to p + \text{rho}^+$ at 5 GeV/c, cross sections and spin-density matrix elements for, (E), 25:59297
  interactions $\pi^+ + p \to \pi^- +$ anything at 18.5 GeV/c in bubble chamber, cross sections for, (E), 25:59319
  interactions $\pi^+ + p \to \pi^+ + p + \omega$ at 3.7 GeV/c, charge asymmetry on $\omega \to \pi^+ + \pi^- + \pi^0$ Dalitz plot from, (E), 25:59308
  interactions $\pi^+ + p \to \pi^+ + p$ at 3.0 to 5.0 GeV/c and 55 to 130°, scintillation counter and spark chamber study of angular distributions for, (E), 25:59285
  interactions $\pi^+ + p \to \text{rho}^0 + \Delta^{++}$ at 11.7 GeV/c, Regge-pole analysis of, (E/T), 25:59499
  interactions $\pi^+ + p \to \text{rho}^0 + \Delta^{++}$ at 11.7 GeV/c, total and differential cross sections for, (E/T), 25:59315
  interactions $\pi^+ + p \to \Sigma^+ + K^+$ at 1.28 and 1.41 GeV/c, test of charge independence in, (E/T), 25:59311
  interactions $\pi^+ + p$ at 1.28 to 1.84 GeV/c, total and differential cross sections for elastic, (E), 25:59309
  interactions $\pi^+ + p$ at 3.6 GeV/c in hydrogen bubble chamber, differential cross sections for elastic, (E), 25:59292
  interactions $\pi^+ + p$ at 8 GeV/c, spin analysis of g-meson from, 25:59298
  interactions $\pi^+ + p$ at 8.5 GeV/c, particle momentum distributions for two-, four-, six-, and eight-prong, (E), 25:59317
  production in $\gamma + p \to \pi^+ + n$ interactions, pseudomodel predictions for differential cross sections for, 25:59362
  production in γ reactions with aluminum, carbon, copper, and lead at 560 MeV, emulsion study of dependence on atomic weight for, (E), 25:59248
  production in $p + p$ interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
  reactions $(\pi^+,2p)$ with lithium-6, nitrogen-14, and oxygen-16 at 70 MeV, excitation spectra for, (E), 25:59709 (LA-DC-12389)
  reactions (π^+,p) with beryllium-9, carbon-12, and oxygen-16 at 70 MeV, excitation energy spectra and upper limits for cross sections for, (E), 25:59710 (LA-DC-12781)
  reactions (π^+,π^0) with carbon-13 at 180 MeV, Glauber approximation for differential cross sections for, 25:59523
  scattering by helium-4, contribution of multiple scattering to total cross section for, 25:59524
MESONS (rho)
  bootstrap from current algebra amplitudes for $\pi + \pi$ interactions, 25:59469
  coupling to photons, Veneziano-type representations for, (T), 25:59352
  decay of interfering rho--epsilon, statistical tensors for angular distributions in, 25:59461
  decay $\text{rho}^0 \to \pi^+ + \pi^-$, interference of $\omega \to 2\pi$ with, 25:59552
  interactions rho + N from photoproduction of e^+--e^- pairs at 4 GeV, real forward scattering amplitude for, (E), 25:59252
  interference with $\omega \to \pi^+ + \pi^- + \pi^0$ decay, search for C violation from, 25:59552
  interference with ω in photoproduction processes, phase of rho propagator for, 25:59348
  mass and width in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
  mixing of rho--ω in photon reactions (γ,e^+e^-) with nuclei, vector dominance model for, 25:59364
  photoproduction on carbon-12 at 4 GeV, relative rho--ω phase in, (E), 25:59252
  production in anti $p + n \to \pi^+ + 2\pi^- + \pi^0$ interactions at 5.5 GeV/c in deuterium bubble chamber, rate for single and upper limit for double, (E), 25:59276
  production in anti $p + p \to 2\pi^+ + 2\pi^-$ interactions at 2.5 GeV/c, (E), 25:59271
  production in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
  production in photon interactions with hadrons, parity rule and helicity conservation in, 25:59384
  production of rho^0 in $\pi^- + p \to \text{rho}^0 + n$ and $\pi^+ + n \to \text{rho}^0 + p$ interactions at 7 GeV/c in bubble chamber, differential cross sections for, (E), 25:59286
  production of rho$^-$ and rho^0 in $\pi^- + p$ two-prong interactions at 3.25 GeV/c in hydrogen bubble chamber, cross sections for peripheral, (E), 25:59314
  production of rho$^-$ in $\pi^- + p \to p + MM^-$ interactions at 3.25 GeV/c with high momentum transfer, differential cross sections for, (E), 25:59312
MESONS (X^0)
  decay $X^0 \to 2\gamma$, hard-meson current algebra and PCAC model for width of, 25:59443
  decay $X^0 \to \gamma + \gamma$ from production in $e^+ + e^-$ interactions, proposed experimental study of, 25:59253
  decay $X^0 \to \gamma + \gamma$ from production in $\pi^- + p$ interactions at 1.6 GeV/c, branching ratio for, (E), 25:59290
  decay $X^0 \to \text{rho}^0 + \gamma$, hard meson current algebra and PCAC model for width of, 25:59443
  mixing of eta and X^0 for cross sections of $e^+ + e^- \to \text{eta}(X^0) + \gamma$ interactions in vector meson region, linear

and quadratic, (T), 25:59377

- production in $e^+ + e^- \to e^+ + e^- + X^0$, $X^0 \to \gamma + \gamma$ interactions, cross sections for, 25:59389
- production in $e^+ + e^- \to X^0 + \gamma$ interactions in vector meson region, vector dominance model with linear and quadratic mixing of eta and X^0 for cross sections of, (T), 25:59377

MESONS, RESONANCE

- bootstrap of sigma from current algebra amplitudes for $\pi + \pi$ interactions, 25:59469
- decay $A_2 \to 3\pi$ in deuterium bubble chamber, (E), 25:59280
- decay $A_2^- \to$ eta $+ \pi^-$ in bubble chamber, A_2^- spin and parity and production mechanism in $\pi^- + p \to A_2^- + p$ interactions at 3.9 and 16 GeV/c in bubble chamber from, (E), 25:59279
- decay delta(966) $\to$ eta $+ \pi$, chiral invariant Lagrangian with massive gauge fields for, 25:59449
- decay eta(1060) $\to 2\pi$, chiral invariant Lagrangian with massive gauge fields for, 25:59449
- decay K(1160) $\to K + \pi$, chiral invariant Lagrangian with massive gauge fields for, 25:59449
- decay of A_1, helicity properties of, 25:59551
- decay of B, helicity properties of, 25:59551
- decay of interfering A_2--background, statistical tensors for angular distributions in, 25:59461
- decay of interfering, statistical tensors for angular distributions in, 25:59461
- decay of K(1760), angular distributions and cross sections for, (E), 25:59318
- decay sigma(730) $\to 2\pi$, chiral invariant Lagrangian with massive gauge fields for, 25:59449
- existence of quasinuclear 2N2antiN, potential approach for, (T), 25:59500
- interactions $A + \pi \to A + \pi$, Veneziano amplitude for, (T), 25:59464
- interference between A_1^+ and A_2^+ in $\pi^+ + p \to 2\pi^+ + \pi^- + p$ interactions at 5 GeV/c, (T), 25:59475
- mass and width in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- mass and width of g(1670), 25:59298
- mass and width of rho (765) in anti $p + p \to$ anti $p + p + \pi^+ + \pi^-$ interactions at 7 GeV/c, (E), 25:59267
- mixing angle for eta and eta' in five- and six-body final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, SU(3), (E), 25:59282
- parity and spin of A_2 from angular distributions for $A_2 \to 3\pi$ decay in deuterium bubble chamber, (E), 25:59280
- parity and spin of A_2^- and daughter from $A_2^- \to$ eta $+ \pi^-$ decay in bubble chamber, (E), 25:59279
- parity and spin of s-wave π rho enhancement in $\pi^+ + p \to 2\pi^+ + \pi^- + p$ interactions at 5 GeV/c, (T), 25:59475
- production and decay of g(1670), 25:59298
- production in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- production of A_2 in Λ and Σ^0 four-body final states in $K^- + n$ interactions at 4.48 GeV/c in deuterium bubble chamber, (E), 25:59280
- production of A_2^- in $\pi^- + p \to A_2^- + p$ interactions at 3.9 and 16 GeV/c in bubble chamber, mechanism for, (E), 25:59279
- production of $g^0(1670)$ in $\pi^+ + d \to p + p + \pi^+ + \pi^-$ and $\pi^- + p \to n + \pi^+ + \pi^-$ interactions at 7 GeV/c, cross sections and spin--parity analysis of, (E), 25:59288
- production of K^* in anti $p + p$ interactions at 2.5 GeV/c, cross sections for, (E), 25:59272
- production of K(1760) in $K^+ + n \to K^+ + \pi^- + p$ and $K^+ + n \to K^0 + \pi^+ + \pi^- + p$ interactions at 9 GeV/c in deuterium bubble chamber, isospin, mass, spin--parity, and widths of, (E), 25:59318
- production of π rho s-wave enhancement in $\pi^+ + p \to 2\pi^+ + \pi^- + p$ interactions at 5 GeV/c, (T), 25:59475
- production of $\pi^+2\pi^-$ system in π^- reactions with light nuclei at 4 GeV/c in freon bubble chamber, cross sections and mass distributions for coherent, (E), 25:59316
- production of rho (765) in anti $p + p \to$ anti $p + p + \pi^+ + \pi^-$ interactions at 7 GeV/c, (E), 25:59267
- production of $S^*(1070)$ in anti $p + p \to 2\pi^+ + 2\pi^-$ interactions at 2.5 GeV/c, (E), 25:59271
- production of S(1727), S(1414), d(1382), and d(1855) in N anti N system from $e^+ + e^-$ colliding-beam interactions, (T), 25:59358
- properties of K(1760), (E), 25:59318
- spin and parity of eta', D, and E in five- and six-charged-particle final states in $\pi^+ + d$ interactions at 2.7 and 3.1 GeV/c in bubble chamber, (E), 25:59282
- spin of g(1670) from production in $\pi + p$ interactions, 25:59298
- theory for, Regge trajectory with finite asymptotic phase in, (T), 25:59451
- width of s-wave π rho enhancement in $\pi^+ + p \to 2\pi^+ + \pi^- + p$ interactions at 5 GeV/c, (T), 25:59475

MESOSPHERE

- development of, from time variations of electron, negative and positive ion densities during sunrise, (E), 25:58859

METAL SPRAYING

- method for preparation of radiation targets, 25:58183 (CONF-711002-, pp 160-5)

METALLIC FOILS

- radiation effects on, design of low-temperature irradiation facility for studies of heavy ion, 25:57620 (RISO-204)

METALLOGRAPHY

- conference on, Cleveland, Ohio, Nov. 16 to 18, 1970, 25:58396

METALLURGICAL EQUIPMENT

- performance of Classimat, for metallographic analysis of molybdenum--thorium oxide spheres, 25:58388 (MLM-OP-71006)

METALS

- corrosion protection of, properties of oxide--phosphate coating for, 25:58375
- determination of trace amounts of, by electrochemical preconcentration and neutron activation, 25:57393
- diffusion of hydrogen through oxide-coated, 25:57298 (ORNL-4676, pp 73-138)
- electron excitation in, (T), 25:59204
- ion reactions with vapors of, review of excited atom formation by charge exchange in, 25:58691
- machining of cylindrical apertures in, by electroerosion, 25:58193
- pressure of flowing liquid, electromagnetic method for measuring, 25:57646(P)
- production of hard, using tungsten carbide, 25:58261
- radioinduced dislocation pile-up in, relations of thermal activation with neutron, 25:58337
- radioinduced void formation in high-purity, review of, 25:58299 (ORNL-TM-3495)
- radioinduced void formation in, conference on, 25:58304
- radioinduced void formation in, relations with dose and temperature, 25:58312
- radioinduced void formation in, review of fast neutron, 25:58305
- radioinduced void formation in, use of ion bombardment to simulate fast neutron, 25:58320
- radioinduced void swelling in, use of high-voltage electron microscope to simulate fast neutron, 25:58326
- thermodynamic properties of liquid, at high temperatures and pressures, equipment for measuring, 25:57635
- void formation and behavior in quenched fcc and hcp, 25:58317

METEORITES

- analysis for selenium by neutron activation, 25:57380
- nitrogen abundance in iron, (E), 25:58423

METEORS

- analysis of iron, for cobalt by neutron activation and γ spectrometry, 25:57386
- antimatter in streams of, annihilation radiation from, (E), 25:58836

METHACRYLIC ACID

- reactions with solvated electrons, rate constant of, 25:57475

METHACRYLIC ACID, METHYL ESTER

- reactions with solvated electrons, rate constant of, 25:57475

METHANE

- deuterium-hydride scattering by, velocity dependence of total effective cross sections for, 25:58782
- deuterium-molecule scattering by, velocity dependence of total effective cross sections for, 25:58782
- helium-atom scattering by, velocity dependence of total effective cross sections for, 25:58782
- iodine-ion reactions at 12 MeV with, electron-capture and -loss cross sections for, (E), 25:58768
- reactions with recoil bromine-80 and bromine-82 from isomeric transition, 25:57491
- yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474

METHANE, BROMO-

- bromine-80m isomeric transition in, explosion model for fragment distribution from, 25:57501
- radiation effects on, explosion model for fragment distribution from x, 25:57501
- reactions with recoil bromine-80 and bromine-82 from isomeric transition, 25:57492

METHANE, IODO-

- removal by sodium thiosulfate in ice cubes of ice condenser reactor containment systems, (E), 25:60124
- removal from reactor containment, efficiency of activated carbon filters for, (T), 25:60088

METHANESULFONIC ACID, ETHYL ESTER

- effects on yeast, studies on genetic control of mutagenic, 25:57976

METHIONINE

- radioprotective effects against ulceration in rabbit skin, x, 25:58036

METHYLIDYNE

- abundance in delta Scu, (E), 25:58479
- abundance in sunspots, (E/T), 25:58589
- spectra of, frequency of 10 cm radio line in, (E), 25:58700

MICA

- positron emission from positron-bombarded, 25:58681

MICE

- carcinogenicity of 7,12-dimethylbenz [a] anthracene in, effects of deuterium on, 25:57920
- cleft palate and oligodactylia induction in, following in utero exposure to cyclophosphamide, 25:58127
- plutonium-239 distribution in, whole-body autoradiographic method for measurement of, 25:57998

XUM

(NIRS-Pu-8)
  radiation effects on adult, neonatal, and weanling, protective effects of tibial shielding against x, 25:58110
  radiation effects on central nervous system of, review of research on, 25:58143
  radiation effects on growth of transplanted sarcomas in, effects of dose on electron and x, 25:58083
  radiation effects on hematopoiesis in, effects of partial marrow shielding on x, 25:58124
  radiation effects on incidence of cleft palate and oligodactylia in embryos of, in utero exposure x, 25:58127
  radiation effects on intestinal and spleen colony formation and survival of, effects of oxygen on RBE for, 25:57997 (LBL-314)
  radiation effects on relation between total iron-59 uptake and uptake by heme and nonheme fractions of bone marrow and spleen of, x, 25:58119
  radiation effects on sensitivity of lymphoid cells of, to antisera, x, 25:58120
  radiation effects on spleen weight in, effects of dose fractionation on whole-body cobalt-60 γ and x, 25:58108
  radiation effects on survival of, following sublethal hemorrhagic shock, whole-body, 25:58109
  radiation effects on survival of, protective effects of tissue preparations against x, 25:58033
  radiation effects on thymus of, role of bone marrow transplants in recovery from x, 25:58115
  radiation effects on ultrastructure of thymus cells in, x, 25:58114
  radioinduced injuries of intestinal mucosa in, regeneration following gamma and x, 25:58111
  radioinduced lesions in blood, bone marrow, and lungs of, similarity between lesions induced by vaccinal disease and, 25:58128
  radioinduced mutations in germ cells of adult, embryonic, and newborn male, comparison of frequency of x, 25:57967
  redox potential in muscles of, effects of cystamine on, 25:58031
  scintiscanning of blood pool and liver in, effects of pH on distribution of metastable indium-113 during, 25:58043
  ultrastructure of thymus cells in, effects of cortisone and polyoma virus infections on, 25:58114

MICROSOMES
  radiation effects on phospholipase A activity in dog sarcoma, γ, 25:57940

MICROWAVES
  absorption by plasma at upper hybrid frequency, (E), 25:59091
  cosmological implications of cosmic background, (T), 25:58666
  interactions with thermally magnetized plasma, nonlinear harmonic radiations from, (E), 25:59013 (CEA-CONF-1835)
  scattering on plasma, diagnostic use of, 25:58995
  use with interferometers for plasma measurements in JFT-2 device, (E), 25:58979 (JAERI-Memo-4530)

MIDLAND POWER REACTOR, UNIT 1
  effluents from, effects on environment of radioactive and thermal, 25:59978 (DOCKET-50329-27)
  site for, biological data for, 25:59978 (DOCKET-50329-27)

MIDLAND POWER REACTOR, UNIT 2
  effluents from, effects on environment of radioactive and thermal, 25:59978 (DOCKET-50329-27)
  site for, biological data for, 25:59978 (DOCKET-50329-27)

MIDWEST FUEL RECOVERY PLANT
  operation authorization request for, requiring source, special nuclear, and by-product materials, 25:57515 (DOCKET-50268-15)

MIHAMA POWER REACTOR, UNIT 1
  containment structure for, leak rate test for, 25:60000
  emergency power supplies for, design features of, 25:59930
  testing of, performance during power, 25:59927

MILK
  analysis for cesium-137 by radiochemical isolation and γ spectrometry or beta detection, 25:57355
  iodine-131 content of cows', following ingestion of hay contaminated with Plowshare debris, 25:57948 (SWRHL-85-r)
  iodine-131 content of off-site, following Schooner Event, (E), 25:57574 (PNE-524)
  radioisotope content of, in Central, North, and South America during March 1971, 25:57990
  radioisotope content of, in Central, North, and South America during April 1971, barium-140, cesium-137, iodine-131, strontium-89, and strontium-90, 25:57983
  radioisotope content of, in Europe, New Zealand, and USA during 1970, 25:57980(R) (HASL-245)
  strontium-90 content of New York City, during 1970, 25:57981(R) (HASL-245(App.))
  tungsten-187 content of off-site, following Schooner Event, (E), 25:57574 (PNE-524)

MILKY WAY
  cooling processes for interstellar medium, (E/T), 25:58623
  gas motions in disk of, (T), 25:58649
  hydrogen distribution in, ionized, (E/T), 25:58528
  hydrogen distribution in, neutral, (E), 25:58651
  hydrogen in central region of, neutral, (E), 25:58652
  interstellar loop structures in, similarity models of, (T), 25:58640
  loops in, supernova-remnant origin of, (E/T), 25:58628
  magnetic field lines in, stochastic, (T), 25:58657
  map of nucleus of, at 10 μ, (E), 25:58639
  model for, considering far-uv radiation, 25:58638
  model of, density computation for phase--space, (T), 25:58641
  nucleus of, model for, (E/T), 25:58624
  photometry of southern, near-uv surface, (E), 25:58653
  star formation in nucleus of, (E/T), 25:58624
  stars in southern, visual and infrared magnitudes of carbon, (E), 25:58500
  structure in, theory of spiral, 25:58634
  ultraviolet background in, (T), 25:58638
  x-ray background in, spectrum and isotropy of, (E), 25:58650

MILLSTONE POINT POWER REACTOR, UNIT 1
  coolant blowdown in, effects of relief valve failure during pressure transient on, 25:59912 (DOCKET-50245-99)
  emergency core cooling system for, performance evalution of, 25:59943 (DOCKET-50245-95)
  operation of, request for not suspending license for, 25:59944 (DOCKET-50245-98)
  shutdown of, effects on regional power supply of, 25:59956 (DOCKET-50271-63)
  shutdown of, malfunction of turbine pressure control system for pressure transient actuated, 25:59912 (DOCKET-50245-99)
  startup of, 25:59911 (DOCKET-50245-96)
  testing program for, preoperational, 25:59911 (DOCKET-50245-96)
  turbines for, force imbalance corrections for pressure control valve for, 25:59910 (DOCKET-50245-94)

MILLSTONE POINT POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59984 (DOCKET-50336-23)
  startup of, effects on regional power supply of delay in, 25:59956 (DOCKET-50271-63)

MISSISSIPPI
  site of Dribble Project in, core and logging data on Hydrologic Test Well 2 at, 25:57563 (USGS-474-111)
  site of Dribble Project in, core and logging data on Hydrologic Test Well 1 at, 25:57562 (USGS-474-110)
  stratigraphy around Tatum dome in Lamar County, effects on seismic wave propagation, 25:57595 (USGS-474-112)
  stratigraphy of southeastern, near Project Dribble site, 25:57596 (USGS-474-129)

MITOCHONDRIA
  radiation effects on aminotransferase activiy in rat tissue, x, 25:57933
  radiation effects on ATP activity in rat liver, radon, 25:57932
  radiation effects on phospholipase A activity in dog sarcoma, γ, 25:57940
  radioinduced degeneration of HeLa cell, electron microscopy of x, 25:58085

MITOSIS
  effects of time of onset of, on fast neutron, γ, and x radiosensitivity of chromosomes in seeds of Crepis capillaris, 25:57968
  radiation effects on cultured human cancer cell, additive effects of colchicine on γ, 25:58080
  radiation effects on rat liver cell, mechanism for x, 25:58130
  radiation effects on, in bone marrow cells of laboratory and wild rats, comparison of x, 25:58116

MIXER-SETTLERS
  development for liquid metal--molten salt systems, 25:57508 (ANL-7810)

MOESSBAUER EFFECT
  research progress on, 25:57442
  temperature shift in, equivalence with gravitational red shift for, (T), 25:59596

MOLECULES
  atom reactions at thermal energies with, cross sections for ionization in excited-, (T), 25:58750
  atom reactions with diatomic, adiabatic-approximation calculations of vibrational transition probabilities in, 25:58761
  atom reactions with diatomic, reaction matrix method for calculation of transition probabilities in, 25:58762
  atom reactions with diatomic, semiclassical treatment of Morse-oscillator systems, 25:58727
  electron reactions with diatomic, selection rule for Σ^+--Σ^- transitions in, 25:58732
  electron reactions with, review of energy resolution in, 25:58747
  electron scattering by, compound states in, (T), 25:58804
  ion reactions with, additive rule for charge-exchange cross sections for, 25:58768
  ion reactions with, Doppler broadening due to thermal motion of molecules in beam experiments on, (T), 25:58752

potentials of diatomic, development of perturbation method to study Morse-like, 25:58372
reactions with atoms and molecules with formation of long-lived complexes, angular distribution of products from, (T), 25:58773
spectral hyperfine effects in, many-body theory for, 25:58794
structure of quark, electronic, 25:59344

MOLTEN SALT BREEDER EXPERIMENT
design of single fluid 1000 MW(e), 25:60015 (ORNL-4676, pp 21-72)
design parameters of, 25:60015 (ORNL-4676, pp 21-72)
fission product removal from fuel salt in, performance of gas separators and bubble generators for, (E), 25:60015 (ORNL-4676, pp 21-72)

MOLTEN SALT BREEDER REACTOR
fuel processing for, development of test stand for, 25:58168 (ORNL-4676, pp 139-233)
fuel reprocessing for, 25:57298 (ORNL-4676, pp 73-138)
fuel reprocessing for, flowsheet analysis for, 25:57522 (ORNL-4676, pp 234-71)
fuel salt for, heat and mass transfer and thermophysical properties of, (E/T), 25:60015 (ORNL-4676, pp 21-72)
heat exchangers for, effects of tubing failures in, (T), 25:60015 (ORNL-4676, pp 21-72)
heat exchangers for, shutdown temperature transients in empty, (T), 25:60015 (ORNL-4676, pp 21-72)
physics analysis of single fluid 1000 MW(e), 25:60015 (ORNL-4676, pp 21-72)
steam generator for, hybrid computer simulation model of, 25:60015 (ORNL-4676, pp 21-72)
tritium distribution and control in, (T), 25:60015 (ORNL-4676, pp 21-72)

MOLTEN SALT REACTOR EXPERIMENT
components for, evaluation of stability of, 25:58168 (ORNL-4676, pp 139-233)
coolant salt flowmeter for, accuracy of differential pressure system on, (E), 25:60096 (ORNL-4676, pp 1-20)
coolant salt for, postoperation inspection of pump for, 25:60015 (ORNL-4676, pp 21-72)
core for, postoperation examination of, 25:60096 (ORNL-4676, pp 1-20)
fission product chemistry in, 25:57298 (ORNL-4676, pp 73-138)
fuel pump bowl in, examination of deposits from mist shield in, 25:57298 (ORNL-4676, pp 73-138)
fuel pumps bowl for, postoperation examination of, 25:60096 (ORNL-4676, pp 1-20)
fuel salt for, postoperation inspection of Mark 2 pump for, 25:60015 (ORNL-4676, pp 21-72)
fuel salt freeze valve for, postoperation inspection of leak in, 25:60096 (ORNL-4676, pp 1-20)
fuel salt processing plant for, residual plutonium and uranium in, 25:60096 (ORNL-4676, pp 1-20)
heat exchanger for, postoperation examination of, 25:60096 (ORNL-4676, pp 1-20)
maintenance of, tools and procedures for remote, 25:60096 (ORNL-4676, pp 1-20)

MOLYBDENUM
analysis for oxygen by 14-MeV neutron activation and γ spectrometry, 25:57376
crystal lattice defects in, effects on proton diffraction patterns, 25:58275
Debye--Waller factor of, temperature dependence of, 25:59179
determination by potentiometric titration using potassium chlorate, 25:57309
determination in fertilizers by atomic absorption spectrophotometry, 25:57306
determination of trace amounts of, by kinetic biamperometric method, 25:57336
determination using salicylhydroxamic acid, gravimetric, 25:57308
diffusion in chromium and titanium films, ion--ion emission studies on, 25:58266
ductility of crystallized wires of, effects of carbon content and grain size on, 25:58269
effects on complexonometric determination of rare earths, 25:57317
effects on hardness of dispersion-hardening iron-base alloys, 25:58235
electric conductivity of laser-evaporated films of, temperature coefficient of, 25:59186
electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
fabrication of MSBR fuel processing test stand components of, 25:58168 (ORNL-4676, pp 139-233)
helium-ion reactions at 45 to 90 keV/amu with, helium-isotope dependence of cross sections for L-shell ionization in, (E), 25:58776
machining of cylindrical apertures in, by electroerosion, 25:58193
mechanical properties of single crystals of, effects of carbon and iron-group metals on, 25:58257
mechanical properties of wires of, effects of gas evolution at 1500°C on, 25:58221
photon reactions with, secondary electron emission from, (E/T), 25:59107
preparation by hydrogen reduction of molybdenum trioxide, 25:58189
preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)
radiation effects on microstructure of, comparison of 2-MeV nitrogen ion and fast neutron, 25:58332
radiation effects on regular void array in high-purity, high-temperature 2-MeV nitrogen ion, 25:58340
radioinduced void formation in, electron microscopic study of fast neutron, 25:58309
radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
slip bands in single crystals of, x-ray topography method for measuring, 25:58271 (CALT-767-P-3-19)
solvent properties for nitrogen at high temperatures, 25:58249
structure of polycrystalline, during extrusion hardening, 25:58277
structure of, effects of deformation temperature on, 25:58231
surface energy and work function of smooth faces of monocrystal of, (T), 25:59194
thermal conductivity at 8 to 2037°C, 25:58344(R) (LA-4693)
thermal cycling stability of, effects of rhenium on, 25:58247
vapor deposition on iron alloys by reduction of molybdenum hexafluoride, 25:58168 (ORNL-4676, pp 139-233)
void lattice structure in, (T), 25:58313
weld defects in, morphology of, 25:58215 (Y-DA-4280)

MOLYBDENUM ALLOYS AND SYSTEMS
mechanical properties of, effects of deformation temperature on, 25:58231
Al--Cr--Mo--W, development of cast, for turbine blades, 25:58203
Al--Mo, structure of drops of, formed at high cooling rates, 25:58284
C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
C--Mo--Ni, phase composition in molybdenum-rich solutions of, at 1200 to 1800°C, 25:58290
C--Mo--Zr, phase studies of, 25:58273
C--Mo-base, crystallization and carbide phase formation in, effects of carbon content on, 25:58282
Co--Fe-base--Mo, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
Co--Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
Co-base--Fe--Mo--Ti, magnetic properties of wires of, 25:59197
Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
Mo--Nb, composition of electronic-melted zone liquation-produced, 25:58260
Mo--Nb, solvent properties for nitrogen at high temperatures, 25:58249
Mo--Nb-base, creep at 1100 to 1300°C, effects of molybdenum content on steady, 25:58222
Mo--Nb-base--Zr, machining characteristics of, at high and low temperatures, 25:58198
Mo--Ni, hardness and structure of electrodeposited, 25:58256
Mo--PuO_2, aging experiments on curium oxide-doped cermet pellets of, flowsheets for, 25:57658(R) (ORNL-4723)
Mo--PuO_2--ThO_2, etching of sintered, for optical microcopy, method for, 25:58354
Mo--Sn--Ti-base--Zr, tensile properties of Beta III, at room temperature, 25:58234
Mo--ThO_2, metallographic properties of cermet spheres of, 25:58388 (MLM-OP-71006)
Mo--ThO_2, preparation of cermets of, development of cold- and hot-press sintering methods for, 25:57658(R) (ORNL-4723)
Mo--Ti, thermodynamic properties at 1844 and 1900°K, triple Knudsen-cell measurements of, 25:58265
Mo--UO_2-base, preparation of dense homogeneous, method for, 25:58348 (LFEN-NI.-53-a)
Mo--W, solvent properties for nitrogen at high temperatures, 25:58249
Mo-base--Nb, thermal cycling of monocrystals of, dimensional effects of, 25:58247
Mo-base--Ti, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
Mo-base--W, mechanical properties and recrystallization temperature of, effects of tungsten content on, 25:58248
Mo-base--W--Zr, mechanical properties and recrystallization temperature of, effects of tungsten and zirconium contents on, 25:58248

MOLYBDENUM FLUORIDES
reactions in molten lithium beryllium fluoride solutions, kinetics of, 25:57298 (ORNL-4676, pp 73-138)

MOLYBDENUM ISOTOPES Mo-92
nuclear charge distribution from electron elastic scattering, (E), 25:59791

MOLYBDENUM ISOTOPES Mo-99
separation of technetium-99m from, by solvent extraction

XUM

  and ion exchange, 25:57483

MOLYBDENUM OXIDES
  performance as lubricant for deep drawing of nickel alloys and stainless steel, 25:58195
  redox potential of molten MoO_3 at 850°C, effects of oxygen pressure on, 25:58374
  reduction to metal using hydrogen, effects of water vapor on, 25:58189

MONAZITES
  analysis for uranium by solvent extraction and polarography, 25:57334

MONTICELLO POWER REACTOR, UNIT 1
  emergency core cooling system for, startup problems with high pressure injection, 25:59913 (DOCKET-50263-88)
  operation of, request for not suspending license for, 25:59953 (DOCKET-50263-87)
  radioactive waste disposal system, revised and additional data on gaseous, 25:59952 (DOCKET-50263-86)

MOON
  atmosphere of, distribution, escape, source, and contamination of gaseous, 25:58679
  composition and physical characteristics of, review of Apollo 11, 12, and 14 and Luna 16 data of, 25:58677
  radon-222 distribution on surface of, uniform and pile-up, (E/T), 25:58680
  volcanism on, evidence for, (E), 25:58678

MUCOSA
  radioinduced injuries of mouse intestinal, regeneration following gamma and x, 25:58111

MUSCLES
  redox potential in dog, mouse, and rat, effects of cystamine on, 25:58031

MUTATIONS
  localization of x-radioinduced suppressor, in Drosophila chromosomes, 25:57975
  radiation effects on frequency of somatic recombinations in tobacco chlorophyll, γ, 25:57977
  radioinduced, in bacteriophage phi X174, effects of oxygen, nitrogen, and thiourea on gamma and x, 25:57971
  radioinduced, in Drosophila, antagonistic effects of vibrations on gamma, 25:57953
  radioinduced, in Escherichia coli, effects of 5-bromouracil substitution of DNA on frequency of uv, 25:57965
  radioinduced, in germ cells of adult, embryonic, and newborn male mice, comparison of frequency of x, 25:57967
  radioinduced, in Neurospora, effects of diepoxybutane on uv, 25:57954
  radioinduced, in peas following seed exposure, comparison of neutron and x, 25:57960
  radioinduced, in spores of Actinomyces hygroscopicus, effects of hygromycin B and streptomycin on frequency of x, 25:57964
  radioinduced, in xiphophorin fish for macromelanophores, synergistic effects of hybridization on x, 25:57957
  radioinduced, in yeast, studies on genetic control of uv and x, 25:57976

MUTSU REACTOR
  design parameters of, 25:60205
  operation of, effectiveness of air conditioning system for filtering airborne radioactivity during, 25:60205

N

NAPHTHALENE
  effects on γ-radioinduced polymerization of styrene in carbon tetrachloride or hexachlorobutadiene solutions, 25:57454

NATIONAL ACCELERATOR LABORATORY SYNCHROTRON
  beam injection booster synchrotron for, computer-based instrumentation and control system using CAMAC for 8-GeV, 25:59664
  beam injector booster synchrotron for, CAMAC control system for, 25:59655

NATIONAL REACTOR TESTING STATION
  protection systems at, fault tree analysis and reliability methods for performance of, 25:60187

NATURAL GAS
  decontamination of nuclear explosion-produced, method for underground storage for, 25:57605(P)

NBS RESEARCH REACTOR
  heat exchanger for, replacement of primary system, 25:60151 (DOCKET-50184-33)
  operations during January to June 1971, 25:60150 (DOCKET-50184-32)

NEBULAE
  chlorine abundance in Orion, (E), 25:58593
  distance to NGC 1579, (E), 25:58504
  electron densities in Orion A and M17, (E), 25:58546
  gamma-ray production in, surrounding pulsar, (T), 25:58550
  helium abundance in Orion, (E/T), 25:58446
  radiative transfer problems in gaseous, line and continuum, (T), 25:58473
  radio recombination lines in Orion A and M17, Stark broadening of, (E), 25:58546
  spectra of gaseous, level populations of hydrogenic ions in, (E/T), 25:58516
  spectra of Orion, emission, (E), 25:58513
  survey of planetary, at 9.3, 4.5, and 2.8 cm, (E), 25:58544

NEMATODA
  Ascaridia galli, use of γ irradiated eggs of, for immunization of chickens, 25:57946

NEODYMIUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  complexes with HEDTA, dissociation constants for, 25:57537
  desorption from tungsten filaments using electric field, 25:58230
  determination in pyrolytic graphite by neutron activation and counting of delayed β and γ coincidences, 25:57389
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  energy levels of, from analysis of spectra between 2450 and 40500 A, 25:58705
  oxidation potential for trivalent--tetravalent, 25:57437
  separation from europium and samarium in chloride solution by solvent extraction using DEHPA in heptane, factors for, 25:57543
  separation from fission products by electromigration following complexing with nitrilotriacetic acid, 25:57558
  solubility in chromium at 1000 to 1800°C, metallographic, microhardness, and x-ray diffraction measurements on, 25:58237
  solubility in lithium--bismuth solutions, 25:57522 (ORNL-4676, pp 234-71)

NEODYMIUM IONS
  energy level calculations for Nd IV, using Hartree--Fock method, 25:58709
  energy levels of Nd II, from analysis of spectra between 2450 and 42500 A, 25:58705

NEODYMIUM ISOTOPES Nd-142
  electron scattering at 129.4, 199.3, 299.1, and 499.5 MeV, differential cross sections for, (E), 25:59793
  energy-level scheme from samarium-142 decay, 25:59821
  nuclear charge distribution from electron differential scattering cross sections at 129.4, 199.3, 299.1, and 499.5 MeV and least squares analysis, (E/T), 25:59793

NEON
  electric discharges in alkali-metal-seeded, properties of high-current, 25:59023
  electron reactions with, model potentials for, 25:58772
  ion reactions in keV range with, effects of velocity and outer-shell configuration on K-vacancy production in, (E), 25:58756
  ionization in lunar atmosphere and associated properties, 25:58679
  plasma jets of, interferometric determination of temperature in, (E), 25:58984
  plasma jets of, spectroscopic diagnostics of, 25:58991
  plasma of, in pseudo equilibrium with additions, interactions of, 25:59018
  plasma of, metastable densities in neutron environment, (E/T), 25:59003
  positron annihilation in, time dependence of, (E), 25:58725

NEON IONS
  effects on benzene vapor at 60 keV, yields from, 25:57469
  effects on germanium monocrystals at 10 to 30 keV, electron emission induced by, 25:59175
  emission spectra of, in solar corona, (E), 25:58621
  reactions with germanium crystals at 10 to 30 keV, angular dependence of, (E/T), 25:59146
  reactions with neon and nitrogen molecules in keV range, production of K vacancies in, (E), 25:58756
  x-ray spectra of solar, (E), 25:58583

NEON ISOTOPES Ne-19
  energy levels at 1.508 and 1.536 MeV from fluorine-19 (p,n) and oxygen-16 (α,n) reactions, lifetimes of, (E), 25:59719

NEON ISOTOPES Ne-20
  deuteron reactions (d,He-3) with, coupled-channel analysis for inelastic effects in, (T), 25:59758
  electron reactions with, production of meson (π) in bound state from, 25:59355
  energy levels from carbon-12 (C-12,α) reactions, evidence for quartet, (E), 25:59717
  energy levels from carbon-12 (N-14,Li-6) reactions, structure of upper $K = 0^+$, (E), 25:59743
  energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
  energy levels of, calculation for α-hole, 25:59757
  production in stars from simple helium burning, (E), 25:58508

NEON ISOTOPES Ne-24
  energy levels of, description using mixed oblate and prolate Hartree-Fock solutions, (T), 25:59728

NEON SYSTEMS
  He--Ne, atomic metastable densities in neutron environment, (E/T), 25:59003
  N--Ne, plasma decay in mixtures of, ion production and loss in, (E), 25:59019

NEPTUNIUM
  deposition as oxide on instrument parts of stainless steel, electrolytic, 25:57440
  oxidation of hexavalent, by potassium persulfate,

  kinetics of, 25:57412
  oxidation potential for trivalent--tetravalent, 25:57437
  preparation and properties of heptavalent, 25:57404
  preparation of radiation targets of, methods for, 25:59634 (CONF-711002-, pp 59-69)
  preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)
  preparation of thin films of, by electrophoresis and electrospraying, 25:58183 (CONF-711002-, pp 160-5)
  reactions of hexavalent and pentavalent, with hydrogen peroxide in nitric acid, 25:57414
  separation from aqueous solutions by solvent extraction using TTA, 25:57535
  separation from other actinides by paper or thin-layer chromatography, 25:57553
  separation from plutonium and promethium by ion exchange chromatography on zirconium phosphate, 25:57550
  separation of various valence forms of, by paper or thin-layer chromatography, 25:57553
  spectra of hexavalent, in dilute sodium carbonate solutions, absorption, 25:57403
NEPTUNIUM ISOTOPES
  cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)
NEPTUNIUM OXIDES
  preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
NEPTUNIUM SULFATES
  complexes with cobalthexaammine ion, preparation and structure of, 25:57403
NERVES
  radiation effects on electrophysiological activity of, sensitizing effects of dyes on uv, 25:57942
  radiation effects on membranes of isolated fibers of crab, studies on role of nucleotides in excitability characteristics using uv, 25:57939
NERVOUS SYSTEM
  radiation effects on central, review of research on, 25:58143
  radiation injuries to rat, effects of focal distance on x, 25:58098
NETHERLANDS
  radioactivity monitoring of airborne dusts over, 1967, 25:57575 (RA-42)
NEUTRINOS
  emission from hot dense stars, URCA process in, (T), 25:58492
  fields in presence of gravitational field, positive energy density for, 25:59589
  interactions and properties of, (T), 25:59403
  interactions $\nu + N \to l +$ meson + baryon, urbaryon model of hadrons for, 25:59394
  interactions $\nu + n \to \mu^- + p$ in Veneziano model, $(\mu + n)$ resonance in, 25:59395
  production in annihilation of polarized leptons, (T), 25:59402
  reactions $(\nu,\mu^- W^+)$ with nuclei at high energies, angular and energy distributions for W production in, 25:59410
  reactions with nuclei, Coulomb corrections to Adler PCAC test in inelastic, 25:59406
  scattering by aluminum-27 and iron-56, weak nucleon processes for impulse approximation for quasielastic forward, (T), 25:59397
  theory for, weak leptonic and semileptonic processes for two- and four-component, (T), 25:59407
NEUTRINOS (ν/sub μ/)
  interactions $\nu + N \to \mu^- +$ meson + baryon, urbaryon model of hadrons for, 25:59394
  interactions $\nu + N \to \mu^- + W^+ + N$, μ^- angular and momentum distributions for, (T), 25:59414
  interactions $\nu + N$ at high energies, μ spectra from, (T), 25:59417
  mass from μ polarization in $\pi^- \to \mu^- +$ anti ν decay, 25:59257
  reactions with iron, angular and momentum distributions of μ^+ and e^+ in direct production of lepton pairs in, (T), 25:59415
  reactions with iron, μ^- angular and momentum distributions for μ^- and W^+ production in, (T), 25:59414
  reactions with nuclei, angular and momentum distributions of μ^+ and e^+ in direct production of lepton pairs in, (T), 25:59415
NEUTRINOS (anti ν/sub μ/)
  interactions anti $\nu + N \to \mu^+ +$ meson + baryon, urbaryon model of hadrons for, 25:59394
NEUTRON BEAMS
  production of fast, from radioisotope sources, 25:59690
NEUTRON CROSS SECTIONS
  data libraries for group-averaged discrete-ordinate, computer programs for, 25:59843 (SC-DR-710320)
  evaluation of data sets and codes for fast reactor analysis, 25:60210 (JAERI-Memo-4406)
  library for, description of LRL evaluated, (E), 25:59783 (UCRL-50400(Vol.4))
NEUTRON SOURCES
  correlation techniques for use at pulsed reactor, time-of-flight, 25:59672 (KFKI-71-45)
  description of 14-MeV T(d,n), 25:59676
  description of californium-252, 25:57661
  neutron beam production from radioisotope, method for, 25:59690
  preparation of curium-242--beryllium and plutonium-238--beryllium, 25:59669 (CEA-R-4172)
  source strength calibration using reactor kinetics method, 25:59688
  spectra and dose-fluence conversion factors for standard radioisotope, 25:57676
  targets for high-yield T(d,n), fabrication of tritium, 25:59670 (CONF-711002-, pp 166-80)
  use in method for measuring fluid flow, 25:57667(P)
NEUTRON SPECTROMETERS
  performance of helium-3 solid state, for time-and energy-dependent spectra measurements, (E), 25:60156(R) (GULF-RT-A-10800)
NEUTRON STARS
  densities in, (T), 25:58564
  density of matter in, (T), 25:58432
  equation of state for, derivation using realistic interactions, (T), 25:59866
  low-temperature phenomena in, (T), 25:58520
  luminosity of, (T), 25:58433
  mass ejection from, in binary systems, (T), 25:58424
  mass limit for, (T), 25:58432
  mass of, limits of, (T), 25:58564
  models for, densities and masses in, 25:58493
  radio emission from expanding charge sheets associated with, (T), 25:58549
  relation to GX 340 + 0, (E), 25:58534
  solid states in interiors of, physics of, (T), 25:58448
  structure of, (T), 25:58520
  thermodynamics of totally degenerate, (T), 25:58521
NEUTRONS
  capture by deuterium and helium-3, cross sections for $n + p \to d + 2\gamma$ interactions at 0.025 eV for cross sections for two-quantum radiative, (T), 25:59527
  capture by hydrogen at 0.025 eV, cross sections and photon angular and spectral distributions for two-quantum radiative, (T), 25:59527
  capture by uranium-238 in uranium and uranyl acetates and sulfates, chemical states of recoil uranium-239 from, 25:57488
  capture by Z = 49 to 92 nuclei at 30 keV to 1.4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  capture on surfaces of peculiar A stars, r-process elements from, (E/T), 25:58462
  collision probabilities in cluster-type fuel lattices, (T), 25:60231
  decay $n \to p + e + \nu$, field-theoretical basis for weak-interaction theory for, (T), 25:59397
  detection and measurement of, self-powered detectors for, 25:57777
  detection of, design criteria for radiation resistant silicon detectors for, 25:57746
  detection of, self-powered detector for, 25:57728(P)
  diffusion calculations for reactors, self-initializing version of WIGL2 code for, 25:60209 (DUN-7538)
  diffusion constants for aluminum--hydrogen lattice, (T), 25:59687
  distribution in clusters of rod type fuel element assemblies, calculation of first flight collision probabilities for, (T), 25:60235
  distribution in thin homogeneous natural uranium slabs, synthesis solution of multigroup Boltzmann equation for, 25:60214
  dose rates in two-layered slab shields, semi-empirical representation of, 25:59117
  dose to man following accidental exposure, effectiveness of activation and biological detectors for measuring, 25:58019
  dosimetry behind shielding, response of various dosimeters for, 25:57858
  dosimetry of mixed gamma and, thermoluminescent dosimeter for, 25:57849
  dosimetry of, characteristics of polyethylene-moderated proportional detectors for, 25:57782
  dosimetry of, development of fission foil--dielectric track detector for, 25:57856
  dosimetry of, development of thermoluminescent and exoelectron dosimeters for personnel, 25:57833
  dosimetry of, multiple activation detector for accident, 25:57857
  dosimetry of, performance of fission foil--dielectric track detectors for personnel, 25:57855
  dosimetry of, performance of Fricke dosimeter for, 25:57862
  dosimetry of, self-powered detector for, 25:57776
  dosimetry of, uranium foil--dielectric track detector for personnel, 25:57854
  effects on anelastic properties of aluminum, effects of cold-working and annealing on, 25:58338
  effects on catalytic activity of palladium in hydrogenation of butynediol, 25:57448
  effects on chromium trisacetylacetone or chromium-51-doped chromium trisacetylacetone, 25:57496
  effects on chromosomes of medical personnel, effects of dose and dose fractionation on aberrant, 25:57972
  effects on deformation in titanium--vanadium alloys at low temperature, 25:58339
  effects on dimensions of graphite specimens, 25:58366 (CEA-CONF-1820)

XUM

- effects on dislocation pile-up in metals, relations with thermal activation, 25:58337
- effects on frequency vs temperature characteristics of synthetic-quartz AT resonators, 25:57906
- effects on graphite, specific heat--magnetic field study of, 25:59148
- effects on helium release from boron-doped nickel, 25:58335
- effects on high-temperature mechanical properties of aluminum--chromium--nickel-base--titanium alloys, 25:58295 (FRNC-TH-64)
- effects on incidence of mutations in peas following seed exposure, comparison between x-ray effects and, 25:57960
- effects on magnetic thin-film recording systems, 25:57908
- effects on mammalian cells, review of effects of LET on repair of, 25:58089
- effects on mechanical properties of Hastelloy N, relations with hafnium, niobium, and titanium additions, 25:58168 (ORNL-4676, pp 139-233)
- effects on mechanical properties of mono- and polycrystals of rhenium, 25:58342
- effects on microstructure and void formation in refractory metals and alloys, 25:58300 (ORNL-TM-3496)
- effects on nil-ductility transition temperature of reactor pressure vessels, surveillance program on, 25:58294 (BAW-10006(Rev.2))
- effects on polymerization of benzene or toluene in presence of aluminum nitride, 25:57456
- effects on potassium trisoxalato chromate, reactions of recoil chromium-51 from, 25:57490
- effects on silica and germania, ESR studies of defects induced in, 25:59174
- effects on silicon, review of defects produced in, 25:59135
- effects on tripolyphosphate hexahydrate, effects of radical scavengers on yields from, 25:57495
- effects on trisoxinatocobalt, reactions of recoil cobalt-60 from, 25:57493
- effects on void distribution in aluminum, relations with dislocations and impurities, 25:58298 (ORNL-TM-3493)
- effects on void formation in nickel, relations with subsequent electron irradiation, 25:58333
- emission rate from plutonium dioxide, effects of oxygen-17 and -18 contents on, 25:57655 (MLM-1844)
- energy in reactors, effects on noise spectra of, (E/T), 25:60238
- fluence measurements of, cadmium sulfide and cadmium selenide detectors for, 25:57758(P)
- flux in cells of finite square reactor lattices, source-sink theory analysis of, 25:60228
- flux measurements of, preparation of Al_2O_3--CoO and MgO--CoO for high-temperature, 25:57723 (CONF-711002-, pp 82-5)
- flux monitoring, preparation of activation detectors for in-core, 25:57724 (CONF-711002-, pp 86-90)
- interactions anti $n + n$, total cross sections, (E), 25:59275
- interactions anti $p + n \to 2\pi^- + \pi^+$ at rest, five-point function in dual model for, (T), 25:59465
- interactions anti $p + n \to \pi^+ + 2\pi^- + \pi^0$ at 5.5 GeV/c in deuterium bubble chamber, cross sections and rate for single rho production and upper limit for double rho production in, (E), 25:59276
- interactions $d + n \to (nn) + p$ at 2 to 160 MeV, three-body separable potential for, 25:59510
- interactions $\gamma + n \to \gamma + n$, quark model extension for total and differential cross sections for, (T), 25:59378
- interactions $\gamma + n \to \pi^0 + n$ at 4 GeV, cross sections relative to $\gamma + p \to \pi^0 + p$ interactions, (E), 25:59243
- interactions $\gamma + n \to$ rho$^-$ $+ p$, rho-exchange contribution to differential cross sections for, 25:59385
- interactions $K^+ + n \to K^+ + \pi^- + p$ and $K^+ + n \to K^0 + \pi^+ + \pi^- + p$ at 9 GeV/c in deuterium bubble chamber, cross sections and mass spectra from, (E), 25:59318
- interactions $K^+ + n \to K^+ + \pi^- + p$ at 3 GeV/c, unitarized Veneziano model for, 25:59478
- interactions $K^- + n \to \pi^- + \Lambda$ and $\pi^+ + n \to K^+ + \Lambda$, duality and exchange degeneracy from finite-energy sum rules for, 25:59501
- interactions $K^- + n$ at 3 GeV/c, differential cross sections for two-body, (E), 25:59291
- interactions $K^- + n$ at 4.48 GeV/c in deuterium bubble chamber, $\Sigma(1640)$ and A_2 production, and simultaneous production of vector mesons and $\Sigma^-(1385)$ in Λ and Σ^0 four-body final states in, (E), 25:59280
- interactions $K^- + n$ at 810 to 1110 MeV, angular distributions for elastic, (E), 25:59302
- interactions $n + d$, calculation of doublet scattering length using rank-four separable potential, (T), 25:59707
- interactions $n + n$ at rest, triton reactions (t,nHe-4) with tritium for determination of scattering length for, (E), 25:59506 (JINR-E15-5905)
- interactions $n + n$, effect of charge asymmetric potentials on scattering length for, (T), 25:59701
- interactions $n + p \to d + 2\gamma$ at 0.025 eV, cross sections and photon angular and spectral distributions for, (T), 25:59527
- interactions $n + p \to d + \gamma$, relation of effective Lagrangian for nonleptonic weak interactions with Lagrangian for, (T), 25:59418
- interactions $n + p \to \pi^0 + d$ from threshold to 720 MeV, test of isospin invariance in, (E/T), 25:59268
- interactions $n + p$ at low energies, scattering amplitudes for, (E), 25:59696
- interactions $\nu + n \to \mu^- + p$ in Veneziano model, $(\mu + n)$ resonance in, 25:59395
- interactions $\pi^+ + n \to K^+ + \Lambda$ and $K^- + n \to \pi^- + \Lambda$, duality and exchange degeneracy from finite-energy sum rules, 25:59501
- interactions $\pi^+ + n \to$ rho^0 $+ p$ at 7 GeV/c in bubble chamber, angular distributions from, (E), 25:59286
- noise detection methods for boiling in reactors, development of, 25:60181
- pairing in lead, nickel, and tin isotopes, equilibrium, (T), 25:59833 (JINR-E4-5907)
- production of low-energy, in μ capture by calcium and sulfur, asymmetry coefficient for angular distribution for, (E), 25:59738 (JINR-P1-6029)
- production over losses ratio for integral reactor characteristic, derivation of, 25:60227
- reactions (n,f) with plutonium-239, uranium-233, and uranium-235 at thermal to 2 MeV energies, energy dependence of prompt neutron yields from, (E), 25:59810
- reactions (n,γ) with nickel in cladding materials, helium production by, 25:58336
- reactions with fissile nuclei, effect of level interference on cross sections for slow, (T), 25:59879
- reactions with plutonium-239 up to 15 keV, review of data on capture-to-fission ratio for, 25:59812
- reactions with thorium-230 and thorium-232, production of protactinium-231 and uranium-232 by, 25:57479 (BMBW-FBK-71-6)
- scattering and transport in condensed matter, (T), 25:59673 (LFEN-NI.-51-a)
- scattering by deuterium, dispersion relations for unphysical cuts in nuclear structure studies of elastic, (T), 25:59691 (LA-DC-12958)
- scattering by heavy water, computer program for double differential cross sections, scattering matrix, and integrated cross sections for, (T), 25:59671 (IFA-DNBR-3)
- scattering by spherical optical potential, computer program for calculating elastic and inelastic, (T), 25:59842 (RT/FI-(71)6)
- scattering by uranium-235, multilevel analysis of cross section data for, (T), 25:59828 (COO-2022-10)
- scattering by water at 0.04 to 0.632 eV at 27 to 270 C, differential cross sections for inelastic, (E/T), 25:59685
- scattering in magnetized crystals, diffraction polarization in, (T), 25:59681
- scattering of pulsed, from hydrogeous compounds, 25:58384
- slowing down times in moderators, effects neutron pulse shapes on, (T), 25:60232
- spectra in beam port of Cornell University TRIGA, preparation and measurement of tailored, (E), 25:60163
- spectra in fast reactors, model for analytic representation of flux and importance, 25:60211 (RPI-328-189)
- spectra in fast reactors, synthesis of 50 energy-group, 25:60215
- spectra measurements of, computer program for unfolding data from activation detectors for, 25:57725 (KFKI-71-22)
- transport equation for, fundamental eigenvalues of linear, 25:59683
- transport equation, method for combining lower- and higher-order discrete-ordinate approximation, 25:59680
- transport equations, variational variable boundary functionals for approximation methods for, 25:59677
- transport of, discrete SN numerical method for solving Boltzmann equation for, (T), 25:59675
- transport problems, numerical methods for, 25:59684
- transport theory, some analytical methods in, 25:59682
- wave propagation in bounded plane geometry, 25:59679

NEUTRONS (anti n)
- interactions anti $n + d$, total cross sections for, (E), 25:59275
- interactions anti $n + n$, total cross sections, (E), 25:59275
- interactions anti $n + p$, total cross sections for, (E), 25:59275

NEUTRONS, DELAYED
- energy spectra from uranium-235 fission, fast separation of bromine precursors for study of, 25:57504

NEUTRONS, EPITHERMAL
- scattering by carbon, chlorine, and hydrogen, amplitudes for coherent atomic, 25:59696

NEUTRONS, FAST
- dosimetry of, lithium hydride-doped lithium fluoride thermoluminescent dosimeter for, 25:57831(P)
- effects on alloys, interaction of coherent precipitates with damage in, 25:59163
- effects on aluminum, relations of chromium, copper, and vanadium contents on recovery from, 25:58303
- effects on chromosomes of Crepis capillaris seed, effects of time of onset of mitosis on frequency of aberrant,

  - 25:57968
  - effects on crystal structure of glass-forming arsenic--germanium--tellurium chalcogenide, 25:58419
  - effects on defect formation in titanium and rhenium at absolute melting temperature, 25:58302
  - effects on densities of stainless steel cladding materials, relations with void formation, 25:58306
  - effects on ESR and optical transmission spectra of α-silicon carbide monocrystals, 25:59154
  - effects on gallium arsenide junction field-effect transistors, improved tolerance to, 25:57905
  - effects on helium production in silver foils, 25:58334
  - effects on microstructure of molybdenum at 650°C, 25:58332
  - effects on tritium production in mixed oxide fuels, relations with burnup, 25:58344(R) (LA-4693)
  - effects on Type 304 stainless steel welds, relations with filler metal composition and welding processes, 25:58296 (HEDL-SA-196)
  - effects on void formation in alloys and metals, review of, 25:58305
  - effects on void formation in aluminum, copper, and magnesium, 25:58310
  - effects on void formation in high-purity aluminum, relations with fluence and flux, 25:58311
  - effects on void formation in metals, review of, 25:58299 (ORNL-TM-3495)
  - effects on void formation in molybdenum, niobium, and vanadium at 0.25 to 0.47 T/sub m/, 25:58309
  - effects on void formation in nickel, relations with subsequent electron irradiation, 25:58330
  - effects on void formation in stainless steel cladding materials, relations with microstructure, 25:58307
  - reactions (n,2n) at 14.8 MeV with A = 85 to 204 nuclei, cross sections and gamma spectra from, (E), 25:59797
  - reactions (n,2n) with germanium-76, selenium-82, and zinc-70 at 14.7 MeV, isomer ratios in, (E), 25:59766
  - reactions (n,2n) with yttrium-89 at 13.29 to 17.58 MeV, statistical-model analysis of excitation function for, (E/T), 25:59768
  - reactions (n,α) and (n,p) in cesium iodide at 12 to 22 MeV, analysis for pre-equilibrium emission mechanism in, (E/T), 25:59826
  - reactions (n,α) with A = 122 to 169 nuclei at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802
  - reactions (n,f) with uranium-236 at 0.8 to 6.7 MeV, energy dependence of prompt neutron yield from, (E), 25:59806
  - reactions (n,f) with uranium-238, evaluation of average neutron yield from, 25:59775 (AWRE-O-44/71)
  - reactions (n,p) with titanium-46 at 4.1 to 6.1 MeV, cross sections for, (E), 25:59755
  - reactions (n,p) with titanium-47 at 3.4 to 6.1 MeV, cross sections for, (E), 25:59755
  - reactions (n,p) with titanium-48 at 6.1 MeV, cross section for, (E), 25:59755
  - reactions with praseodymium-141 at 1 to 18 MeV, total cross section for, (E), 25:59811
  - reactions with water at 14-MeV, fast neutron spectra from pulsed, 25:59674
  - scattering by boron-11 at 14.1 MeV, coupled-channels calculation of angular distributions from elastic and inelastic, (T), 25:59720
  - scattering by cadmium-111, osmium-190, and yttrium-89 at 14.8 MeV, cross sections and gamma spectra from inelastic, (E), 25:59797
  - scattering by natural aluminum, phosphorus, and sulfur at 7.96 and 9.05 MeV, cross sections for elastic and inelastic, (E/T), 25:59770
  - scattering by natural magnesium at 7.97 MeV, cross sections for elastic and inelastic, (E/T), 25:59770
  - scattering by natural silicon at 7.71 to 9.05 MeV, cross sections for elastic and inelastic, (E/T), 25:59770
  - scattering by yttrium-89 at 2.69 to 18.07 MeV, statistical-model analysis of excitation function for inelastic, (E/T), 25:59768
  - spectra in subcritical assemblies, time-of-flight measurements of, (E/T), 25:60156(R) (GULF-RT-A-10800)
  - spectra measurements of, calculations for activation detectors for, 25:57775
  - streaming in fast test reactor grid-plate shielding, effects of sodium coolant holes configuration on, (E), 25:60158 (ORNL-TM-3514)
- NEUTRONS, FISSION
  - effects on ir absorption of polished gallium arsenide, spectral studies on, (E/T), 25:59155
  - effects on silicon and germanium, crystallinity and damaged regions in, (E/T), 25:59140
  - effects on void formation in nickel, relations with tensile stress, 25:58308
- NEUTRONS, INTERMEDIATE
  - capture by zinc at 10 to 80 keV, γ spectra from, (E), 25:59759
- NEUTRONS, PILE
  - effects on biaxial stress rupture of Type 316 stainless steel at 1000 to 1400°F, 25:58297 (HEDL-TME-71-72)
- NEUTRONS, THERMAL
  - age determination for, method for, (T), 25:59686
  - calculation of reactor physics constants for, computer program for, 25:60225 (JAERI-Memo-4394)
  - capture by chlorine-35, gamma linear polarization and coincidence spectrum from, (E), 25:59745
  - capture by platinum in acetylacetonate complexes, isotope effects on recoils from, 25:57489
  - capture by ytterbium-171 and -173, γ spectra and Q-values for, (E), 25:59825
  - capture by Z = 17 to 80 nuclei, gamma circular polarization from polarized, (E), 25:59780 (KFK-1401)
  - detection of, activation detector for, 25:57729(P)
  - diffusion length in moderators for, computer program for calculation of, 25:60226 (LFEN-NI.-60-a)
  - effects on carrier content, Hall mobility, and photoconductivity of n- and p-type cadmium telluride at 1 MeV, 25:59161
  - effects on catalytic activity of iron in ammonia synthesis, 25:57444
  - effects on mechanical properties of modified Hastelloy N, relations with composition, 25:58168 (ORNL-4676, pp 139-233)
  - reactions (n,f) with plutonium-239, absolute cross section for, (E), 25:59777 (IFA-NR-33)
  - scattering by simple fluids, theory of, 25:59678
  - scattering cross section for heavy water, computer code using Butler model for, 25:59689
- NEVADA TEST SITE
  - earthquake occurrences near, during 1950 to 1971, data summary on, 25:57589 (CGS-746-12)
  - radiation monitoring following venting of Baneberry underground nuclear test of December 18, 1970, 25:57993
- NEW ZEALAND
  - fallout monitoring during 1970, 25:57980(R) (HASL-245)
- NICKEL
  - analysis for cobalt, radiometric, 25:57356
  - atomic interaction potential for ion bombardment of polycrystalline, (T), 25:59145
  - content of foods in Kiev region of Soviet Union, 25:57987
  - copper adhesion to (111) crystal surfaces of, LEED study of, 25:58270
  - creep of sintered powder specimens of, effects of stress and time on, 25:58389(R) (SRO-552-8)
  - determination by extraction using quinolinol melt and spectrography, 25:57312
  - determination in cobalt alloys, spectrographic, 25:57313
  - determination in fuel solutions of JRR-1, 25:57320
  - determination in steel by neutron activation and radiochemical separation, 25:57381
  - determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  - determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  - effects on hardness of dispersion-hardening iron-base alloys, 25:58235
  - effects on mechanical properties of molybdenum single crystals, 25:58257
  - effects on niobium nitride solubility in iron austenite, 25:58268
  - effects on oxidation of hexavalent neptunium by potassium persulfate, 25:57412
  - etching by selective cavitation, method for, 25:58190
  - microstructure of sintered powders of, effects of initial particle size on, 25:58389(R) (SRO-552-8)
  - permeability of sintered powders of, relations with initial particle size, 25:58389(R) (SRO-552-8)
  - preparation of spheroidized powders of, using plasma heating, 25:58187(T) (SCL-T-710281)
  - radioinduced helium production in cladding materials of, neutron, 25:58336
  - radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
  - radioinduced helium release from boron-doped, neutron, 25:58335
  - radioinduced void formation in pure, relations of subsequent electron irradiation on fast neutron, 25:58330
  - radioinduced void formation in, at 280 to 600°C, electron microscopic study of electron, 25:58328
  - radioinduced void formation in, effects of tensile stress during irradiation on neutron, 25:58308
  - radioinduced void formation in, relations of subsequent electron irradiation on neutron, 25:58333
  - radioinduced void formation in, theory of, 25:58314
  - radioinduced void swelling in helium-containing, relations of dose with 20-MeV carbon ion, 25:58322
  - radioinduced void swelling in, use of high-voltage electron microscope to simulate fast neutron, 25:58326
  - separation from plutonium by solvent extraction using TBP, 25:57357
  - sintering of, parameters for activated, 25:58200
  - surface energy and work function of smooth faces of monocrystal of, (T), 25:59194
  - tensile properties of sintered-powder bars of, effects of porosity on, 25:58389(R) (SRO-552-8)
  - tungsten adhesion to (111) crystal surfaces of, LEED study of, 25:58270
- NICKEL 200
  - oxidation at 1000 to 1125°C in air, 25:57654(R) (DP-1279)
  - weld defects in, morphology of, 25:58215 (Y-DA-4280)

XUM

NICKEL ALLOY COUPLES
  Cr--Ni-base/Ni-base--Si, development of thermocouple of, 25:57876
NICKEL ALLOYS AND SYSTEMS
  coating with molybdenum and tungsten for corrosion protection, chemical vapor deposition method for, 25:58168 (ORNL-4676, pp 139-233)
  corrosion by air at 800 to 1300°C, effects of aluminum and chromium contents on, 25:58203
  oxidation resistance of IN-102, at 1500 to 2000°C in air, 25:58203
  preparation of corrosion-resistant high-strength superalloys of, review of methods for, 25:58203
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  radiation effects on tensile properties of IN-102, alpha particle, 25:58163(R) (AI-AEC-12859)
  Al--Cc--Cu--Fe-base--Ni, properties and structure of, effects of neodymium additions on, 25:58250
  Al--Cr--Ni-base--Ti, radiation effects on mechanical properties of, relations of temperature with neutron, 25:58295 (FRNC-TH-64)
  Al--Nb--Ni, preparation of fiber-strengthened composites of, method for, 25:58363
  Al--Ni, void formation in intermetallic NiAl single crystals, relations with microstructure, 25:58318
  Al--Ni-base, stability of intermetallic compounds and solid solutions in, thermal, 25:58224
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
  C--Mo--Ni, phase composition in molybdenum-rich solutions of, at 1200 to 1800°C, 25:58290
  C--Ni, preparation of metal-matrix composites of, methods for, 25:58363
  Co--Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
  Cr--Ni, porosity and pressure strength of boron-containing, for use as neutron absorber, 25:58255
  Cr--Ni, production of boron-containing neutron absorbers of, using powder metallurgy, 25:58255
  Cu--Ni, welding to steel, deposition of intermediate layers for, 25:58204
  Fe--Ni--V, electric, magnetic, and mechanical properties of $Ni_3(Fe,V)$ solid solutions, 25:59188
  Fe-base--Mo--Ni, aging of, dilatometric, electric conductivity, and electron microscopy studies on, 25:58232
  Mo--Ni, hardness and structure of electrodeposited, 25:58256
  Ni--V, oxidation in air at 1000°C, activation energy for, 25:58251
  Ni--W, hardness of electrolytically deposited, relations of internal stresses with micro-, 25:58236
  Ni--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
NICKEL CARBIDES
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
NICKEL IONS
  spectra in x-irradiated sodium chloride, ESR, 25:59201
NICKEL ISOTOPES
  neutron pairing in, equilibrium, (T), 25:59833 (JINR-E4-5907)
NICKEL ISOTOPES Ni-56
  production in stars from simple helium burning, (E), 25:58508
NICKEL ISOTOPES Ni-58
  deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  deuteron inelastic scattering at 82 MeV, DWBA analysis of angular distributions from, (E), 25:59754
  energy levels from inelastic scattering, deformation parameters for, (E), 25:59754
NICKEL ISOTOPES Ni-60
  helium-3 elastic scattering at 30 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  photon reactions (γ,n) up to 35 MeV endpoint energy, excitation functions for, (E), 25:59772
  proton reactions (p,γ) near 1.6 MeV, γ spectra and angular distributions for, (E), 25:59764
NIMONIC PE 16
  radiation effects on density of, relations of void formation with fast neutron, 25:58306
  radioinduced void formation in, electron microscopic study of annealing of, 25:58307
  radioinduced void swelling in helium-containing, relations of dose with 20-MeV carbon ion, 25:58322
NIOBIUM
  analysis for oxygen by 14-MeV neutron activation and γ spectrometry, 25:57376
  Debye--Waller factor of, temperature dependence of, 25:59179
  determination by spectrography, elimination of effect of sample composition on, 25:57330
  determination in alloys using magneson, photometric, 25:57315
  determination using diantipyrylpropylmethane, pyrocatechol, and pyrogallol, spectroscopic, 25:57316
  determination using rezarson, spectrophotometric, 25:57333
  machining of cylindrical apertures in, by electroerosion, 25:58193
  oxidation of, effects of interstitial oxygen content on, 25:58172
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  production and purification of, using aluminothermic reduction and electrorefining, 25:58202
  radioinduced void formation in, electron microscopic study of fast neutron, 25:58309
  radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  separation from oxalic and tartaric acids by solvent extraction using tributylamine, 25:57546
  separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
  solubility in sodium at high temperatures, 25:58163(R) (AI-AEC-12859)
  surface energy and work function of smooth faces of monocrystal of, (T), 25:59194
NIOBIUM ALLOYS AND SYSTEMS
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  Al--Ge--Nb, properties of superconducting, 25:58948
  Al--Nb--Ni, preparation of fiber-strengthened composites of, method for, 25:58363
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  Co-base--Nb, microstructure of decomposing supersaturated solid solutions, 25:58280
  D--Nb--Ti, deuterium distribution fluctuations in $NbTi_2D$, 25:58278
  Hf--Nb, electric conductivity from 4 to 300°K, 25:58929 (FRNC-TH-72)
  Mo--Nb, composition of electronic-melted zone liquation-produced, 25:58260
  Mo--Nb, solvent properties for nitrogen at high temperatures, 25:58249
  Mo--Nb-base, creep at 1100 to 1300°C, effects of molybdenum content on steady, 25:58222
  Mo--Nb-base--Zr, machining characteristics of, at high and low temperatures, 25:58198
  Mo-base--Nb, thermal cycling of monocrystals of, dimensional effects of, 25:58247
  Nb--Sn, Kohn instability in Labbe--Friedel model of Nb_3Sn, (T), 25:58947
  Nb--Ti, microstructure of superconducting, effects of heat treatment on, 25:58942
  Nb--UO_2-base, preparation of dense homogeneous, method for, 25:58348 (LFEN-NI.-53-a)
  Nb--W, composition of electronic-melted zone liquation-produced, 25:58260
  Nb--Zr-base, fabrication of calandria and pressure tubes of, for Japanese reactors, 25:58194
  Nb-base--Zr, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
NIOBIUM CARBIDES
  machining of, effects of carbon content in corresponding ranges of homogeneity on electroerosion, 25:58356
NIOBIUM FLUORIDES
  disproportionation of NbF_4, 25:57298 (ORNL-4676, pp 73-138)
  mass spectra of, 25:57298 (ORNL-4676, pp 73-138)
  reactions in molten lithium beryllium fluoride solutions, kinetics of, 25:57298 (ORNL-4676, pp 73-138)
NIOBIUM ISOTOPES Nb-95
  chemical state in seawater, effects of iron on, 25:57410
NIOBIUM NITRIDES
  solubility in iron austenite, effects of chromium, manganese, nickel, and silicon on, 25:58268
NIOBIUM OXIDES
  crystal defect structure of oxygen-deficient Nb_2O_5, model for, 25:58391
  effects of doping agent of, on fission product retention by uranium oxide fuel particles, 25:58347 (JUL-730-RW)
  reduction to metal, aluminothermic, 25:58202
  CaO--Nb_2O_5--SiO_2--TiO_2, liquidus of pseudo-ternary $CaO.Nb_2O_5$--$CaO.TiO_2$--SiO_2 plane of, 25:58390
NITRATE REDUCTASE
  radiation effects on synthesis of, in Ustilago, uv, 25:57955
NITRIC ACID
  HCl--HNO_3, properties of etchant of, for uranium dioxide, 25:58244
  HNO_3--$Sr(NO_3)_2$, radiolysis of citric acid in solutions of, γ, 25:57457 (ARH-2163)
NITROCELLULOSE
  use in preparation of thin-film radiation targets, methods for, 25:59639 (CONF-711002-, pp 134-43)
NITROGEN
  abundance in iron meteorites, (E), 25:58423
  content of blood of rabbits and rats following administration of mercuric bichloride and uranium,

XUM

25:58099
- determination in presence of fission products by neutron activation, automated system for, 25:57390
- deuterium-hydride scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- deuterium-molecule scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- effects on γ and x radioinduced mutations in bacteriophage phi X174, 25:57971
- effects on tungsten evaporation rate in strong electric fields, 25:58227
- electron reactions with molecular, K--LL Auger spectra from, (E), 25:58736
- energy levels of, modified relativistic Hartree--Fock approximation for $(2p)^3$ ground-state, 25:58800
- helium-atom scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- iodine-ion reactions at 12 MeV with molecular, electron-capture and -loss cross sections for, (E), 25:58768
- ion reactions in keV range with molecular, effects of velocity and outer-shell configuration on K-vacancy production in, (E), 25:58756
- nitrogen-ion (N_2^+) reactions at 1 to 45 eV with molecular, effects of ion excited states on cross sections for, (E), 25:58751
- nitrogen-ion (N^+) reactions at 1 to 70 eV with molecular, cross sections and mechanisms of charge exchange in, (E/T), 25:58735
- radioinduced fixation of, 25:57442
- reactions with sodium (3^2P) atoms of molecular, cross sections for excitation in, (E), 25:58778
- reactions with zirconium surfaces, effects of impurities on, 25:58173
- solubility in chromium, molybdenum, niobium, tantalum, and tungsten at high temperatures, 25:58249

NITROGEN IONS
- effects on microstructure of molybdenum at 2 MeV and 870°C, 25:58332
- effects on regular void array in high-purity molybdenum and TZM at high temperatures and 2 MeV, 25:58340
- electron reactions with N^{2+}, cross sections for ionization in, (E), 25:58769
- excitation of positive molecular, electron impact cross section for, (E), 25:58726
- implantation in silicon carbide at 30 keV, 25:59171
- reactions with celluloid films of multiply charged, film-thickness dependence of cross sections for electron capture and loss in, (E), 25:58695

NITROGEN IONS (N^+)
- reactions with neon and nitrogen molecules in keV range, production of K vacancies in, (E), 25:58756
- reactions with nitrogen molecules at 1 to 70 eV, cross sections and mechanisms of charge exchange in, (E/T), 25:58735

NITROGEN IONS (N_2^+)
- reactions with nitrogen molecules at 1 to 45 eV, effects of ion excited states on cross sections for, (E), 25:58751

NITROGEN ISOTOPES
- determination of, mass spectrometer for, 25:57890

NITROGEN ISOTOPES N-14
- meson reactions $(\pi^+,2p)$ at 70 MeV, excitation spectra for, (E), 25:59709 (LA-DC-12389)
- proton inelastic scattering by, approximate G-matrix calculations for, (T), 25:59858
- reactions (N-14,Li-6) with carbon-12 at 60.0 MeV, energy spectrum from, (E), 25:59743

NITROGEN ISOTOPES N-15
- effects on rotational spectra of ammonia in 0.5-mm wavelength region, 25:57424

NITROGEN OXIDES NO
- density of (NO^+) in F-region nightglow, (E/T), 25:58884
- deuterium-hydride scattering by, velocity dependence of total effective cross sections for, 25:58782
- deuterium-molecule scattering by, velocity dependence of total effective cross sections for, 25:58782
- electron reactions at 13 to 18 eV with, production of oxygen ions (O^-) by dissociative attachment in, (E), 25:58730
- electron reactions with, K--LL Auger spectra from, (E), 25:58736
- helium-atom scattering by, velocity dependence of total effective cross sections for, 25:58782
- iodine-ion (I^-) reactions with, effects of thermal motion of molecules on charge exchange in, (T), 25:58752

NITROGEN OXIDES NO_2 OR N_2O_4
- electron paramagnetic spectrum in potassium chloride, hindered rotation from, 25:59199 (NYO-2150-74)
- electron reactions at 60 eV with, production of excited oxygen ions (O^+) in, (E), 25:58763
- sodium-atom reactions at 1 to 30 eV with, light emission and excitation cross sections for, (E), 25:58749

NITROGEN OXIDES N_2O
- electron reactions at 60 eV with, production of excited oxygen ions (O^+) in, (E), 25:58763
- electron reactions at 7 to 15 eV with, production of oxygen ions (O^-) by dissociative attachment in, (E), 25:58730
- iodine-ion reactions at 12 MeV with, electron-capture and -loss cross sections for, (E), 25:58768

NITROGEN SYSTEMS
- He--N, ion production and loss processes in plasma of, (E), 25:59014
- N--Ne, plasma decay in mixtures of, ion production and loss in, (E), 25:59019

NOBELIUM
- oxidation potential for trivalent--tetravalent, 25:57437

NOISE
- detection methods for boiling in liquid sodium, development of, 25:60090
- detection methods for boiling, development of, 25:60181

NORTH AMERICA
- fallout deposition on, during Jan. 1964, effects of major stratospheric--tropospheric mass exchanges on, 25:57572(R) (COO-1340-24)
- fallout monitoring during 1970, 25:57981(R) (HASL-245(App.))
- radioactivity of surface atmosphere and precipitation sampled during March 1971, gross β, 25:57992
- radioisotope content of milk during March 1971, barium-140, cesium-137, iodine-131, strontium-89, and strontium-90, 25:57990

NORTH ANNA POWER REACTOR, UNIT 1
- construction of, request for not suspending permit for, 25:59985 (DOCKET-50338-32)

NORTH ANNA POWER REACTOR, UNIT 2
- construction of, request for not suspending permit for, 25:59985 (DOCKET-50338-32)

NOSE CONES
- fabrication of carbon felt, infiltrated with pyrolytic carbon, 25:58352 (Y-DA-2123(Rev.1))

NOVAE
- spectra of DQ Her, hydrogen lines in, (E), 25:58426
- spectra of Herculis 1963, Balmer absorption lines in, (E), 25:58436
- spectra of Serpentis 1970, recovery and final decline of, (E), 25:58450

NPD REACTOR
- fuel burnup in, methods for analysis of, (E/T), 25:60093 (AECL-3995)

NUCLEAR AUXILIARY POWER SYSTEMS
- development for spacecraft, review on, 25:57671

NUCLEAR CHEMISTRY
- research program at Los Alamos Meson Physics Facility, 25:59642 (LA-DC-12795)
- research progress on, 25:57442

NUCLEAR EMULSIONS
- cosmic nuclei reactions with light nuclei above 700 MeV/nucleon in, energy distribution and mean energy of nonrelativistic doubly charged particle production in multicharged, (E), 25:59274
- meson reactions $(\pi^-, 2\pi^-\pi^+)$ and $(\pi^-, 3\pi^- 2\pi^+)$ with nuclei at 17 and 45 GeV in, mean free paths for coherent, (E), 25:59313
- processing for discrimination of alpha and recoil proton tracks, 25:57731
- proton reactions at 28 GeV with, energy spectra of lithium-8 fragments from, (E), 25:59278
- sensitivity at low temperatures, 25:57829

NUCLEAR EXPLOSIONS
- yields of, estimation using microbarograph data, (E/T), 25:57606

NUCLEAR EXPLOSIONS, ATMOSPHERIC
- book: Protection of Animals Against Injury by Nuclear Weapons, 25:58026
- effects of Chinese, on cesium-144 content of Fayetteville, Arkansas atmosphere, 25:57578
- effects of Chinese, on strontium-90 content in Japanese atmosphere and northern hemisphere stratosphere, 25:57579
- effects on sodium-22 content of USSR rivers, 25:57568
- fallout from 10th Chinese, monitoring in Swedish atmosphere, 25:57580
- fallout monitoring from Dec. 28, 1968 Chinese, in Swedish atmosphere, 25:57577

NUCLEAR EXPLOSIONS, UNDERGROUND
- bibliography of civil, industrial, and scientific uses for, 25:57603 (TID-3522(Rev.9))
- containment of Jorum Event, method for pre-shot calculation of, 25:57607
- detection of, Indian seismology research on methods for, 25:57591 (INIS-mf-71, pp 181-98)
- discrimination between earthquakes and, using seismic P-wave spectra, 25:57599
- discrimination between earthquakes and, using short period seismic array data, 25:57600
- effects of Milrow, on seismic activity in Amchitka Island region, 25:57597
- effects on seismic activity near Nevada Test Site from 1950 to 1971, (E), 25:57589 (CGS-746-12)
- ground motion from, at Amchitka Island, method for prediction of, 25:57602 (SC-RR-69-376)
- list of June 1970, 25:57993
- natural gas production stimulation by, method for decontamination of product from, 25:57605(P)
- radiation monitoring following venting of Baneberry, December 18, 1970, 25:57993
- seismic waves from, generation and propagation of P, R, and S, 25:57593 (TID-25572)
- seismological effects of Cannikin Event, at Amchitka

XUM

  Island, Alaska, studies of potential, 25:57590 (COO-2138-4)
  use for copper ore fracturing, method for ore processing of decontaminated copper following, 25:57523 (ORNL-4677)
  use to construct chimneys for chemical mining of copper and waste disposal, 25:57604 (UCRL-73130)
NUCLEAR MATERIALS MANAGEMENT
  control systems for, in conversion plants, standards for, 25:57717
  inventories for, standards for conducting, 25:57715
  methods for, computer-controlled, 25:57897
  nuclear safeguards measurements using photonuclear reactions, equipment and methods development for, 25:57704 (GULF-RT-A-10826)
NUCLEAR MATTER
  energy and defect parameters for dense neutron, calculations using Hamada--Johnston hard-core and Reid and Bressel--Kerman--Rouben soft-core potentials, (T), 25:59866
  forces in, theory of two-body effective, (T), 25:59850
NUCLEAR MODELS
  alpha-particle, saturation properties of residual binding energy in, (T), 25:59725
  shell, antisymmetrized weak coupling scheme for, (T), 25:59857
  unified, development from independent-particle and liquid-drop models, (T), 25:59849
NUCLEAR POWER
  development in Australia during July 1970 to June 1971, 25:60276(R) (NP-19036)
  development of, conference on, 25:60006 (CONF-700113)
  requirements for, estimates of long-range, 25:60020
NUCLEAR POWER PLANTS
  condenser water cooling for, effects of spinning disks in ponds for, 25:60023
  construction in Japan, civil engineering aspects of, 25:59895
  construction of, delays in schedules for, 25:59893
  development in Europe, 25:59901
  development in Federal Republic of Germany, predictions to 1980, 25:59889
  development in India, status of, 25:59891
  development in Japan, economic and safety aspects of, 25:59905
  development in Japan, effects of uranium enrichment technology on, 25:59904
  development in Japan, petroleum industry competition for, 25:59903
  development in Japan, projections of, 25:59906
  development in Sweden, 1970 status of, 25:59890
  development in U.S., public opinion on, 25:60129
  development of, data summary on, 25:59900
  development of, economics for 1975 to 1995 for worldwide, 25:59888
  development of, economics for worldwide, 25:59887
  economics in Australia, 25:59919
  economics in Yugoslavia, 25:60108
  economics of, effects of generating cost variables on, 25:59920
  electric power production by UK, forecasts to year 2000, 25:57633
  integration in New England Power Exchange System, 25:59907 (CONF-710606-15)
  operation in mixed generation utility systems, control optimization of, 25:59922
  power generation cycle for, with means for storing heat during reduced load operation, 25:60143(P)
  radioactive effluents from U.S., public opinion on guidelines for, 25:60128
  response to earthquakes, models for simulating dynamic, (T), 25:57598
  siting of U.S., public participation in regulation of, 25:60004
  siting of, economic, environmental, and safety aspects of, 25:60119
  valves for BWR-type, design of safety, 25:57637
NUCLEAR REACTION ANALYSIS
  method of (p,α), for determination of light impurities in bulk heavy material, 25:57360
NUCLEAR REACTIONS
  book: Scattering, Reactions, and Disintegrations in Nonrelativistic Mechanics (in Russian), 25:59612
  cross sections for charged-particle, neutron, and proton, description of LRL evaluated library of, (E), 25:59783 (UCRL-50400(Vol.4))
  cross sections for heavy-ion multinucleon-transfer, Q-value dependence of, (T), 25:59845
  Hauser--Feshbach theory for compound, time reversal invariant formulation of, 25:59873
  nuclear materials safeguards research with photon-induced, 25:57704 (GULF-RT-A-10826)
  particle polarization and spin correlations in, X-coefficients for, 25:59881
  polarization effects in nucleon transfer, (T), 25:59831 (IFA-CRD-41)
  potentials for, finite-difference solution of Schroedinger equation for axially symmetric single-particle, (T), 25:59839 (LA-4735)
  research at Rice Univ., 1969 to 1970, (E/T), 25:59692(R) (ORO-1316-99)
  resonance phenomena in, model for analysis of, (T), 25:59876
  theory for compound nucleus, role of angular momentum and isobaric spin in tests of independence hypothesis for, (T), 25:59830 (CU-1019-82)
  theory of resonance, review of line broadening in, (T), 25:59847
NUCLEAR REACTIONS (DIRECT)
  Coulomb excitation in, DWBA calculation of differential cross sections for quadrupole, (T), 25:59859
  cross sections in deuteron stripping, DWBA treatment of finite-range effects in calculation of differential, (T), 25:59854
  deuteron stripping, finite-range interactions in DWBA treatment of, (T), 25:59841(R) (CRC-4119-1)
  isospin T = 0 and T = 1 transfers in (He-3,p), effects on angular distributions of, (T), 25:59741
  theory of (d,p) stripping, (T), 25:59848
NUCLEAR STRUCTURE
  calcuations for low-lying spectra in spherical nuclei, including long-range effective interactions, 25:59884
  deformation and compressibility in Hartree--Fock field, 25:59877
  nucleon--nucleon potential, one-pion-exchange contribution to weak P- and T-violating, 25:59408
  research at intermediate energies at Rice Univ., 1970 to 1971, (E/T), 25:59693(R) (ORO-1316-100)
  Siegert's theorem in, applicability of, (T), 25:59864
NUCLEAR THEORY
  book: Theory of Complex Nuclei, 25:59875
  decays in 2s-1d-shell nuclei, comparison of analogous $\Delta T = 0$ beta and gamma, 25:59844
  Hartree--Fock calculations in s-d shell, effect of spin-dependent forces on, (T), 25:59878
  isobaric mass equation in, parameters for T = 3/2 multiplet in A = 4n + 1 nuclei, 25:59882
  nucleon--nucleon potential in, nature of two-pion exchange contribution to, 25:59870
  potentials in two-, three-, and infinite-nucleon systems in, separable, 25:59517
NUCLEI
  alpha elastic scattering by spinless, Regge-pole and partial-wave analysis of glory scattering in backward, (T), 25:59846
  alpha reactions with light, at low energies, cross sections and polarization effects in nucleon transfer, (T), 25:59831 (IFA-CRD-41)
  alpha-cluster configurations in light, calculation using Skyrme interaction, (T), 25:59883
  baryon resonance reactions with A > 4, probability for multibaryon resonances from, 25:59521
  beta decay far from stability line, review of study of, (T), 25:59835 (KURRI-TR-76, pp 1-2)
  beta decay of heavy, calculation of half-lives and strength functions for allowed and first-forbidden, (T), 25:59868
  binding energies of alpha-particle, saturation properties of residual, (T), 25:59725
  binding energy of one-dimensional N-body systems with inverse and inverse-square pair potentials, (T), 25:59840 (NP-19027)
  binding energy of, estimates of harmonic-oscillator potential-energy effects in intermediate states in calculations of, (T), 25:59862
  binding energy of, separable potentials for, (T), 25:59517
  Coulomb displacement energies in mirror, correction of isovector monopole state to, (T), 25:59871
  Coulomb energies and second energy differences in A = 18 to 42, calculations including pairing residual interactions, (T), 25:59860
  decays of 2s-1d-shell, comparison of analogous $\Delta T = 0$ beta and gamma, (T), 25:59844
  electrodisintegration through giant resonance and quasielastic regions, strong-coupling particle-hole analysis of, (T), 25:59869
  electron elastic scattering by, radiative corrections for, 25:59880
  energy levels from neutron capture by Z = 16 to 57, spin assignments for, (E), 25:59780 (KFK-1401)
  energy levels from neutron resonances in Z = 42 to 80, spin assignments for compound-state, (E), 25:59780 (KFK-1401)
  energy levels from pickup reactions, calculation of energy-weighted averages of spectroscopic factors for, (T), 25:59855
  energy levels of deformed odd--odd, β-strength functions for 0^+ and 1^+ unlike particle-hole, (T), 25:59872
  energy levels of one-dimensional N-body systems with inverse and inverse-square pair potentials, exact ground-state, (T), 25:59840 (NP-19027)
  energy levels of, delayed-coincidence and recoil-distance techniques for measuring lifetimes of, (E), 25:59771
  energy levels of, displacement of dipole isodoublet, (T), 25:59853
  energy-level transitions in, applicability of Siegert's theorem to electric, (T), 25:59864
  energy-level transitions in, effects of nonlocal BCS pairing interaction in electric, (T), 25:59863
  fission of, ambiguities in R-matrix parameters for interfering resonances with two channels for, (T), 25:59829 (COO-2022-11)

XUM

- fission of, pairing gap parameters and transition points in pairing-plus-quadrupole model of, (T), 25:59867
- forces in, theory of two-body effective, (T), 25:59850
- helium-3 reactions (He-3,p) with odd--even, isospin effects on angular distributions from, (T), 25:59741
- meson (π) reactions at 0.01 to 100 GeV, cascade evaporation model for Monte Carlo method for calculating, (T), 25:59508(T) (ORNL-tr-2514)
- meson (π) reactions with, absorption and dispersion corrections to πN optical potential for, 25:59516
- meson (π^-) reactions with light, at 4 GeV/c in freon bubble chamber, cross sections and mass distributions for coherent production of $\pi^+ 2\pi^-$ system in, (E), 25:59316
- meson reactions (π^-, $2\pi^- \pi^+$) and (π^-, $3\pi^-$ $2\pi^+$) at 17 and 45 GeV in emulsions, mean free paths for coherent, (E), 25:59313
- neutrino emission from, in hot dense stars, (T), 25:58492
- neutrino reactions ($\nu, \mu^- W^+$) at high energies, angular and energy distributions for W production in, 25:59410
- neutrino reactions with, angular and momentum distributions of μ^+ and e^+ in direct production of lepton pairs in, (T), 25:59415
- neutrino reactions with, Coulomb corrections to Adler PCAC test in, 25:59406
- neutron capture by $Z = 17$ to 80, gamma circular polarization from polarized thermal, (E), 25:59780 (KFK-1401)
- neutron cross sections of fissile, effect of level interference on slow, (T), 25:59879
- neutron decay of, possible examples of two-, (T), 25:59740
- nucleon inelastic scattering by, DWBA analysis using realistic nucleon--nucleon interactions of, (T), 25:59858
- nucleon reactions at 0.01 to 100 GeV, cascade evaporation model for Monte Carlo method for calculating, (T), 25:59508(T) (ORNL-tr-2514)
- photon reactions (γ, e^+e^-) with, vector dominance model for rho--ω mixing in, 25:59364
- photon reactions with, ENDF formats and procedures for storage of data on, (T), 25:59838 (LA-4549)
- positron elastic scattering by, radiative corrections for, 25:59880
- properties of short-lived, conference on measurement of, (E), 25:59834 (KURRI-TR-76)
- properties of short-lived, review of properties of, (E), 25:59782 (KURRI-TR-76, pp 21-6)
- properties of, reaction-matrix theory of ground-state, (T), 25:59851
- proton decay of, possible examples of two-, (T), 25:59740
- proton reactions (p,n) at 23 MeV with $A = 26$ to 165, spectra and DWBA analysis of angular distributions from, (E), 25:59789
- proton reactions with, isobaric-spin conservation for proton emission probability in compound-nucleus, (T), 25:59830 (CU-1019-82)
- reactions with light nuclei above 700 MeV/nucleon in emulsions, energy distribution and mean energy of nonrelativistic doubly charged particle production in, (E), 25:59274
- resonances with two fission channels in, ambiguities in R-matrix parameters for interfering, (T), 25:59829 (COO-2022-11)

NUCLEI (CELLS)
- radiation effects on macro- and micro-, of Stylonychia, x, 25:58096

NUCLEIC ACID
- radiation effects on content in above-ground parts and roots of pea and wheat plants, γ, 25:57941

NUCLEIC ACID, DEOXYRIBO-
- characterization and fractionation of tobacco leaf transfer, 25:60284 (RLO-2225-T-15-7)
- radiation effects on Escherichia coli, role of endonuclease in repair of uv, 25:57928
- radiation effects on Micrococcus luteus, role of nucleases in repair of uv, 25:57935
- radiation effects on synthesis in Chlamydomonas, dark repair of uv, 25:57925
- radiation effects on synthesis of amphibian embryo, effects of dose on x, 25:57944
- radiation effects on synthesis of HeLa cells, effects of 5-fluorouracil on uv, 25:58082
- radiation effects on, review of neutron, 25:58089
- radioinduced breaks in mammalian, review of repair mechanisms for uv and x, 25:57943
- radioinduced single- and double-strand breaks in phi X-174 replicative form of, effects of LET on, 25:57952 (LBL-28)
- radioinduced single-strand breaks in human lymphocyte, kinetics of repair of electron, 25:57958
- radioinduced synthesis in polytene chromosomes of Drosophila, uv and x, 25:57951 (COO-1747-6)
- repair in irradiated bacteria in relation to chromosome recovery, 25:57970
- role of tritium-labeled, in radioinduced death of mammalian cells, 25:58086
- strand break repair in human, 5-bromodeoxyuridine photolysis mechanisms for, 25:60268 (CONF-711014-1)

NUCLEIC ACID, RIBO-
- radiation effects on synthesis of amphibian embryo, effects of dose on x, 25:57944
- radiation effects on, of rats in relation to central nervous system, x, 25:58098

NUCLEOGENESIS
- element production in simple helium burning, (E/T), 25:58508
- heavy-element enrichment by, (T), 25:58636
- products of rapid neutron capture on surfaces of peculiar A stars, (E/T), 25:58462

NUCLEONS
- form factor and structure function in parton model, electromagnetic, 25:59431
- form factors from current algebra, Regge poles, and Veneziano model, axial-vector, 25:59356
- form factors in quark--parton model, 25:59391
- form factors of, high-energy behavior of, 25:59339
- interaction $\gamma + N \to \pi^0 + N$, PCAC hypothesis from s-wave threshold amplitudes of, (E/T), 25:59373
- interactions anti K + N at 0 to 1400 MeV/c, energy-dependent multichannel M-matrix fits to partial-wave analyses of, (T), 25:59476
- interactions anti $K^0 + N \to K + \Xi$ at 2 to 5 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
- interactions anti $\nu + N \to \mu^+ +$ meson + baryon, urbaryon model of hadrons for, 25:59394
- interactions $e + N$ in parton model, scaling in deep inelastic, 25:59431
- interactions $e + N$, relativistic model for inelastic form factors, widths, and locations of N^* production in, (T), 25:59337
- interactions $e^- + N \to e^- + N$ at high energies and low momentum transfers, Compton scattering cross sections for two-photon-exchange contribution to, (T), 25:59372
- interactions $e^+ + N \to e^+ + N$ at high energies and low momentum transfers, Compton scattering cross sections for two-photon-exchange contribution to, (T), 25:59372
- interactions $\gamma + N \to \pi + N$, vector meson dominance of k^2 dispersion relation for invariant amplitudes for π production in, (T), 25:59351
- interactions $\gamma + N$, classical charge-symmetric field theory for cross sections for scalar meson production in, (T), 25:59338
- interactions $\gamma + N$, field theoretical basis for weak-interaction theory for, (t), 25:59397
- interactions $\gamma + N$, nonleading Regge behavior and fixed poles with polynomial residues in Compton, 25:59381
- interactions K + N, empirical analysis of differences and sums of angular distributions for duality in, (T), 25:59477
- interactions K + N, modified Pomeranchuk theorem for lower bounds on elastic and charge-exchange, 25:59474
- interactions $K^+ + N \to K^0 + p + p$ at 5.5 GeV/c, partial cross section and momentum transfer distribution for, (E), 25:59305
- interactions $K^- + N \to \Lambda + \pi$ at 1 to 1.85 GeV/c, partial-wave analysis of, (E), 25:59303
- interactions $K^- + N$ at intermediate energy, dual structure of amplitudes for, 25:59504
- interactions $\Lambda + N$, charge-symmetry breaking in, (T), 25:59515
- interactions $N + N \to N + N + \gamma$ in soft photon region, elastic NN phase shifts from, (E/T), 25:59520
- interactions $N + N \to N + N + \gamma$, review of, (E), 25:59241 (CONF-710915-2)
- interactions N + N at high and superhigh energies, Monte Carlo method with energy--momentum conservation law for analytical approximations for reconstruction of inelastic, (T), 25:59472 (JINR-P2-6022)
- interactions N + N at high energies, quasipotential theory of, 25:59442
- interactions N + N in pre-asymptotic region, angular distributions and amplitude structure for inelastic, (T), 25:59497
- interactions N + N with vector-meson exchange, radiative corrections to relativistic eikonal amplitude for, (T), 25:59453
- interactions $\nu + N \to l +$ meson + baryon, urbaryon model of hadrons for, 25:59394
- interactions $\nu + N \to \mu^- +$ meson + baryon, urbaryon model of hadrons for, 25:59394
- interactions $\nu + N \to \mu^- + W^+ + N$, μ^- angular and momentum distributions for, (T), 25:59414
- interactions $\nu + N$ at high energies, μ spectra from, (T), 25:59417
- interactions of, comparison of models for relation of amplitude for deuteron production in deuteron interactions with amplitude for nucleon production in, (T), 25:59514
- interactions $\pi + N \to$ eta + N, dispersion theoretic model for $S_{11}(1525)$ resonance and cross sections for, 25:59486
- interactions $\pi + N \to m\pi + N$, one-pion-exchange model for effective mass spectrum of π system in, (T), 25:59496
- interactions $\pi + N \to \pi + \Lambda + K$ at 7 GeV/c, production of $N^*(1700)$ in, 25:59307
- interactions $\pi + N$ at high and superhigh energies, Monte Carlo method with energy--momentum conservation law for analytical approximations for reconstruction of inelastic, (T), 25:59472 (JINR-P2-6022)

XUM

- interactions π + N at threshold to 13 GeV/c, predictions of isospin invariance in backward, (E/T), 25:59287
- interactions π + N in pre-asymptotic region, angular distributions and amplitude structure for inelastic, (T), 25:59497
- interactions π + N, complex Regge poles in backward, (T), 25:59495
- interactions π + N, generalized potential and P_{33} phase shift for, 25:59485
- interactions π + N, invariant amplitudes in unphysical region for, 25:59481
- interactions π + N, low-energy π + π interaction from phase shifts for, 25:59463
- interactions π + N, modified Pomeranchuck theorem for lower bounds on cross sections for elastic, 25:59474
- interactions π + N, parity violation from longitudinal polarization of recoil nucleon in, 25:59487
- interactions π + N, reconstruction of amplitudes from experimental data for, 25:59498
- interactions rho + N from photoproduction of e^+--e^- pairs at 4 GeV, real forward scattering amplitude for, (E), 25:59252
- interactions Σ + N at low energies, parameters for, (T), 25:59525
- interactions with leptons, relativistic model for inelastic form factors, widths, and locations of N* production in, (T), 25:59337
- production in proton reactions with iron at 400 GeV, Monte Carlo calculations of star and flux distributions from, (T), 25:59507 (ORNL-4673)
- reactions with nuclei at 0.01 to 100 GeV, cascade evaporation model for Monte Carlo method for calculating, (T), 25:59508(T) (ORNL-tr-2514)
- scattering by calcium-40 at 14 MeV, optical model analysis of, (T), 25:59744
- scattering by nuclei, DWBA analysis using realistic nucleon--nucleon interactions of inelastic, (T), 25:59858
- theory for KN system, quasipotential formalism for field-theoretic and phenomenological analysis in, (T), 25:59422 (JINR-E2-6046)
- theory for πN system, quasipotential formalism for field-theoretic and phenomenological analysis in, (T), 25:59422 (JINR-E2-6046)
- theory for separable potentials in two-, three-, and infinite-N systems of, (T), 25:59517

NUCLEOTIDES
- radiation effects on adenine, in different degrees of phosphorylation in rat liver and kidney, 25:57936
- radiation effects on release of, from Micrococcus luteus DNA, uv, 25:57928
- role in excitability characteristics of nerve fibers, use of uv radiation in studies of, 25:57939

O

OAK RIDGE AREA (TENN.)
- radioactivity monitoring during 1969, 25:57985

OBSIDIAN
- age of, fission track and uranium content method for estimation of, 25:57569
- uranium content of volcanic, geologic origin of, 25:57569

ORDNANCE MATERIEL
- detection of high explosives, neutron capture gamma-ray techniques for, 25:57866 (SC-RR-710450)

ORES
- analysis for niobium, spectrophotometric, 25:57333
- processing of, following nuclear fractionation development of solvent extraction-electrowinning method for, 25:57523 (ORNL-4677)

ORGANISMS
- radioinduced injuries in, evaluation of biochemical indicators of, 25:58126

ORNL HIGH-FLUX ISOTOPE REACTOR
- coolant boiling in, performance of neutron noise and acoustic noise methods for detection of, 25:60181
- fuel elements for, fabrication specifications for, 25:58349 (ORNL-4713)
- radiation targets from, processing at TRU to recover transuranium elements from, 25:57524 (ORNL-TM-3343)

ORNL ISOCHRONOUS CYCLOTRON
- experimental facilities at, computer system for compressed storage of data from, 25:59667
- experimental facilities at, description of system for multiparameter pulse height-analysis by repeated use of single fast ADC, 25:59668

OSMIUM
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- proton bombardment of, production of radioactive rhenium isotopes by, 25:57480 (JINR-P6-5955)

OSMIUM ISOTOPES Os-190
- neutron inelastic scattering at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797

OSTEICHTHYES
- Platypoecilus maculatus, radioinduced mutations for macromelanophores in, synergistic effects of hybridization on x, 25:57957

OXYGEN
- content in loop sodium, monitoring of, 25:58166(R) (AI-AEC-12980)
- determination in antimony, gallium arsenide, molybdenum, niobium, and titanium by 14-MeV neutron activation and γ spectrometry, 25:57376
- determination in beryllium by γ activation, nondestructive, 25:57385
- determination in irradiated ceramic fuels, method for, 25:58344(R) (LA-4693)
- determination in liquid sodium, development of on-line meter for, 25:60058(R) (ANL-7817)
- determination in loop sodium, development of meter for, 25:58163(R) (AI-AEC-12859)
- determination in presence of fission products by neutron activation, automated system for, 25:57390
- determination in ruthenium by vacuum fusion method, 25:57329
- deuterium-hydride scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- deuterium-molecule scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- diffusion in praseodymium oxide, (E/T), 25:58372
- diffusion in zirconium and zirconium dioxide, Wagner's theory on, 25:58254
- diffusion in zirconium oxide, effects of pressure on, 25:58370
- diffusion through carbon or vanadium pentoxide layers, effects of electric field on, 25:58383
- effects of interstitial, on oxidation resistance of niobium, 25:58172
- effects on γ and x radioinduced mutations in bacteriophage phi X174, 25:57971
- effects on RBE of helium ions for effects on intestinal and spleen colony formation and survival of mice, 25:57997 (LBL-314)
- effects on somatic crossing over in X chromosomes of Drosophila, 25:57959
- electron reactions at 10, 15, and 20 eV with molecular, differential cross sections for excitation in, (E), 25:58732
- electron reactions at 15 eV with molecular, production of oxygen ions (O^-) by dissociative attachment in, (E), 25:58730
- electron reactions at 60 eV with molecular, production of excited oxygen ions (O^+) in, (E), 25:58763
- electron reactions up to 300 eV with molecular, cross sections for ultraviolet emission produced by dissociative excitation in, (E), 25:58758
- electron reactions up to 350 eV with molecular, cross section for production of O I 1300-A multiplet by dissociative excitation in, (E), 25:58728
- electron reactions with molecular, K--LL Auger spectra from, (E), 25:58736
- helium-atom scattering by molecular, velocity dependence of total effective cross sections for, 25:58782
- helium-ion reactions at 100 eV to 4 keV with molecular, energy losses and energy-level transitions in, (E), 25:58753
- hydrogen-ion (H_2^+) reactions at 100 eV to 4 keV with molecular, energy losses and energy-level transitions in, (E), 25:58753
- interactions with hydrogen in interstellar medium, cross sections for transitions of fine structure components of, (E/T), 25:58623
- iodine-ion (I^-) reactions with molecular, effects of thermal motion of molecules on charge exchange in, (T), 25:58752
- iodine-ion reactions at 12 MeV with molecular, electron-capture and -loss cross sections for, (E), 25:58768
- oxygen-ion (O^-) reactions with molecular, effects of thermal motion of molecules on charge exchange in, (T), 25:58752
- proton reactions at 100 eV to 4 keV with molecular, energy losses and energy-level transitions in, (E), 25:58753
- removal from materials during radiosterilization, method for, 25:57625(P)
- sorption on tungsten (100) surfaces at 20 to 1000°C, 25:58226
- spectral lines in Orion Nebula due to, (E), 25:58513
- spectral morphology of 6300-A, in F-region nightglow, (E/T), 25:58884

OXYGEN IONS
- effects on subsequent valence distribution of sulfur-35 ion implanted in sodium chloride crystals, 25:57503
- electron reactions up to 1 keV with O^{2+}, cross sections for ionization in, (E), 25:58774
- emission spectra of, in solar corona, (E), 25:58621
- reactions with celluloid films of multiply charged, film-thickness dependence of cross sections for electron capture and loss in, (E), 25:58695
- spectral emission line intensities of, in solar transition region, (E), 25:58599
- x-ray spectra of solar, (E), 25:58583

OXYGEN IONS (O^+)
- density in F-region nightglow, (E/T), 25:58884
- electron reactions up to 1 keV with, cross sections for ionization in, (E), 25:58774
- reactions with argon and krypton at 10 to 170 eV, effects of excited states on charge exchange in, (E), 25:58763

- OXYGEN IONS (O^-)
  - reactions with oxygen molecules, effects of thermal motion of molecules on charge exchange in, (T), 25:58752
- OXYGEN IONS (O_2^+)
  - density in F-region nightglow, (E/T), 25:58884
- OXYGEN ISOTOPES O-16
  - binding and single-particle energies of, RPA calculation using self-consistent starting energies and higher-order corrections in Goldstone expansion, (T), 25:59723
  - energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
  - energy levels of, variational calculation using α-particle model, (T), 25:59726
  - energy-level transitions in π-mesic atoms of, cascade processes and x-ray emission in, (T), 25:58724
  - meson reactions (π^+,2p) at 70 MeV, excitation spectra for, (E), 25:59709 (LA-DC-12389)
  - meson reactions (π^+,p) at 70 MeV, excitation energy spectra and upper limits for cross sections for, (E), 25:59710 (LA-DC-12781)
  - production in stars from simple helium burning, (E), 25:58508
  - proton elastic scattering by, effective cross sections for, (T), 25:59509
  - reactions (O-16,α) with carbon-12 at 28.9 MeV, α-γ angular correlations from, (E), 25:59767
  - reactions (O-16,p) with carbon-12 at 36 and 60 MeV, angular distributions and spectra from, (E), 25:59714
  - reactions (O-16,p) with carbon-12, p-γ angular correlations from, (E), 25:59761
  - scattering by iridium-191 at 25 to 65 MeV with Coulomb excitation, gamma spectra from inelastic, (E), 25:59805
  - scattering by lead-207 at 70 MeV with Coulomb excitation, gamma spectra from inelastic, 25:59804
- OXYGEN ISOTOPES O-17
  - alpha reactions (α,n) at 1 to 5.5 MeV, excitation functions and Hauser--Feshbach calculations of spectra from, (T), 25:59708 (BNWL-B-109)
  - separation from heavy water, design and operation of countercurrent distillation facility for, 25:57675
  - separation from plutonium-238 oxide, gas phase-packed bed method for, 25:57655 (MLM-1844)
- OXYGEN ISOTOPES O-18
  - alpha reactions (α,n) at 1 to 5.5 MeV, excitation functions and Hauser--Feshbach calculations of spectra from, (T), 25:59708 (BNWL-B-109)
  - separation from heavy water, design and operation of countercurrent distillation facility for, 25:57675
  - separation from plutonium-238 oxide, gas phase-packed bed method for, 25:57655 (MLM-1844)
  - use as tracer for studies of oxygen diffusion in zirconium oxide, 25:58370
- OXYGEN SYSTEMS
  - O--Pu--U, phase studies of, 25:58409
  - O--Sc--V, phase studies at 1000 to 1500°C, 25:58401
- OYSTER CREEK POWER REACTOR, UNIT 1
  - protection system for, failure of isolation condenser steam line break sensor relays for, 25:59909 (DOCKET-50219-149)
- OZONE
  - production in BNL chemonuclear loop, efficiency of, 25:57610 (BNL-50293)

P

- PACIFIC OCEAN
  - iron deposits in East Pacific Rise of, thorium and uranium isotopic composition of, 25:57585
  - sediments in East Pacific Rise of, thorium and uranium isotopic composition of, 25:57585
- PACKAGING
  - regulations for hazardous materials, US Dept. of Transportation, 25:57710
- PAINTS
  - analysis by neutron activation, 25:57373
- PALLADIUM
  - preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  - radiation effects on catalytic activity of, in hydrogenation of butynediol, neutron, 25:57448
  - separation from ruthenium and rhodium by coprecipitation with ferric hydroxide, 25:57552
- PALLADIUM ALLOYS AND SYSTEMS
  - Au--Pd--Te, superconductivity in simple cubic intermetallic (Au/sub 1-x/Pd/sub x/)Te_2, 25:58928 (CALT-822-37)
- PALLADIUM ISOTOPES Pd-108
  - neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797
- PALLADIUM ISOTOPES Pd-110

PHONONS
  Boltzmann transport equation for gas of, derivation of hydrodynamics from, 25:59215
  interactions in solids and liquid helium, (T), 25:59204
PHOSPHITES
  effects on chemical state of recoil phosphorus-32 from neutron-irradiated tripolyphosphate hexahydrate, 25:57495
PHOSPHOLIPASE A
  radiation effects on activity in lysosomes, microsomes, and mitochondria in Sticker sarcoma of dogs, γ, 25:57940
PHOSPHONIC ACID, ETHYLENEDI-, DIBUTYL ESTER
  solvent properties for europium from sodium perchlorate solutions, 25:57544
PHOSPHORIC ACID, BIS(2-ETHYLHEXYL) ESTER
  solvent properties for europium, neodymium, and samarium from aqueous chloride solution, 25:57543
PHOSPHORIC ACID, TRIBUTYL ESTER
  solvent properties of, 25:57557
PHOSPHORUS
  radiation effects on metabolism in pea and wheat plants and in first and second filial generations, γ, 25:57941
PHOSPHORUS IONS
  implantation in silicon for use as charged-particle detectors, 25:57749
  ranges and stragglings in silicon at 20 to 400 keV, calculations of, 25:59116
PHOSPHORUS ISOTOPES P-30
  energy levels at 1.453 and 1.974 MeV, lifetimes for, (E), 25:59771
  energy-level scheme from silicon-29 (p,γ) reactions, (E), 25:59760
PHOSPHORUS ISOTOPES P-31
  neutron elastic and inelastic scattering at 7.96 and 9.05 MeV, cross sections for, (E/T), 25:59770
  nuclear magnetic resonance in uranium monophosphide, 25:59189
  photon reactions (γ,n) at 21.5 and 25.5 MeV, analysis for isospin effect in, (E/T), 25:59765
PHOSPHORUS ISOTOPES P-32
  evaluation for scanning human mammary glands for localization of neoplasms, 25:58051
  preparation of applicators of, by sorption on Anex foil Zerolith FF, 25:57500
  radiation effects on oxidation state of recoil, from neutron-irradiated tripolyphosphate hexahydrate, 25:57495
  transport between oats to vetch, 25:57950
  uptake by bone marrow, liver, and spleen of x-irradiated rats, effects of bone marrow transplants on, 25:58123
  uptake by leaves and roots of oats and vetch, 25:57950
  uptake by melanomas in human eyes, diagnostic test using, 25:58063
  uptake by pure and mixed stands of buckwheat and lupine, comparison of, 25:57949
PHOTOGRAPHIC FILM
  performance of Polaroid Types 52 and 57, in neutron radiography, 25:57691
PHOTOMETRY
  calibrations of uvhyβ and gnkmf systems, (E), 25:58480
PHOTONS
  coupling to rho, Veneziano-type representations for, (T), 25:59352
  coupling to vector mesons, Veneziano-type representations for, (T), 25:59352
  exchange contribution of two, to $e^- + N \rightarrow e^- + N$ and $e^+ + N \rightarrow e^+ + N$ interactions at high energies and low momentum transfers, Compton scattering cross sections for, (T), 25:59372
  fission reactions with heavy nuclei at 0.1 to 5 GeV, giant resonance in yields and integral cross sections for, (E), 25:59794
  interaction $\gamma + N \rightarrow \pi^0 + N$, PCAC hypothesis from s-wave threshold amplitudes of, (E/T), 25:59373
  interactions $e + \gamma$ in inelastic $e + e$ interactions, hadron production in deep inelastic, (T), 25:59333 (JINR-E2-6036)
  interactions $\gamma + d \rightarrow$ eta $+ d$, amplitudes with anomalous thresholds for ω exchange and S_{11} contributions to, (T), 25:59514
  interactions $\gamma + e \rightarrow \gamma\ (2\gamma) + e$ in constant electromagnetic field, spectral and angular distributions for Compton and induced Compton, (T), 25:59368
  interactions $\gamma + e$ with electron beams in crystals, anomalous transmission in, (T), 25:59228
  interactions $\gamma + \gamma \rightarrow 3\pi$, relation between amplitudes for $e^+ + e^- \rightarrow 3\pi$, $\pi^0 \rightarrow 2\gamma$, and, 25:59357
  interactions $\gamma + \gamma$ in colliding beams, differential cross sections for hadron production in deep inelastic $e + e$ interactions from total cross sections for hadron production in virtual, (T), 25:59371
  interactions $\gamma + n \rightarrow \gamma + n$, quark model extension for total and differential cross sections for, (T), 25:59378
  interactions $\gamma + N \rightarrow \pi + N$, vector meson dominance of k^2 dispersion relation for invariant amplitudes for π production in, (T), 25:59351
  interactions $\gamma + n \rightarrow \pi^0 + n$ at 4 GeV, cross sections relative to $\gamma + p \rightarrow \pi^0 + p$ interactions, (E), 25:59243
  interactions $\gamma + n \rightarrow$ rho$^-$ $+ p$, rho-exchange contribution to differential cross sections for, 25:59385
  interactions $\gamma + N$, classical charge-symmetric field theory for cross sections for scalar meson production in, (T), 25:59338
  interactions $\gamma + N$, field theoretical basis for weak-interaction theory for, (t), 25:59397
  interactions $\gamma + N$, nonleading Regge behavior and fixed poles with polynomial residues in Compton, 25:59381
  interactions $\gamma + p \rightarrow$ eta $+ p$ below 1 GeV/c, $S_{11}(1530)$ production in, (T), 25:59514
  interactions $\gamma + p \rightarrow \gamma + p$ in deep inelastic $e + p$ current interactions, field theory for amplitudes of Compton, (T), 25:59363
  interactions $\gamma + p \rightarrow \gamma + p$, quark model extension for total and differential cross sections for, (T), 25:59378
  interactions $\gamma + p \rightarrow \pi^0 + p$ at 4 GeV, cross sections relative to $\gamma + n \rightarrow \pi^0 + n$ interactions, (E), 25:59243
  interactions $\gamma + p \rightarrow \pi^+ + n$, pseudomodel predictions for differential cross sections for polarized, 25:59362
  interactions $\gamma + p$ at high energies, Regge pole model for total cross sections of Compton, 25:59340
  interactions $\gamma + \pi \rightarrow \pi + \pi$, hard-meson current algebra and PCAC model for γ--3π coupling constant and form factor for, 25:59382
  interactions with hadrons, hadron electrodynamics in resonance model for absorption cross sections for, 25:59386
  interactions with hadrons, parity rule and helicity conservation in rho^0 production in, 25:59384
  motion in refracting medium, (T), 25:59325
  production in backward $e^+ + e^- \rightarrow e^+ + e^- + m\gamma$ interactions at high energies, double-logarithmic approximation for cross sections for, (T), 25:59374
  production in backward $e^+ + e^-$ interactions at high energies, integral equation for cross sections from partial waves with multi-Regge poles for amplitudes of, (T), 25:59369
  production in $N + N \rightarrow N + N + \gamma$ interactions, review of, (E), 25:59241 (CONF-710915-2)
  production in neutrino annihilation of polarized leptons, angular distributions and spectra for, (T), 25:59402
  production in nuclear reactions, ENDF formats and procedures for storage of data on, (T), 25:59838 (LA-4549)
  properties of photon tachyons in disappearing Fresnel wave, strong correlation between Cherenkov effect and, (T), 25:59573
  reactions (γ,α) on beryllium, carbon, and cellophane, pulse-height spectra from, (E), 25:59734
  reactions (γ,d) with helium-4, dispersive calculation using Omnes--Muskhelishvili equation of cross sections for, (T), 25:59698
  reactions (γ,e^+e^-) with nuclei, vector dominance model for rho--ω mixing in, 25:59364
  reactions (γ,n) with lead-207 and -208 and iron-56 and -57 at threshold, review of cross sections and photon doorways for, (E), 25:59784 (UCRL-73336)
  reactions with aluminum, carbon, copper, and lead at 560 MeV, emulsion study of dependence on atomic weight for yields of π^+ and π^- from, (E), 25:59248
  reactions with hydrogen atoms, calculation of radial transition matrix elements for, 25:58770
  reactions with nuclei, ENDF formats and procedures for storage of data on, (T), 25:59838 (LA-4549)
  reactions with various metals, secondary electron emission from, (E/T), 25:59107
  scattering by carbon, deuterium, and helium-4, analysis for double scattering and glory effects in Compton, 25:59703
PHOTOSPHERE
  brightness temperatures in, (E), 25:58596
  electric conductivity in faculae, (E/T), 25:58588
  electric conductivity in, (E/T), 25:58588
  facula-to-photosphere contrast, effects of scattered light on, (T), 25:58587
  spectra of, K-line profiles in, (E), 25:58596
PHYSICAL CHEMISTRY
  research progress on fundamentals of effusion and thermodynamics of materials, 25:57435(R) (COO-1029-39)
PHYSICS
  book: Topics in Modern Physics: A Tribute to Edward U. Condon, 25:58682
  conference on theoretical, Birmingham, England, 6/67, (T), 25:59209
PILGRIM POWER REACTOR
  site for, environmental radiation survey during April to

XUM

  - June 1971, 25:59966 (DOCKET-50293-56)
  - startup of, effects on regional power supply of delay in, 25:59956 (DOCKET-50271-63)
- PILOCARPINE
  - effects on excretion of plutonium-239 by rats, 25:57998 (NIRS-Pu-8)
- PINCH DEVICES
  - plasma losses in high-current, from inverse skin effect, (T), 25:58967
  - plasma properties in dynamic z-, discharge ignition effects on, (E), 25:59015
  - plasma properties in theta-, electron bursts in, (E), 25:59021
- PINCH EFFECT
  - ion distribution function for high-current z-, (E), 25:59024
- 2-PINENE
  - radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)
- PIPE FITTINGS
  - erosion of high-pressure, chromium-50 and cobalt-60 tracer techniques for measuring, 25:57662
- PIPES
  - crack initiation and growth in reactor cooling systems, effects of low-cycle fatigue on, (E), 25:60061(R) (GEAP-10207-24)
  - defects in metal, standard ultrasonic method for detecting longitudinal, 25:57686
  - design and performance of glass, for reactors, 25:58421
  - failure in reactor cooling systems, probability analysis of, 25:60061(R) (GEAP-10207-24)
- PLACENTA
  - scintigraphy for localization of, using metastable indium-113, 25:58060
- PLANETARY NEBULAE
  - helium abundances in, (E/T), 25:58446
  - radio emission from 121, (E), 25:58544
  - spectra of NGC 7662, (E), 25:58516
- PLANETS
  - effects on large-scale distribution of solar activity, (E), 25:58611
  - effects on solar activity, (T), 25:58570 (N-71-14166)
  - formation from charged bodies ejected from Sun, (T), 25:58591
  - formation of, floccule theory of, (T), 25:58586
  - orbits of, torsion effects on perihelion motion of, (T), 25:59605
- PLANTS
  - analysis for cesium-137 by radiochemical isolation and γ spectrometry or beta detection, 25:57355
  - analysis of standard, for selenium by neutron activation, 25:57380
  - radiation effects on seeds and cuttings of berry, effects of dose and species on gamma, 25:58151
  - strontium-90 content of agricultural, in East Germany, effects of fallout from nuclear weapons tests on, 25:57986
  - tungsten-181 content in off-site, following Schooner Event, (E), 25:57574 (PNE-524)
- PLASMA
  - atomic metastable densities in helium, neon, and mixed helium--neon, in neutron environment, (E/T), 25:59003
  - bibliography on plasma physics and fusion reactors, 25:58955
  - book: Plasma Physics and Problems of Controlled Thermonuclear Synthesis, 25:58957
  - boundary layer near electrodes, approximation method for calculating, 25:59051
  - boundary sheath near cathode in disturbed, (T), 25:59035
  - collisions in turbulent weakly ionized, cross sections for, (T), 25:59039
  - conductivity in toroidal devices with trapped particles, electric, (T), 25:59046
  - confinement from atomic beam interactions with ECR-heated targets, (T), 25:58969
  - confinement in DECA IIB, equilibrium in, (E), 25:58958 (CEA-CONF-1807)
  - confinement in pinch devices, losses from inverse skin effect, (T), 25:58967
  - confinement in tokamaks and bumpy torus, energy flow and current diffusion in, (T), 25:58961 (CONF-711016-1)
  - confinement in tokamaks, effects of effective electron collision frequency on, (E), 25:58974
  - confinement in toroidal traps using hf electric fields, (E/T), 25:58976
  - confinement in trapped-particle-free stellarators, adiabatic compression of, (T), 25:58964
  - diagnostics in free-burning arcs, spectroscopic, (E/T), 25:58998
  - diagnostics in medium-beta torus JFT-2, microwave interferometric, (E), 25:58979 (JAERI-Memo-4530)
  - diagnostics in tokamaks using alpha particles, current distribution, (T), 25:58980 (JAERI-Memo-4531)
  - diagnostics near boundary of quartz wall, temperature, 25:58985
  - diagnostics of cesium, using hot and cold probes, (E), 25:58986
  - diagnostics of continuum gas, theory of cooled spherical electrostatic probe for, 25:58982
  - diagnostics of magnetized, ion and atom temperature, (E/T), 25:58988
  - diagnostics of turbulent, probe geometry effects on, (E), 25:58983
  - diagnostics of turbulent, using shf wave scattering, (T), 25:58996
  - diagnostics of uranium, spectroscopic, 25:59000
  - diagnostics of, double microfield probe for, (E), 25:58990
  - diagnostics of, electron temperature and recombination coefficients from spectroscopic, (E/T), 25:58993
  - diagnostics of, using particle-loss measurements and beam interactions, 25:58994
  - diagnostics using cylindrical Langmuir probes, voltage--current characteristics in, 25:58999
  - diagnostics using Doppler effect at electron cyclotron frequency, (E), 25:58997
  - diagnostics using double probes, effect of electron and ion drifts on, (T), 25:58981
  - diagnostics using electrostatic probes, potential, (E), 25:58992
  - diagnostics using microwave reflection, methods for, 25:58995
  - diagnostics using open resonator, density, 25:58977(T) (AEC-tr-7271)
  - diagnostics using optical interferometry and holographic techniques, 25:59001
  - dielectric permittivity of weakly ionized, in crossed fields, (T), 25:59050
  - diffusion in closed magnetic traps, effects of charged particle streams on, (T), 25:58975
  - diffusion in multipoles toward conductors and walls, (T), 25:58970
  - electric discharge in, computer simulation of breakdown potential, (E/T), 25:59004
  - electric discharges in low-pressure hydrogen, potential breakdown in, (E), 25:59022
  - electron beam interactions with, Doppler shifts at cyclotron frequency in, (E), 25:58997
  - electron distribution function deformation under influence of large-amplitude wave, (E), 25:59012 (CEA-CONF-1833)
  - electron energy balance equation for positive column, self magnetic fields in, (T), 25:59038
  - expansion of rarefied, in vacuum, (T), 25:59049
  - heating and collisions in, models for simulating, 25:59033
  - heating at ion cyclotron resonance, collisionless, 25:58973
  - heating at second harmonic of electron cyclotron frequency, (E), 25:58971
  - heating by electron beams, effects of magnetic fields on, (E), 25:58972
  - heating by lasers in density range 10^{17} to 10^{19}/cm^3, 25:59054 (MATT-782)
  - heating by lasers, prospects for, 25:59057
  - heating in Heliotron C, ohmic, (E), 25:58963
  - heating in magnetic mirrors, stochastic model of ECR, (T), 25:58968
  - heating in tokamak devices, high-frequency, (T), 25:58966
  - heating in toroidal devices, transit-time magnetic pumping in, 25:58959 (CEA-CONF-1830)
  - heating of deuterium--tritium, by lasers, (T), 25:58965
  - heating of ions by electrostatic ion cyclotron waves, low-loss coupling method for, 25:58962 (IPP-IV-25)
  - heating of laser-produced, at lower hybrid resonance, (E), 25:58960 (CEA-CONF-1831)
  - injection and confinement from atomic beam interactions with ECR-heated targets, (T), 25:58969
  - injection of fast atomic deuterium into high-temperature, penetration of, (T), 25:59030
  - interactions of argon and neon, in pseudo equilibrium with additions, 25:59018
  - ion distribution function for high-current z discharges, (E), 25:59024
  - ion production and loss processes in helium--nitrogen mixtures, (E), 25:59014
  - ionization decay in neon--nitrogen, ion production and loss in, (E), 25:59019
  - ionization in nonequilibrium low-pressure cesium, excited states in, (T), 25:59008
  - ionization levels in cesium, population of, 25:59034
  - ionization levels in low-current helium arc, population of, (E), 25:59017
  - kinetic theory of hydrogeneous, effective potentials for components of, 25:59042
  - kinetic theory of turbulent, quasi-linear approximation for, 25:59027 (IPP-6/94)
  - kinetic theory of warm electron, eigenvalue problems for Lagrangian systems, 25:59052
  - kinetic theory of, integration methods for Vlasov equation for, 25:59040
  - kinetic theory of, polynomial expansion method for problems involving relativistic Maxwellian distribution, 25:59053
  - kinetics of weakly ionized, steady-state charged-particle distribution in, (T), 25:59048
  - motion in hf electromagnetic fields, nonlinear theory of, 25:59037
  - production and heating using lasers, possibilities of, 25:59054 (MATT-782)
  - production of dense, shock wave pre-ionization for theta pinches, 25:59056

XUM

  production of quiescent, in skipping magnetic fields, (E), 25:59055
  production using lasers, review of, 25:59058

  stability criteria for relativistic, in magnetic fields, (T), 25:59064
  stability in external electric fields oscillating near plasma frequency, (T), 25:59067
  stability in positive column discharges, (T), 25:59072
  stability in tokamaks, collisional effects on dissipative, (T), 25:59060 (CEA-CONF-1800)
  stability of high-frequency resonant, (E), 25:59063 (NP-19031)
  stability of inhomogeneous finite-β, ion cyclotron drift, (T), 25:59070
  stability of semi-infinite plane slab, kink and tearing-mode, (T), 25:59068
  stability of two-component anisotropic, electrostatic, (T), 25:59061 (CEA-CONF-1828)
  stability of uniform magnetized, linear theory for, (T), 25:59102
  stability of weakly ionized, unified linear theory for magnetohydrodynamic, 25:59066
  stability of, asymptotic behavior of two-stream, (T), 25:59062 (IPP-6/97)
  stabilization of thin filaments of, dynamic, (T), 25:59071
  temperature difference of ions and electrons in collisional, quasi-linear approximation of, 25:59007
  temperature relaxation in, ion and electron, (T), 25:59028
  theory for tachyon, classical tachyon mechanics for formulation of Maxwell--Vlasov, (T), 25:59556 (IPP-6/95)
  use of high-temperature air, in transpiration cooling of nuclear rocket nozzles, 25:57640 (N-71-22591)
  uses in powder metallurgy, 25:58187(T) (SCL-T-710281)
  viscosity in strong magnetic fields, unified theory for, 25:59029
  wave absorption at upper hybrid frequency, microwave, (E), 25:59091
  wave absorption by cold, boundary effects on, (T), 25:59084 (CEA-CONF-1827)
  wave absorption in cylindrical column of cold magnetized, electromagnetic, (T), 25:59088
  wave buildup in inhomogeneous finite-β, ion cyclotron drift, (T), 25:59070
  wave damping in inhomogeneity of cold collisionless, electromagnetic, (T), 25:59081(T) (AEC-tr-7272)
  wave damping in inhomogeneous, drift-, (T), 25:59103
  wave echoes in, exact test-particle propagator of Lenard--Bernstein equation for, (T), 25:59087
  wave excitation by coupling between transverse and longitudinal fields, electron, 25:59101
  wave excitation by different electron and ion temperatures, low frequency, (T), 25:59069
  wave excitation by grids in collisionless, ion, (E/T), 25:59095
  wave excitation in infinite cylindrical column of, edge effects on magnetoacoustic, (E), 25:59089
  wave interactions in discharge, ion acoustic and ionization, (E/T), 25:59098
  wave interactions in, nonlinear electron, (T), 25:59099
  wave interactions with charged particles in, cyclotron-frequency, (T), 25:59096
  wave interactions with two-component, reflection and transmission of lf Alfven, (T), 25:59093
  wave interactions with, effect on microinstabilities for anisotropic ion temperatures, 25:59083 (CEA-CONF-1826)
  wave propagation at anisotropic pressures, stationary, (T), 25:59085
  wave propagation in inhomogeneous, nonlinear magnetoacoustic, (T), 25:59086
  wave propagation in magnetized, dispersion relations for surface, (T), 25:59092
  wave propagation in magnetized, large-amplitude TM, (T), 25:59094
  wave propagation in multicomponent cold, at angles to magnetic field, (T), 25:59090
  wave propagation in positive column discharges, low-frequency, (T), 25:59072
  wave propagation in uniform magnetized, linear theory of transverse, (T), 25:59102
  wave propagation on inhomogeneous column, surface, (E/T), 25:59100
  wave scattering on turbulent, shf electromagnetic, (T), 25:58996
  wave transformation and emission from beam--plasma discharge, density effects on, (E/T), 25:59104
  wave transformation at upper hybrid resonance, for oblique incidence, (T), 25:59082 (CEA-CONF-1803)
  wave transformation in, coupled equations for electromagnetic, (T), 25:59105
PLASMA ACCELERATORS
  design of mercury electron-bombardment ion thrusters, 25:59011
  ion sources for Hall, high-current hollow cathode, 25:59080
  neutral gas acceleration in rail-type, by shock waves, (T), 25:59031
  properties of toroidal glow discharge, in radial magnetic fields, (E/T), 25:59002
PLASMA JETS
  diagnostics of argon and neon, interferometric determination of temperature, (E), 25:58984
  diagnostics of argon and neon, spectroscopic, 25:58991
  diagnostics using lasers, electron density and temperature, (E/T), 25:58987
  diagnostics using optical methods, ion velocity, 25:58978 (CEA-CONF-1829)
  interactions of, ordinary mode electromagnetic instability in, (T), 25:59065
  stability of colliding, ordinary mode electromagnetic, (T), 25:59065
PLASMAPAUSE
  electron precipitation near, correlation with vlf emissions and plasmapause position, (E/T), 25:58897
  formation of, associated with dynamical processes in ionosphere and magnetosphere, (E/T), 25:58867
  formation of, relation to acceleration and precipitation of outer magnetospheric thermal plasma, (E/T), 25:58909
  magnetic-field measurements near L approximately equal 4, conjugate geomagnetic-noise and coherent-pulsation, (E), 25:58898
  plasma instabilities in magnetospheric, review of, 25:58895
PLASTICS
  reactions of dielectric, with fluorine, 25:57619 (RFP-1739)
  B--plastics, properties of continuous filament reinforced, for use in space vehicles, 25:58422
  graphite--plastics, properties of continuous filament reinforced, for use in space, 25:58422
PLATINUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  complexes with 2,4-pentanedione, radiation effects on reactions of recoils from neutron, 25:57489
  neutron capture by, in acetylacetonate complexes, isotope effects on recoils from, 25:57489
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  separation from gold by solvent extraction using triphenylguanidinium chloride, 25:57554
  void formation in, by quenching, 25:58319
PLATINUM ALLOYS AND SYSTEMS
  Cm--Pt, preparation of intermetallic $CmPt_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)
  Hf--Pt-base--Rh--Ti--W, hardness of crystallized, effects of annealing at high temperatures on, 25:57658(R) (ORNL-4723)
  Pt-base--Rh--W, compatibility with tungsten at high temperatures, 25:57658(R) (ORNL-4723)
  Pt-base--Rh--W, hardness of crystallized, effects of annealing at high temperature on, 25:57658(R) (ORNL-4723)
PLATINUM ISOTOPES Pt-191
  electron-capture decay of, branching ratios, conversion-electron, gamma, and x-ray spectra, and log-ft and Q values for, (E), 25:59805
  energy levels of, determination of electromagnetic transition probabilities from mean lifetimes of, (E), 25:59776 (FRNC-TH-56)

XUM

PLOWSHARE PROJECT
- bibliography of civil, industrial, and scientific uses for nuclear explosions in, 25:57603 (TID-3522(Rev.9))
- fallout from Schooner Event in, data from off-site environmental monitoring of, 25:57574 (PNE-524)
- field testing system for, data tabulation on economic, equipment, and personnel aspects of, 25:57601 (LMSC-D-177630(Vol.2))

PLUTONIUM
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- buildup in fast reactor fuels, effects of fuel cycle on, (T), 25:60095(R) (IAEA-R-742-F)
- content of human lungs, multiwire proportional detector for measuring, 25:57773
- criticality of hemispheres and spheres of alpha-phase, equipment and methods for measuring, 25:57718
- deposition as oxide on instrument parts of stainless steel, electrolytic, 25:57440
- determination following thin-layer chromatography, radiometric, 25:57357
- determination in biological samples, radiochemical method for, 25:57998 (NIRS-Pu-8)
- determination in mixed oxide fuels, development of methods for, 25:58344(R) (LA-4693)
- determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
- determination relative to uranium in oxide fuels during fabrication, 25:57507(R) (ANL-7799)
- diffusion of cobalt in, tracer studies of, 25:58212 (NRCN-268)
- disproportionation of tetravalent, in nitric and perchloric acids, chromatographic studies on, 25:57357
- distribution between nitric acid and TBP, effects of valence state on, 25:57357
- fuel cycles for high temperature gas cooled reactors, economics of, 25:60097 (ORNL-TM-3525)
- oxidation and reduction in Purex Process, 25:57507(R) (ANL-7799)
- oxidation of trivalent, in lithium chloride--potassium chloride eutectic, chronopotentiometric study of, 25:57420
- oxidation potential for trivalent--tetravalent, 25:57437
- preparation and properties of heptavalent, 25:57404
- preparation of radiation targets of, methods for, 25:59634 (CONF-711002-, pp 59-69)
- preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)
- preparation of thin films of, by electrophoresis and electrospraying, 25:58183 (CONF-711002-, pp 160-5)
- production in Federal Republic of Germany, 25:57666
- production in JRR-1, measurement of, 25:57320
- purification by continuous ion exchange, control system for operation of equipment in, 25:57510 (ARH-SA-82)
- reactions with chromium and arsenic, 25:57413
- reactions with chromium in presence of acetaldehyde and arsenite, 25:57411
- recycle in pressurized heavy water power reactor fuels, analysis of optimum economic, 25:60092 (AECL-3910)
- separation from fast breeder fuels by Purex Process solvent extraction, 25:57518(T) (EURFNR-888)
- separation from incinerator ash, evaluation of methods for, 25:57525 (RFP-1723)
- separation from neptunium and promethium by ion exchange chromatography on zirconium phosphate, 25:57550
- separation from other actinides by paper or thin-layer chromatography, 25:57553
- separation from other cations by solvent extraction using TBP, 25:57357
- separation from spent LMFBR fuels by solvent extraction, performance of centrifugal contactor in, 25:57507(R) (ANL-7799)
- separation from spent LMFBR fuels, development of mixer-settler for, 25:57508 (ANL-7810)
- separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
- separation of various valence forms of, by paper or thin-layer chromatography, 25:57553
- spectra of hexavalent, in dilute sodium carbonate solutions, absorption, 25:57403
- utilization in thermal reactor fuels, projections of, 25:60249

PLUTONIUM ALLOYS AND SYSTEMS
- diffusion of cobalt in, tracer studies of, 25:58212 (NRCN-268)
- O--Pu--U, phase studies of, 25:58409
- Pu--Ru, thermodynamic properties of intermetallic $PuRu_2$, at 913 to 1076°K, measurement using emf cells, 25:58211 (LA-4758)

PLUTONIUM CARBIDES
- alpha reactions (α,n) in Hauser--Feshbach calculation of neutron spectra for, (T), 25:59708 (BNWL-B-109)
- PuC--UC, hardness of fuels of, at 400 to 500°C, 25:58344(R) (LA-4693)
- PuC--UC, phase studies of, 25:58344(R) (LA-4693)
- PuC--UC, preparation of fuels of, method for, 25:58163(R) (AI-AEC-12859)
- PuC--UC, preparation of tungsten-modified, by carbothermic reduction of mixed component oxides, 25:58365 (AI-AEC-12983)
- PuC--UC, radiation effects on encapsulated fuels of, at high burnups, in-pile, 25:58344(R) (LA-4693)

PLUTONIUM ISOTOPES
- cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)
- hazards for man, review, 25:57998 (NIRS-Pu-8)

PLUTONIUM ISOTOPES Pu-238
- decay scheme, 25:57998 (NIRS-Pu-8)
- design of heat source of, for cardiac pacemaker, 25:57668(P)
- fabrication and testing of heat sources of, for use in implantable cardiac pacemaker, 25:57657(R) (NUMEC-4189-6)
- performance as heat source in thermionic converters, analysis of systems, 25:57656 (N-71-18512)
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)
- use as heat source in implantable cardiac pacemaker, 25:57669

PLUTONIUM ISOTOPES Pu-239
- content of human lungs, development of large proportional and scintillation detectors for measurement of, 25:57998 (NIRS-Pu-8)
- content of human puncture wounds, design of collimated alpha detector for measurement of, 25:57998 (NIRS-Pu-8)
- decay scheme, 25:57998 (NIRS-Pu-8)
- distribution in lung tissues following inhalation, development of phantom for studies of, 25:57998 (NIRS-Pu-8)
- distribution in mice and rats, whole-body autoradiographic method for measurement of, 25:57998 (NIRS-Pu-8)
- effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918
- excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
- excretion by rats, effects of dehydrocholic acid, DTPA, and pilocarpine on enhancement of, 25:57998 (NIRS-Pu-8)
- inhalation of insoluble, radiation dose to lungs and pulmonary lymph nodes of man following acute or chronic, 25:58001 (UCRL-73388)
- monitoring in air, design of combined detector and sampler for, 25:57998 (NIRS-Pu-8)
- neutron capture-to-fission up to 15 keV, review of data on, 25:59812
- neutron fission at thermal to 2 MeV energies, energy dependence of prompt neutron yield from, (E), 25:59810
- neutron fission of, absolute cross section for thermal, (E), 25:59777 (IFA-NR-33)
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

PLUTONIUM ISOTOPES Pu-240
- decay scheme, 25:57998 (NIRS-Pu-8)
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

PLUTONIUM ISOTOPES Pu-241
- decay scheme, 25:57998 (NIRS-Pu-8)
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

PLUTONIUM ISOTOPES Pu-242
- decay scheme, 25:57998 (NIRS-Pu-8)
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

PLUTONIUM NITRATES
- $Pu(NO_3)_4$--$UO_2(NO_3)_2$, processing at West Valley Processing Plant, safety evaluations for, 25:57514 (DOCKET-50201-89)

PLUTONIUM OXIDES PuO_2
- aging experiments on pellets of, flowsheets for, 25:57658(R) (ORNL-4723)
- alpha reactions (α,n) in Hauser--Feshbach calculation of neutron spectra for, (T), 25:59708 (BNWL-B-109)
- preparation from plutonium nitrate, fluid-bed process for, 25:57507(R) (ANL-7799)
- preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
- production of oxygen-17 and -18 depleted, gas phase-packed bed method for, 25:57655 (MLM-1844)
- Mo--PuO_2, aging experiments on curium oxide-doped cermet pellets of, flowsheets for, 25:57658(R) (ORNL-4723)
- Mo--PuO_2--ThO_2, etching of sintered, for optical microcopy, method for, 25:58354
- PuO_2--ThO_2, etching of sintered, for optical microscopy, method for, 25:58354
- PuO_2--ThO_2, metallography of molybdenum-coated pressed pellets of, 25:58398
- PuO_2--UO_2, analysis of fuels of, for plutonium and uranium, methods for, 25:58344(R) (LA-4693)
- PuO_2--UO_2, melting heat rating of, (E), 25:60243
- PuO_2--UO_2, microstructure of fuel pellets of, for fast flux irradiation studies, 25:58397
- PuO_2--UO_2, plutonium segregation in, neutron radiographic method for detection of, 25:57698
- PuO_2--UO_2, preparation of fuels from reprocessed, CNEN and SNAM methods for, 25:58351 (RT/ING-(70)30)
- PuO_2--UO_2, properties of stainless steel-clad fuel pins of, for 1000 MW(e) helium-cooled breeder reactor, mechanical and thermal, 25:58410 (BLG-456)
- PuO_2--UO_2, radiation effects on enthalpy of fuels of, in-

XUM

- pile, 25:58344(R) (LA-4693)
  - PuO_2--UO_2, radioautography of irradiated fuel elements of, method for hot cell, 25:57693
  - PuO_2--UO_2, radioinduced tritium production in, relations of burnup with fast neutron, 25:58344(R) (LA-4693)
  - PuO_2--UO_2--WO_3, reduction to tungsten-modified carbide fuels, carbothermic, 25:58365 (AI-AEC-12983)
- PLUTONIUM PEROXIDES
  - preparation and properties of pentavalent, 25:57400
- POINT BEACH POWER REACTOR, UNIT 1
  - operation of, request for not suspending license for, 25:59954 (DOCKET-50266-56)
- POINT BEACH POWER REACTOR, UNIT 2
  - emergency core cooling system for, performance evaluation for small break conditions, 25:59968 (DOCKET-50301-41)
- POLONIUM
  - electromigration behavior of, in CDTA and EDTA, 25:57520 (JINR-E6-5552)
- POLONIUM ISOTOPES Po-210
  - determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
  - energy levels from lead-208 (α,2n) reactions, core-excited, (E), 25:59817
- POLONIUM ISOTOPES Po-218
  - content in particles in French uranium mine air, (E), 25:57564
- POLYPHOSPHATES
  - radiation effects on tripolyphosphate hexahydrate, effects of radical scavengers on yields from reactor, 25:57495
- POPULATIONS
  - radiation hazards to human, from artificial and natural sources, 25:57994
- POSITRON CAMERAS
  - development of multiple proportional detector, 25:57774
- POSITRONS
  - annihilation in gases, time dependence of, (E), 25:58725
  - annihilation in iodine at 80 to 180 keV, cross sections and spectra from single-quantum, (E), 25:58723
  - emission from mica and polyethylene absorbers, 25:58681
  - emission in $W^+ \to e^+ + \nu$ decay, angular and momentum distributions for, (T), 25:59413
  - interactions $e^+ + e^- \to 3\pi$, relation between amplitudes for $\pi^0 \to 2\gamma$, $\gamma + \gamma \to 3\pi$, and, 25:59357
  - interactions $e^+ + e^- \to e^+ + e^- + \gamma + \gamma$, cross sections for π^0, eta, and eta' production in, 25:59389
  - interactions $e^+ + e^- \to e^+ + e^- + \gamma + \gamma$, proposal for experimental study of $\pi^0\gamma\gamma$, eta $\gamma\gamma$, and $X^0\gamma\gamma$ vertices from, 25:59253
  - interactions $e^+ + e^- \to e^+ + e^- + m\gamma$ at high energies, double-logarithmic approximation for bremsstrahlung cross sections for backward, (T), 25:59374
  - interactions $e^+ + e^- \to eta^0(X^0) + \gamma$ in vector meson region, vector dominance model with linear and quadratic mixing of eta and X^0 for cross sections for, (T), 25:59377
  - interactions $e^+ + e^- \to N +$ anti N, production of S(1727), S(1414), d(1382), and d(1855) in colliding-beam, (T), 25:59358
  - interactions $e^+ + e^- \to p +$ anti p, scaling law for proton form factors for, 25:59361
  - interactions $e^+ + e^- \to p +$ anything, hadron electrodynamics in resonance model for, 25:59386
  - interactions $e^+ + e^- \to$ phi $\to \pi^- + \pi^+ + \gamma$, conformal symmetry for, 25:59542
  - interactions $e^+ + e^- \to \pi^0 + \gamma$ in vector meson region, vector dominance model for cross sections for, (T), 25:59377
  - interactions $e^+ + e^-$ at 1.4 to 2.4 GeV, analysis of elastic, (E), 25:59250
  - interactions $e^+ + e^-$ at 1.4 to 2.4 GeV, cross sections for multiple particle production in, (E), 25:59251
  - interactions $e^+ + e^-$ at high energies, integral equation for cross sections from partial waves with multi-Regge poles for bremsstrahlung amplitudes in backward, (T), 25:59369
  - interactions $e^+ + e^-$ in colliding beams, contribution to total cross section from bremsstrahlung mechanism for differential cross section for hadron production in, (T), 25:59375
  - interactions $e^+ + e^-$ in colliding beams, differential cross sections for hadron production in deep inelastic e + e interactions from, (T), 25:59371
  - interactions $e^+ + e^-$ in crossed beams, Landau--Lifshitz process for cross sections for hadron production in, (T), 25:59334 (LNF-71/14)
  - interactions $e^+ + e^-$, cross section for heavy lepton production in, (T), 25:59390
  - interactions $e^+ + e^-$, Regge-pole-theory prediction of scaling in hadron production in, (T), 25:59376
  - interactions $e^+ + e^-$, total cross sections for W and e^+ production in colliding-beam, 25:59383
  - interactions $e^+ + N \to e^+ + N$ at high energies and low momentum transfers, Compton scattering cross sections for two-photon-exchange contribution to, (T), 25:59372
  - production in neutrino reactions with iron, angular and momentum distributions for, (T), 25:59415
  - production in neutrino reactions with nuclei, angular and momentum distributions for, (T), 25:59415
  - reactions with hydrogen atoms, theory of generalized variational bounds for positronium formation in, 25:58755
  - scattering by nuclei, radiative corrections for elastic, 25:59880
- POTASSIUM
  - determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
  - determination in solid rocket propellants by neutron activation and gamma spectroscopy, 25:57384
  - determination of extracellular, in man, radioisotope dilution method for, 25:57924
  - effects on complexonometric determination of rare earths, 25:57317
  - electromigration in molten chlorides, 25:57439
- POTASSIUM ACID CARBONATES
  - radioinduced free radicals in single crystals of, at 77°K, ESR study of γ, 25:57471
- POTASSIUM ACID PHOSPHATES
  - deuterium isotopic effect on ferroelectric properties and Curie temperature of crystals of, (T), 25:59196
- POTASSIUM AMIDES
  - H_2--KNH_2, radiolysis of aqueous solutions of, production of long-lived ammoniated electrons from γ, 25:57477
- POTASSIUM ANTIMONATES
  - radiation effects on, ESR spectra of radicals from γ, 25:57445
- POTASSIUM BROMIDES
  - analysis for iodine as iodide, potentiometric, 25:57314
  - radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
  - KBr--$MgBr_2$, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)
- POTASSIUM CHLORIDES
  - analysis for iodine as iodide, potentiometric, 25:57314
  - nitrogen dioxide impurity EPR spectrum in x-irradiated, hindered rotation from, 25:59199 (NYO-2150-74)
  - radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
  - KCl--LiCl, plutonium oxidation in molten, chronopotentiometric study of, 25:57420
  - KCl--$PbCl_2$, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)
  - KCl--$PbCl_2$, spectra at 590°C, Raman, 25:58387(R) (ANL-7823)
  - KCl--RbCl, radiation effects on electric conductivity of crystals of, effects of divalent cation impurities on 1.2-MeV-electron, 25:59172
- POTASSIUM CHLORORHENATES
  - radiation effects on crystals of, thermal annealing of recoil rhenium atoms from proton, 25:57497
- POTASSIUM CHROMATES
  - complexes with oxalates, radiation effects on, reactions of recoil chromium-51 from, 25:57490
- POTASSIUM FLUORIDES
  - radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
- POTASSIUM IODATES
  - analysis for iodine as iodide, potentiometric, 25:57314
- POTASSIUM IODIDES
  - radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
  - KI--MgI_2, spectra at 400°C, Raman, 25:58387(R) (ANL-7823)
  - KI--NaF, effects on direct spectrographic determination of trace amounts of metals in tungsten trioxide, 25:57335
- POTASSIUM IONS
  - electron reactions with, model potentials for, 25:58772
- POTASSIUM ISOTOPES K-40
  - content of foods in Kiev region of Soviet Union, 25:57987
- POTASSIUM ISOTOPES K-43
  - evaluation for scintigraphy of myocardium in dogs, 25:58041 (UCLA-12-837)
- POTASSIUM PEROXYDISULFATES
  - reactions with hexavalent neptunium, kinetics of, 25:57412
- POTASSIUM THORIUM FLUORIDES
  - crystal structure, 25:57298 (ORNL-4676, pp 73-138)
- POWDERS
  - density of flowing, in reservoir, radiometric gage for measuring, 25:57872(P)
  - sintering mechanisms of, effects of particle density distribution and characteristics on, 25:58389(R) (SRO-552-8)
- POWER CYCLES
  - operating characteristics of Brayton, for gas cooled power reactors with closed cycle gas turbines and secondary air cooling system, 25:60140
- POWER PLANTS
  - design of MHD, using liquid metal emulsion with gas turbines associated with high-temperature gas reactor, 25:58841
- PRAIRIE ISLAND POWER REACTOR, UNIT 1
  - construction of, request for not suspending permit for, 25:59963 (DOCKET-50282-41)
- PRAIRIE ISLAND POWER REACTOR, UNIT 2
  - construction of, request for not suspending permit for, 25:59963 (DOCKET-50282-41)
- PRASEODYMIUM
  - abundance on surfaces of peculiar A stars, (E/T), 25:58462
  - complexes with DPTA, spectrophotometric studies on,

  25:57549
- complexes with HEDTA, dissociation constants for, 25:57537
- determination in cobalt alloys, spectrographic, 25:57313
- oxidation potential for trivalent--tetravalent, 25:57437
- separation from aqueous solutions by solvent extraction using DTPA, studies for, 25:57549
- separation from fission products by electromigration following complexing with nitrilotriacetic acid, 25:57558
- solubility in chromium at 1000 to 1800°C, metallographic, microhardness, and x-ray diffraction measurements on, 25:58237

PRASEODYMIUM IONS
- energy level calculations for Pr III and Pr IV, using Hartree--Fock method, 25:58709
- energy level configuration interactions in Pr IV, $4f^2$, (T), 25:58798

PRASEODYMIUM ISOTOPES Pr-141
- neutron total cross section at 1 to 18 MeV, (E), 25:59811

PRASEODYMIUM ISOTOPES Pr-144
- energy-level transitions in, K conversion coefficient for, (E), 25:59790

PRASEODYMIUM OXIDES
- diffusion of oxygen in polycrystalline Pr_7O_{12}, (E/T), 25:58372

PREAMPLIFIERS
- design and performance of low-noise wide-band current-pulse, for neutron counters, 25:57751
- feedback techniques for, application of pulsed, 25:57812

PRESSURE GAGES
- development of electromagnetic, for flowing liquid metals, 25:57646(P)

PRESSURE VESSELS
- bibliography on prestressed concrete, 25:57609 (AED-C-1-18)
- design characteristics of rock shaft mounted prestressed concrete, for power reactors, 25:60071(P)
- design of reactor prestressed concrete, with uniform distribution of stresses from lid to wall, 25:60069(P)
- design of reactor, with prestressed concrete walls and steel cover, 25:60258(P)
- design of reactor, with thin steel shells surrounded by bolted stacks of metal rings, 25:60070(P)
- fracture characteristics of water cooled reactor, effects of steel thickness on, 25:60075
- prestressing concrete for, steel rope wrapping method for, 25:60063
- properties of steel, for Czechoslovak power reactors, 25:58216 (ZJE-106)
- radiation effects on nil-ductility transition temperature of reactor, surveillance program on neutron, 25:58294 (BAW-10006(Rev.2))
- stress analysis of power reactor, finite element method for, 25:60142
- temperature distribution in prestressed concrete, for heavy water moderated boiling power reactors, 25:60080
- thermal stress limits for prestressed concrete, for heavy water moderated boiling power reactors, 25:60081
- valves for BWR-type power plant, design of safety, 25:57637

PROMETHIUM
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- oxidation potential for trivalent--tetravalent, 25:57437
- separation from neptunium and plutonium by ion exchange chromatography on zirconium phosphate, 25:57550
- separation from other rare earths by electrophoresis in Complexon III on cellulose or silica gel, 25:57299

PROPANE
- radioinduced solvated electrons in liquid, absorption spectrum and half-life of pulsed electron, 25:57468

PROPANE, 2-METHYL-
- yields from γ radiolysis of gaseous ethylene in presence of 2-methylpropene, 25:57474

PROPELLANTS
- analysis of solid rocket, for potassium and sodium by neutron activation and gamma spectroscopy, 25:57384

PROPENE, 2-METHYL-
- effects on yields from γ radiolysis of gaseous ethylene, 25:57474
- radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)

PROPYLENE OXIDE
- radiolysis of clathrate hydrates of, stability of radicals from γ, 25:57476

PROSPECTING
- instruments for radioactive ore, radiometric, 25:57867
- method for uranium, evaluation of pulsed neutron well logging, 25:57560 (INP-732)

PROTACTINIUM
- electromigration behavior of, in CDTA and EDTA, 25:57520 (JINR-E6-5952)
- oxidation potential for trivalent--tetravalent, 25:57437
- phase formation in, studies of high-temperature fcc, 25:58291
- preparation of thin films of, by electrophoresis and electrospraying, 25:58183 (CONF-711002-, pp 160-5)
- redox potential of, in MSBR fuel solvent salt, 25:57298 (ORNL-4676, pp 73-138)
- separation from MSBR fuel by fluorination and reductive extraction, 25:57522 (ORNL-4676, pp 234-71)
- separation from MSBR fuel by oxide precipitation, 25:57522 (ORNL-4676, pp 234-71)
- separation from oxalic and tartaric acids by solvent extraction using tributylamine, 25:57546

PROTACTINIUM ISOTOPES
- cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)

PROTACTINIUM ISOTOPES Pa-230
- beta and electron-capture decay of, electron, gamma, and x-ray spectra from, (E), 25:59800
- beta decay of, branching ratios and log-ft and Q values for, (E), 25:59800
- electron-capture decay of, branching ratios and log-ft and Q values for, (E), 25:59800

PROTACTINIUM ISOTOPES Pa-231
- production by neutron irradiation of thorium-230 and thorium-232 mixtures, 25:57479 (BMBW-FBK-71-6)

PROTACTINIUM ISOTOPES Pa-232
- beta decay of, branching ratios, conversion electron and gamma spectra, and log-ft and Q values for, (E), 25:59798

PROTEINS
- catabolism and transport mechanisms for, 25:60277(R) (NYO-3515-5)
- radiation effects on electrophoretic pattern of human saliva, 25:57945
- radioinduced formation of immunoglobulin-like, in bursectomized chickens, x, 25:57934

PROTON CROSS SECTIONS
- library for, description of LRL evaluated, (E), 25:59783 (UCRL-50400(Vol.4))

PROTON SPECTROMETERS
- amplifier for satellite-borne, design of, 25:57821
- coincidence system for satellite-borne, design of, 25:57821

PROTONS
- abundance in H I regions, (E/T), 25:58630
- channeling in crystals, calculation of electronic and nuclear stopping powers for, 25:59129
- dechanneling in germanium, (E/T), 25:59130
- density in midlatitude ionosphere and magnetosphere associated with magnetic storms, dynamics of thermal, (E), 25:58867
- detection and discrimination of recoil, from alpha particles in nuclear emulsions, processing method for, 25:57731
- dose fields in human hip and neck, comparison of calculated and experimental, 25:58023
- dose to space missions, risk of solar, (E/T), 25:58853 (N-71-27792)
- effects on heating of gases, optical line spectra due to, (T), 25:58629
- effects on metal foils at MeV ranges, design of low-temperature facility for studies of, 25:57620 (RISO-204)
- effects on n- and p-type germanium, annealing and energy level spectrum of defects produced by 600-MeV, 25:59159
- effects on potassium chlororhenate or sodium perrhenate, thermal annealing of recoil rhenium atoms from, 25:57497
- effects on production of krypton fluorides, 25:57455
- effects on swelling of helium-containing Type 316 stainless steel at 500°C, 25:58167(R) (AI-AEC-12987)
- effects on tantalum films at 150 keV and low temperature, 25:59160
- effects on void formation in Type 316 stainless steel, relations with flux and temperature, 25:58166(R) (AI-AEC-12980)
- emission during solar flares, longitude effects on delay of, (E), 25:58612
- form factors from $e^+ + e^- \to p +$ anti p interactions, scaling law for, 25:59361
- intensity in morning sector of auroral zone during slowly varying cosmic-noise absorption, (E), 25:58891
- intensity measurements of 0.25- to 1.65-MeV, in radiation belt, (E), 25:58890
- interactions anti d + p at 13.3 GeV/c, CPT invariance test from ratio of total cross sections of anti p + d interactions at 6.65 GeV/c to total cross sections of, (E), 25:59275
- interactions anti n + p, total cross sections for, (E), 25:59275
- interactions anti p + p → 2 anti p + 2p at 7 GeV/c, upper limit for cross sections for, (E), 25:59267
- interactions anti p + p → $2\pi^+ + 2\pi^-$ at 2.5 GeV/c, production of rho, f, and S*(1070) in, (E), 25:59271
- interactions anti p + p → 4π, isobaric five-point amplitude for, 25:59470
- interactions anti p + p → anti n + n at 232 MeV in bubble chamber, cross sections and angular distributions for, (E), 25:59266 (SJC-P-71-1)
- interactions anti p + p → anti p + p + $\pi^+ + \pi^-$ at 7 GeV/c, production of $\Delta^{--}(1236)$, $\Delta^{++}(1236)$, $N\pi\pi(1460)$, and $N\pi\pi(1712)$, and rho(765) in, (E), 25:59267
- interactions anti p + p → anti p + p at 232 MeV in bubble chamber, cross sections and angular distributions for, (E), 25:59266 (SJC-P-71-1)
- interactions anti p + p → $K^+(\pi^+) + K^-(\pi^-)$ at 7 GeV/c,

upper limits for cross sections for, (E), 25:59267
interactions anti $p + p$ at 2.5 GeV/c, cross sections for final states and resonance production in, (E), 25:59272
interactions anti $p + p$ at 6.65 GeV/c, total cross sections for, (E), 25:59275
interactions $d + p \to (np) + p$ at 2 to 160 MeV, three-body separable potential for, 25:59510
interactions $d + p \to (pp) + n$ at 2 to 160 MeV, three-body separable potential for, 25:59510
interactions $d + p \to p + d$ at 2 to 160 MeV, three-body separable potential for, 25:59510
interactions $e + p \to e + \pi^0 + p$, differential cross sections for, (E), 25:59353
interactions $e + p \to e + \pi^0 + p$, test of dip mechanisms in hadron interactions using, (T), 25:59346
interactions $e + p$ up to 18 GeV at 18 to 34°, form factors, scaling, and cross sections for inelastic, (E), 25:59242
interactions $e + p$, asymptotic scaling of structure functions for, 25:59342
interactions $e + p$, field theory for Compton scattering amplitude and duality in deep inelastic current, (T), 25:59363
interactions $e + p$, hadron electrodynamics in resonance model for, 25:59386
interactions $e + p$, radiative corrections to inelastic, 25:59366
interactions $e + p$, two-photon generation mechanism for angular distributions and production cross sections for π^0 production in, (T), 25:59370
interactions $e + p$, vector dominance model for inelastic, 25:59365
interactions $e + p$, wee parton model for single-particle production, 25:59387
interactions $\gamma + p \to \text{eta} + p$ below 1 GeV/c, $S_{11}(1530)$ production in, (T), 25:59514
interactions $\gamma + p \to \gamma + p$ in deep inelastic $e + p$ current interactions, field theory for amplitudes of Compton, (T), 25:59363
interactions $\gamma + p \to \gamma + p$, quark model extension for total and differential cross sections for, (T), 25:59378
interactions $\gamma + p \to \pi^0 + p$ at 4 GeV, cross sections relative to $\gamma + n \to \pi^0 + n$ interactions, (E), 25:59243
interactions $\gamma + p \to \pi^+ + n$, pseudomodel predictions for differential cross sections for polarized, 25:59362
interactions $\gamma + p$ at high energies, Regge pole model for total cross sections of Compton, 25:59340
interactions $K_2^0 + p \to K_1^0 + p$ at 3 and 6 GeV/c, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
interactions $K_2^0 + p \to K_1^0 + p$ at high energies, asymptotical properties of amplitude of, (T), 25:59494
interactions $K^- + p \to \text{anti } K^0 + n$ at 800 to 1200 MeV/c, partial-wave analysis of, (E/T), 25:59293
interactions $K^- + p \to \text{anti } K^0 + n$, test of semi-local duality in backward, (E), 25:59482
interactions $K^+ + p \to \text{anti } \Lambda + p + p$ at 8.25 GeV/c, Veneziano model for, (E/T), 25:59295
interactions $K^+ + p \to \text{anti } \Sigma^0 + p + p$ at 8.25 GeV/c, cross sections for, (E), 25:59295
interactions $K^- + p \to K + \Xi$ at 2 to 5 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
interactions $K^+ + p \to K^0 + \pi^0 + \Delta^{++}$ at 2.5 to 5.0 GeV, rotation of symmetry axis in $K + \pi$ interactions from, 25:59502
interactions $K^- + p \to K^- + p$ at 800 to 1200 MeV/c, partial-wave analysis of, (E/T), 25:59293
interactions $K^+ + p \to K^+ + \pi^0 + p$, dual + Pomeron analysis of, 25:59490
interactions $K^- + p \to K^- + \pi^0 + p$, dual + Pomeron analysis of, 25:59490
interactions $K^+ + p \to K^+ + \pi^- + \Delta^{++}$ at 2.5 to 5.0 GeV, rotation of symmetry axis in $K + \pi$ interactions from, 25:59502
interactions $K^- + p \to K^+ + \Xi^-$ at high energies, two-Reggeon cuts and exotic exchange in, (T), 25:59618
interactions $K^- + p \to K^-(\text{anti } K^0) + p(n)$ near 1.670 GeV in hydrogen bubble chamber, differential cross sections for, (E), 25:59281
interactions $K^- + p \to \Lambda(\Sigma^0) + \pi^+ + \pi^-$ at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, Σ^{**} production in, (E), 25:59284
interactions $K^- + p \to p + \pi^- + \text{anti } K^0$ at 3.9 to 5.0 GeV/c in hydrogen bubble chamber, Σ^{**} production in, (E), 25:59284
interactions $K^- + p \to p + \pi^- + \text{anti } K^0$ at 4.6 and 5.0 GeV/c in hydrogen bubble chamber, quasi-two-body cross sections for, (E), 25:59284
interactions $K^- + p \to \pi^- + \pi^+ + \Lambda$, Veneziano five-point function model for, 25:59488
interactions $K^- + p \to \pi^+ + \Sigma^-$ at 2 to 16 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
interactions $K^- + p$ at 4.6 and 5.0 GeV/c in hydrogen bubble chamber, quasi-two-body cross sections for production of two charged particles and $\Lambda(\Sigma^0)$ in, (E), 25:59284
interactions $K^+ + p$ at 5 GeV/c, cross sections and angular correlations for six- and seven-body states in, (E), 25:59299
interactions $K^+ + p$ at 8.25 GeV/c, cross sections for Y^* and N^* production in, (E), 25:59295
interactions $K^+ + p$ below 600 MeV/c, s- and p-wave scattering lengths for, (T), 25:59489
interactions $K^+ + p$, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
interactions $K^- + p$, empirical analysis of differences and sums of angular distributions for, (T), 25:59477
interactions $\Lambda + p$, cross sections for elastic, (T), 25:59525
interactions $n + p \to d + 2\gamma$ at 0.025 eV, cross sections and photon angular and spectral distributions for, (T), 25:59527
interactions $n + p \to d + \gamma$, relation of effective Lagrangian for nonleptonic weak interactions with Lagrangian for, (T), 25:59418
interactions $n + p \to \pi^0 + d$ from threshold to 720 MeV, test of isospin invariance in, (E/T), 25:59268
interactions $n + p$ at low energies, scattering amplitudes for, (E), 25:59696
interactions $p + d \to p + d$ at 70 GeV, emulsion study of differential cross sections and slope parameters for, (E), 25:59273
interactions $p + d$ at 12.8 GeV/c, Glauber multiple scattering model for elastic, (E/T), 25:59269
interactions $p + p \to 2p + m\pi^+ + m\pi^-$ at high energies, charge-conservation model for, (T), 25:59512
interactions $p + p \to p + \text{anything}$ at 20 to 1500 GeV, diffraction-model analysis of, (T), 25:59511
interactions $p + p \to p + p + \gamma$ at 99 MeV, elastic pp phase shifts from, (E/T), 25:59520
interactions $p + p \to p + p$ at 50 GeV, emulsion study of differential cross sections and slope parameters for, (E), 25:59273
interactions $p + p \to p + p$, spin extension of Chou--Yang model for differential cross sections of, (T), 25:59513
interactions $p + p \to \pi + \text{anything}$ at 12.4 to 1500 GeV, diffraction-model calculations of meson (π) multiplicities and spectra in, (T), 25:59511
interactions $p + p \to \pi^+ + d$ at 425 MeV, polarization and differential cross section for, (E), 25:59270
interactions $p + p \to X + \text{anything}$ at high energies, scaling law in dual-resonance model for deep inelastic, (T), 25:59428
interactions $p + p$ at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra of π^-, π^+, K^-, K^+, anti p, and p in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
interactions $p + p$ at 1500 GeV in CERN ISR, angular distribution of secondary particles from production in, 25:59277
interactions $p + p$ at high energies, charge-conservation model for multiple hadron production in, (T), 25:59512
interactions $p + p$ at high energies, experimental test of Pomeranchuk theorem in, 25:59424
interactions $p + p$, effect of charge asymmetry on scattering length for, (T), 25:59701
interactions $p + p$, two-photon generation mechanism for angular distributions and production cross sections for π^0 production in, (T), 25:59370
interactions $\pi + p$ at high energies, experimental test of Pomeranchuk theorem in, 25:59424
interactions $\pi^+ + p \to 2\pi^+ + \pi^- + p$ at 5 GeV/c, analysis of angular distributions in A_1 and A_2 regions in, (T), 25:59475
interactions $\pi^- + p \to A_2^- + p$ at 3.9 and 16 GeV/c in bubble chamber, A_2^- production mechanism in, (E), 25:59279
interactions $\pi^+ + p \to \Delta^{++} + \text{eta}^0$ at 5 GeV/c, cross sections and spin-density matrix elements for, 25:59297
interactions $\pi^+ + p \to \Delta^{++} + \pi^0$ at 5 GeV/c, cross sections and spin-density matrix elements for, 25:59297
interactions $\pi^+ + p \to \Delta^{++} + \pi^+ + \pi^-$ at 8 GeV/c, S-wave resonance effects in $\pi + \pi$ interactions from, (E/T), 25:59296
interactions $\pi^- + p \to \text{eta} + n$ at 1.6 and 2.3 GeV/c, angular distribution predictions for, (T), 25:59477
interactions $\pi^- + p \to \text{eta} + n$, complex A_2 Regge trajectory for analyzing, (T), 25:59479
interactions $\pi^- + p \to K^0 + \text{anti } K^0 + n$ at 12 GeV/c, generalized Veneziano model for, (T), 25:59492
interactions $\pi^- + p \to K^+ + K^- + n$ at 11.04 GeV/c, mass and width of phi from optical spark chamber study of, (E), 25:59301
interactions $\pi^- + p \to K^+ + \Sigma^-$ at 2 to 16 GeV/c, Regge cut model for near-forward differential cross sections for, 25:59483
interactions $\pi^- + p \to \Lambda^0 + K^0$, $\Lambda^0 \to p + \pi^-$ at 1.07 GeV/c, Λ^0 magnetic moment from, (E), 25:59294
interactions $\pi^- + p \to n + \pi^+ + \pi^-$ at 7 GeV/c, production of $g^0(1670)$ in, (E), 25:59288
interactions $\pi^- + p \to n + X^0$, $X^0 \to \gamma + \gamma$ at 1.6 GeV/c, (E), 25:59290
interactions $\pi^- + p \to p + MM^-$ at 3.25 GeV/c with high momentum transfer, differential cross sections for rho-production in, (E), 25:59312
interactions $\pi^- + p \to p + \pi^+ + \pi^- + \pi^- + \pi^0$ at 13 and 20 GeV/c, multi-Regge model for, (E/T), 25:59300

XUM

interactions $\pi^+ + p \to p + \pi^+$ at 5 GeV/c, cross sections and spin-density matrix elements for, (E), 25:59297
interactions $\pi^+ + p \to p + rho^+$ at 5 GeV/c, cross sections and spin-density matrix elements for, (E), 25:59297
interactions $\pi^- + p \to \pi^0 + n$ at 2 to 5 GeV/c, partial wave amplitudes for, (E/T), 25:59304
interactions $\pi^- + p \to \pi^0 + n$ at 3.67 and 4.83 GeV/c, Regge trajectory and isospin invariance in, (E), 25:59289
interactions $\pi^+ + p \to \pi^- +$ anything at 18.5 GeV/c in bubble chamber, cross sections for, (E), 25:59319
interactions $\pi^- + p \to \pi^- +$ anything at 8 to 24.8 GeV/c in bubble chamber, cross sections for, (E), 25:59319
interactions $\pi^+ + p \to \pi^+ + p + \omega$ at 3.7 GeV/c, charge asymmetry on $\omega \to \pi^+ + \pi^- + \pi^0$ Dalitz plot from, (E), 25:59308
interactions $\pi^- + p \to \pi^- + p$ at 3.0 to 5.0 GeV/c and 55 to 130°, scintillation counter and spark chamber study of angular distributions for, (E), 25:59285
interactions $\pi^+ + p \to \pi^+ + p$ at 3.0 to 5.0 GeV/c and 55 to 130°, scintillation counter and spark chamber study of angular distributions for, (E), 25:59285
interactions $\pi^- + p \to \pi^- + p$, spin amplitudes for, (T), 25:59471 (CEA-N-1456)
interactions $\pi^- + p \to \pi^+ + \pi^- + n$, S-wave $\pi\pi$ phase shift from, (E), 25:59306
interactions $\pi^- + p \to \pi^- + \pi^- + \pi^+ + p$ at 7 and 25 GeV/c, production and decay of $N^*(1500)$ and $N^*(1700)$ in, 25:59307
interactions $\pi^+ + p \to rho^0 + \Delta^{++}$ at 11.7 GeV/c, Regge-pole analysis of, (E/T), 25:59499
interactions $\pi^+ + p \to rho^0 + \Delta^{++}$ at 11.7 GeV/c, total and differential cross sections for, (E/T), 25:59315
interactions $\pi^- + p \to rho^0 + n$ at 11 GeV/c, Regge-pole analysis of, (E/T), 25:59499
interactions $\pi^- + p \to rho^0 + n$ at 7 GeV/c in bubble chamber, angular distributions from, (E), 25:59286
interactions $\pi^+ + p \to \Sigma^+ + K^+$ at 1.28 and 1.41 GeV/c, test of charge independence in, (E/T), 25:59311
interactions $\pi^+ + p$ at 1.28 to 1.84 GeV/c, total and differential cross sections for elastic, (E), 25:59309
interactions $\pi^- + p$ at 2 to 5 GeV/c, partial wave amplitudes for elastic, (E/T), 25:59304
interactions $\pi^- + p$ at 3.25 GeV/c in hydrogen bubble chamber, rho⁻ and rho⁰ peripheral production cross sections and cross sections for two-prong, (E), 25:59314
interactions $\pi^+ + p$ at 3.6 GeV/c in hydrogen bubble chamber, differential cross sections for elastic, (E), 25:59292
interactions $\pi^+ + p$ at 8 GeV/c, spin analysis of g-meson from, 25:59298
interactions $\pi^+ + p$ at 8.5 GeV/c, particle momentum distributions for two-, four-, six-, and eight-prong, (E), 25:59317
interactions with electrons, bremsstrahlung from, (T), 25:58837
production in p + p interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
ratio to pions at altitudes of 800 gm/cm^2, non EAS-associated, (E), 25:58834
reactions (p,3n) with germanium-70 at 30 to 55 MeV, cross sections for, (E), 25:59747
reactions (p,γ) with aluminum-27 near 1 MeV, precise γ-ray energies and Q-value for, (E), 25:59762
reactions (p,γ) with calcium-48 at 4 to 18 MeV, excitation function and gamma spectrum from, (E), 25:59742
reactions (p,γ) with copper-63 at 2 to 18 MeV, gamma spectra from, (E), 25:59742
reactions (p,γ) with gold-197, indium-115, silver, and tantalum-181 at 4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
reactions (p,γ) with nickel-60 near 1.6 MeV, γ spectra and angular distributions for, (E), 25:59764
reactions (p,γ) with silicon-29 at 900 to 2120 keV, γ spectra from, (E), 25:59760
reactions (p,γ) with titanium-46 at 1350 to 2280 keV, excitation function for, (E), 25:59752
reactions (p,He-4) with beryllium-9 and boron-11, mechanisms for differential cross sections and angular distributions for, (E), 25:59711 (UCLA-10-P-18-32)
reactions (p,n) with A = 26 to 165 nuclei at 23 MeV, spectra and DWBA analysis of angular distributions from, (E), 25:59789
reactions (p,n) with tritium at 3 to 16 MeV, polarization transfer at 0° in, (E), 25:59695
reactions $(p,n\gamma)$ with calcium-48 near 2 MeV, γ and conversion electron spectra from, (E), 25:59756
reactions (p,pd) with helium-3 at 35 MeV, effect of neutron pickup on quasi-free scattering, (E), 25:59702
reactions in lead at 0.85 to 1.7 GeV/c, neutron yield from, (E), 25:59820
reactions with ammonium rhenate and osmium targets, production of radioactive rhenium isotopes by, 25:57480 (JINR-P6-5955)
reactions with atoms, approximate analytical expressions and scaling relations for excitation and ionization cross sections for, 25:58740
reactions with atoms, effects of orbital momentum on formation of highly excited hydrogen atoms in, (T), 25:58734
reactions with carbon-12 at 0.1 to 660 MeV, intranuclear cascade model for, (T), 25:59265 (JINR-P2-5991)
reactions with carbon-12 to 1 TeV, effect of intermediate resonance production on cross sections for elastic and inelastic, 25:59519
reactions with gases, summary of experimental data on electron capture and loss in, 25:58742
reactions with helium at 10 to 130 keV, excitation of autoionizing levels in, (E), 25:58779
reactions with hydrogen 2s atoms, transition to ground state in, (T), 25:58746
reactions with hydrogen atoms at high energies, total inelastic and charge-exchange cross sections for, (T), 25:58775
reactions with hydrogen atoms at low energies, formal theory of, 25:58771
reactions with hydrogen atoms, Glauber amplitudes for excitation of ns and np levels in, (T), 25:58766
reactions with hydrogen molecules and rare gas atoms, review of charge exchange in, (E), 25:58743
reactions with iron at 400 GeV, Monte Carlo calculations of nucleon- and meson (π)-induced star and flux distributions from, (T), 25:59507 (ORNL-4673)
reactions with iron-56 to 1 TeV, effect of intermediate resonance production on cross sections for elastic and inelastic, 25:59519
reactions with natural aluminum, magnesium, and silicon at 6 to 52 MeV, cross sections for aluminum-26 and sodium-22 formation in, (E), 25:59753
reactions with nuclear emulsions at 28 GeV, energy spectra of lithium-8 fragments from, (E), 25:59278
reactions with nuclei, isobaric-spin conservation for proton emission probability in compound-nucleus, (T), 25:59830 (CU-1019-82)
reactions with oxygen molecules at 100 eV to 4 keV, energy losses and energy-level transitions in, (E), 25:58753
scattering by aligned holmium-165 at 5 to 10 MeV, deformation parameter and spectra from elastic, (E), 25:59788
scattering by beryllium-9 with subsequent breakup, analysis of $n-{}^{8}Be$ final-state interaction using effective-range approximation, (T), 25:59735
scattering by carbon-12 at 1 GeV, analysis using Glauber theory and α-particle model, (T), 25:59727
scattering by lithium-6, nitrogen-14, and zirconium-90, approximate G-matrix calculations for inelastic, (T), 25:59858
scattering by oxygen-16, effective cross sections for elastic, (T), 25:59509
scattering by titanium-48, chromium, and zinc-64 at 40 MeV, differential cross sections for, (E), 25:59739 (ORNL-TM-3591)
scattering by tungsten at high energy, analysis for recoil-nucleus effects in, (T), 25:59814
scattering from amorphous tungsten oxide surface at 275 keV, spectra of low-angle, (E/T), 25:58689
stopping in aluminum, gold, lithium, and silver at 20 to 1000 keV, electronic, (T), 25:59124
trapping boundaries for 10- to 100-keV, in ring current, (T), 25:58854
variations in high-latitude trapping boundary of 100- to 200-keV, associated with polar magnetic substorms, (E), 25:58866

PROTONS (anti p)
interactions anti $p + d \to p + \pi^+ + 2\pi^- + \pi^0$ at 5.5 GeV/c in deuterium bubble chamber, cross sections for anti $p + n \to \pi^+ + 2\pi^- + \pi^0$ interactions, rate for single rho production, upper limit for double rho production, cross sections, and angular and momentum distributions in, (E), 25:59276
interactions anti $p + d$ at 6.65 GeV/c, CPT invariance test from ratio of total cross sections of anti $d + p$ interactions at 13.3 GeV/c to total cross sections of, (E), 25:59275
interactions anti $p + n \to 2\pi^- + \pi^+$ at rest, five-point function in dual model for, (T), 25:59465
interactions anti $p + n \to \pi^+ + 2\pi^- + \pi^0$ at 5.5 GeV/c in deuterium bubble chamber, cross sections and rate for single rho production and upper limit for double rho production in, (E), 25:59276
interactions anti $p + p \to 2$ anti $p + 2p$ at 7 GeV/c, upper limit for cross sections for, (E), 25:59267
interactions anti $p + p \to 2\pi^+ + 2\pi^-$ at 2.5 GeV/c, production of rho, f, and $S^*(1070)$ in, (E), 25:59271
interactions anti $p + p \to 4\pi$, isobaric five-point amplitude for, 25:59470
interactions anti $p + p \to$ anti $n + n$ at 232 MeV in bubble chamber, cross sections and angular distributions for, (E), 25:59266 (SJC-P-71-1)
interactions anti $p + p \to$ anti $p + p + \pi^+ + \pi^-$ at 7 GeV/c, production of $\Delta^{--}(1236)$, $\Delta^{++}(1236)$, $N\pi\pi(1460)$, and $N\pi\pi(1712)$, and rho(765) in, (E), 25:59267
interactions anti $p + p \to$ anti $p + p$ at 232 MeV in bubble chamber, cross sections and angular distributions for, (E), 25:59266 (SJC-P-71-1)
interactions anti $p + p \to K^+(\pi^+) + K^-(\pi^-)$ at 7 GeV/c, upper limits for cross sections for, (E), 25:59267

XUM

  interactions anti p + p at 2.5 GeV/c, cross sections for final states and resonance production in, (E), 25:59272
  interactions anti p + p at 6.65 GeV/c, total cross sections for, (E), 25:59275
  production in p + p interactions at 14.25 to 70 GeV/c, phenomenological study of inclusive single-particle spectra in triple Regge limit for, (T), 25:59505 (JINR-E2-6031)
PROTOZOA
  Stylonychia mytilus, radiation effects on appearance of pseudomicronuclei in progeny of, x, 25:58096
  Tetrahymena pyriformis, radiosensitivity of growth and DNA and RNA stability and synthesis in, effects of concentration of dactinomycin on γ, 25:58091
PULSARS
  CP 0950, microsecond intensity variations in radio emissions from, (E), 25:58562
  decay of, in binary systems, (T), 25:58424
  emission mechanism for, (T), 25:58549
  mechanism in supermassive disks undergoing fragmentation, (T), 25:58668
  model for, featuring rapidly rotating supermassive, quasar, (T), 25:58496
  NP 0532, position determination for, (E), 25:58537
  NP 0532, radio pulse arrival times at Arecibo, (E), 25:58559
  NP 0532, search for pulsed gamma emission from, (E), 25:58542
  particle escape into nebula from, gamma-ray production by, (T), 25:58550
  period of, (E), 25:58545
  polarization at 410 and 1665 MHz, linear and circular, (E), 25:58551
  position of, (E), 25:58545
  PSR 0329 + 54, mode changing in pulses from, 25:58569
  PSR 0833-45, interstellar scattering and low-frequency spectrum of, (E), 25:58540
  PSR 1237 + 25, mode changing in pulses from, 25:58569
  pulse characteristics of, (E), 25:58545
  radiation mechanism for, (T), 25:58431
  radio emission from, slow variations of, (T), 25:58522(T) (CSIRO-Trans-10649)
  radio emissions from, effects of dispersion by interstellar medium on, (E), 25:58562
  rotation measures of, (E), 25:58545
  spectra of, effects of induced Compton scattering by thermal electrons on, (T), 25:58527
PULSE CONVERTERS
  design of MOSFET current-to-frequency, for monitoring ion-chamber currents in subpicoampere-to-microampere range, 25:57894
  nomenclature for voltage-comparing analog-to-digital, proposed, 25:57886
PULSE GENERATORS (ELECTRONICS)
  circuits for programmable solid-state, for charge-sensitive amplifiers, 25:57896
PULSE GENERATORS (PNEUMATICS)
  performance in compacting sol-gel uranium dioxide, 25:58364
PULSE SHAPERS
  circuits for fixed-discrimination-level and constant-fraction-of-pulse height, with subnanosecond outputs for nuclear physics, 25:57786
PUMPS
  production of centrifugal, development of Canadian facilities for, 25:57608 (70-CNA-658)
PUMPS (LIQUID METAL)
  design problems with liquid sodium cooled fast reactor primary, 25:60077
PUREX PROCESS
  efficiency for fast breeder fuel element reprocessing, 25:57518(T) (EURFNR-888)
  hydrazoic acid formation and destruction in, 25:57511 (BNWL-B-121)
  nitrous acid elimination from organic stream in, 25:57511 (BNWL-B-121)
  solvent cleanup using macroreticular ion exchange resins in, 25:57509 (ARH-SA-58)
PURINES
  formation in early solar system by catalytic synthesis, (E/T), 25:58575
  formation in early solar system by catalytic synthesis, (E/T), 25:58576
PYRIMIDINES
  formation in early solar system by catalytic synthesis, (E/T), 25:58576
  formation in early solar system by catalytic synthesis, (E/T), 25:58575
PYRITES
  analysis for cobalt by neutron activation and spectrometry, 25:57386
PYROMETERS
  design of thermoelectric, 25:57761(P)
PYROXENES
  analysis for cobalt by neutron activation and spectrometry, 25:57386
PYRROLIDINONE, VINYL-
  reactions with solvated electrons, rate constant of, 25:57475

Q

QUAD CITIES POWER REACTOR, UNIT 1
  testing of, request for authorization for initial, 25:59949 (DOCKET-50254-53)
QUAD CITIES POWER REACTOR, UNIT 2
  loading of, request for authorization for initial, 25:59949 (DOCKET-50254-53)
  testing of, request for authorization for initial, 25:59949 (DOCKET-50254-53)
QUALITY CONTROL
  method for laboratory, computerized, 25:57611 (CTC-51)
  method using gamma radiography, efficiency evaluation of, 25:57696
QUANTUM ELECTRODYNAMICS
  charge-current commutator in, equal-time, 25:59566
  CP violation from, mechanism for, 25:59539
  electron g-factor anomaly from, (E), 25:59560
  interactions in, Lagrangian theory for, 25:59563
  model for number and momentum distributions, total cross sections, and amplitudes for production of electron pairs in e + e interactions in, infinite-momentum, 25:59345
QUANTUM FIELD THEORY
  Bjorken limit in, point-source static model for renormalized field product for, 25:59564
  commutation relations from orthogonal transformations in, inequivalence of representations of, 25:59567
  derivatives of infinite-dimensional free massless fields in, covariant, 25:59582
  eikonal approximation for Feynman diagrams in, 25:59579
  eikonal approximation in neutral scalar, 25:59569
  Feynman diagrams in, regularization of three-vertex, 25:59568
  field algebra, review on, 25:59324
  field operators for hadron interactions, bilocal, 25:59583
  formalism for free fields in, Clifford algebras for, 25:59563
  gauge transformations for electromagnetic interactions in, internal symmetries from, 25:59545
  interactions in, wave mechanical theory for, 25:59563
  Lagrangian in, invariant perturbation theory for nonlinear chiral, 25:59574
  Lagrangian, generalization on basis of function manifold, 25:59559
  Lee model in, properties of, 25:59575
  LSZ formulation for spin-two mesons, 25:59570
  mesons in, gauge-invariant Lagrangian for massive vector, (T), 25:59555
  model for renormalized field product for Bjorken limit and Ward identity in, point-source static, 25:59564
  model of, convergent expansion for resolvent of phi*, 25:59581
  operators in, generalization of Cook formalism for Fock space for two-body interactions from, 25:59580
  parastatistics with variable numbers of particles in, 25:59561
  quantization method for finite and infinite component fields with arbitrary mass spectra, 25:59557
  renormalized field product for Bjorken limit and Ward identity in point-source static model for, 25:59564
  scattering amplitudes in nonlocalizable, bounds on elastic, 25:59565
  strong interactions in, point-source static model for renormalized field product for Bjorken limit and Ward identity for, 25:59564
  theory for Euclidean, analogies between statistical mechanics and, 25:59622
  theory in curved space--time, connection for, 25:59578
  three-body problem in, three-dimensional covariant formulation of, 25:59577
  vacuum degeneration for charged scalar field with self-interaction in case of one spatial degree of freedom, 25:59576
  Ward identities in, anomalies in, 25:59572
  Ward identity in, point-source static model for renormalized field product for, 25:59564
  Yang--Mills field in, massive and massless, 25:59601
  Yang--Mills fields in, renormalization of massless, 25:59571
QUANTUM MECHANICS
  angular momentum reduction in three-body problem, nonexhaustive restatement of, 25:59206 (LYCEN-7118)
  book: Scattering, Reactions, and Disintegrations in Nonrelativistic Mechanics (in Russian), 25:59612
  bound-state equations in, factorization method of solution of, 25:59227
  exclusion principle in, effects on permutation group, (T), 25:59235
  group theory for permutation degeneracy in four electrons in, (T), 25:59235
  Hamiltonian and Lagrangian formalisms in, consistency between, 25:59558
  Hamiltonian in, construction of diagonal sets commuting with, 25:59222
  Hartree--Fock equation in, formulation and solutions of unrestricted, 25:59239
  P representation in, equation of motion for, 25:59208
  parastatistics with variable numbers of particles in, 25:59561

representations in phase space, (T), 25:59234
Schroedinger equation in, approximate methods for solving, 25:59205 (JINR-E2-6043)
Schroedinger equation in, solutions for time-dependent interactions, 25:59207 (NP-19033)
unitary representation up to factor of Galilei group in Hilbert space, continuous irreducible, (T), 25:59217

QUARTZ
radiation effects on frequency vs temperature characteristics of crystals of synthetic, gamma and neutron, 25:57906

QUASARS
distribution of, (E/T), 25:58567
evolution into galactic nuclei, (T), 25:58626
flux density of, fluctuations of, (E), 25:58556
fragmentation in, (T), 25:58668
luminosity functions of, at 400 and 2700 MHz, (E), 25:58644
luminosity of, (T), 25:58659
model for formation from quasags, (T), 25:58523(T) (CSIRO-Trans-10650)
model for, featuring rapidly rotating supermassive stars, (T), 25:58496
occultation of, solar, (E), 25:58662
optical identification for five, (E), 25:58538
optical monitoring of twenty, (E), 25:58568
polarization of 3C 279, evolution at 8 GHz of linear, (E), 25:58556
position of 3C 273B, (E), 25:58566
radio intensity variations of 3C 273, at 2.3 and 8.15 mm, (E), 25:58524
spectra of, effects of induced Compton scattering by thermal electrons on, (T), 25:58527
spectral redshifts of, (T), 25:58666
spectral redshifts of, selection effects in measurement of, (E/T), 25:58567

R

RABBITS
nitrogen content of blood of, following administration of mercuric chloride and uranium, 25:58099
radiation dose to, effectiveness of blood plasma-quenching effect for measuring whole-body γ, 25:58017
radiation effects on iodine-131 clearance rate in skin of, x, 25:58125
radiation effects on survival of, protective effects of tissue preparations against x, 25:58033
radioinduced heterotopic bone formation in lungs of, x, 25:58133

RADIATION
book: Protection of Animals Against Injury by Nuclear Weapons, 25:58026
book: Radiation Effects on Glass and Ceramics, in Russian, 25:59147
book: Radiation Stability of Lacquer Coatings, 25:58420
dose distribution planning for megavolt therapy, methods for, 25:58007
dose to astronauts during duty on space stations, effects of shielding during solar flares on, 25:58025(T) (ORNL-tr-2490)
dose to astronauts of USSR Soyuz-9 space ship, preflight calculations of, 25:58006
dose to human lungs and pulmonary lymph nodes following acute or chronic inhalation of insoluble plutonium-239, method for calculation of, 25:58001 (UCRL-73388)
dose to man during travel on high-altitude supersonic aircraft, 25:58138
dosimetry in human skin, method for measurement of epidermis thickness for use during, 25:58000 (RD/B/R-1934)
dosimetry in human tissues, concepts and units for, 25:58002
dosimetry in supervoltage therapy, 25:58077
effects of self-, in radioactive solids, time dependence of defect accumulation from, (T), 25:59170
effects on blood cell counts in medical personnel in Japan during 1969, survey of, 25:58134
effects on blood, bone marrow, and lungs of mice and rats, similarity between effects of vaccinal disease and, 25:58128
effects on central nervous system of man, mice, and rats, review of research on, 25:58143
effects on chromosomes in bacteria, role of DNA repair in recovery following aberrant, 25:57970
effects on chromosomes in human peripheral lymphocytes, review of aberrant, 25:57963
effects on circulatory system of laboratory animals, pathological, 25:58122
effects on cyclohexane, kinetics of, 25:57473
effects on development of vesicovaginal fistula in man following therapy of gynecologic neoplasms, 25:58135
effects on diamonds, review of defects produced in, 25:59137
effects on electrophoretic pattern of proteins in human saliva, 25:57945
effects on excretion of catecholamines by man, effects of ACTH on, 25:57938
effects on frequency of chromosome X loss in Drosophila, use as dosimeter, 25:57999 (NP-18944)
effects on hematopoiesis in spleen of mice following transplantation of bone marrow, 25:58117
effects on histology and physiology of nervous system, effects of dose on, 25:58143
effects on human blood vessels and heart following therapy for thoracic diseases, 25:58147
effects on III-V semiconductor compounds, 25:59138
effects on mammalian cells, review of relation between recovery and dose rate in, 25:58088
effects on man following therapy for cervical cancer, effects of adrenal cortex exract on, 25:58035
effects on mice following sublethal hemorrhagic shock, lethal whole-body exposure, 25:58109
effects on normal tissues, additive effects of antineoplastic drugs on therapeutic, 25:58077
effects on results of thromboelastographic examinations among uranium mining personnel, chronic, 25:58144
effects on semiconductors, review of theory of defects in, 25:59131
effects on sensitivity of man to pharmaceuticals, 25:58142
effects on silicon, review of defects produced in, 25:59135
effects on survival of ascites tumor cells in mice, sensitizing effects of iodoacetamide on, 25:58034
effects on thermostability of polyethylene, effects of antioxidants and fillers on, 25:57446
effects on void formation in materials, relations with dose and temperature, 25:58312
effects on void formation in materials, theory of, 25:58314
effects on void formation in reactor materials, conference on, 25:58304
hazards to human populations from artificial and natural sources, 25:57994
hazards to man in industry and medicine, review on, 25:58139
scattering of partially coherent, by free electrons, nonlinear, (T), 25:59225
use for therapy of human carcinomas, role of antitumor immune mechanisms of normal tissues in, 25:58072
uses in medicine and technology, criteria for benefits and hazards of, 25:58030

RADIATION DETECTORS
characteristics of, on TD-1, HEOS-B, and COS-B, (E), 25:58829
circuitry for ΔE--E telescopes of, for charged-particle identification, 25:57722 (CEA-R-4183)
conference on, Vienna, Austria, Nov. 23-27, 1970, 25:57726 (STI/PUB-269)
deadtime correction in counting rapidly decaying sources, 25:57732
design of self-powered ytterbium, 25:57755(P)
design of self-powered, for neutron detection, 25:57728(P)
design of self-powered, for neutron dosimetry, 25:57776
development of glass chamber, using liquid--liquid phase separation for detection of charged particle, 25:57727
energy response of beta--gamma survey, tables of, 25:57781
energy response of neutron survey, tables of, 25:57781
materials evaluation for, 25:59147
operation and uses of self-powered, 25:57777
performance of various, for monitoring outside reactor shielding, 25:57779

RADIATION DETECTORS, ACTIVATION
calculations for fast neutron spectra measurements, 25:57775
data unfolding for, computer program for neutron spectra, 25:57725 (KFKI-71-22)
description for thermal neutron detection, 25:57729(P)
design and performance of multiple, for accident dosimetry of neutrons, 25:57857
development for liquid metal cooled fast breeder reactor power and breeding distributions, 25:60050
preparation for in-core neutron flux monitoring, 25:57724 (CONF-711002-, pp 86-90)
preparation of Al_2O_3--CoO and MgO--CoO, for high-temperature neutron flux measurements, 25:57723 (CONF-711002-, pp 82-5)

RADIATION DETECTORS, BUBBLE CHAMBER
optical system for 75-cm hydrogen, 25:57826 (SJC-T-71-3)
particle tracks in, instrument for measurement of ionization of, 25:57825 (RPP/H-81)
particle tracks in, review of systems for automatic, 25:57827

RADIATION DETECTORS, DIELECTRIC TRACK
development of fission foil--dielectric track detector for neutron dosimetry, 25:57856
development of uranium foil--dielectric track detector for personnel neutron dosimetry, 25:57854
particle tracks in, spark counter readout system for, 25:57855
performance for personnel neutron dosimetry, 25:57855

RADIATION DETECTORS, FISSION CHAMBER
design for neutron flux measurement in water cooled reactors, 25:60046
preamplifiers for, design and performance of low-noise wide-band current-pulse, 25:57751

RADIATION DETECTORS, FISSION FOIL
effectiveness for measuring neutron dose to man in accidental exposure, 25:58019

RADIATION DETECTORS, GEIGER-MUELLER
- characteristics of beta--gamma survey, 25:57782
- design for monitoring environmental gamma doses and dose rates, 25:57721 (AECL-3989)

RADIATION DETECTORS, IONIZATION CHAMBER
- amplifier for segmented, 25:57757(P)
- characteristics of cutie pie, for beta--gamma dosimetry, 25:57782
- current output of, design of MOSFET current-to-frequency converter for measurement of, 25:57894
- design and performance of extrapolation, for measurement of dose distributions at bone--tissue interfaces, 25:57851
- design of cavity-type, air-equivalent properties of Teflon--carbon mixture for, 25:57861
- design of flowthrough, with screen window, 25:57756(P)
- design of quartz-fiber personnel, standard for, 25:57830
- efficiency and response of large-area, for whole-body counting, 25:57772
- operation and uses of liquid, 25:57778

RADIATION DETECTORS, PROPORTIONAL
- characteristics of polyethylene-moderated boron trifluoride, for neutron dosimetry, 25:57782
- data acquisition and electronics system for multiwire hodoscope, design of CAMAC, 25:59656
- design of multiwire, for measuring plutonium content of human lungs, 25:57773
- development for radioisotope imaging in vivo, 25:57774
- development for readout of optically or thermally stimulated exoelectron emission dosimeters, 25:57834
- development of large-area, for measurement of plutonium-239 lung burden in man, 25:57998 (NIRS-Pu-8)
- electrodes for design of foil-supported, 25:57750
- performance of proton recoil, for time-of-flight neutron spectra measurements, (E), 25:60156(R) (GULF-RT-A-10800)
- properties of Rossi tissue-equivalent spherical, for dosimetry, 25:57853

RADIATION DETECTORS, SCINTILLATION
- design for photon counting, 25:57759(P)
- design of collimated, for measurement of alpha activity from plutonium-239 in puncture wounds, 25:57998 (NIRS-Pu-8)
- development of barium fluoride, for charged-particle and gamma-ray detection, 25:57817
- development of large-area, for measurement of plutonium-239 content of human lungs, 25:57998 (NIRS-Pu-8)
- efficiency and response of cylindrical, for whole-body counting, 25:57772
- efficiency of organic, calculation of luminescence, 25:57753
- geometric factors for thallium-activated sodium iodide, for gamma angular correlation measurements, 25:57733
- light output from very thin Pilot B, effects of wave-shifter concentration on, 25:57819
- performance of flat large-area, for high-energy interactions of cosmic rays, 25:57828
- performance of liquid, for detection of carbon-14-labeled compounds, 25:57752
- response of poly(vinyl toluene), at high radiation doses, 25:57765

RADIATION DETECTORS, SEMICONDUCTOR
- characteristics of multiplying, for gamma detection, 25:57748
- charge-carrier lifetime and mobility in p--i--n, determination using sine-modulated light, 25:57738
- design of cadmium selenide or cadmium sulfide, for neutron fluence measurements based on delayed electric conductivity change, 25:57758(P)
- design of intravenous, for blood flow studies using radioisotopes, 25:57760(P)
- development of avalanche, 25:57747
- developments in, 25:57793
- fabrication and testing of indium antimonide and lead oxide, for nuclear particle spectroscopy, 25:57807
- fabrication and testing of, conference on, 25:57734
- performance of probe type, for measuring beta emission from tracer doses of phosphorus-32, 25:58064
- preamplifiers for, application of pulsed-charge feedback to charge-sensitive, 25:57812
- pulse shapes from, averaging techniques for measurement of bias and radiation effects on current, 25:57737
- rectifying process in metal--semiconductor surface-barrier, review of, 25:57741
- sensitivity for x-ray detection and radiography, 25:57766

RADIATION DETECTORS, SEMICONDUCTOR (GERMANIUM)
- background measurement of lithium-drifted, 25:57803
- capacitance characteristics of lithium-drifted p--i--n, measurement of, 25:57802
- carrier trapping in lithium-drifted, derivation and testing of model for, 25:57815
- characteristics of, calculation of, 25:57762
- data-acquisition system for, design and performance of high-count rate two-parameter, 25:57806
- development of p--i--n, review on, 25:57730
- efficiency and solid-angle corrections for five-sided lithium-drifted, 25:59841(R) (ORO-4119-1)
- efficiency calibration of well-type lithium-drifted, for gamma detection, 25:57740
- fabrication and testing of 60-cm^3 well-type lithium-drifted, for activation analysis, 25:57805
- fabrication and testing of gamma, made from high-purity germanium, 25:57814
- fabrication and testing of high-purity n--i--p, for gamma spectroscopy, 25:57811
- fabrication and testing of high-purity p-type, for gamma spectroscopy, 25:57820
- fabrication and testing of high-purity, for gamma and x radiation, 25:57762
- fabrication and testing of well-type lithium-drifted, with <5μ dead layer, 25:57799
- fabrication of lithium-drifted, effects of lithium precipitation in, 25:57735
- pair formation in lithium-drifted, temperature dependence of average energy for electron--hole, 25:57739
- performance for gamma spectroscopy, 25:57822
- performance of large satellite-borne lithium-drifted, for cosmic-ray detection, 25:57791
- performance of lithium-drifted, effects of trapping on, 25:57798
- performance of p--i--n, for measurement of fluence and flux density of low-energy gamma and x radiation, 25:57768
- pulses from gamma irradiation of coaxial and planar lithium-drifted, pulse height, risetime, and spatial distributions of slow, 25:57818
- surface channels on lithium-drifted, effects on electron and x-ray spectra of, 25:57797
- testing of encapsulated lithium-drifted, in liquid nitrogen, assembly for, 25:57800

RADIATION DETECTORS, SEMICONDUCTOR (SILICON)
- amplifers for satellite-borne, circuits for low-power charge-sensitive FET, 25:57821
- amplifiers for space applications of, design and performance of charge-sensitive, 25:57792
- calibration of Maxon--Rae, for neutron-capture cross-section measurements, 25:57789
- capacitance characteristics of lithium-drifted p--i--n, measurement of, 25:57802
- characteristics for use in clinical environments for dosimetry, 25:57743
- characteristics of avalanche, for low-energy x-ray spectroscopy, 25:57771
- characteristics of, calculation of, 25:57762
- coincidence circuits for satellite-borne, 25:57821
- design and characteristics of miniature needle-type lithium-drifted, for measurements of trace activity in vivo, 25:57744
- design and performance of surface-barrier, for planar distribution measurements of low-energy beta sources, 25:57769
- design criteria for radiation-resistant, for neutron detection, 25:57746
- design of avalanche, for in vivo detection of low energy radioisotopes, 25:57770
- development and performance of lithium-drifted, for low-energy x-ray spectrometry, 25:57816
- development of miniaturized, for measurements in vivo, 25:57745
- electron-hole pair formation by alpha particles in lithium-drifted, energy-gap and temperature dependence of average, 25:57788
- fabrication and testing of boron-implanted, for nuclear spectroscopy, 25:57809
- fabrication and testing of small rod-shaped, for medical applications, 25:57808
- fabrication and tests of ion-implanted, for charged-particle detection, 25:57749
- performance for gamma dosimetry, 25:57850
- performance of surface-barrier, for alpha spectroscopy, 25:57794 (INS-TCH-5)
- radiation effects on surface-barrier, 200-keV to 1-MeV electron, 25:57907
- resolution of 5000-μ lithium-drifted, measurement of, 25:57801
- spectral noise intensity of, measurement of, 25:57742

RADIATION DETECTORS, SPARK CHAMBER
- development of self-triggered wire, for clinical gamma-ray scanners, 25:57784

RADIATION DOSE
- control methods for reactor maintenance personnel, 25:59926
- determination of absorbed, in reactor core materials, 25:60160 (STI/DOC-10/127)
- standards for man, use of data on radioisotope uptake and retention in tissues for development of internal, 25:58024 (CONF-711104-1)

RADIATION DOSIMETERS
- calibration for gamma dosimetry, maintenance of electron equilibrium in, 25:57860
- calibration of, 1970 IAEA international glass dosimetry intercomparison for, 25:57838
- development for personnel monitoring, review on, 25:57767
- developments in, review on, 25:57846
- energy calibration for gamma and x rays, 25:57859
- glasses for, properties of, 25:58421
- materials evaluation for, 25:59147
- response of various, for neutron dosimetry behind shielding, 25:57858

RADIATION DOSIMETERS, BIOLOGICAL
- effectiveness for measuring neutron dose to man in

  accidental exposure, 25:58019
  effectiveness of blood plasma-quenching effect as whole-body, 25:58017
  effectiveness of chromosome aberration frequency in human peripheral lymphocytes as, 25:58013
  effectiveness of chromosome aberration frequency in peripheral human lymphocytes as, factors affecting, 25:58014
  effectiveness of chromosome aberration frequency in human peripheral lymphocytes as, for low-dose occupational exposures, 25:58015
  effectiveness of chromosome aberration frequency in human peripheral lymphocytes as, 25:58016
  radioinduced loss of Drosophila chromosome X, 25:57999 (NP-18944)
RADIATION DOSIMETERS, CHEMICAL
  characteristics of tissue-equivalent alanine, using EPR readout, 25:57852
  performance of Fricke, for gamma rays, neutrons, and x rays, 25:57862
  performance of Fricke, for measuring absorbed x-ray dose to brain during therapy of tinea capitis in children, 25:58012
RADIATION DOSIMETERS, EXOELECTRON
  characteristics for gamma dosimetry, 25:57836
  development for personnel neutron dosimetry, 25:57833
  preparation and properties of beryllium oxide, 25:57835
  readout detector for, proportional, 25:57834
RADIATION DOSIMETERS, THERMOLUMINESCENT
  characteristics of lithium borate, with rf heating for readout, 25:57839
  design and performance of dyprosium-activated calcium sulfate, for short-term personnel dosimetry, 25:57847
  design of lithium hydride-doped lithium fluoride, for fast neutrons, 25:57831(P)
  development for personnel dosimetry, 25:57840
  development for personnel neutron dosimetry, 25:57833
  development of high-sensitivity tissue-equivalent manganese silicate, 25:57841
  fabrication of sintered lithium fluoride, which can be reused without regeneration, 25:57848
  performance of calcium sulfide, for mixed gamma and neutron dosimetry, 25:57849
  performance of lithium fluoride--Teflon, for surface dosimetry of beta and gamma radiation, 25:57837
  preparation and properties of combination lithium borate and lithium fluoride, for personnel monitoring, 25:57842
  readout method for, 25:57832(P)
  readout systems for, using hot nitrogen gas for heating, 25:57843
  research at Phillipine AEC, 25:57845
  sensitivity and linearity of calcium fluoride and lithium fluoride, effects of residual thermoluminescence on, 25:57844
RADIATION DOSIMETRY
  methods for personnel at Boris Kidric Institute, 25:58018
RADIATION MONITORING
  developments in, review on, 25:57767
  equipment and method for in-situ seabed, development of gamma, 25:57586
  equipment for automatic surveillance of nuclear power plants, 25:60120
  standard guide for administrative practices in, USA, 25:57714
RADIATION PROTECTION
  standards for, review of development of ICRP, 25:58024 (CONF-711104-1)
RADIATION RATE METERS
  performance for measurement of dose from cobalt-60 applicators during therapy of gynecological neoplasms, 25:58010
RADIATION-SCATTERING ANALYSIS
  method of alpha-particle, for determination of traces of heavy elements in bulk light material, 25:57360
RADIATION SOURCES
  calibration of, gravimetric and volumetric methods for minimizing dilution and sampling errors in, 25:57498 (CONF-711002-, pp 283-92)
  effectiveness of small, for therapy of tumor remnants in human cervix following external γ or x radiotherapy, 25:58074
  lifetime of radioisotope, for gamma radiography, method for determining optimum, 25:57697
RADIATION STANDARDS AND UNITS
  definitions of quality factor, 25:58005
RADIATION TARGETS
  assay of, physical methods for, 25:59640 (CONF-711002-, pp 272-82)
  fabrication of accelerator, methods for, 25:59636 (CONF-711002-, pp 101-7)
  fabrication of tritium, for high-yield neutron source, 25:59670 (CONF-711002-, pp 166-80)
  preparation by heavy-ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  preparation by ion deposition and implantation, 25:57650 (CONF-711002-, pp 10-20)
  preparation of actinide metal, by casting, 25:59634 (CONF-711002-, pp 59-69)
  preparation of alpha-active, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
  preparation of radioactive and stable, methods for, 25:59635 (CONF-711002-, pp 91-100)
  preparation of self-supporting isotopic chromium, 25:59633 (CONF-711002-, pp 39-46)
  separation of radioisotopes from, chemical and nuclear methods for, 25:57481 (KURRI-TR-76, pp 8-14)
  thickness and uniformity measurements using charged particles, 25:57863 (CONF-711002-, pp 307-20)
RADIO GALAXIES
  brightness distributions for 54, east--west, (E), 25:58645
  emission in spiral, origin of continuum, (E), 25:58646
  flux densities for 54, (E), 25:58645
  luminosity functions of, at 400 and 2700 MHz, (E), 25:58644
  luminosity of, (T), 25:58659
  lunar occultation of, (E), 25:58538
  positions for 54, (E), 25:58645
RADIO WAVES
  absorption in auroral zone of cosmic-noise, time lag of, (E/T), 25:58863
  absorption in ionosphere, phase-integral calculation of reflected, (T), 25:58875
  absorption of cosmic-noise, correlation with auroral pulsations, (E/T), 25:58858
  deflection in solar gravitational field, (E), 25:58662
  noise absorption in morning sector of auroral zone, effect on incoming proton intensity, slowly varying cosmic, (E), 25:58891
  noise bursts at 3 MHz from lightning-flash radiation, pulse characteristics of, (E), 25:58876
  production in neutral electric-field regions within powerful radio sources, (T), 25:58526
  propagation in ionosphere, effect of geomagnetic field on reflection and transmission of, (T), 25:58869
  propagation in ionosphere, magneto-ionic mode coupling of hf, (T), 25:58871
  propagation in ionosphere, magneto-ionic mode coupling of hf, (T), 25:58870
  propagation under daytime ionosphere, geomagnetic-field effect on 1 to 4 kHz elf and vlf, (T), 25:58873
  survey at 1400 MHz, 5C1 sources, (E), 25:58531
RADIOACTIVE CONTAMINATION
  evaluation of environmental, following Schooner Event, 25:57574 (PNE-524)
  monitoring in environs of Aiken, S. C. and Oak Ridge, Tenn. during 1969, 25:57985
  possibility of environmental, by excretions from patients during interstitial iodine-131 therapy, 25:58079
RADIOACTIVE MATERIALS
  handling and storage of, design of equipment for, 25:57719(P)
  radiography of, design and operation of equipment for x-ray, 25:57688
  radiography of, equipment and method for underwater cold-neutron, 25:57679(T) (LB/G-2986)
  shipping by rail or motor vehicle, US Dept. of Transportation regulations for, 25:57710
  shipping of, design modification of ATMX-500 railroad car for, 25:57705 (MLM-1812)
  shipping through UK ports, standard for safe, 25:57711
  standard for sampling of airborne, in nuclear facilities, 25:57712
  standards for shipping by railway in UK, 25:57713
RADIOACTIVE MINERALS
  prospecting for, radiometric instruments for, 25:57867
RADIOACTIVE WASTE
  analysis for plutonium, computer-controlled system for, 25:57897
  analysis in large and small containers using mobile assay system, 25:57704 (GULF-RT-A-10826)
  analysis of aqueous, for uranium, spectrophotometric, 25:57343
  concentration device for liquid, continuous, 25:57900(P)
  disposal into sea, equipment and method for in-situ monitoring of seabed gamma activity from, 25:57586
  disposal into sea, IAEA panel recommendations on, 25:57708
  disposal of fuel reprocessing plant, using underground nuclear chimneys, 25:57604 (UCRL-73130)
  disposal of reactor cooling water-contained, into Columbia River, effects on radioisotope content of river sediments and waters, (E), 25:57561 (TID-25786)
  effects on environment of U.S. of power reactor, 25:60001
  effects on environment of U.S. power reactor, 25:60002
  processing alpha-emitting, combined flocculation and ion exchange method for, 25:57998 (NIRS-Pu-8)
  processing and disposal of solutions or suspensions of, using film-forming and binding agents, 25:57531
  processing and disposal of, in Federal Republic of Germany, 25:57540
  processing of liquid, from radiological institutes, 25:57529
  processing of low-level liquid, at West Valley Processing Plant, technical specification for facility for, 25:57512 (DOCKET-50201-87)
  radiolysis of liquid, during bedrock storage, self-, 25:57459 (DP-1264)
  separation of alpha and beta sources from, by coagulation with ferric hydroxide, 25:57556

- separation of plutonium from incinerator ash, evaluation of methods for, 25:57525 (RFP-1723)
- shipping to Lyons, Kansas, thermal cooling method for containers and shielding for, 25:57706 (ORNL-TM-3545)
- storage at French nuclear center in Hague, relation of medical problems of personnel to, 25:57978
- storage of phosphate glass-incorporated, in stainless steel pot under water, semi-fluid conditions in, 25:57702 (BNWL-B-112)

RADIOACTIVITY
- conference on monitoring of, in atmosphere, Obninsk, July 30 to Aug. 2, 1968, 25:57576
- measurements in sediments at base of Mt. Obora, Japan, 1967, 25:57566
- monitoring in airborne dusts over the Netherlands during 1967, 25:57575 (RA-42)
- monitoring in vicinity of Savannah River Plant during January through June 1971, 25:57996(R) (DPSPU-71-30-16)

RADIOAPPLICATORS
- radiation dose rate from cobalt-60 gamma, performance of rate meters for measurements of, 25:58010

RADIOCHEMICAL PROCESSING PLANTS
- development of Elan-2B, for preparation of cesium-137 and strontium-90 sources, 25:57482(T) (ORNL-tr-2535)
- equipment decontamination for, remote, 25:57517 (DP-1266)
- nuclear materials control systems for, standards for, 25:57717
- waste disposal from fuel, using underground nuclear chimneys, 25:57604 (UCRL-73130)

RADIOFREQUENCY SPECTROMETERS
- data acquisition and control system for NMR, on-line computer, 25:57887

RADIOGRAPHY, BIOMEDICAL
- effectiveness for diagnosis of tumors of human liver, 25:58044
- effectiveness of lipiodol contrast media, for localization of neoplasms of human lymph system in comparison with radioisotope scanning, 25:58055
- fundamentals of tomographic, using automatic exposure techniques, 25:58066

RADIOGRAPHY, INDUSTRIAL
- development of neutron, for inspecting mixed-oxide fuels, use of radiographic analogues in, 25:57698
- development of neutron, for welded joints in reactors, 25:57680 (ORNL-TM-3561)
- equipment and method for underwater cold-neutron, of radioactive objects, 25:57679(T) (LB/G-2986)
- equipment for x-ray, of radioactive objects, design and operation of, 25:57688
- equipment for, design of, 25:57889(P)
- films for neutron, performance of Polaroid Types 52 and 57, 25:57691
- gamma buildup in, analytical method for evaluation of, 25:57681
- method for identifying defects in steel castings up to 2 in. thick, standard reference radiographs for use in, 25:57694
- method for identifying defects in steel fusion welds, standard reference radiographs for use in, 25:57687
- method for inspecting thick castings and welds, use of betatron in, 25:57678 (INR-1204)
- method for thin welded joints using beta particles, 25:57700
- methods for measuring dynamic conditions inside aircraft gas turbine engines, 25:57689
- quality control in gamma, efficiency evaluation of method for, 25:57656
- radioisotope sources for gamma, method for determining optimum life of, 25:57697
- screens for high energy, evaluation of metal intensifying, 25:57690
- standard for controlling quality of, 25:57682
- standard reference radiographs for heavy-walled steel castings, 25:57684
- standard reference radiographs for steel welds, 25:57683

RADIOIMMUNOASSAY
- method for antibodies to virus antigens, 25:57912
- method for growth hormone in dog plasma, 25:57909
- method for measurement of epinephrine and norepinephrine content in blood plasma, double isotope, 25:57914

RADIOISOTOPE SCANNERS
- collimators for use with low-energy radioisotopes, 25:57891
- design of tomographic, 25:57754(P)
- development of self-triggered wire spark chambers as, 25:57784
- performance for detection of carbon-14-labeled compounds, 25:57752

RADIOISOTOPE SCANNING
- book: Handbook for Technologists of Nuclear Medicine, 25:58049
- contrast intensification during, use of television reproduction for, 25:58059
- data processing using desk-top computers, 25:58065
- distribution data for quantitative, statistical analysis of, 25:58062
- effectiveness for diagnosis of tumors in human liver, 25:58044
- effectiveness for localization of neoplasms of human lymph system in comparison with radiography, 25:58055
- evaluation of rectilinear and dual probe, for diagnostic studies in man, 25:58057
- method using neutron activation analysis in vivo, 25:57785
- scan image quality for, statistical evaluation of, 25:58067

RADIOISOTOPES
- book: Isotopes: Bibliographies and Reference Tables. Volume III, 25:59697
- content in Columbia River water, relations with chemical, mineral, and physical characteristics of streambed sediments, (E), 25:57561 (TID-25786)
- content in Indian soils, gamma spectrometric measurements of, 25:57567
- content of environment and foodstuffs in relation to man, 25:57994
- content of foods in Kiev region of Soviet Union, 25:57987
- decay of, tables of gamma spectra from, 25:59785
- detection of low-energy, silicon avalanche detector for in vivo, 25:57770
- handling of, standard for safe, 25:57709
- hazards to man in industry and medicine, 25:58139
- preparation of radiation targets of, methods for, 25:59635 (CONF-711002-, pp 91-100)
- production of gaseous, from neutron-irradiated targets, 25:57485(P)
- regulatory control of accelerator-produced, in USA during 1969, 25:58028 (BRH/DMRE-71-4)
- separation by chemical and nuclear methods, 25:57521 (KURRI-TR-76, pp 15-18)
- separation from radiation targets, chemical and nuclear methods for, 25:57481 (KURRI-TR-76, pp 8-14)
- separation using laboratory-type electromagnetic separator, 25:57649 (CONF-711002-, pp 1-9)
- transport in SNAP-8 cooling system, 25:58166(R) (AI-AEC-12980)
- transport through ecosystems, use of biological models and computer calculations in studies of kinetics of, 25:57947 (CONF-710501-35)
- uptake and retention in human tissues, development of radiation protection standards from data on, 25:58024 (CONF-711104-1)
- use as gamma sources in radiography, optimum lifetime for, 25:57697
- use as tracers for measuring thermal expansion and wear of turbine components, 25:57663
- use in agriculture in Hungary, 25:57911
- uses in food science and technology, review on tracer, 25:57913
- uses in railway transportation industry, 25:57672

RADIOMETRIC TESTING
- performance of gamma-scintillation, for detecting material defects, effects of noise level and source characteristics on, 25:57701

RADIOTHERAPY
- dose curves for, real-time computer system for calculation and display of, 25:58078
- dose distribution planning for megavolt, use of computers in, 25:58007
- effectiveness of high-energy beam, dosimetry and energy studies related to, 25:58075
- tumor treatment by, performance of Hiedelberg Triga reactor for, 25:60173

RADIUM
- activity in nonequilibrium state, gamma spectrometric measurement of, 25:57506
- effectiveness of intracavitary, for therapy of uterine cervical carcinomas, 25:58070
- effects on human epithelium following therapy for cervical tumors in relation to recurrance incidence, cytological and histological studies on, 25:58140
- electromigration behavior of, in CDTA and EDTA, 25:57520 (JINR-E6-5952)
- precipitation with bone mineral analog calcium hydroxylapatite by isomorphous cocrystallization, 25:57418
- preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
- regulatory control of, in USA during 1969, 25:58028 (BRH/DMRE-71-4)

RADIUM ISOTOPES Ra-224
- effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918

RADIUM ISOTOPES Ra-226
- activity in nonequilibrium state, gamma spectrometric measurements of, 25:57365
- determination in presence of bismuth-214 and lead-214 by gamma spectrometry, 25:57365
- determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
- effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918
- excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
- radon leakage from sealed sources of, photographic method for detection of, 25:57707

RADIUM ISOTOPES Ra-228
- effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918

  - effects on oxidative phosphorylation in rat tissues, 25:57932
  - leakage from sealed radium source, photographic method for detection of, 25:57707
- RADON ISOTOPES Rn-222
  - distribution on Moon surface, uniform and pile-up, (E/T), 25:58680
- RAINWATER
  - cerium-144 content of Fayetteville, Arkansas, from May 1966 to Jan. 1969, 25:57578
- RANCHO SECO POWER REACTOR
  - construction of, request for not suspending permit for, 25:59971 (DOCKET-50312-26)
- RARE EARTH ISOTOPES
  - cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)
- RARE EARTH MINERALS
  - analysis of concentrates of, for yttrium by neutron activation, 25:57382
- RARE EARTH OXIDES
  - analysis for impurities, polarographic, 25:57311
  - analysis for thorium and uranium by TBP extraction and photometry, 25:57341
- RARE EARTHS
  - analysis for yttrium by extraction chromatography and emission spectroscopy or neutron activation, 25:57372
  - determination by differences in rates of substitution reactions in complexes with polydentate ligands, 25:57319
  - determination in mixed oxide fuels, method for, 25:58344(R) (LA-4693)
  - determination using terbium complex with 1,2-dihydroxybenzene-3,5-disulfonic acid as luminescent indicator, microvolumetric, 25:57317
  - separation by electrophoresis in Complexon III on cellulose or silica gel, 25:57299
  - separation by high-pressure liquid chromatography using α-hydroxyisobutyric acid as eluant, 25:57526 (UCRL-73190(Rev.1))
  - separation from MSBR fuel by extraction, 25:57298 (ORNL-4676, pp 73-138)
  - separation from MSBR fuel by extraction using liquid metals, 25:57522 (ORNL-4676, pp 234-71)
  - separation from plutonium by solvent extraction using TBP, 25:57357
  - separation from thorium and uranium by solvent extraction using TBP, 25:57341
  - separation from thorium by ion exchange, 25:57342
- RARE GASES
  - determination of radioactive, released from fuel elements by gas chromatography and γ spectrometry, continuous, 25:57344 (CEA-R-4218)
  - deuterium-hydride scattering at 300 to 3500 m/sec by, total effective cross sections for, (E), 25:58781
  - diffusion and release from uranium dioxide, review of, 25:58413
  - hydrogen-atom reactions with, review of charge exchange in, (E), 25:58743
  - proton reactions with, review of charge exchange in, (E), 25:58743
  - release during annealing of ion-bombarded solids, review of, 25:58412
- RATS
  - californium-252 distribution, excretion, and retention by, following intraperitoneal injection, 25:57922
  - effects of gamma processed fish on, following ingestion over three generations, 25:58162
  - nitrogen content of blood of, following administration of mercuric bichloride and uranium, 25:58099
  - plutonium-239 distribution in, whole-body autoradiographic method for measurement of, 25:57998 (NIRS-Pu-8)
  - plutonium-239 excretion by, effects of dehydrocholic acid, DTPA, and pilocarpine on enhancement of, 25:57998 (NIRS-Pu-8)
  - radiation dose to, effectiveness of blood plasma-quenching effect for measuring whole-body γ, 25:58017
  - radiation effects on aminotransferase activity in mitochondria of tissues of, x, 25:57933
  - radiation effects on behavior and thyroid gland of, following intraperitoneal injection of iodine-131 during gestation, 25:58100
  - radiation effects on central nervous system of, review of research on, 25:58143
  - radiation effects on cholinesterase and hexokinase activity in brain and heart of, effects of adrenal hormones on x, 25:57929
  - radiation effects on leukocyte count, adrenal cortex, and thyroid of, bremsstrahlung, 25:58107
  - radiation effects on liver cells in, mechanism for x, 25:58130
  - radiation effects on medullary tissue of brain of, electron microscopy of γ, 25:58118
  - radiation effects on mitotic activity in bone marrow cells of, effects of species on x, 25:58116
  - radiation effects on numbers of cysteine-rich glial cells in brain of, effects of dose and head exposure on x, 25:58106
  - radiation effects on orthodromic responses of, following exposure of spinal cord, x, 25:58101
  - radiation effects on oxidative phosphorylation in tissues of, radon, 25:57932
  - radiation effects on phosphorus-32 uptake by bone marrow, liver, and spleen of, effects of bone marrow transplants on x, 25:58123
  - radiation effects on tibia of, comparison of effects of dose on γ and x, 25:58102
  - radioinduced lesions in blood, bone marrow, and lungs of, similarity between lesions induced by vaccinal disease and, 25:58128
  - radioinduced neoplasms in, relation of age and sex to incidence of x, 25:58097(T) (ORNL-tr-2521)
  - redox potential in muscles of, effects of cystamine on, 25:58031
- REACTIVITY
  - shutdown margins for, two frequency reactor noise method for worth measurements for, (T), 25:60043
- REACTOR CONTAINMENT STRUCTURES
  - aerosols in liquid metal cooled fast reactor, distribution of accident released, (E/T), 25:60148 (AI-69-Memo-95)
  - air locks for, coupled fastening mechanism for door pairs of, 25:60257(P)
  - design characteristics of earthquake resistant floating, for power reactors, 25:60091(P)
  - design characteristics of prestressed concrete, 25:60256(P)
  - design of aircraft, impact speed and angle criteria for, 25:60192 (N-71-25411)
  - design parameters for liquid sodium cooled fast test reactor, 25:60188
  - fission product deposition in, effects of heat transfer characteristics on, (T), 25:60111(R) (BMI-1917)
  - leak rate test for pressurized water power reactor, 25:60000
  - spray systems for pressurized water reactor, development of fission product removing, 25:60086
  - stress loading requirements for liquid sodium cooled fast test reactor, 25:60188
- REACTOR CONTAINMENT SYSTEMS
  - filter systems for, methyl iodide removal efficiency of activated carbon, (T), 25:60088
  - fission product removal by ice condenser, effects of absorbent solutions in ice cubes on, (E), 25:60124
- REACTOR CONTROL ELEMENTS
  - drive motor for drum type, performance of electric stepping, (T), 25:60193 (N-71-26979)
  - drive system for pressurized water, design of solid-state, 25:60066
  - drive system for, design of hydraulic, 25:60047
  - handling of liquid metal cooled fast, gripping device for, 25:60259(P)
  - location in fast reactor cores, effects on breeding ratio and fuel temperature of, (T), 25:60045
  - movement programming of boiling water, effects of refueling schemes on optimum, (T), 25:60101
- REACTOR CONTROL SYSTEMS
  - design characteristics for neutron flux monitoring automatic, 25:60054(P)
  - design for automatic startup and power regulation, 25:60169
  - design modifications for power reactor, 25:59899
  - design with fine flux trim rods to eliminate hot channels, 25:60244(P)
  - development of automatic, for gas cooled power reactors, 25:59894
  - development of on-line digital computer, for research reactor, 25:60185
  - stability of closed-loop, root locus method for analysis of, 25:60219
  - stability of separate dual, for coupled core reactors, (T), 25:60051
- REACTOR EXPERIMENTAL FACILITIES
  - performance of semiautomatic pneumatic shuttle system for water cooled and moderated research reactors, 25:60168
- REACTOR FUEL ELEMENTS
  - cladding failures in sodium bonded, sodium soluble isotopic tagging methods for location of, (T), 25:60083 (ANL-7785)
  - cladding for, closed-end burst testing of, 25:58209 (AECL-3992)
  - cladding materials for fast breeder, development of, (E/T), 25:60010(T) (EURFNR-902)
  - cladding tubes for, deformation and rupture behavior of Zircaloy-4, (E), 25:60118 (ORNL-4727)
  - coating cracks in Rover, masked probe for detection of, 25:57659
  - design criteria for stainless steel-clad ceramic pin-type, for 1000 MW(e) breeder reactor, 25:58410 (BLG-456)
  - design of assemblies with radially varying plutonium and uranium contents, 25:60247(P)
  - design of gas cooled, with means for prevention of vibrations, 25:60084(P)
  - design of thermionic, with heat pipes, 25:60199(P)
  - design of tubular, with means for expansion between internal and external cladding, 25:60250(P)
  - design with cup-shaped retainer between fuel and fission gas plenum, 25:60246(P)
  - design with helical metal strip wrapped around pin clusters, 25:60253(P)

- development of fast breeder, fabrication and irradiation testing programs for, 25:60010(T) (EURFNR-902)
- end fitting for, design of latch and pad assembly for, 25:60252(P)
- end fitting for, design of solid cylindrical, 25:60251(P)
- fabrication of hexagonal thorium--uranium, for unclad metal breeder reactor, 25:58185 (ORNL-TM-3499)
- fabrication of, method for, 25:58355(P)
- failure detection and identification of fast, methods for leaking, 25:60082 (ANL-7782)
- failure of liquid sodium cooled, effects on coolant boiling of, 25:60117 (KFK-1380)
- failure of sodium cooled, development of methods for detection of, 25:60058(R) (ANL-7817)
- failure of water cooled rod type, analysis of accident propagation from, 25:60126
- fission density distribution in uranium oxide (UO_2) rod type, autoradiography analysis of, 25:60172
- fission gas release from, continuous measurement of rare gas, 25:57344 (CEA-R-4218)
- heat transfer characteristics of water cooled Zircaloy clad bundles of pin type, during coolant loss accident conditions, (E), 25:60114 (CONF-711103-1)
- heat transfer crisis in boiling water flowing through bundles of, 25:57638 (IAE-2014)
- heat transfer from tubular, in central channel of natural uranium gas-cooled reactor, (E/T), 25:57639 (JUL-753-RB)
- inspection of rod-type, eddy current method for, 25:57692(P)
- neutron distribution in clusters of rod type, calculation of first flight collision probabilities for, (T), 25:60235
- radiation effects on, limitations of least squares method for determining, 25:58301 (RD/B/N-1971)
- reprocessing of irradiated, continuous head end dissolution method for, 25:57539(P)
- shipping of irradiated clad uranium dioxide, design of container for, 25:57703 (DPSPU-71-124-4A)
- spaces for bundles of rod type, design characteristics of wedge shaped core expanding, 25:60255(P)

REACTOR FUELS
- analysis of irradiated ceramic, for oxygen, method for, 25:58344(R) (LA-4693)
- analysis of irradiated mixed oxide, for sodium, spectrochemical, 25:58344(R) (LA-4693)
- analysis of mixed oxide, for rare earths, method for, 25:58344(R) (LA-4693)
- analysis of mixed oxide, for sulfur, spectrophotometric, 25:58344(R) (LA-4693)
- analysis of solutions of, for added metals, corrosion products, and sulfuric acid, 25:57320
- burnup analysis of JRR-1, 25:57320
- burnup in heavy water reactors, methods for analysis of, (E/T), 25:60093 (AECL-3995)
- burnup of power, economics of, 25:60102
- burnup of, effects of variations in operation periods on, (T), 25:60216
- chemistry of molten salt, 25:57298 (ORNL-4676, pp 73-138)
- cladding failure on, detection by fission-product cesium-137 counting, 25:58344(R) (LA-4693)
- cooling of coated particle, direct method for helium, 25:57645
- cycle analysis for fast breeder, collapsing method effects on spatial mesh data for, (T), 25:60100
- cycle for power reactor, development in Europe of, 25:59901
- cycles for pressurized heavy water power reactors, effects of plutonium recycle on optimum economic, 25:60092 (AECL-3910)
- cycles for water moderated power reactors, linear programming for optimization of, (T), 25:60104
- cycles in Japan power reactors, economic aspects of, 25:59928
- development for use with in-pile chemonuclear loops, 25:57610 (BNL-50293)
- development of fast breeder, fabrication and irradiation testing programs for, 25:60010(T) (EURFNR-902)
- economics of, cost--benefit analysis of, 25:59921
- fabrication of oxide pellet-type, with center holes, pressing and sintering method for, 25:58362
- fission product re-solution rates in, measurement of, 25:58411(R) (GEAP-12217)
- meltdown in TREAT, estimation of total energy for, 25:58344(R) (LA-4693)
- production and processing of, in Federal Republic of Germany, 25:57666
- properties of sintered ceramic, relations with microstructure, 25:58389(R) (SRO-552-8)
- radiation testing of, CNEN summary on methods for, 25:58351 (RT/ING-(70)30)
- reprocessing methods for fast, 25:60005(R) (ANL-7854)
- reprocessing of fast breeder, by Purex Process, separation of plutonium and uranium in, 25:57518(T) (EURFNR-888)
- reprocessing of molten salt, flowsheet analysis for, 25:57522 (ORNL-4676, pp 234-71)
- reprocessing of oxide, liquid-metal head-end process for, 25:57507(R) (ANL-7799)
- reprocessing of pyrocarbon-coated, by chloride extraction process, 25:57542
- reprocessing of Rover, by burn leach method, 25:57519 (IN-1484)
- reprocessing of thorium, with high burnup by Thorex two-stage process, 25:57541
- reprocessing of uranium-containing, solvent extraction method for, 25:57534(P)
- reserves and long-range requirements for, estimates of, 25:60020
- separation of plutonium from LMFBR, development of mixer-settler for, 25:57508 (ANL-7810)
- solubility of irradiated mixed oxide, in hydrochloric acid at high pressures, 25:58344(R) (LA-4693)

REACTOR LOADING MACHINES
- centering device for, design of vertical tubular, 25:60254(P)
- design characteristics of high temperature gas cooled graphite moderated reactor, 25:60031(P)
- design characteristics of liquid sodium cooled fast reactor, 25:60087
- design parameters of liquid sodium cooled fast test reactor, 25:60174

REACTOR MODERATORS
- neutron slowing down times in, effects of pulse shapes on, (T), 25:60232

REACTOR SAFETY
- accidents in, review of U.S. safety programs on, 25:60132
- analysis of, listing of computer programs for, 25:60127
- chemical aspects of, review of, 25:60116 (HMI-B-113)
- reliability engineering methods for, 25:60125
- reliability requirements in evaluation of, 25:60122

REACTOR SAFETY EXPERIMENTS
- operation of TREAT, during August 1971, 25:60005(R) (ANL-7854)
- physics calculations of power distributions in TREAT test fuels, 25:58344(R) (LA-4693)
- reactivity transients in SPERT-III E-core, prompt moderator heating feedback effects on, (E/T), 25:60179

REACTORS
- accidents in, listing of computer programs for analysis of, 25:60127
- book: Nuclear Heat Transport, 25:60222
- conference on radioinduced void formation in materials for, Reading, Eng., March 24 to 25, 1971, 25:58304
- core measurements in, device for magnetic transmission of, 25:60245(P)
- critical size of bare, Lie series method for solution of multi-dimensional multigroup diffusion equation for, 25:60233
- excursions in, model including delayed neutrons for self-limiting, 25:60223 (AD-721076)
- heat flux studies for, critical, (E/T), 25:57647
- integral characteristic of, derivation of neutron production over neutron losses ratio for, 25:60227
- kinetics of, optimum two dimension S/sub N/ calculation methods for, 25:60224(T) (EURFNR-899)
- measurement and control of, development of broadband high-temperature magnetostrictive and piezoelectric ultrasonic transducers for, 25:57898
- neutron collision probabilities in cluster-type fuel lattices in, (T), 25:60231
- neutron diffusion calculations for, self-initializing version of WIGL2 code for, 25:60209 (DUN-7538)
- neutron distribution in thin homogeneous natural uranium slab, synthesis solution of multigroup Boltzmann equation for, 25:60214
- neutron flux in cells of finite square lattices in, source-sink theory analysis of, 25:60228
- noise spectra in, neutron energy effects on, (E/T), 25:60238
- operations incidents in, analysis of reactivity perturbations for detection of, 25:60123
- physics calculations for, use of evolution operator method in, 25:60221
- physics constants for, computer program for calculation of thermal neutron, 25:60225 (JAERI-Memo-4394)
- power change with internal feedback in, methods for space-time optimal, (T), 25:60241
- power distribution in, use of modern control theory for analysis of spatial, 25:60213
- pressure vessels for, use of steel cover on prestressed concrete, 25:60258(P)
- pressure vessels for, with thin steel shells surrounded by metal girders and rings, 25:60070(P)
- protection systems for, design procedure for optimum noise filter for, 25:60248
- safety aspects of, reliability engineering methods for, 25:60125
- shielding for, monitoring system for dosimetry at surfaces of, 25:57779
- stability of, Liapounov method for calculation of, (T), 25:60239
- subcriticality measurements in, optimal filtering method for, (E/T), 25:60234
- transfer functions for, method for calculation of coefficients of, (T), 25:60229
- xenon oscillations in large, calculation of optimum control rod strategy for, (T), 25:60236

REACTORS, AGR-TYPE
- design characteristics of, 25:60030

REACTORS, AIRCRAFT
- containment vessel for, impact speed and angle criteria for design of, 25:60192 (N-71-25411)

REACTORS, BOILING
- control element programming in, effects of refueling schemes on optimum, (T), 25:60101
- coolant loss accidents in, analytical description of, 25:60111(R) (BMI-1917)
- cooling systems for, effects of corrosion on low-cycle fatigue life of piping in, (E), 25:60061(R) (GEAP-10207-24)
- cooling systems for, use of constant speed pumps and feedwater driven pumps in, 25:60067(P)
- hydrodynamics of, design problems for, 25:60065
- pressure vessels for heavy water moderated power, temperature distribution in prestressed concrete, 25:60080
- pressure vessels for heavy water moderated power, thermal stress limits for prestressed concrete, 25:60081
- pressure vessels for, effects of thickness on fracture characteristics of steel, 25:60075
- simulation of, hybrid computer for real time, 25:60218
- stability of, effects of self-oscillation conditions on, (T), 25:60037
- transfer functions for, thermal and hydrodynamic, (E/T), 25:60038

REACTORS, BREEDER
- accidents in, review of U.S. safety programs on, 25:60132
- control element locations in cores of, effects on breeding ratio and fuel temperature of, (T), 25:60045
- cooling systems of, corrosion product and fission product activity levels in, (E), 25:60010(T) (EURFNR-902)
- core design for, with fuel pins containing blanket material in end sections, 25:60028(P)
- core monitoring in, instrumentation and signal processing for, (E/T), 25:60010(T) (EURFNR-902)
- design characteristics of gas cooled fast, in Germany, 25:60013 (KFK-1375)
- design problems with gas cooled fast, 25:60009 (CONF-710922-5)
- design problems with liquid sodium cooled fast, review of, 25:60008 (CONF-710922-4)
- development in Germany during October to December 1970, 25:60010(T) (EURFNR-902)
- development in Germany of liquid metal cooled fast, 25:60012 (JUL-775-RG)
- development of fast, in European Community, 25:60032
- development of gas cooled fast, review of, 25:60009 (CONF-710922-5)
- development of liquid sodium cooled fast power, summary of, 25:60029
- economic aspects of gas cooled fast, in Germany, 25:60013 (KFK-1375)
- fuel cycle analysis for fast, collapsing method effects on spatial mesh data for, (T), 25:60100
- fuel elements for helium-cooled 1000 MW(e), mechanical and thermal properties of, 25:58410 (BLG-456)
- fuel elements for, fabrication of unclad metal, 25:58185 (ORNL-TM-3499)
- physics parameters of, (E/T), 25:60010(T) (EURFNR-902)
- power conversion system for 1000 MW(e) helium cooled fast, design parameters for closed cycle gas turbine, 25:60137 (KFK-1409)
- power shift in sodium cooled fast, effects of long-term operation on, (T), 25:60044
- safety aspects of fast, 25:60136
- safety studies on, (E/T), 25:60010(T) (EURFNR-902)

REACTORS, CANDU-TYPE
- fuel burnup in, methods for analysis of, (E/T), 25:60093 (AECL-3995)
- fuel cycles for pressurized heavy water, effects of plutonium recycle on optimum economic, 25:60092 (AECL-3910)

REACTORS, FAST
- accidents in liquid sodium cooled, effects of fuel element failures and coolant flow blockage on, 25:60117 (KFK-1380)
- accidents in, review of U.S. safety programs on, 25:60132
- construction of sodium cooled, requirements and problems in, 25:60007 (CONF-710922-1)
- control element locations in cores of, effects on breeding ratio and fuel temperature of, (T), 25:60045
- control elements for, gripping device for handling, 25:60259(P)
- coolant boiling in liquid sodium cooled, effects of fuel element failures and coolant flow blockage on, 25:60117 (KFK-1380)
- cooling systems of, corrosion product and fission product activity levels in, (E), 25:60010(T) (EURFNR-902)
- core components for power, effects of radioinduced voids on design of, 25:58331
- core design for, with fuel pins containing blanket material in end sections, 25:60028(P)
- core meltdown accidents in, methods for analysis of mechanical work energy produced during, 25:60121
- core monitoring in, instrumentation and signal processing for, (E/T), 25:60010(T) (EURFNR-902)
- core of, hydrodynamic and thermodynamic design of, (E/T), 25:60010(T) (EURFNR-902)
- design characteristics of gas cooled breeder, in Germany, 25:60013 (KFK-1375)
- design characteristics of liquid sodium cooled, comparison of, 25:60094 (CONF-710922-2)
- design parameters for, methods for optimization of, (T), 25:60217
- design problems with gas cooled breeder, 25:60009 (CONF-710922-5)
- design problems with liquid sodium cooled breeder, review of, 25:60008 (CONF-710922-4)
- development in Germany during October to December 1970, 25:60010(T) (EURFNR-902)
- development in Germany of liquid sodium cooled breeder, 25:60012 (JUL-775-RG)
- development of breeder, in European Community, 25:60032
- development of gas cooled breeder, review of, 25:60009 (CONF-710922-5)
- development of liquid sodium cooled breeder power, summary of, 25:60029
- economic aspects of gas cooled breeder, in Germany, 25:60013 (KFK-1375)
- fission products in, integral measurement of reactivity worths of, (E/T), 25:60034 (AE-428)

- radioinduced defects in, at absolute melting temperature, electron microscopic study of fast neutron, 25:58302
- reactions of recoil atoms of, in proton-irradiated potassium chlororhenate or sodium perrhenate, effects of thermal annealing on, 25:57497

RHENIUM ALLOYS AND SYSTEMS
- Re--W-base, compatibility with cobalt-59 fuels at 1200 to 1400°C, 25:57654(R) (DP-1279)
- Re--W-base, creep rupture of deformed powder metallurgy, at 500 psi, mechanisms of, 25:58213 (ORNL-TM-3350)

RHENIUM ISOTOPES
- production of short-lived radioactive, by proton bombardment of ammonium rhenate or osmium, 25:57480 (JINR-P6-5955)

RHENIUM ISOTOPES Re-186
- use of tracer for measuring steam quality in boiler tubes, 25:57674

RHODIUM
- separation from palladium and ruthenium by coprecipitation with ferric hydroxide, 25:57552

RHODIUM ALLOYS AND SYSTEMS
- Cm--Rh, preparation of intermetallic $CmRh_3$, by oxide reduction reactions, 25:57658(R) (ORNL-4723)
- Hf--Pt-base--Rh--Ti--W, hardness of crystallized, effects of annealing at high temperatures on, 25:57658(R) (ORNL-4723)
- Pt-base--Rh--W, compatibility with tungsten at high temperatures, 25:57658(R) (ORNL-4723)
- Pt-base--Rh--W, hardness of crystallized, effects of annealing at high temperature on, 25:57658(R) (ORNL-4723)

RIBOSE, DEOXY-
- radiolysis of aqueous solutions of, products from electron pulse, 25:57930

RING CURRENT
- location of magnetospheric, (T), 25:58854
- plasma instabilities in magnetospheric, review of, 25:58895

RIVERS
- sodium-22 content of USSR, effects of 1961 and 1962 atmospheric nuclear explosions on, 25:57568

ROBERT E. GINNA POWER REACTOR, UNIT 1
- coolant activity for, measurements for 1520 MW(t) operation, 25:59942 (DOCKET-50244-81)
- personnel for, retraining requirements for 1520 MW(t) operation, 25:59942 (DOCKET-50244-81)
- power level for, requested information for increase to 1520 MW(t), 25:59942 (DOCKET-50244-81)
- testing program for, description of 1520 MW(t) operation, 25:59942 (DOCKET-50244-81)

ROCKET MOTOR NOZZLES
- cooling by transpiration, effects on nozzle thermal load, 25:57640 (N-71-22591)

ROCKET REACTORS (NERVA)
- testing of NRX-A6, off-site radiological monitoring for, 25:60195 (SWRHL-78-r)

ROCKS
- analysis for ultramicroamounts of thorium by photometry, 25:57342
- analysis of standard, for selenium by neutron activation, 25:57380
- uranium desorption and recrystallization in, during metamorphism, 25:57581

RODS
- vibration of slender single and bundles of, within fluid-filled tube, study of acoustically-induced, (E/T), 25:57621 (TRG-Report-2141)

ROVER REACTORS
- fuel elements for, masked probe for eddy current inspection for coating cracks in, 25:57699
- fuels for, burn-leach process for reprocessing of, 25:57519 (IN-1484)
- testing of Pewee 1, off-site radiological monitoring during, 25:60196 (SWRHL-87-r)

RUBBER
- reactions of sponge, with fluorine, 25:57619 (RFP-1739)

RUBIDIUM
- electromigration in molten chlorides, 25:57439
- separation from MSBR fuel solvent by reductive extraction, 25:57298 (ORNL-4676, pp 73-138)

RUBIDIUM BROMIDES
- Li--LiBr--RbBr--Se, thermodynamic properties of, emf measurements of, 25:58387(R) (ANL-7823)

RUBIDIUM CHLORIDES
- radiation effects on electric conductivity of crystals of, effects of divalent cation impurities on 1.2-MeV-electron, 25:59172
- KCl--RbCl, radiation effects on electric conductivity of crystals of, effects of divalent cation impurities on 1.2-MeV-electron, 25:59172

RUBIDIUM FLUORIDES
- $RbBF_4$--RbF, phase diagram of, 25:57298 (ORNL-4676, pp 73-138)

RUBIDIUM FLUOROBORATES
- $RbBF_4$--RbF, phase diagram of, 25:57298 (ORNL-4676, pp 73-138)

RUBIDIUM ISOTOPES Rb-85
- neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797

RUBIDIUM ISOTOPES Rb-87
- neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797

RUBIDIUM THORIUM FLUORIDES
- crystal structure, 25:57298 (ORNL-4676, pp 73-138)

RUBIDIUM URANYL NITRATES
- symmetry types of uniaxial and biaxial crystals of, 25:58703

RUBIDIUM ZIRCONIUM FLUORIDES
- crystal structure, 25:57298 (ORNL-4676, pp 73-138)

RUTHENIUM
- analysis for oxygen by vacuum fusion method, 25:57329
- determination by spectrophotometry using 3,4-diaminobenzoic acid, 25:57325
- separation from fission products as gaseous ruthenium tetroxide by ferric oxide--silica filters, 25:57532
- separation from gases by ferric oxide--silica filters, 25:57532
- separation from palladium and rhodium by coprecipitation with ferric hydroxide, 25:57552
- separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530

RUTHENIUM ALLOYS AND SYSTEMS
- Pu--Ru, thermodynamic properties of intermetallic $PuRu_2$, at 913 to 1078°K, measurement using emf cells, 25:58211 (LA-4758)

RUTHENIUM ISOTOPES Ru-106
- separation from copper extracted from nuclearly fractured ores, method for, 25:57523 (ORNL-4677)

S

S-MATRIX
- equations for coefficient functions of, Kirkwood--Saltzburg, 25:59622
- relation with second virial coefficient, new derivation of, 25:59220
- review on theory and use for particle physics, 25:59614
- singularities of, review on, 25:59613

SAFETY
- regulations regarding nuclear, in Hungary, 25:58027

XUM

SAINT LAURENT-DES-EAUX REACTOR (EDF-4)
  design characteristics of, 25:59896
  fuel element meltdown in, recovery operations following, 25:59924
  startup of, 25:59896
SALEM POWER REACTOR, UNIT 1
  construction of, request for not suspending permit for, 25:59957 (DOCKET-50272-20)
SALEM POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59957 (DOCKET-50272-20)
SALIVA
  radiation effects on electrophoretic pattern of proteins in human, 25:57945
SAMARIUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  complexes with HEDTA, dissociation constants for, 25:57537
  determination in cobalt alloys, spectrographic, 25:57313
  determination in fluorite by solvent extraction and spectrography or fluorimetry, 25:57332
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  optical properties at 1.13 to 3.96 eV, 25:59187
  oxidation potential for trivalent--tetravalent, 25:57437
  separation from europium and neodymium in chloride solution by solvent extraction using DEHPA in heptane, factors for, 25:57543
SAMARIUM ALLOYS AND SYSTEMS
  Gd--Sm, magnetic properties at 77 to 1100°K, 25:59176
SAMARIUM IONS
  energy level interactions in Sm II, 4f--5d, (T), 25:58697
SAMARIUM ISOTOPES
  energy level transitions of, structural corrections in pair conversion coefficients in M1, (T), 25:59861
SAMARIUM ISOTOPES Sm-142
  beta and electron-capture decay of, β, γ, and conversion electron spectra from, (E), 25:59821
SAMARIUM ISOTOPES Sm-145
  electron-capture decay of, gamma and x-ray spectra, log-ft values, and relative K-capture probability for, (E), 25:59799
SAMARIUM ISOTOPES Sm-152
  alpha inelastic scattering at 10 to 12 MeV with Coulomb excitation, cross sections for, (E), 25:59823
  energy-level transitions from Coulomb excitation, moments for E4, (E), 25:59823
  nuclear deformation from Coulomb excitation, (E), 25:59823
SAMARIUM ISOTOPES Sm-154
  alpha inelastic scattering at 10 to 12 MeV with Coulomb excitation, cross sections for, (E), 25:59823
  energy-level transitions from Coulomb excitation, moments for E4, (E), 25:59823
  nuclear deformation from Coulomb excitation, (E), 25:59823
  preparation of monocrystalline, by grain growth annealing, 25:58184 (CONF-711002-, pp 181-90)
SAMARIUM OXIDES
  reduction to metal using thorium with simultaneous distillation separation, 25:58184 (CONF-711002-, pp 181-90)
SAMPLING
  methods for airborne radioactive materials, in nuclear facilities, standard for, 25:57712
SAN ONOFRE POWER REACTOR, UNIT 1
  control elements for, revised insertion limits for Cycle 3 operation of, 25:59940 (DOCKET-50206-127)
  core burnup limit for, request for increase to 18000 MWD/MTM for Cycle 2, 25:59939 (DOCKET-50206-126)
SATELLITES
  radiation detection equipment on TD-1, HEOS-B, and COS-B, (E), 25:58829
SATURN (PLANET)
  interior of, phase diagrams of hydrogen and helium in, (E), 25:58675
SAXTON POWER REACTOR
  coolant purification system for, increase in hydrogen pressure ratings for primary, 25:59937 (DOCKET-50146-94)
  coolant purification system for, increase in hydrogen pressure ratings for primary, 25:59936 (DOCKET-50146-93)
SCALERS
  design and construction of four-decade digital log, 25:57893
SCANDIUM
  effects on periodic precipitation in silver--cadmium alloys, 25:58262
  effects on spectrophotometric determination of yttrium, 25:57318
  separation from thorium by ion exchange, 25:57342
  spectra and energy levels of I and II, analysis of arc and spark, 25:58701
SCANDIUM ALLOYS AND SYSTEMS
  O--Sc--V, phase studies at 1000 to 1500°C, 25:58401
SCANDIUM ISOTOPES Sc-46
  content in Columbia River sediments, (E), 25:57561 (TID-25786)
SCANDIUM ISOTOPES Sc-48
  energy levels from calcium-48 (p,nγ) reactions, spin-parity assignments for, (E), 25:59756
  energy-level transitions from calcium-48 (p,nγ) reactions, internal conversion coefficients for, (E), 25:59756
SCANDIUM ISOTOPES Sc-49
  energy levels from calcium-48 (p,γ) reactions, symmetry energy for collective electric dipole, (E), 25:59742
SCANDIUM SELENIDES
  dissociation energy of, 25:57435(R) (COO-1029-39)
SCATTERING
  amplitude for three-particle, 25:59616
  amplitude of, new derivation of second virial coefficient with two-body, 25:59220
  amplitudes at high energies, selection rules for Regge cuts in, 25:59440
  amplitudes at high energy, generalized eikonal approximation and impact phase averaging for, 25:59610
  amplitudes in dual resonance models, zeros of multiparticle, 25:59625
  amplitudes in multi-Regge model, factorization into signature terms of, 25:59611
  amplitudes in Neveu--Schwarz model, dual one-loop, 25:59433
  amplitudes of elastic, in nonlocalizable field theories, bounds on, 25:59565
  amplitudes of high-energy, scaling behavior and Regge behavior from light-cone singularities of, 25:59617
  amplitudes of quasi-elastic, negative-energy timelike states from analytic continuation of, 25:59609 (KFKI-71-39)
  amplitudes of zero-spin equal-mass-particle elastic, upper bound on absorptive part of, 25:59630
  amplitudes of, crossing symmetry of partial waves, tests of crossing-symmetric models, and multivariable expansion of, 25:59619
  amplitudes of, extrapolation off boundary of analytic region of, 25:59621
  amplitudes of, finite- and infinite-dimensional local irreducible representations of O(3) symmetry for construction of, 25:59536
  amplitudes of, group theory for structure of generalized Veneziano, 25:59628
  amplitudes of, Radon transforms for structure of generalized Veneziano, 25:59627
  book: Scattering, Reactions, and Disintegrations in Nonrelativistic Mechanics (in Russian), 25:59612
  cross sections from beam experiments on, velocity correction factors for, 25:58757
  eikonal approximation for Mandelstam diagram with Regge pole and single-particle exchange, 25:59629
  Lippmann--Schwinger equation for, existence of solutions of two-particle, 25:59626
  matrix elements for, estimate of turning-point error in JWKB, 25:58737
  partial-wave model for, uniformized soluble, 25:59620
  potential for nonrelativistic L-wave inverse, Schroedinger equation for, 25:59623
  potential, differential equation for off-shell two-particle T-matrix for Hulthen, 25:59631
  potential, existence of solutions of two-particle Lippmann--Schwinger equation for, 25:59626
  Regge pole theory for short-wavelength, 25:59615
  S-matrix theory for, 25:59614
  theory of high-energy atomic and nuclear, review, 25:58775
  three-body problem in, three-dimensional covariant formulation of quantum field theory for, 25:59577
  wave function for free-incident-particle three-body, asymptotic form of, 25:59624
SCHIZOMYCOTA
  Actinomyces hygroscopicus, radioinduced mutations in spores of, effects of hygromycin B and streptomycin on frequency of x, 25:57964
  Azotobacter chroococcum, radiation effects on survival of, effects of cell age and content on γ, 25:58156
  Escherichia coli, radiation effects on DNA of, enzymatic repair of uv, 25:57928
  Escherichia coli, radiation effects on F-prime sex factors in, induction of prophage lambda through conjugal transfer of uv, 25:57956
  Escherichia coli, radiation effects on survival of, sensitizing effects of colloidal selenium and selenourea on x, 25:58155
  Escherichia coli, radiation effects on, protective effects of ethylene glycol against γ, 25:58157
  Escherichia coli, radioinduced mutations in, effects of 5-bromouracil substitution of DNA on frequency of uv, 25:57965
  Micrococcus luteus, radiation effects on DNA of, role of nucleases in repair of uv, 25:57935
  Micrococcus luteus, radiation effects on release of nucleotides from DNA of, uv, 25:57928
  Nitrobacter agilis, nitrification in soil suspension, effects of elements on, 25:57401
  radioinduced chromosome aberrations in, role of DNA repair in recovery of, 25:57970
  Thiobacillus ferrooxidans, effects on oxidation of iron and sulfide minerals in uranium deposits, method for enhancing, 25:57582
  Vibrio sp., disease production by, species and

XUM

  temperature dependence of, 25:60283(R) (RLO-2225-T-10-3)

SCINTILLATION CAMERAS
  performance of double-detector, for visualization of cold nodules in bulky organs, 25:57763

SCREENS
  performance of metal intensifying, for radiography, 25:57690

SEALS AND GLANDS
  design characteristics for rotatable cover, for liquid metal cooled reactor core vessels, 25:60021(P)

SEAS
  radioactive waste disposal into, IAEA panel recommendations on, 25:57708

SEAWATER
  analysis for cesium by precipitation using AMP and emission photometry, 25:57301 (TID-25776)
  analysis for cesium-134 and cesium-137 by precipitation using AMP and γ counting, 25:57348 (TID-25777)
  analysis for cesium-137 by radiochemical isolation and γ spectrometry or beta detection, 25:57355
  analysis for strontium by atomic absorption spectrophotometry, 25:57310
  radioisotope chemical states in, effects of iron on, 25:57410
  separation of uranium from, by adsorption using titanic acid, 25:57337
  uranium distribution between calcareous skeletons and, 25:57409

SEDIMENTARY DEPOSITS
  seismic wave propagation through, near Project Dribble site in Mississippi, effects of stratigraphy on, 25:57596 (USGS-474-129)
  sonic velocity of, near Project Dribble site in Mississippi, (E), 25:57595 (USGS-474-112)
  uranium occurrence in permeable, 25:57584

SEISMIC WAVES
  discrimination between earthquake- and underground nuclear explosion-generated, using short period seismic array data, 25:57600
  effects of earthquake-generated, on nuclear power plants, models for simulating dynamic, (T), 25:57598
  generation and propagation by Cannikin Event at Amchitka Island, Alaska, studies of potential effects of, 25:57590 (COO-2138-4)
  generation and propagation of P, R, and S, from underground nuclear explosions, 25:57593 (TID-25572)
  ground motion from, method for calculating linear dynamic response of buildings to, 25:57592 (JAB-99-70)
  propagation through rocks near Project Dribble site, velocity cross section data for interpreting, 25:57595 (USGS-474-112)
  propagation through sedimentary rocks at Project Dribble site, effects of stratigraphy on, 25:57596 (USGS-474-129)
  spectra of P, generated by earthquakes and underground nuclear explosions, method for seismic event identification using, 25:57599

SEISMOLOGY
  research in India, development of, 25:57591 (INIS-mf-71, pp 181-98)
  review on underground nuclear explosion, 25:57593 (TID-25572)

SELENIUM
  determination in glacial ice, by neutron activation and radiochemical separation, 25:57394
  determination of trace amounts of, by neutron activation, 25:57380
  determination of trace amounts of, in tellurium by photometry, 25:57323
  determination simultaneously with gold and tellurium in water by neutron activation, 25:57370
  radioinduced production in germanium, effects on infrared absorption, 25:58343
  radiosensitizing effects of colloidal, on anoxic bacteria, x, 25:58155

SELENIUM ISOTOPES Se-75
  effectiveness for scintigraphy of liver and thyroid gland, 25:58054
  energy level at 287 keV, lifetime for, (E), 25:59771
  evaluation for scanning human mammary glands for localization of neoplasms, 25:58051
  evaluation of selenomethionine-labeled, for scintigraphy of pancreas, 25:58061
  use of methionine-incorporated, for scintigraphy of pancreas with colloidal gold-198 liver subtraction by means of television reproduction, 25:58059

SELENIUM ISOTOPES Se-76
  energy levels from arsenic-76 beta decay, spin--parity assignments for, (E), 25:59748

SELENIUM ISOTOPES Se-80
  energy levels from arsenic-80 beta decay, spin--parity assignments for, (E), 25:59749

SELENIUM ISOTOPES Se-82
  neutron reactions (n,2n) at 14.7 MeV, isomer ratio in, (E), 25:59766

SELENIUM SYSTEMS
  Li--LiBr--RbBr--Se, thermodynamic properties of, emf measurements of, 25:58387(R) (ANL-7823)

SEMICONDUCTORS
  defects in irradiated, review of theory of, 25:59131
  ion implantation doping of, using electromagnetic isotope separators, 25:57650 (CONF-711002-, pp 10-20)
  ion implantation in binary III--V, review, 25:59168
  radiation effects on properties of, review of ion, 25:59173
  radiation effects on silicon carbide, gamma, (E), 25:57903

SEQUOYAH POWER REACTOR, UNIT 1
  construction of, request for not suspending permit for, 25:59977 (DOCKET-50327-20)

SEQUOYAH POWER REACTOR, UNIT 2
  construction of, request for not suspending permit for, 25:59977 (DOCKET-50327-20)

SERINE
  radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931

SEWAGE
  radiosterilization of, design of spiral-flow gamma facility for, 25:57636(P)

SEYFERT GALAXIES
  model for NGC 5548, (E), 25:58655
  radiations from nuclei of, (T), 25:58629
  radio emission from core sources in, at 1415 MHz, (E), 25:58642
  spectra of NGC 5548, Hα profile in, (E), 25:58655

SF MATERIALS ACCOUNTING
  records for, standards for compiling and maintaining, 25:57716

SHIELDED CONTAINERS
  design for shipping irradiated fast reactor fuel elements, engineering drawings for, 25:57720
  design for shipping of SPERT III irradiated fuels, 25:57703 (DPSPU-71-124-4A)
  design modification of ATMX-500 railroad car, for shipping radioactive materials, 25:57705 (MLM-1812)
  thermal cooling of high-level radioactive waste, before removal of loaded cylinders, method for, 25:57706 (ORNL-TM-3545)

SHIELDING
  gamma dose rate calculations for two-layered slab, using Monte Carlo method, (T), 25:59108
  gamma dose rate in two-layered slabs, semi-empirical representations of, 25:59117
  neutron dose rate in two-layered slabs, semi-empirical representations of, 25:59117
  radioprotective effects of tibial, in adult, neonatal, and weanling mice, comparison of x, 25:58110
  requirements for astronauts exposed to solar flares during duty on space stations, 25:58025(T) (ORNL-tr-2490)
  temperature distribution in concrete, for power reactors, 25:60056

SHIPPING
  container for irradiated fast reactor fuel element, design of shielded, 25:57720
  equipment for air-ride, of Mark II Test Assembly, vibration testing of, 25:57612 (HEDL-TME-71-114)
  regulations for hazardous materials, US Dept. of Transportation, 25:57710
  standard for safe, of radioactive materials through UK ports, 25:57711
  standards for British railway, of dangerous materials, 25:57713

SHIPS
  air conditioning for nuclear powered, effectiveness for filtering airborne radioactivity of, 25:60205
  development of nuclear powered, data summary on, 25:60207

SHOCK WAVES
  book: Protection of Animals Against Injury by Nuclear Weapons, 25:58026
  effects on sheep in two-man foxholes at various distances from 500-ton TNT charge, 25:60272 (DASA-2711)
  production in air and ground from above-ground and underground explosions, finite difference method for calculation of, 25:57594 (UCRL-73369)
  production of turbulent electrostatic, from laminar shocks, (E), 25:59020
  simulation of high-Mach-number magnetosonic, in plasma, (T), 25:59044
  stability of compression, in MHD flows in channels, 25:58848
  use for pre-ionization of theta-pinch plasmas, 25:59056

SILICATE ROCKS
  analysis by neutron activation, low-energy photon detector for, 25:57387

SILICIC ACIDS
  reactions with ferric and uranyl ions in aqueous solutions, spectrophotometric study of, 25:57406

SILICON
  analysis of semiconductor-grade silicon by proton activation, 25:57396
  determination in tellurium after extraction with TBP, spectrophotometric, 25:57324
  determination of trace amounts of, in uranium dioxide by spectrophotometry using molybdenum blue method, 25:57340
  effects on niobium nitride solubility in iron austenite, 25:58268
  electron reactions at 7 to 10 MeV, bremsstrahlung spectra from, (E), 25:59149

  ion implantations of lithium, boron, and phosphorus in, for use as charged-particle detectors, 25:57749
  ion ranges and stragglings in, calculations of 20- to 400-keV heavy, 25:59116
  neutron elastic and inelastic scattering at 7.71 to 9.05 MeV by natural, cross sections for, (E/T), 25:59770
  proton reactions at 6 to 52 MeV with natural, cross sections for aluminum-26 and sodium-22 formation in, (E), 25:59753
  radiation damage regions in, crystallinity of fission-neutron and ion-, (E/T), 25:59140
  radiation effects on electric conductivity of n- and p-type, subthreshold electron, 25:59127
  radioinduced defects in n- and p-type, review of electron and neutron, 25:59135
  radioinduced disorder in p-type, Rutherford-backscattering study of helium-ion, 25:59136
  reactions of recoil atoms of, research progress on, 25:57487(R) (COO-1713-25)
SILICON CARBIDES
  ion implantations in alpha-, disorder and location of 40-keV antimony and 30-keV nitrogen, 25:59171
  properties of whiskers of, for composite reinforcing materials, 25:58361
  radiation effects on cathodoluminescence spectrum of beta-, 3.5-MeV electron, (E/T), 25:59139
  radiation effects on ESR and optical transmission spectra of monocrystals of α-, α and neutron, 25:59154
  radiation effects on semiconductors of, gamma, (E), 25:57903
  Al--SiC, properties of carbide whisker reinforced composites of, 25:58361
SILICON IONS
  x-ray spectra of solar, (E), 25:58583
SILICON ISOTOPES Si-27
  energy level at 780 keV, lifetime for, (E), 25:59771
  energy levels from silicon-28 (He-3,$\alpha\gamma$) and magnesium-24 (α,nγ) reactions, lifetimes and spin--parity assignments for, (E), 25:59751
  energy-level transitions from silicon-28 (He-3,$\alpha\gamma$) and magnesium-24 (α,nγ) reactions, branching ratios for, (E), 25:59751
SILICON ISOTOPES Si-28
  energy levels from electron inelastic scattering, model analysis of, (E/T), 25:59736
  energy levels of, calculation for α-hole, 25:59757
  helium-3 reactions (He-3,$\alpha\gamma$) at 8.2 MeV, spectra from, (E), 25:59751
  photon reactions (γ,n) up to 35 MeV endpoint energy, excitation functions for, (E), 25:59772
  production in stars from simple helium burning, (E), 25:58508
SILICON ISOTOPES Si-29
  proton reactions (p,γ) at 900 to 2120 keV, γ spectra from, (E), 25:59760
SILICON ISOTOPES Si-32
  production in stars from simple helium burning, (E), 25:58508
SILICON JUNCTIONS
  rectifying process in, review of, 25:57741
SILICON OXIDES
  analysis of high-purity, for uranium by luminescence method, 25:57328
  coating with silver films induced by electron bombardment, mechanisms of selective, 25:58178 (AWRE-O-42/71)
  effects on thermostability of irradiated polyethylene, 25:57446
  preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
  radioinduced intrinsic and impurity defects in, ESR study of, 25:59174
  reactions with zinc oxide to form zinc orthosilicate, ESR study of defect kinetics in, 25:59174
  CaO--Nb$_2$O$_5$--SiO$_2$--TiO$_2$, liquidus of pseudo-ternary CaO.Nb$_2$O$_5$--CaO.TiO$_2$--SiO$_2$ plane of, 25:58390
  polyethylene--SiO$_2$, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)
SILICON SYSTEMS
  Al--Cu-base--Si, oxidation at high temperatures, mechanisms of, 25:58171
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
  Cr--Ni-base/Ni-base--Si, development of thermocouple of, 25:57876
  Cu--Si, welding to steel, deposition of intermediate layers for, 25:58204
  Cu-base--Si, oxidation at high temperatures, mechanisms of, 25:58171
  Ge--Si-base, radioinduced disorder in p-type, Rutherford-backscattering study of helium-ion, 25:59136
SILTS
  analysis for mercury by neutron activation and radiochemical separation, 25:57392
  characteristics of Columbia River, effects on radioisotope content in river water of chemical, mineral, and physical, (E), 25:57561 (TID-25786)
  radiation monitoring of seabed, equipment and method for in-situ gamma, 25:57586
  radioactivity in Mt. Obora, Japan, measurements of, 25:57566
  radioisotope content of Columbia River, (E), 25:57561 (TID-25786)
  thorium-230 abundance variations in ocean-bottom, 25:57588
  thorium-230/uranium-234 ratio in iron-rich East Pacific Rise, 25:57585
  uranium abundance variations in ocean-bottom, 25:57588
  uranium-234/-238 ratio in iron-rich East Pacific Rise, 25:57585
SILVER
  deposition on silicon dioxide by electron bombardment, comparison with silicon monoxide reactions, 25:58178 (AWRE-O-42/71)
  determination by extraction using quinolinol melt and spectrography, 25:57312
  effects on oxidation of hexavalent neptunium by potassium persulfate, 25:57412
  helium-ion reactions at 45 to 90 keV/amu with, helium-isotope dependence of cross sections for L-shell ionization in, (E), 25:58776
  ionization cross sections of, measurement of, 25:58344(R) (LA-4693)
  meson (π^-) inelastic scattering at 3.5 GeV/c with charged-particle evaporation, charged-particle energy spectra and angular distributions for, (E), 25:59822
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
  proton reactions (p,γ) at 4 MeV with natural, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  proton stopping power at 20 to 1000 keV of, electronic, (T), 25:59124
  radioinduced helium production in foils of, fast neutron, 25:58334
SILVER ALLOYS AND SYSTEMS
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  Ag--Al--In, phase studies at 143 to 506°C, isothermal, 25:58287
  Ag--Au-base, radioinduced crowdions in, comments on evidence for electron, 25:59162
  Ag--Au-base, radioinduced crowdions in, stabilization of electron, (T), 25:59153
  Ag-base--Cd, precipitation in, effects of aluminum, beryllium, magnesium, scandium, and yttrium additions on periodic, 25:58262
  Ag-base--Cu--In, bonding to lead telluride, methods for solid-state, 25:58207
SILVER CHLORIDES
  AgCl--NaCl, effects on direct spectrographic determination of trace amounts of metals in zirconium dioxide, 25:57335
SILVER ISOTOPES Ag-110
  use of metastable, as tracer for determining current efficiency in aluminum oxide electrolysis, 25:58360
SINGLE CRYSTALS
  charged-particle scattering by, quantum/classical transition in, (T), 25:59157
  dislocation damping forces in, 25:60264 (CALT-767-P-3-15)
  particle energy loss distribution in, effects of channeling on heavy positive, (T), 25:59150
SINTERING
  method for activated, of metals and ceramics, 25:58200
SKIN
  barium-140 distribution in tissues of, following cutaneous application, 25:57917
  decontamination of human, effectiveness of acetic acid derivatives for, 25:57982
  epidermis thickness of human, in relation to age, body site, and sex, 25:58000 (RD/B/R-1934)
  radiation effects on cell division in epidermis of human, from mammary tumors, x, 25:58146
  radiation effects on human, methods for treatment of ulcerogenic x, 25:58038
  radiation effects on iodine-131 clearance rate in human and rabbit, x, 25:58125
  radioinduced ulceration in rabbit, protective effects of desoxycorticosterone acetate, methionine, and vitamin A against x, 25:58036
  strontium-89 distribution in tissues of, following cutaneous application, 25:57917
SLURRIES
  x-ray scattering from, effects of particle size on Compton and Rayleigh, 25:59118
SODIUM
  analysis for impurity carbon, hydrogen, and oxygen, development of on-line meters for, 25:60058(R) (ANL-7817)
  analysis for iodine-135, development of method for, 25:60058(R) (ANL-7817)
  analysis for iron, spark mass spectrometric, 25:58163(R) (AI-AEC-12859)
  analysis for oxygen, development of in-line meter for, 25:58163(R) (AI-AEC-12859)

analysis for particulate impurities, development of methods for, 25:60058(R) (ANL-7817)
analysis of loop, for carbon and oxygen, 25:58166(R) (AI-AEC-12980)
boiling in liquid metal cooled fast reactors, effects of fuel element failures and coolant flow blockage on, 25:60117 (KFK-1380)
boiling in liquid, development of high temperature sonic detectors for, 25:60090
boiling in liquid, development of methods for detection of, 25:60089
boiling of liquid, analysis of stable and transient flow characteristics during, 25:60112 (CEA-CONF-1797)
carbon distribution between steels and liquid, equilibrium, (E), 25:60058(R) (ANL-7817)
corrosive efects of flowing high-temperature, on Types 304 and 316 stainless steel, 25:58163(R) (AI-AEC-12859)
corrosive effects of flowing, on Type 316 stainless steel, 25:58167(R) (AI-AEC-12987)
corrosive effects of liquid, on fast breeder reactor materials, (E/T), 25:60010(T) (EURFNR-902)
corrosive effects of Types 304 and 316 stainless steel at high temperature, metallographic studies of, 25:58174
corrosive effects on stainless steel loops, 25:58170 (RD/B/N-1998)
determination in analytical reagents by neutron activation, 25:57379
determination in irradiated mixed oxide fuels, spectrochemical, 25:58344(R) (LA-4693)
determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
determination in solid rocket propellants by neutron activation and gamma spectroscopy, 25:57384
determination of extracellular, in man, radioisotope dilution method for, 25:57924
effects in combination with helium on stress rupture of Types 304 and 316 stainless steel at 900 to 1200°F, 25:58167(R) (AI-AEC-12987)
effects of dynamic and static high-temperature, on mechanical properties of Types 304 and 316 stainless steel, 25:58167(R) (AI-AEC-12987)
effects of dynamic and static high-temperature, on mechanical properties of Types 304 and 316 stainless steel, 25:58166(R) (AI-AEC-12980)
effects of high-temperature, on mechanical properties of Type 304 and 316 stainless steel, 25:58163(R) (AI-AEC-12859)
effects on complexonometric determination of rare earths, 25:57317
electromigration in molten chlorides, 25:57439
flowmeters for liquid, development of eddy current probe, 25:60184
flowmeters for liquid, development of permanent magnet probe, 25:60183
flowmeters for liquid, performance of magnet flow-through, 25:60182
hydrogen content in liquid, development of diffusion tube detector for monitoring, 25:57877
impurities in coolants of, design of collector for, 25:57624(P)
purification for use in fundamental studies, methods for, 25:58163(R) (AI-AEC-12859)
purity specifications for liquid, for large operating reactor loops, 25:60058(R) (ANL-7817)
reactions with deuterium, hydrogen, and nitrogen molecules, excitation cross sections for, (E), 25:58778
reactions with nitrogen and sulfur dioxides at 1 to 30 eV, light emission and excitation cross sections for, (E), 25:58749
solvent properties for bismuth at high temperatures, 25:58163(R) (AI-AEC-12859)
solvent properties for carbon at high temperatures, 25:58163(R) (AI-AEC-12859)
solvent properties for chromium at high temperatures, 25:58163(R) (AI-AEC-12859)
solvent properties for irradiated iron, 25:58163(R) (AI-AEC-12859)
solvent properties for niobium at high temperatures, 25:58163(R) (AI-AEC-12859)
solvent properties for noble gases, 25:58387(R) (ANL-7823)
solvent properties for titanium at high temperatures, 25:58163(R) (AI-AEC-12859)
Na--NaH--NaOH--Na_2O, phase diagram of, 25:60058(R) (ANL-7817)

SODIUM ALUMINUM SILICATES
$NaAlSiO_4$--polyethylene, radiation effects on mechanical properties and creep resistance of composites of, gamma, 25:58416(R) (RLO-2098-2)

SODIUM AMIDES
spectra at 220°C, Raman, 25:58387(R) (ANL-7823)
vibration spectra of, pulsed neutron-scattering of, 25:58384

SODIUM BROMIDES
radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467

SODIUM CHLORIDES
copper (II) ion ESR spectra in, 25:59201
nickel (I) ion ESR spectra in, 25:59201
radiation effects on valence distribution of ion-implanted sulfur-35 in crystals of, γ, 25:57503
radioinduced F centers in crystals of, effects of prior electric field treatment on kinetic stages of γ-, (E/T), 25:59164
radioinduced F color centers in, thermal aggregation of x, 25:59152
radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
sulfur-35 valence distribution after ion implantation in, effects of pre-bombardment with chlorine, sulfur, and oxygen on, 25:57503
AgCl--NaCl, effects on direct spectrographic determination of trace amounts of metals in zirconium dioxide, 25:57335

SODIUM FLUORIDES
analysis of molten, for hydrogen- and deuterium-containing impurities, spectroscopic, 25:57298 (ORNL-4676, pp 73-138)
copper (II) in ESR spectra in, 25:59201
radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467
BeF_2--NaF, electric conductivity of molten and supercooled, 25:57298 (ORNL-4676, pp 73-138)
BeF_2--NaF, phase transitions in molten, 25:57298 (ORNL-4676, pp 73-138)
KI--NaF, effects on direct spectrographic determination of trace amounts of metals in tungsten trioxide, 25:57335
$NaBF_4$--NaF, corrosive effects of molten, on Inconel, 25:57298 (ORNL-4676, pp 73-138)
$NaBF_4$--NaF, corrosive effects on Hastelloy N and Haynes 25 alloys at 460 to 600°C, 25:58169 (ORNL-TM-3488)
$NaBF_4$--NaF, corrosive effects on Hastelloy N and Inconel 600 at high tempertures, 25:58168 (ORNL-4676, pp 139-233)
$NaBF_4$--NaF, reactions of molten, with water, 25:57298 (ORNL-4676, pp 73-138)

SODIUM FLUOROANTIMONATES
radiation effects on, ESR spectra of radicals from γ, 25:57445

SODIUM FLUOROBORATES
analysis of molten, for hydrogen- and deuterium-containing impurities, spectroscopic, 25:57298 (ORNL-4676, pp 73-138)
spectra of polycrystalline, Raman, 25:57298 (ORNL-4676, pp 73-138)
$NaBF_4$--NaF, corrosive effects of molten, on Inconel, 25:57298 (ORNL-4676, pp 73-138)
$NaBF_4$--NaF, corrosive effects on Hastelloy N and Haynes 25 alloys at 460 to 600°C, 25:58169 (ORNL-TM-3488)
$NaBF_4$--NaF, corrosive effects on Hastelloy N and Inconel 600 at high tempertures, 25:58168 (ORNL-4676, pp 139-233)
$NaBF_4$--NaF, reactions of molten, with water, 25:57298 (ORNL-4676, pp 73-138)

SODIUM HYDRIDES
Na--NaH--NaOH--Na_2O, phase diagram of, 25:60058(R) (ANL-7817)

SODIUM HYDROXIDES
solvent properties of aqueous, for cobalt, tungsten, and tungsten carbide, 25:58177
Na--NaH--NaOH--Na_2O, phase diagram of, 25:60058(R) (ANL-7817)
$NaNO_3$--NaOH, solvent properties of aqueous, for tungsten carbide, 25:58177

SODIUM HYPOCHLORITES
effects on radioinduced decoloration of textile dye solutions, 25:57452

SODIUM IODIDES
radiolysis of frozen aqueous solutions of, ESR study of hydrogen atoms and hydroxyl radicals from, 25:57467

SODIUM IONS
electron reactions with, model potentials for, 25:58772
reactions with neon and nitrogen molecules in keV range, production of K vacancies in, (E), 25:58756

SODIUM ISOTOPES Na-22
content in USSR rivers, effects of 1961 and 1962 atmospheric nuclear explosions on, 25:57568
content of cosmogenic, in inland surface waters, uses in hydrological studies, 25:57568

SODIUM ISOTOPES Na-23
photon reactions (γ,n) with, energy dependence of yield for, (E), 25:59815

SODIUM NITRATES
solvent properties of aqueous, for cobalt, tungsten, and tungsten carbide, 25:58177
$NaNO_3$--NaOH, solvent properties of aqueous, for tungsten carbide, 25:58177

SODIUM OXIDES
Na_2O--TeO_2, radiation effects on structure of glasses of, EPR studies on effects of metal oxide additives on γ, 25:57447
Na--NaH--NaOH--Na_2O, phase diagram of, 25:60058(R) (ANL-7817)

SODIUM PERRHENATES
radiation effects on crystals of, thermal annealing of recoil rhenium atoms from proton, 25:57497

SODIUM SALICYLATES
radiosensitizing effects on Escherichia coli, γ, 25:58157

SODIUM THIOSULFATES
  sorptive properties for iodine and methyl iodide in ice condenser reactor containment systems, (E), 25:60124
SODIUM URANATES
  preparation and thermochemical properties of pentavalent and hexavalent, 25:57405
SOILS
  analysis for trace amounts of elements by resonance neutron activation and γ spectrometry, 25:57375
  radioactivity of Indian, measurements of gamma, 25:57567
  radioisotope content of Indian, gamma spectrometric measurements of, 25:57567
  strontium-90 content of agricultural, in East Germany, effects of fallout from nuclear weapons tests on, 25:57986
SOLAR ACTIVE REGIONS
  electron densities in, (E), 25:58599
  spectra of, radio and ultraviolet, (E/T), 25:58580
SOLAR CELLS
  development for spacecraft electric power systems, review on, 25:57671
SOLAR CORONA
  acoustic waves in, propagation of a spectrum of, (T), 25:58579
  brightness of, apparent surface, (E/T), 25:58618
  calcium abundance in, (E), 25:58605
  current sheets in, magnetic model of three-dimensional flowing, (E/T), 25:58616
  electron densities in, (E), 25:58621
  electron density and temperature in, (E/T), 25:58580
  electron temperatures in, (E), 25:58621
  expansion phenomena in, large-scale energy-associated, (T), 25:58894
  flare production in, mechanism for, (T), 25:58573
  loops in, magnetic-field strengths in, (E), 25:58606
  loops in, monochromatic observations of, (E), 25:58606
  polarization of, (E/T), 25:58618
  prominence formation in radiatively cooled, (T), 25:58571
  spectra of, profiles of 5303- and 6374-A lines in, (E), 25:58572
  transition layer with chromosphere, model for, (E/T), 25:58580
  ultraviolet spectra during eclipse of Mar. 7, 1970, (E), 25:58617
SOLAR DISTURBANCES
  planetary effects on distribution of calcium flocculi, (E), 25:58611
  relation to soft x-ray emission, (E), 25:58600
SOLAR FLARES
  bremsstrahlung in Oct. 24, 1969, (E), 25:58609
  distribution of, longitudinal, (T), 25:58570 (N-71-14166)
  effect on ionospheric electron content enhancements and sudden frequency deviations, (E), 25:58901
  effects on radiation dose to astronauts during prolonged duty on space stations, protective effects of shielding against, 25:58025(T) (ORNL-tr-2490)
  electron density in Oct. 24, 1969, (E), 25:58609
  magnetic fields in Oct. 24, 1969, (E), 25:58609
  mass motions in spray-type, (E), 25:58608
  prediction of, from statistical sunspot data in 1966, (T), 25:58592
  production mechanism for, (T), 25:58573
  proton emission during, longitude effects on delay of, (E), 25:58612
  proton events during space missions, risk of, (E/T), 25:58853 (N-71-27792)
  radio polarizations associated with Oct. 24, 1970, (E), 25:58620
  synchrotron emission in Oct. 24, 1969, (E), 25:58609
SOLAR GRANULES
  intensity fluctuations and velocities in, power spectrum analysis of, (E), 25:58594
SOLAR PARTICLES
  emission from March 1970 event, observations over polar cap and in radiation belt, (E), 25:58892
  energy losses by, direct observations of, (E), 25:58590
SOLAR PROMINENCES
  electron density in loop-type, of Aug. 12, 1970, (E), 25:58607
  energy balance in cool quiescent, (E/T), 25:58603
  formation of, due to thermal instability of radiatively cooled corona, (T), 25:58571
  gas streaming in, east--west, (E), 25:58601
  helium abundance in, (E), 25:58602
  magnetic fields in cool quiescent, (E/T), 25:58603
  production mechanism for, (T), 25:58573
  spectra of quiescent, Hα and K-line, (E), 25:58601
  spectra of, helium lines in, (E), 25:58604
  temperatures in loop-type, of Aug. 12, 1970, (E), 25:58607
SOLAR RADIATION
  relation to sunspot number at 600 to 9400 MHz during high and moderate solar activity, slowly varying component of, (E/T), 25:58614
SOLAR RADIO BURSTS
  emission from flare of Oct. 24, 1969, (E), 25:58609
  Faraday rotation dispersion in Type III, (E), 25:58610
  polarization characteristics of Type III, distribution of, (E), 25:58610
  relation to flare spray of Mar. 12, 1969, (E), 25:58608
SOLAR SPICULES
  heating of chromosphere due to, (T), 25:58619
SOLAR SYSTEM
  amino acid formation in early, catalytic synthesis, (E/T), 25:58575
  amino acid formation in early, catalytic synthesis, (E/T), 25:58576
  magnetic field in interplanetary space, large-scale properties of, 25:58582
  planetary formation from charged bodies ejected from Sun, (T), 25:58591
  planetary formation in, floccule theory of, (T), 25:58586
SOLAR WIND
  convection of solar particles by, outward, (E), 25:58590
  deceleration of, shock-free, (T), 25:58615
  directional fluctuations of, short-term, (E), 25:58581
  effect on aerodynamic parameters of magnetosphere, (E/T), 25:58908
  effect on angular momentum loss of Sun, (E), 25:58581
  effects on interplanetary hydrogen cone, (T), 25:58578
  helium interaction with, helium$^+$ ion abundance from photoionization of interstellar, (E/T), 25:58855
  interaction with interstellar hydrogen, (T), 25:58615
  interaction with interstellar hydrogen, effect on interstellar magnetic-field location, (T), 25:58631
  ion temperatures in, Venera-3 measurements on, (E), 25:58613
  observational data on, review of, (E), 25:58585
  parameters of, relation to magnetic activity, magnetotail electron flux, and radiation zone parameters, (E/T), 25:58852(T) (LA-tr-71-69)
  plasma penetration to low altitudes through high-latitude cusp in magnetopause, (E/T), 25:58882
  proton density, temperature, and velocity in, relation with magnetospheric substorm occurrences and interplanetary magnetic-field parameters, (E), 25:58856
  theory of quiet, review of developments on, 25:58894
  velocity from Sun, effect of interstellar magnetic shock front on, (T), 25:58631
  velocity of, Venera-3 measurements on, (E), 25:58613
SOLAR X-RAY BURSTS
  correlation with sudden phase anomalies in very sudden enhancements in wave fields, (E), 25:58888
  emission from flare of Oct. 24, 1969, (E), 25:58609
SOLIDS
  atom reactions with surfaces of, review of Auger and resonance processes in, (E/T), 25:58692
  diffusion in, short-circuiting effects in, 25:58209 (AECL-3952)
  electron scattering by magnetic, cross-section formulas for polarized-, 25:58687
  ion energy losses at low energies in, calculation using screened Coulomb potential, 25:59124
  ion implantation in, channeling-effect technique for study of, 25:59167
  ion implantation in, review of range distributions in, 25:59166
  ion reactions with surfaces of, review of Auger and resonance processes in, (E/T), 25:58692
  Markov approach to density fluctuations due to transport and scattering, 25:59237
  Markov approach to density fluctuations due to transport and scattering, 25:59236
  phonon interactions in, (T), 25:59204
  radiation-defect accumulation in radioactive, time-dependent self-, (T), 25:59170
  radioinduced void formation in, in high-voltage electron microscope, (T), 25:58316
  radioinduced void formation in, relations with dose and temperature, 25:58312
  rare gas release during annealing of ion-bombarded, review of stages of, 25:58412
  sputtering of, review of angular and energy distributions and yields from, 25:58693
  void interaction with dislocation loops in, (T), 25:58315
SOUND
  effects on vibration of slender rods within fluid-filled tube, (E/T), 25:57621 (TRG-Report-2141)
  propagation in bounded plane geometry, 25:59679
  propagation in solar atmosphere, (T), 25:58579
SOUTH AMERICA
  fallout monitoring during 1970, 25:57981(R) (HASL-245(App.))
  radioactivity of surface atmosphere and precipitation sampled during March 1971, gross β, 25:57992
  radioisotope content of milk during March 1971, barium-140, cesium-137, iodine-131, strontium-89, and strontium-90, 25:57990
SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR
  control rods of, cladding temperatures for FRED, 25:60153 (DOCKET-50231-97)
  management of, revised responsibilities for, 25:60152 (DOCKET-50231-96)
  operations during May to July 1971, 25:60154 (DOCKET-50231-98)
  personnel for, revised responsibilities for, 25:60152 (DOCKET-50231-96)

XUM

  testing program for, technical specifications for Core 2 transient, 25:60155 (DOCKET-50231-99)

SOVIET UNION
  granites from Central Kazakhstan in, statistical analysis of uranium distribution in, 25:57583
  sodium-22 content of rivers in, effects of 1961 and 1962 atmospheric nuclear explosions on, 25:57568

SPACE
  light polarization in interstellar, (E), 25:58488
  magnetic fields in interplanetary, large-scale properties of, 25:58582
  plasma and magnetic field in interplanetary, interactions with magnetosphere, (E/T), 25:58886
  spin states of atoms and molecules in interstellar, (T), 25:58665

SPACE FLIGHT
  proton events during, risk of solar, (E/T), 25:58853 (N-71-27792)
  radiation dose to astronauts during USSR Soyuz-9, preflight calculations of, 25:58006

SPACE VEHICLES
  economics of reusable interorbital, 25:60198
  power systems for, development of electric, 25:57671
  structures for, properties of composite materials in, 25:58422

SPECTROMETERS
  fabrication and testing of boron-implanted silicon, 25:57809

SPECTROSCOPY
  group theory for atomic, symmetry principles in, 25:58788

SPERMATOCYTES
  radioinduced mutations in adult, embryonic, and newborn mouse, comparison of frequency of x, 25:57967

SPHENE
  analysis for tantalum by neutron activation and γ spectroscopy, 25:57371

SPINAL CORD
  radiation effects on rat, orthodromic responses following x, 25:58101

SPLEEN
  radiation effects on hematopoiesis in mouse, following transplantation of bone marrow, 25:58117
  radiation effects on weight of mouse, effects of dose fractionation on whole-body cobalt-60 γ and x, 25:58108
  scintigraphy of reticuloendothelial system function in patients with hematological diseases, use of metastable technetium-99 colloids for, 25:58053
  scintiscanning of human, effectiveness of γ irradiated chromium-51-labeled erythrocytes for, 25:58136

SPORES
  radioinduced mutations in Actinomyces hygroscopicus, effects of hygromycin B and streptomycin on frequency of x, 25:57964

SPUTTERING
  method for radiofrequency, of thin-film radiation sources, 25:57651 (CONF-711002-, pp 147-59)
  methods for refractory metal radiation targets using argon ions, 25:59637 (CONF-711002-, pp 109-15)
  products of, review of angular and energy distributions and yields of, 25:58693

STABLE ISOTOPES
  preparation of radiation targets of, methods for, 25:59635 (CONF-711002-, pp 91-100)

STAINLESS STEEL
  bonding to aluminum, method for diffusion, 25:58207
  carburization-decarburization processes in liquid sodium systems, kinetics of, (E), 25:60058(R) (ANL-7817)
  coating instrument parts of, with neptunium, plutonium, thorium, or uranium as oxides by electrolytic deposition, 25:57440
  corrosion of loops of, by high-temperature sodium, 25:58170 (RD/B/N-1998)
  corrosion of sensitized, effects of various environments on stress, (E), 25:59886 (WCAP-7735)
  corrosion of Type 304, by molten MSRE fuel salts, 25:58168 (ORNL-4676, pp 139-233)
  corrosion of Type 316, by flowing sodium at 1200°F, 25:58167(R) (AI-AEC-12987)
  corrosion of Types 304 and 316, by flowing high-temperature sodium, 25:58163(R) (AI-AEC-12859)
  crack initiation and growth in Type 304, effects of low-cycle fatigue on, (E), 25:60061(R) (GEAP-10207-24)
  drawing of Type 304, testing of lubricants for deep, 25:58195
  fabrication of fuel cladding of, for nuclear powered ships, 25:58194
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
  mechanical properties of Type 316, effects of carburization on, 25:58167(R) (AI-AEC-12987)
  mechanical properties of Types 304 and 316, effects of dynamic and static high-temperature sodium on, 25:58166(R) (AI-AEC-12980)
  mechanical properties of Types 304 and 316, effects of dynamic and static high-temperature sodium on, 25:58167(R) (AI-AEC-12987)
  mechanical properties of Types 304 and 316, effects of high-temperature helium and sodium on, 25:58163(R) (AI-AEC-12859)
  metallography of Types 304 and 316, exposed to sodium at high temperature, 25:58174
  properties of austenitic, effects in design rules of FFTF structural elements of data in, 25:60115 (HEDL-SA-164)
  properties of Type 304L, for use in encapsulating californium-252, 25:58242
  radiation effects on biaxial stress rupture of Type 316, at 1000 to 1400°F, pile neutron, 25:58297 (HEDL-TME-71-72)
  radiation effects on density of Types M316, M316L, FV548, and EN58B, relations of void formation with fast neutron, 25:58306
  radiation effects on mechanical properties of welds on Type 304, relations of filler metal composition and weld process with fast neutron, 25:58296 (HEDL-SA-196)
  radiation effects on stress rupture of Types 304 and 316, alpha particle, 25:58163(R) (AI-AEC-12859)
  radioinduced atom displacement rates in, calculation of copper-ion and fast-neutron, 25:59144
  radioinduced helium production in, measurement of in-pile, 25:58163(R) (AI-AEC-12859)
  radioinduced swelling of helium-containing Type 316, relations of cold work on 20-MeV carbon ion, 25:58324
  radioinduced swelling of helium-containing Type 316, relations of temperature with proton, 25:58167(R) (AI-AEC-12987)
  radioinduced void formation in Type 316, effects of flux and temperature on proton, 25:58166(R) (AI-AEC-12980)
  radioinduced void formation in Types M316, M316L, and FV548, electron microscopic study of annealing of, 25:58307
  radioinduced void formation in, relations of helium content on 1-MeV electron, 25:58329
  radioinduced void swelling in helium-containing Type 316, relations of temperature with 20-MeV carbon ion, 25:58321
  radioinduced void swelling in helium-containing Type 316, relations of dose with 20-MeV carbon ion, 25:58322
  radioinduced void swelling in helium-containing Type 18/8/Ti, relations of temperature with 20-MeV carbon ion, 25:58323
  stress rupture of Type 306, effects of carburization on, 25:58166(R) (AI-AEC-12980)
  stress rupture of Types 304 and 316, combined effects of helium and sodium at 900 to 1200°F on, 25:58167(R) (AI-AEC-12987)
  tensile properties of Types 19-9DL and Sandvik 12R72, 25:58163(R) (AI-AEC-12859)
  epoxy resin--stainless steel, radiation effects on strength of joints of, gamma, 25:58416(R) (RLO-2098-2)

STANDARDS
  code of practice for shipping of radioactive materials through UK ports, 25:57711
  development of fast test reactor control system and instrumentation, 25:60180
  dosimeters, design of personnel ionization, BS 3385, 25:57830
  gamma sources for radiography, fabrication of, BS 3513, 1962, 25:57665
  gamma sources for radiography, shielding for, BS 4097, 1966, 25:57664
  guide for administrative practices in radiation monitoring, USAS N13.2 1969, 25:57714
  guide to practice nuclear material control systems for conversion facilities, ANSI N15.4-70, 25:57717
  hazardous materials regulations of the Dept. of Transportation including specification for shipping containers, Tariff No. 23, 1969, 25:57710
  method for controlling quality of radiographic testing, ASTM E142-68, 25:57682
  method for ultrasonic contact inspection of weldments, ASTM E164-65, 25:57685
  method for ultrasonic inspection of metal pipe and tubing for longitudinal discontinuities, ASTM E213-68, 25:57686
  methods for sampling airborne radioactive materials in nuclear facilities, ANSI N13.1, 1969, 25:57712
  physical inventories of nuclear materials, ANSI N15.3-71, 25:57715
  radiation protection, review of development of ICRP, 25:58024 (CONF-711104-1)
  radioactive waste disposal into sea, Safety Series No. 5, 1961, 25:57708
  record and reporting units for nuclear materials control, ANSI N15.2-71, 25:57716
  reference radiographs for heavy-walled steel castings, ASTM E280-68, 25:57684
  reference radiographs for steel castings up to 2 in. in thickness, ASTM E71-71, 25:57694
  reference radiographs for steel fusion welds, ASTM E390-69, 25:57687
  reference radiographs for steel welds, ASTM E99-63, 25:57683
  safe handling of radioisotopes, Safety Series No. 1, 1962, 25:57709
  samples issued in USSR on, handbook of, 25:57297(T) (NBS-SPEC. PUBL.-260-30)
  shipping of dangerous goods by railway in UK, BR 22426 (Rev.), 25:57713
  specification for straight-beam ultrasonic examination of plain and clad steel plates for special applications, ASTM A578-71, 25:57695

STANFORD LINEAR ACCELERATCR
  experimental facilities at, design of proportional wire chamber electronics system using CAMAC, 25:59656
STAR CLUSTERS
  photometry cf Ba 8, Ba 9, and Be 68 groups, three-color, (E), 25:58439
  stability of glcbular, (T), 25:58430
  star distribution in M56, bright-, (E), 25:58429
  star membership probabilities in open, method for computing, (E), 25:58437
  star velocity distribution function in quasi-stationary spherical, (T), 25:58428
  stellar distribution in M13, evolving, spatial, (E), 25:58487
  structure of rapidly rotating relaxed globular, (T), 25:58494
STARS
  atmosphere cf epsilon Vir, line-blanketed model, (T), 25:58484
  atmospheres of hot, population of states of helium atom in, (T), 25:58472
  atmospheres of pulsating, (E/T), 25:58485
  atmospheres of, circulation in radiative, (T), 25:58518
  atmospheres of, excitation and transfer of line radiation in, (T), 25:59041
  atmospheres cf, radiative transfer in, (T), 25:58510
  atmospheric parameters for G and K giant, (E/T), 25:58481
  black hole in beta Lyrae, (E/T), 25:58497
  classificaticn of CD -42° 14462 as a possible white dwarf, (E), 25:58456
  color indices fcr 28 visual binary, (E), 25:58457
  compositicn of G and K giant, (E/T), 25:58481
  distance to LkHa-101, (E), 25:58504
  distances tc Wclf--Rayet, associated with H II regicns, (E), 25:58477
  distributicn in galaxies, (T), 25:58636
  distribution of evolving, in M13, space, (E), 25:58487
  distributicn of young Pcpulation I, in spiral galaxies, (T), 25:58646
  element abundances in Am, of chromium, iron, and titanium Am, (E/T), 25:58438
  element abundances on surfaces of peculiar A, (E/T), 25:58462
  energy distributions for Orion B, (E), 25:58503
  evolution of halo population variable, in instability strip, (T), 25:58440
  evolution of M31 disk population, (E/T), 25:58491
  evolution cf massive main-sequence, (T), 25:58434
  flares from red-dwarf, (T), 25:58443
  fluorescence phenomena in, (E/T), 25:58519
  formaticn in nucleus of Milky Way, (E/T), 25:58624
  formation of binary, Deser--Laurent theory of gravitation fcr general rate of, (T), 25:59585
  helium abundance in C and B, (T), 25:58472
  helium burning in, element production from, (E/T), 25:58508
  helium productien in massive main-sequence, (T), 25:58434
  identificaticn cf HD 226868 with Cyg X-1, (E), 25:58554
  infrared spectra of LkHa-101, near-, (E), 25:58504
  light curves for MN Cas, XZ Per, and FK Aql, (E), 25:58427
  light polarization of, wavelength dependence of interstellar, (E), 25:58488
  limb darkening in eclipsing variable, nonlinear effects of, (T), 25:58490
  lumincsities of southern carbon, visual and infrared, (E), 25:58500
  luminosity cf very high-temperature, (T), 25:58433
  magnitudes cf 28 visual binary, (E), 25:58457
  mass exchange in binary, containing a neutron star, (T), 25:58424
  mass exchange in U Cep, (E), 25:58435
  mass losses from rotating magnetic, pulsed, (T), 25:58431
  mass ratio fcr beta Lyrae, (E/T), 25:58497
  matter in, superdense, (T), 25:58520
  membership cf HD 148321 and HD 119674 in Sco--Cen associaticn, (E), 25:58502
  model for Cyg X-3 featuring white-dwarf, (E/T), 25:58552
  model for eclipsing binary, 25:58499
  model for HS Herculis, (E), 25:58452
  model fcr W Vir, (E/T), 25:58485
  models fcr helium-burning 10 solar mass Population I, (T), 25:58465
  molecular dissociative equilibrium in delta Scu, (E), 25:58479
  neutrino emission from hot dense, URCA process in, (T), 25:58492
  orbital elements of spectroscopic binaries HD 24733 and HD 861, (E), 25:58442
  oscillaticns of magnetic polytrope, (T), 25:58507
  oscillations of, second-order rotational perturbaticn of nonradial, (T), 25:58441
  periods for three peculiar A-Type, (E), 25:58454
  photometric observations of LkHa-101 and LkHa-190, infrared, (E), 25:58505
  photometric orbital elements of eclipsing binary, (E), 25:58427
  photometry of HS Herculis, UBV, (E), 25:58452
  photometry cf IU Aur, UBV, (E), 25:58475
  photometry cf cld disk population red-giant, (E), 25:58449
  photometry of red RR Lyrae variable DK Vel, (E), 25:58453
  photometry of S Vel, UBV and Hβ, (E), 25:58478
  photometry of subluminous B-Type, CD -42° 14462, (E), 25:58456
  photometry of wide physical binary, (E), 25:58480
  pressure inside rotating relativistic, (T), 25:58486
  pulsations of massive main-sequence, (T), 25:58434
  radial velocities for four suspected spectroscopic binary, in the Pleiades, (E), 25:58458
  radiation transfer problems in atmospheres of, non-LTE, (T), 25:58467
  radiative transfer in atmospheres of pulsating variable, (T), 25:58543
  radiative transfer in atmospheres of, grey, (T), 25:58471
  radiative transfer in atmospheres of, modified Feautrier method for, 25:58470
  radiative transfer in model atmosphere of, (T), 25:58469
  radiative transfer in two-component atmospheres of, (T), 25:58468
  radiative-transfer effects in atmospheres of Cepheid, (E/T), 25:58474
  radio emission from hydroxyl in long-pericd variable, search for, (E), 25:58466
  radius of Sirius B, (E), 25:58511
  redshift of Sirius B, gravitational, (E), 25:58511
  reflection effect in close binary, monochromatic, (E/T), 25:58451
  relation of Wolf--Rayet, with H II regions, (E), 25:58477
  relation of zeta Oph to galactic continuum Loop I, (E/T), 25:58628
  rotation in post-Newtonian approximation to general relativity, rapid, 25:58495
  rotation of components of U Cep, (E), 25:58435
  rotation of supermassive, in first post-Newtonian approximation to general relativity, (T), 25:58496
  spectra of CH Cyg during 1967--70 activity phase, (E), 25:58482
  spectra of double-lined eclipsing binary, metallic-line, (E), 25:58506
  spectra of early O and Of, (E), 25:58483
  spectra of Orion B, (E), 25:58503
  spectra of RZ Pegasi, detection of technetium lives in, (E), 25:58459
  spectra of VI Cyg No. 12, search for interstellar absorption in, (E), 25:58512
  spectra of white-dwarf, with circular polarization, (E), 25:58447
  spectral classification of A- and F-Type, (E/T), 25:58438
  spectral emission lines for HD 21242, (E), 25:58461
  spectral emission lines of Of, time variations in, (E), 25:58515
  spectral energy distributions of main-sequence, (E), 25:58517
  spectral line formation in pulsating variable, (T), 25:58543
  stability of, undergoing phase change, (T), 25:58425
  surface gravities of A and F, in delta Scuti region, (E), 25:58476
  temperature of Sirius B, effective, (E), 25:58511
  temperatures of A and F, in delta Scuti region, effective, (E), 25:58476
  turbulence in A and F Type, micro, (E/T), 25:58438
  ultraviolet colors of early-type, interstellar extinction of, 25:58489
  ultraviolet radiation from, (E), 25:58445
  velocity observations of Delta Scuti 20 CVn, radial, (E), 25:58460
  velocity variation of, in quasi-stationary spherical cluster, (T), 25:58428
STATISTICS
  analogies between statistical mechanics and Euclidean quantum field theory, 25:59622
  Markov approach to density fluctuations due to transport and scattering, 25:59236
  Markov approach to density fluctuations due to transport and scattering, 25:59237
  parastatistics with variable numbers of particles, quantized, 25:59561
STEAM
  corrosive effects on Hastelloy N, 25:58168 (ORNL-4676, pp 139-233)
  quality in power boilers, rhenium-186 tracer method for measuring, 25:57674
  use in cooling casks and waste containers, 25:57706 (ORNL-TM-3545)
STEAM-GENERATING HEAVY-WATER-MODERATED REACTOR
  pressure tubes for, replacement procedures for, 25:60079
STEAM POWER PLANTS
  construction of, delays in schedules for, 25:59893
  operating cost of, probabilistic model for estimating, 25:60280 (ORNL-TM-3549)
  operation in mixed generation utility systems, control optimization of, 25:59922
STEEL
  analysis for nickel by neutron activation and

XUM

  radiochemical separation, 25:57381
  analysis for uranium as carbonate complex, polarographic, 25:57321
  carburization-decarburization processes in liquid sodium systems, kinetics of, (E), 25:60058(R) (ANL-7817)
  crack initiation and growth in Type A516 carbon, effects of low-cycle fatigue on, (E), 25:60061(R) (GEAP-10207-24)
  defects in castings of, to 2 in.-thick, standard reference radiographs for identification of, 25:57694
  defects in fusion welds of, standard reference radiographs for identification of, 25:57687
  defects in heavy-walled castings of, standard reference radiographs for identifying, 25:57684
  defects in welds of, standard reference radiographs for identifying, 25:57683
  evaluation of austenitic and ferritic, for use in sodium--sodium heat exchangers, 25:57614 (KFK-1387)
  heat treatment of Type 4340, using molten glass, 25:58199
  inspection of clad and plain plates of, standard for straight-beam ultrasonic method for, 25:57695
  preparation of high-speed tool, by hot isostatic pressing, 25:58197
  production of, use of process heat reactors for, 25:60200
  properties of pressure vessel, effects of thickness on mechanical, 25:60075
  properties of pressure vessel, for Czechoslovak power reactors, 25:58216 (ZJE-106)
  properties of thick-section plate and weldments of ASTM A533B, impact and tensile, 25:58218
  radioinduced void formation in, theory of, 25:58314
  tensile properties of six-inch thick flawed heavy-section ASTM A533, facility and mechanics for testing, 25:58219
  welded joints in, beta radiographic inspection of, 25:57700
  welding to aluminum, copper, and copper alloys, deposition of intermediate layers for, 25:58204
STELLAR FLARES
  emission from red dwarfs, (T), 25:58443
STELLAR WIND
  equations for, transformation of, (T), 25:58463
STELLARATORS
  magnetic fields of linear, vacuum, (T), 25:59074 (IPP-1/119)
  plasma adiabatic compression in, (T), 25:58964
  plasma diffusion in L-1, effects on charged particle streams on, (T), 25:58975
STEROIDS
  radiation effects on content in plasma of rats, bremsstrahlung, 25:58107
STOMACH
  scintigraphy of wall of, using metastable technetium-99-labeled pertechnetate, 25:58060
STORAGE RINGS
  beam expansion by coupling of betatron oscillations and damping of synchrotron oscillations, 25:59645(T) (SLAC-Trans-134)
  beam stability in, study of stochasticity in many-dimensional nonlinear oscillating systems for determining, 25:59652
STRATOSPHERE
  cyclones in lower, effects on Jan. 1964 fallout deposition on North America, 25:57572(R) (COO-1340-24)
  fission product content during 1970, 25:57980(R) (HASL-245)
  plutonium-238 content during 1970, 25:57980(R) (HASL-245)
  strontium-90 content of northern hemisphere, estimates for 1967 to 1970, 25:57579
  trough development at solar-activity maximum and minimum, relation with geomagnetic storms, (E), 25:58860
STREPTOMYCIN
  effects on frequency of x-radioinduced mutations in spores of Actinomyces hygroscopicus, 25:57964
STRESS
  analysis of, finite element method for, 25:60142
STRONTIUM
  determination in Roanoke River water by neutron activation and γ spectrometry, 25:57395
  determination in seawater by atomic absorption spectrophotometry, 25:57310
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  electron reactions up to 1 keV with, total cross sections for ionization in, (E), 25:58777
  precipitation with bone mineral analog calcium hydroxylapatite by isomorphous cocrystallization, 25:57418
  separation from yttrium by colloid formation and filtration, 25:57352
STRONTIUM BROMIDES
  hexane--$SrBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494
STRONTIUM ISOTOPES Sr-88
  helium-3 reactions (He-3,d) at 24.78 MeV, DWBA analysis of differential cross sections and spectrum from, (E), 25:59750
STRONTIUM ISOTOPES Sr-89
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  distribution in skin tissues following cutaneous application, 25:57917
STRONTIUM ISOTOPES Sr-90
  content in Japanese atmosphere, 1963 to 1971, 25:57579
  content in northern hemisphere stratosphere, estimates for 1969 to 1970, 25:57579
  content of milk in Europe, New Zealand, and USA during 1970, 25:57980(R) (HASL-245)
  content of plants and soils in East Germany from 1960 through 1963, effects of fallout on, 25:57986
  determination in natural samples by precipitation from EDTA solutions and counting, 25:57366
  determination in reactor effluent water by ion exchange and γ spectroscopy or radiochemical methods, 25:57351
  determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
  determination in yttrium-90 samples, rapid method for, 25:57352
  effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918
  excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
  preparation of beta sources of, Elan-2B pilot plant for, 25:57482(T) (ORNL-tr-2535)
STRONTIUM NITRATES
  HNO_3--$Sr(NO_3)_2$, radiolysis of citric acid in solutions of, γ, 25:57457 (ARH-2163)
STRONTIUM OXIDES
  ion transport numbers for, at 900 to 1180°C under low oxygen potentials, effects of ion radius on, 25:58379
STRUCTURES
  response to ground motions, analytical method for calculating linear dynamic, 25:57592 (JAB-99-70)
  stress analysis of power reactor, finite element method for, 25:60142
STYRENE
  radioinduced polymerization in bulk and solution, γ, 25:57450 (ORO-3667-1)
  radioinduced polymerization in carbon tetrachloride or hexachlorobutadiene solution, effects of additives on kinetics of γ, 25:57454
  reactions with solvated electrons, rate constant of, 25:57475
STYRENE POLYMERS
  radiation effects on, gamma, 25:58416(R) (RLO-2098-2)
  carbon black--polystyrene, radiation effects on composites of, gamma, 25:58416(R) (RLO-2098-2)
  poly(divinylbenzene)--polystyrene, properties as carrier of stationary phase in chromatographic separations, 25:57527 (UJV-2557-Ch)
SUCROSE
  radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931
  betaine--sucrose, use as release agent for evaporative production of carbon thin films, 25:58346 (CONF-711002-, pp 144-6)
SULFONES
  polymers, radiation effects on, gamma, 25:58416(R) (RLO-2098-2)
  glass fibers--polysulfones, radiation effects on composites of, gamma, 25:58416(R) (RLO-2098-2)
SULFUR
  determination in mixed oxide fuels, spectrophotometric, 25:58344(R) (LA-4693)
  meson (μ^-) capture by, asymmetry coefficient for low-energy neutron angular distribution from, (E), 25:59738 (JINR-P1-6029)
  neutron elastic and inelastic scattering at 7.96 and 9.05 MeV by natural, cross sections for, (E/T), 25:59770
  reactions with coal tar pitch, mechanisms of, 25:58168 (ORNL-4676, pp 139-233)
SULFUR DIOXIDES
  sodium-atom reactions at 1 to 30 eV with, light emission and excitation cross sections for, (E), 25:58749
SULFUR IONS
  effects on subsequent valence distribution of sulfur-35 ion implanted in sodium chloride crystals, 25:57503
SULFUR ISOTOPES S-32
  energy levels of, calculation for α-hole, 25:59757
SULFUR ISOTOPES S-35
  radiation effects on valence distribution of ion-implanted, in sodium chloride crystals, γ and heavy-ion, 25:57503
  reactions of recoil, 25:57442
SULFUR SYSTEMS
  Li--S, phase studies of, 25:58387(R) (ANL-7823)
SULFURIC ACID
  analysis of analytical grade, for impurities by neutron activation, 25:57379
  determination in fuel solutions of JRR-1, 25:57320
SUN
  activity of, correlation with interplanetary plasma and magnetosphere, (E/T), 25:58886
  activity of, effect on magnetic-storm-related atmospheric trough development, (E), 25:58860
  activity of, effect on relation of sunspot number and slowly varing component of radio emission, (E/T), 25:58614
  charged-body ejection by, formation of planets from, (T),

25:58591
  chlorine abundance in, (E), 25:58593
  light bending near, effects of torsion on, (T), 25:59605
  magnesium isotope abundances in atmosphere of, (E), 25:58597
  radio polarization at 7.8 GHz of, mapping of, (E), 25:58620
  radio-wave deflection in gravitational field of, (E), 25:58662
  rotation of, differential, 25:58622
  spectra of, iron lines in, (E), 25:58595
  spin-down of, e-folding time for, (E), 25:58581
  ultraviolet spectra during eclipse of Mar. 7, 1970, (E), 25:58617
  x-ray spectra of, satellite lines in, (E), 25:58583
SUNSPOTS
  activity in 1966, solar-flare prediction from, (T), 25:58592
  activity of 1954 minimum, relation to anomaly of streaming-associated cosmic-ray solar diurnal variation, (E), 25:58824
  book: Studies of Atmosphere and Ionosphere at Times of Unusual Solar Activity, (E), 25:58893
  effects of cycle of, on interplanetary hydrogen cone, (T), 25:58578
  magnetic fields in, (T), 25:58584
  magnetic-field strengths in, effects on molecular dissociation equilibrium, (E/T), 25:58589
  models of, hydromagnetic, (T), 25:58584
  radio polarization in McMath 11002 region, (E), 25:58620
  relation of numbers of, to slowly varying component of solar radio emission, (E/T), 25:58614
  spectra of umbrae of, molecular, (E/T), 25:58577
  spectra of, chlorine in, (E), 25:58593
  velocity field in and around, (E), 25:58598
SUPERCONDUCTORS
  critical field of solid cylinder of, with normal metal coating, (T), 25:58941
  electric conductivity of, higher-order effects due to fluctuation on, 25:58930
  feasibility of high-temperature, 25:58934
  fluctuation effects on S/I/N junction current, 25:58936
  fluctuation of order parameter and diamagnetism of, dynamic, 25:58945
  Josephson device impedance matching, dc transformer for, 25:58938
  resonance scattering in two-band, nonmagnetic, (T), 25:58935
  surface resistance of dirty Type-II, 25:58946
  theory of phase transitions in β-tungsten structure of A_3B intermetallic, induced by band Jahn--Teller effect, 25:58272
  tunneling in, role of spin-orbit scattering in high-field, (T), 25:58939
SUPERFLUIDITY
  examples of off-diagonal long-range order in, explicit, (T), 25:58918
SUPERNOVA REMNANTS
  mapping of Cygnus Loop at 1420 MHz, (E), 25:58514
  occurrence in galactic continuum loops, (E/T), 25:58628
  structure of Cygnus Loop at 1420 MHz, (E), 25:58514
  x-ray flux from Cas A, soft, (E), 25:58548
SUPERNOVAE
  discovery of faint, in anonymous southern galaxy, (E), 25:58455
  distribution in spiral galaxies, (T), 25:58646
  photometry of SN 1971, UBV, (E), 25:58464
  spectra of Type-I, wavelength shifts of intensity minima in, (E), 25:58501
SURFACE WATERS
  sodium-22 content of inland, hydrological studies using cosmogenic, 25:57568
  tritium content of USA, during 1970, 25:57991
SURFACES
  electrostatic potential of real conducting, statistical variations in, (T), 25:58681
  gas-beam reactions with hot solid, harmonic-model analysis of, 25:58690
SURRY POWER REACTOR, UNIT 1
  piping systems for, applications of sensitized stainless steel in, 25:59962 (DOCKET-50280-52)
  piping systems for, applications of sensitized stainless steel in, 25:59960 (DOCKET-50280-50)
  piping systems for, request for additional data on welds for, 25:59961 (DOCKET-50280-51)
  quality assurance program for construction of, request for additional data on, 25:59961 (DOCKET-50280-51)
SURRY POWER REACTOR, UNIT 2
  piping systems for, applications of sensitized stainless steel in, 25:59962 (DOCKET-50280-52)
  piping systems for, applications of sensitized stainless steel in, 25:59960 (DOCKET-50280-50)
  piping systems for, request for additional data on welds for, 25:59961 (DOCKET-50280-51)
  quality assurance program for construction of, request for additional data on, 25:59961 (DOCKET-50280-51)
SUSPENSIONS
  x-ray scattering from, effects of particle size on Compton and Rayleigh, 25:59118
SUSQUEHANNA POWER REACTOR, UNIT 1
  design parameters of, requested additional data on, 25:59999 (DOCKET-50387-11)
  design parameters of, revised and additional data on, 25:59998 (DOCKET-50387-10)
  operations aspects of, requested additional data on, 25:59999 (DOCKET-50387-11)
  operations aspects of, revised and additional data on, 25:59998 (DOCKET-50387-10)
SUSQUEHANNA POWER REACTOR, UNIT 2
  design parameters of, requested additional data on, 25:59999 (DOCKET-50387-11)
  design parameters of, revised and additional data on, 25:59998 (DOCKET-50387-10)
  operations aspects of, requested additional data on, 25:59999 (DOCKET-50387-11)
  operations aspects of, revised and additional data on, 25:59998 (DOCKET-50387-10)
SWEDEN
  fallout monitoring in atmosphere of, following 10th Chinese nuclear explosion, 25:57580
  nuclear power plant development in, 1970 status of, 25:59890
SWINE
  radiation effects on serum content of immunoglobulins in, γ, 25:58104
SWITCHES
  development of gas-discharge duplexers using radioactive primers, 25:57902
SWITZERLAND
  radioactivity levels in human food in, during 1969, 25:57989
  radioactivity levels in human food in, during 1970, 25:57988
SYMMETRY GROUPS
  breaking of Nambu--Goldstone chiral, for baryon octet electromagnetic mass differences, 25:59541
  chiral and conformal Lagrangian models in, 25:59542
  GL(n), characteristic identities for generators of, 25:59537
  internal, compatibility with asymptotic identification for electromagnetic part of gauge field, 25:59545
  O(3), boson calculus for, operators in, 25:59534
  O(3), finite- and infinite-dimensional local irreducible representations of, 25:59536
  O(4), boson calculus for, operators in, 25:59534
  O(4,2) x SU(3), baryon mass and electromagnetic form factors in, 25:59548
  O(n), boson calculus for, operators in, 25:59534
  O(n), characteristic identities for generators of, 25:59537
  SO(n), polynomial identity for vector operators for Lie algebra of, 25:59538
  SO(p,1), decomposition of matrix elements for most degenerate representations of, 25:59535
  Sp(n), boson calculus for, operators in, 25:59534
  Sp(n), characteristic identities for generators of, 25:59537
  SU(3) x SU(3) breaking model, π sigma commutator in, 25:59550
  SU(4) x O(3), classification of meson states in representations of, 25:59551
  U(6) x U(6), duality and representation mixing for hadron interactions in nonchiral, 25:59549
  U(6,6), meson classification and mass formulas in ladder, 25:59546
SYMMETRY GROUPS SU(3)
  baryon resonance decay rates and coupling constants in, 25:59491
SYNCHROCYCLOTRONS
  radiofrequency circuit for, 25:59649(P)
  shielding for JINR, activation of concrete, 25:59657
SYNCHROTRON RADIATION
  polarization of, degree of circular, (T), 25:58547
SYNCHROTRONS
  control and data handling system for NAL 8-GeV injection booster, computer-based, 25:59664
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP)
  shielding for reactor, discrete ordinates analysis of bottom grid-plate, (E/T), 25:60055(R) (ORNL-TM-3573)
SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-8)
  boiler for, performance testing of SN-1, 25:60138 (N-71-19497)
  boilers for, thermal performance of once-through forced convection mercury, (T), 25:60194 (N-71-27855)
  cooling system for, radioisotope transport in, 25:58166(R) (AI-AEC-12980)
  pump and turboalternator for, design and performance of bearings for, 25:57617 (N-71-26910)

T

T-111 (TANTALUM ALLOY)
  mechanical properties at high temperatures, effects of oxygen doping on, 25:57658(R) (ORNL-4723)
TACHYONS
  energy levels in magnetic field, 25:59388
  group theory for, lightlike, continuous-spin, and spacelike representations of Poincare group in, (T), 25:59532
  properties of photon, in disappearing Fresnel wave, strong correlation between Cherenkov effect and, (T), 25:59573

theory for classical, charged, point, mechanics and classical tunnel effect in, (T), 25:59556 (IPP-6/95)

TALCS
  effects on thermostability of irradiated polyethylene, 25:57446

TANTALUM
  determination by spectrography, elimination of effect of sample composition on, 25:57330
  determination in ore dressing products by x-ray absorption methods, 25:57327
  determination in pyrolytic graphite by neutron activation and counting of delayed β and γ coincidences, 25:57389
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  determination in sphene by neutron activation and γ spectroscopy, 25:57371
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  effects on electric properties of lanthanum boride, temperature dependence of, 25:59183
  effects on electric properties of lanthanum hexaboride, 25:59182
  electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
  etching by selective cavitation, method for, 25:58190
  mechanical properties of, effects of nitridation at 1000 to 1400°C on, 25:58259
  photon reactions with, secondary electron emission from, (E/T), 25:59107
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  preparation of spheroidized powders of, using plasma heating, 25:58187(T) (SCL-T-710281)
  radiation damage in films of nitrogen- and oxygen-doped, low-temperature 150-keV proton, 25:59160
  radioinduced Frenkel defects in (110) foils of, anisotropy of swelling energy of electron, 25:59125 (JUL-729-FF)
  separation from oxalic and tartaric acids by solvent extraction using tributylamine, 25:57546
  solvent properties for nitrogen at high temperatures, 25:58249
  surface energy and work function of smooth faces of monocrystal of, (T), 25:59194
  thermal emission properties of bare monocrystalline and barium-covered, 25:59177

TANTALUM ALLOYS AND SYSTEMS
  Ta--Ti-base, corrosion resistance of joints of, in hydrochloric acid at 90°C, 25:58176
  Ta--Ti-base, weldability of, 25:58176
  Ta-base--W, mechanical properties at high temperatures, effects of oxygen doping on, 25:57658(R) (ORNL-4723)

TANTALUM CARBIDES
  crystal structure of systems of, electron microscopy and optical studies on relation of physical properties to, 25:58403
  machining of, effects of carbon content in corresponding ranges of homogeneity on electroerosion, 25:58356
  stress variations in, at 1200 to 2200°C, effects of deformation rate on, 25:58395

TANTALUM ISOTOPES Ta-181
  neutron capture at 30 keV to 1.4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  photofission at 0.1 to 5 GeV, giant resonance in yields and integral cross sections for, (E), 25:59794
  proton reactions (p,γ) at 4 MeV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801

TARS
  reactions with sulfur, mechanisms of, 25:58168 (ORNL-4676, pp 139-233)

TD-NICKEL
  testing of fuel capsules of, at 850 to 1000°C, results of long-term, 25:57654(R) (DP-1279)

TD-NICKEL CHROMIUM
  fabrication of thin sheets and tubes of, development of method for, 25:58199
  testing of fuel capsules of, at 1000°C, results of long-term, 25:57654(R) (DP-1279)

TECHNETIUM
  spectral lines of, in RZ Pegasi, (E), 25:58459

TECHNETIUM ISOTOPES Tc-99
  chemical state in seawater, effects of iron on, 25:57410
  effectiveness of sulfur colloid-incorported metastable, for scanning liver for diagnosis of adenomas, 25:58046
  evaluation of albumin macroaggregate-incorporated metastable, for scintigraphy of blood circulation and neoplasm localization in human lungs, 25:58040 (UCLA-12-834)
  evaluation of pertechnetate- and sulfur colloid-incorporated metastable, for diagnostic scintigraphic studies, 25:58060
  separation of metastable, from molybdenum-99 by solvent extraction and ion exchange, 25:57483
  use of colloids of metastable, for scintigraphy of reticuloendothelial system in man with blood diseases, 25:58053
  use of metastable, for scintigraphy of human brain for diagnosis of Schilder's disease, 25:58048

TEKTITES
  age of Ivory Coast indochinite and micro-, relations of geomagnetic reversals to fission track estimation of, 25:57565

TELEMETERING SYSTEMS
  design parameters for magnetic, 25:60245(P)

TELEVISION EQUIPMENT
  use for scintiscan reproduction for contrast intensification, 25:58059
  x-ray emission from color, estimation of genetically significant dose for population of USA from, 25:58011

TELLURIUM
  analysis for silicon after extraction with TBP, spectrophotometric, 25:57324
  analysis for trace amounts of selenium by photometry, 25:57323
  determination simultaneously with gold and selenium in water by neutron activation, 25:57370
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  effects on complexonometric determination of rare earths, 25:57317

TELLURIUM ISOTOPES Te-122
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802

TELLURIUM ISOTOPES Te-130
  carbon-12 reactions (C-12,xn) and (C-12,αxn) above 10 MeV/nucleon, excitation functions, compound nucleus production cross section energy dependence, angular momentum, and evaporation cross section ratio energy dependence for, (E), 25:59779 (JINR-P7-5912)
  carbon-13 reactions (C-13,xn) and (C-13,αxn) above 10 MeV/nucleon, excitation functions, compound nucleus production cross section energy dependence, angular momentum, and evaporation cross section ratio energy dependence for, (E), 25:59779 (JINR-P7-5912)

TELLURIUM ISOTOPES Te-132
  excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919

TELLURIUM OXIDES
  Na_2O--TeO_2, radiation effects on structure of glasses of, EPR studies on effects of metal oxide additions on γ, 25:57447

TELLURIUM SYSTEMS
  As--Ge--Te, radiation effects on crystal structure of glass-forming chalcogenide of, fast neutron, 25:58419
  Au--Pd--Te, superconductivity in simple cubic intermetallic (Au/sub 1-x/Pd/sub x/)Te_2, 25:58928 (CALT-822-37)
  Bi--Te, hardness of, 25:58253
  Li--Te, phase studies of, 25:58387(R) (ANL-7823)

TERBIUM
  complexes with HEDTA, dissociation constants for, 25:57537
  determination in fluorite by solvent extraction and spectrography or fluorimetry, 25:57332
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  energy level interactions in, 4f--5d, (T), 25:58697
  oxidation potential for trivalent--tetravalent, 25:57437
  photochemistry of dilute sulfuric acid solutions of, formation of hydrates of peroxides in, 25:57416
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)

TERBIUM IONS
  luminescence in lanthanum and cerium phosphate phosphors, effects of thorium ions on, 25:59185

TERBIUM ISOTOPES Tb-159
  neutron capture at 400 keV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
  neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802

TERBIUM ISOTOPES Tb-160
  beta decay of, triple γ angular correlations from, (E), 25:59819

TEREPHTHALIC ACID, POLYETHYLENE ESTERS
  reactions with fluorine, 25:57619 (RFP-1739)

p-TERPHENYL
  effects on γ-radioinduced polymerization of styrene in carbon tetrachloride or hexachlorobutadiene solutions, 25:57454

THALLIUM
  determination by potentiometric titration using potassium chlorate, 25:57309
  diffusion of trace amounts of, in molten bismuth, indium, lead, tin, and zinc, thermal, 25:58267
  neutron capture at 400 keV by natural, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801

THALLIUM FLUORIDES
  TlF--UF_4, crystal structure of phases in, differential thermal analysis and x-ray crystallography studies on, 25:58418

THALLIUM ISOTOPES Tl-204
  beta decay of, K- and L-shell electron shake-off in, (E), 25:59792

THALLIUM SULFATES
  effects on nitrification by Nitrobacter agilis in soil

XUM

  suspension, 25:57401
- effects on yields of hydrogen and hydrogen peroxide from radiolysis of water, 25:57472

THERMAL CONDUCTIVITY
- measurement in solids by temperature wave method, description of, 25:57644

THERMIONIC CONVERTERS
- design and performance of radioisotope-fueled, parametric studies of, 25:57656 (N-71-18512)
- design with beryllium oxide reflectors and vapor chamber condensers for space reactors, 25:60197(P)
- electric space potential in cesium diode, 25:58838 (N-71-26273)
- fuel element design with heat pipe for nuclear, 25:60199(P)
- performance of CVD tungsten emitters with niobium and molybdenum collectors, 25:58839 (TEE-4125-5)

THERMODYNAMICS
- arrow of time in, (T), 25:58672
- Carnot cycles for general relativistic systems, (T), 25:58673
- conference on statistical, in astrophysics and relativity, Cardiff, Wales, 4/70, 25:58670
- ensemble versus time average probabilities in relativistic statistical mechanics, (T), 25:59238
- time asymmetry in, (T), 25:58671
- variational formulation of relativistic fluid, (T), 25:58674

THERMOELECTRIC CONVERTERS
- development of radioisotope-fueled, for spacecraft electric power systems, review on, 25:57671
- operation of cobalt-60-fueled, summary on, 25:57654(R) (DP-1279)

THERMONUCLEAR REACTIONS
- production in migmatron self-colliding orbits, 25:59078

THERMONUCLEAR REACTORS
- bibliography on plasma physics and fusion reactors, 25:58955
- data acquisition system for ORNL fusion experiments, 25:59075 (ORNL-TM-3593)
- design of JFT-1, magnet coil, 25:59079
- development of GA dc multipole and Doublet II, 25:59073(R) (GULF-GA-A-10807)
- effects on earth surface temperatures in years 2000 to 2020, 25:58956
- magnetic pumping in toroidal, transit-time, 25:58959 (CEA-CONF-1830)
- plasma confinement in toroidal, using hf electric fields, (E/T), 25:58976
- plasma diffusion in multipoles toward conductors and walls, (T), 25:58970
- plasma electric conductivity in toroidal, with trapped particles, (T), 25:59046
- plasma losses in high-current, from inverse skin effect, (T), 25:58967

THERMOSPHERE
- electron pitch-angle distribution at 350 to 1200 km in, at low latitude, (E), 25:58904
- winds in, auroral electrojet heating of, (T), 25:58864

THICKNESS GAGES
- description of charged-particle radiometric, for accurate measurements of targets, 25:57863 (CONF-711002-, pp 307-20)
- design and performance of radiometric, using semiconductor detectors, 25:57865 (NP-18941)
- design of alpha radiometric, 25:57864 (INS-TL-112)
- radiation source for gamma, selection of energy and activity of, 25:57874

THOREX PROCESS
- development for thorium reactor fuel with high burnup, 25:57541

THORIUM
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- complexes with DTPA, structure of, aqueous ir and proton NMR spectral studies of, 25:57436
- content in manganese nodules, α-particle and induced fission track methods for measuring, 25:57570
- deposition as oxide on instrument parts of stainless steel, electrolytic, 25:57440
- determination in rare earth oxides by TBP extraction and photometry, 25:57341
- determination of natural, in urine, methods used at CNEN for, 25:57347 (RT/PRCT-(71)9)
- determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
- determination of ultramicroamounts of, in rocks, photometric, 25:57342
- effects on spectrophotometric determination of calcium, 25:57304
- electromigration behavior of, in CDTA and EDTA, 25:57520 (JINR-E6-5952)
- oxidation potential for trivalent--tetravalent, 25:57437
- preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
- separation from other actinides by paper or thin-layer chromatography, 25:57553
- separation from other elements by ion exchange, 25:57342
- separation from rare earths and uranium by solvent extraction using TBP, 25:57341
- separation from thorium reactor fuel with high burnup by Thorex two-stage process, 25:57541
- solubility in lithium--bismuth solutions, 25:57522 (ORNL-4676, pp 234-71)
- x-ray yields from L/sub II/ subshell of, Auger, Coster--Kronig, and fluorescence, (E), 25:58719

THORIUM ALLOYS AND SYSTEMS
- Th-base--U, fabrication of fuel elements of, for unclad metal breeder reactor, 25:58185 (ORNL-TM-3499)

THORIUM CARBIDES
- chlorination of, thermogravimetric study of, 25:57542

THORIUM FLUORIDES ThF_4
- BeF_2--LiF--ThF_4, separation of cesium and rubidium from, by reductive extraction, 25:57298 (ORNL-4676, pp 73-138)
- BeF_2--LiF--ThF_4--UF_4, heat transfer and thermophysical properties of, (E/T), 25:60015 (ORNL-4676, pp 21-72)

THORIUM IONS
- effects on cerium and terbium luminescence in lanthanum and cerium phosphate phosphors, 25:59185

THORIUM ISOTOPES
- cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)

THORIUM ISOTOPES Th-228
- effects on incidence of osteosarcomas in beagle dogs following intravenous injection, 25:57918

THORIUM ISOTOPES Th-230
- abundance variations in ocean sediments, 25:57588
- content ratio to uranium-234 in East Pacific Rise sediments and iron deposits, 25:57585
- energy levels from protactinium-230 electron-capture decay, spin--parity assignments for, (E), 25:59800
- energy-level transitions from protactinium-230 electron-capture decay, branching and mixing ratios, internal conversion coefficients, and multipolarities for, (E), 25:59800
- neutron reactions with, production of protactinium-231 and uranium-232 by, 25:57479 (BMBW-FBK-71-6)

THORIUM ISOTOPES Th-232
- determination in biological materials, alpha spectra unfolding method for, 25:57362
- neutron reactions with, production of protactinium-231 and uranium-232 by, 25:57479 (BMBW-FBK-71-6)
- photofission at 0.1 to 5 GeV, giant resonance and 300-MeV resonance in yields and integral cross sections for, (E), 25:59794
- photofission near threshold energy, angular distribution for, (E), 25:59786
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

THORIUM OXIDES
- thermal decomposition of hydrous, thermogravimetric, differential thermal analysis, and Hahn's emanation studies, 25:57407

THORIUM OXIDES ThO_2
- CeO_2--ThO_2, electric conductivity of $CeO_2 \cdot 3ThO_2$ solid solutions at 1000 to 1500°C and varying oxygen pressure, 25:58368
- Co-base--Cr--ThO_2, properties for use in turbine vanes, 25:58203
- Mo--PuO_2--ThO_2, etching of sintered, for optical microcopy, method for, 25:58354
- Mo--ThO_2, metallographic properties of cermet spheres of, 25:58388 (MLM-OP-71006)
- Mo--ThO_2, preparation of cermets of, development of cold- and hot-press sintering methods for, 25:57658(R) (ORNL-4723)
- PuO_2--ThO_2, etching of sintered, for optical microscopy, method for, 25:58354
- PuO_2--ThO_2, metallography of molybdenum-coated pressed pellets of, 25:58398
- ThO_2--UO_2, analysis for uranium and uranium dioxide stoichiometry, coulometric, 25:57305
- ThO_2--W-base, particle morphology in, effects of deformation on, 25:58264

THORIUM OXYCARBONATES
- thermal decomposition of hydrous, thermogravimetric, differential thermal analysis, and Hahn's emanation studies, 25:57407

THORIUM SULFATES
- effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401

THREONINE
- radiation effects on metabolism in pea and wheat plants and their offspring, gamma, 25:57931

THULIUM
- determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
- oxidation potential for trivalent--tetravalent, 25:57437
- preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)

THULIUM ISOTOPES Tm-169
- neutron reactions (n,α) at 14.2 MeV, presence of direct effects in spectra from, (E/T), 25:59802

THULIUM ISOTOPES Tm-174
- beta decay of, gamma spectra and half-life for, (E), 25:59781 (KURRI-TR-76, pp 19-20)

THULIUM OXIDES
- compatibility with TZM, tantalum-base alloys, and tungsten capsule materials at 1600°C, 25:57658(R) (ORNL-4723)

vapor pressure at 2000°C, 25:57658(R) (ORNL-4723)

THYMIDINE
  radiclysis cf aqueous solutions of, products from electron pulse, 25:57930

THYMINE
  radiclysis cf aqueous solutions of, products from electron pulse, 25:57930

THYMUS GLAND
  radiation effects on mouse, role of bone marrow transplants in recovery from x, 25:58115
  radiation effects on ultrastructure of cells of mouse, comparison of effects of cortisone and polyoma virus infections with x, 25:58114

THYROID GLAND
  function in gerbils, use of iodine-131 in studies of, 25:57915
  radiation effects on activity in rats, bremsstrahlung, 25:58107
  radioinduced destruction of, in rats following intraperitoneal injection of iodine-131 during gestation, 25:58100
  scintigraphy for diagnosis of neoplasms and function studies, use of iodine-131 for serial, 25:58056
  scintigraphy using selenium-75-labeled methionine for localization of lesions, 25:58054

TIN
  critical field curve of superconducting, effects of bismuth impurity on, 25:58940
  determination in biological materials by neutron activation and rapid radiochemical separation, 25:57378
  diffusion of trace amounts of thallium in molten, thermal, 25:58267
  superconducting transitions in films of, resistivity anomalies from liquid helium contact, (E), 25:58937

TIN ALLOYS AND SYSTEMS
  Al--Sn--Ti-base--V, heat treatment of, using molten glass, 25:58199
  Cu--Sn, welding to steel, deposition of intermediate layers for, 25:58204
  Mo--Sn--Ti-base--Zr, tensile properties of Beta III, at room temperature, 25:58234
  Nb--Sn, Kohn instability in Labbe--Friedel model of Nb_3Sn, (T), 25:58947

TIN ISOTOPES
  neutron pairing in, equilibrium, (T), 25:59833 (JINR-E4-5907)

TIN ISOTOPES Sn-120
  deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  deuteron inelastic scattering at 82 MeV, DWBA analysis of angular distributions from, (E), 25:59754
  energy levels from inelastic scattering, deformation parameters for, (E), 25:59754

TISSUES
  analysis of bird and fish, for mercury, by neutron activation and radiochemical separation, 25:57392
  analysis of soft, for calcium-45 by liquid scintillation counting, 25:57361
  radiation dosimetry in human, concepts and units for ionizing, 25:58002
  radiation effects on human tumor-surrounding, effects of body inhomogeneities on electron and x, 25:58141
  radiation effects on lactate dehydrogenase activity in vaginal, of cervical cancer patients, effects of dose on γ, 25:57937

TITANIUM
  abundance in Am stars, (E/T), 25:58438
  analysis for oxygen by 14-MeV neutron activation and γ spectrometry, 25:57376
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  diffusion of molybdenum atoms in films of, ion--ion emission studies on, 25:58266
  effects on hardness of dispersion-hardening iron-base alloys, 25:58235
  electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
  mechanical properties of, effects of fatigue on, 25:58223
  microstructure of, effects of fatigue on, 25:58223
  photon reactions with, secondary electron emission from, (E/T), 25:59107
  radioinduced defects in, at absolute melting temperature, electron microscopic study of fast neutron, 25:58302
  solubility in sodium at high temperatures, 25:58163(R) (AI-AEC-12859)

TITANIUM ALLOYS AND SYSTEMS
  embrittlement by ω phase formation in α + β, effects of alloying on, 25:58283
  joining to high-strength materials by continuous seam diffusion bonding, 25:58201
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  Al--Cr--Ni-base--Ti, radiation effects on mechanical properties of, relations of temperature with neutron, 25:58295 (FRNC-TH-64)
  Al--Sn--Ti-base--V, heat treatment of, using molten glass, 25:58199
  Al--Ti, aluminum activity in, effects of hydrogenation on, 25:58220
  Al--Ti-base--V, bonding of, method for diffusion, 25:58207
  Al--Ti-base--V, drawing of, testing of lubricants for deep, 25:58195
  Al--Ti-base--V, extrusion of thin-walled tubes of, development of method for, 25:58199
  Al--Ti-base--V, rolling of sheets of, development of method for, 25:58199
  C--Cr--Fe--Hf--Mn--Mo--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  Co-base--Fe--Mo--Ti, magnetic properties of wires of, 25:59197
  Cr--Ti, chromium activity in, effects of hydrogenation on, 25:58220
  Cr--Ti--V-base, radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
  D--Nb--Ti, deuterium distribution fluctuations in $NbTi_2D$, 25:58278
  Hf--Pt-base--Rh--Ti--W, hardness of crystallized, effects of annealing at high temperatures on, 25:57658(R) (ORNL-4723)
  Mo--Sn--Ti-base--Zr, tensile properties of Beta III, at room temperature, 25:58234
  Mo--Ti, thermodynamic properties at 1844 and 1900°K, triple Knudsen-cell measurements of, 25:58265
  Mo-base--Ti, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  Nb--Ti, microstructure of superconducting, effects of heat treatment on, 25:58942
  Ta--Ti-base, corrosion resistance of joints of, in hydrochloric acid at 90°C, 25:58176
  Ta--Ti-base, weldability of, 25:58176
  Ti--V, phase formation in, effects of temperature on omega, 25:58283
  Ti--V, radiation effects on deformation in, low-temperature neutron, 25:58339
  Ti--V, vanadium activity in, effects of hydrogenation on, 25:58220
  Ti--V-base, radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
  Ti--V-base, radioinduced void formation in, electron microscopic study of fast neutron, 25:58309
  Ti--V-base, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  Ti--Zr-base, properties of dilute cast, electric and mechanical, 25:58258

TITANIUM CARBIDES
  crystal structure of systems of, electron microscopy and optical studies on relation of physical properties to, 25:58403
  properties of, effects of ionic heating during diffusion welding on surface chemical and physical, 25:58233

TITANIUM CHLORIDES
  reactions with tetrakis(decyl)ammonium chloride complexes with uranyl chloride for reduction of uranyl ion, 25:57415

TITANIUM DEUTERIDES
  preparation of targets of, on copper backing, 25:59639 (CONF-711002-, pp 134-43)

TITANIUM HYDRIDES
  preparation of targets of, on copper backing, 25:59639 (CONF-711002-, pp 134-43)

TITANIUM ISOTOPES Ti-44
  energy levels of, calculation for α-hole, 25:59757
  production in stars from simple helium burning, (E), 25:58508

TITANIUM ISOTOPES Ti-46
  helium-3 reactions (He-3,t) at 37.7 MeV, DWBA analysis including tensor force of, (E), 25:57901
  neutron reactions (n,p) at 4.1 to 6.1 MeV, cross sections for, (E), 25:59755
  proton reactions (p,γ) at 1350 to 2280 keV, excitation function for, (E), 25:59752

TITANIUM ISOTOPES Ti-47
  neutron reactions (n,p) at 3.4 to 6.1 MeV, cross sections for, (E), 25:59755

TITANIUM ISOTOPES Ti-48
  helium-3 elstic scattering at 30 and 32 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  neutron reactions (n,p) at 6.1 MeV, cross section for, (E), 25:59755
  proton elastic scattering at 40 MeV, differential cross sections for, (E), 25:59739 (ORNL-TM-3591)

TITANIUM OXIDES
  dissociation energy of, 25:57435(R) (COO-1029-39)
  effects on thermostability of irradiated polyethylene, 25:57446
  CaO--Nb_2O_5--SiO_2--TiO_2, liquidus of pseudo-ternary $CaO.Nb_2O_5$--$CaO.TiO_2$--SiO_2 plane of, 25:58390

TITANIUM TRITIDES
  preparation of targets of, on copper backing, 25:59639 (CONF-711002-, pp 134-43)

TOKAMAK DEVICES
  magnetic field effects on plasma cross section in, equilibrium, (T), 25:59077
  plasma confinement in, energy flow and current diffusion

XUM

in, (T), 25:58961 (CONF-711016-1)
- plasma current distribution measurements using alpha particles, (T), 25:58980 (JAERI-Memo-4531)
- plasma diagnostics in medium-beta torus JFT-2, microwave interferometric, (E), 25:58979 (JAERI-Memo-4530)
- plasma energy losses in, effects of effective electron collision frequency on, (E), 25:58974
- plasma heating by high-frequency fields in, (T), 25:58966
- plasma instabilities in, collisional effects on dissipative, (T), 25:59060 (CEA-CONF-1800)

p-TOLUAMIDE, N-ISOPROPYL-α-(2-METHYLHYDRAZINO)-
- hydrochloride, effects on survival of Azotobacter chroococcum, effects of cell age and content on, 25:58156

TOLUENE
- radioinduced polymerization of, effects of recoil atoms of carbon-14 produced from incorporated aluminum nitride on neutron, 25:57456

TRACER TECHNIQUES
- book: Handbook for Technologists of Nuclear Medicine, 25:58049
- method for measuring steam quality in boiler tubes using rhenium-186, 25:57674
- method for refractory furnace lining wear using radioisotopes, 25:57677
- use of barium-133 and calcium-45, to study losses from oxide coatings on lamp cathodes, 25:57660
- use of lanthanum-140, for measuring mixing efficiency of sintering facility for producing iron agglomerate, 25:57659

TRANSACTINIDE ELEMENTS
- abundance on surfaces of peculiar A stars, (E/T), 25:58462
- alpha decay of, Nilsson-model calculation of half-lives for, (T), 25:59803
- electron energy eigenvalues and wave functions in, effects of upper limit to electric field strength on, (T), 25:59554
- fission of, Nilsson-model calculation of barriers and half-lives for spontaneous, (T), 25:59803
- production of, survey of possibilities for, (E/T), 25:59774(T) (AERE-Trans-1139)

TRANSDUCERS
- development of broadband high-temperature magnetostrictive and piezoelectric ultrasonic, for reactor measurements, 25:57898

TRANSFORMERS
- design for accelerator tube, 25:59648(P)
- design of superconducting, for impedance matching of Josephson galvanometer, 25:58938

TRANSISTORS
- carrier transport in bipolar, for high frequency and storage time predictions, TRAC Ebers--Moll model for, 25:57904
- radiation effects on gallium arsenide junction field-effect, improved tolerance to fast-neutron, 25:57905

TRANSPORT THEORY
- Boltzmann equation for, properties of numerical approximations for, 25:59113
- conference on interdisciplinary applications of, Oxford, England, 9/70, 25:59109
- equations, fundamental eigenvalues of linear, 25:59683
- Feautrier method in, modified, (T), 25:58470
- Fourier transform methods in linear, 25:59121
- Milne problem for two-dimensional, in quarter space, 25:59112
- multigroup equation for, with separable kernel, 25:59111
- radiative transfer equation in, solution of energy equation and, 25:58851
- radiative transfer in, Bellman's approach to numerical solution of Fredholm integral equations with positive kernels, 25:59110
- radiative, grey, (T), 25:58471
- radiative, in stellar atmospheres, (T), 25:58510
- radiative-transfer equation for, numerical solution of unsteady, 25:59114

TRANSURANIUM ELEMENTS
- separation by electromigration in CDTA and EDTA, 25:57520 (JINR-E6-5952)
- separation from HFIR targets in TRU, 25:57524 (ORNL-TM-3343)
- separation from lanthanum by electromigration, 25:57520 (JINR-E6-5952)
- separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530

TRAPS
- performance in removing impurities from lithium in heat pipes, 25:57615(R) (LA-4746)

TRIBUTYLAMINE
- solvent properties for niobium, protactinium, tantalum, and zirconium, 25:57546

TRIMETHYLENE OXIDE
- iodine-ion reactions at 12 MeV with, electron-capture and -loss cross sections for, (E), 25:58768

s-TRIOXANE
- radioinduced polymerization of solid, kinetics of γ, 25:57453
- reactions with solvated electrons, rate constant of, 25:57475

TRIOXANES
- radioinduced polymerization under superdry conditions, γ, 25:57450 (ORO-3667-1)

TRITIUM
- activity of, method using proportional counter for measurement of absolute, 25:57505
- binding energy of, effect of charge asymmetric potentials on, (T), 25:59701
- content in off-site water supplies following Schooner Event, (E), 25:57574 (PNE-524)
- determination by combustion in nitrogen stream, oxidation, and scintillation counting, 25:57349
- determination in MSRE pump bowl gas, 25:57298 (ORNL-4676, pp 73-138)
- determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
- determination of, evaluation of 5 scintillators for use in, 25:57363
- deuteron reactions (d,n) at 0.2 to 1 MeV using polarized beam, analyzing power for, (E), 25:59705
- deuteron reactions (d,n) at 0.5 to 7 MeV, compound-nucleus analysis of differential and total cross sections and neutron polarization from, (T), 25:59706
- deuteron reactions (d,n) with, formalism for polarized particles in, (T), 25:59837 (LA-4492)
- effects of thymidine-incorporated, on cultured mammalian cells, lethal, 25:58086
- effects on isotopic exchange between ethane and hydrogen on nickel catalyst, 25:57428
- effects on radical addition of RSH to unsaturated compounds, 25:57426
- exchange with bound hydrogen in fluoroborate coolants, 25:57298 (ORNL-4676, pp 73-138)
- excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
- handling of, storage as uranium tritide behind palladium diffusion tube for, 25:57502
- particle reactions at high energies, relativistic Feynman graphs in momentum representation for method for calculating amplitudes of, (T), 25:59528
- proton reactions (p,n) at 3 to 16 MeV, polarization transfer at 0° in, (E), 25:59695
- radioinduced production in irradiated mixed oxide fuels, relations with burnup, 25:58344(R) (LA-4693)
- separation from copper extracted from nuclearly fractured ores, method for, 25:57523 (ORNL-4677)
- separation from heavy water by isotope exchange with deuterium, 25:57545(P)
- separation from heavy water, design and operation of countercurrent distillation facility for, 25:57675
- triton reactions (t,nHe-4), determination of scattering length for n + n interactions at rest from, (E), 25:59506 (JINR-E15-5905)

TRITIUM SYSTEMS
- D--T, laser heating of plasma of, (T), 25:58965

TRITONS
- binding energy of, calculation using rank-four separable potential, (T), 25:59707
- binding energy of, separable potentials for, (T), 25:59517
- reactions (t,nHe-4) with tritium, determination of scattering length for n + n interactions at rest from, (E), 25:59506 (JINR-E15-5905)

TROPOSPHERE
- cyclones in upper, effects on Jan. 1964 fallout deposition on North America, 25:57572(R) (COO-1340-24)
- trough development at solar-activity maximum and minimum, relation with geomagnetic storms, (E), 25:58860

TSURUGA POWER REACTOR
- maintenance requirements for, 25:60191
- operation of, review of, 25:60191
- testing program for, 25:60191

TUBES
- defects in metal, standard ultrasonic method for detecting longitudinal, 25:57686
- inspection of electrically-conducting, eddy current method for, 25:57692(P)
- texture control in, effects of fabrication parameters on, 25:58186 (ORNL-TM-3500)

TUNGSTEN
- adhesion to (111) crystal surface of nickel, LEED study on, 25:58270
- compatibility with cobalt-59 fuels at 1200°C, 25:57654(R) (DP-1279)
- compatibility with platinum-base radioisotope fuel capsules at high temperatures, 25:57658(R) (ORNL-4723)
- crack nucleation and growth in powder metallurgy, electron fractography studies of, 25:58213 (ORNL-TM-3350)
- crystallization of foils of, structure of anomalously large grains in secondary re-, 25:58279
- deposition on plutonium oxide aging specimens, design of equipment for chemical vapor, 25:57658(R) (ORNL-4723)
- determination in pyrolytic graphite by neutron activation and counting of delayed β and γ coincidences, 25:57389
- effects of doping agent of, on radioinduced swelling of uranium carbide fuels, 25:58163(R) (AI-AEC-12859)
- effects on electric properties of lanthanum boride, temperature dependence of, 25:59183
- effects on electric properties of lanthanum hexaboride, 25:59182
- effects on hardness of dispersion-hardening iron-base alloys, 25:58235

XUM

electric conductivity at 1400 to 2100°C of wires of, temperature coefficient of, 25:58241
electric conductivity of laser-evaporated films of, temperature coefficient of, 25:59186
electron reactions at 12.5 to 22 MeV with, bremsstrahlung yield from, 25:59106
evaporation rate in strong electric fields, effects of nitrogen on, 25:58227
helium-ion reactions at 45 to 90 keV/amu with, helium-isotope dependence of cross sections for M-shell ionization in, (E), 25:58776
mechanical properties of single crystals of, effects of carbon on, 25:58257
neodymium desorption from filaments of, using electric field, 25:58230
performance of chemical vapor deposited capsules of, under stress at 1650°C, 25:57658(R) (ORNL-4723)
preparation by hydrogen reduction of tungsten trioxide, 25:58189
properties and uses of, newsletter on, 25:58206
proton scattering at high energy, analysis for recoil-nucleus effects in, (T), 25:59814
sintering of, parameters for activated, 25:58200
solubility in sodium hydroxide--sodium nitrate solutions, 25:58177
solvent properties for nitrogen at high temperatures, 25:58249
sorptive properties for oxygen on (100) surfaces of, at 20 to 1000°C, relations with work function, 25:58226
sorptive properties for residual gases in strong electric field, field-ion microscopic study of, 25:58246
sorptive properties of carbonized, for ytterbium, electron-emission study of, 25:58228
surface energy and work function of smooth faces of monocrystal of, (T), 25:59194
thermal cycling stability of, effects of rhenium on, 25:58247
thermionic performance of emitters of chloride vapor-deposited, with niobium and molybdenum collectors, 25:58839 (TEE-4125-5)
uses in Polish industry, economics of, 25:58164
vapor deposition on iron and nickel alloys, development of methods for chemical, 25:58168 (ORNL-4676, pp 139-233)
ytterbium desorption from filaments of, using electric field, 25:58230
zirconium deposition on single crystals of, field-emission microscopic study of surface structures from, 25:58229

TUNGSTEN ALLOYS AND SYSTEMS
properties and uses of, newsletter on, 25:58206
Al--Cr--Mo--W, development of cast, for turbine blades, 25:58203
Al--W, structure of drops of, formed at high cooling rates, 25:58284
C--Cr--Fe--Ni--Si--W, metallography of carbide structures in cast heat-resistant, 25:58399
Co--Fe-base--W, hardness of dispersion-hardening hard facing, effects of primary and secondary additions on, 25:58235
Cr--W, uses for milling surface-hardened specimen by hard-facing process, 25:58196
Cu--W, crystallization of electron beam-refined composites of, 25:58285
H--W, heat transfer by aerosols of, measurement by extinction parameters at high temperatures, 25:57641
Hf--Pt-base--Rh--Ti--W, hardness of crystallized, effects of annealing at high temperatures on, 25:57658(R) (ORNL-4723)
Mo--W, solvent properties for nitrogen at high temperatures, 25:58249
Mo-base--W, mechanical properties and recrystallization temperature of, effects of tungsten content on, 25:58248
Mo-base--W--Zr, mechanical properties and recrystallization temperature of, effects of tungsten and zirconium contents on, 25:58248
Nb--W, composition of electronic-melted zone liquation-produced, 25:58260
Ni--W, hardness of electrolytically deposited, relations of internal stresses with micro-, 25:58236
Pt-base--Rh--W, compatibility with tungsten at high temperatures, 25:57658(R) (ORNL-4723)
Pt-base--Rh--W, hardness of crystallized, effects of annealing at high temperature on, 25:57658(R) (ORNL-4723)
Re--W-base, compatibility with cobalt-59 fuels at 1200 to 1400°C, 25:57654(R) (DP-1279)
Re--W-base, creep rupture of deformed powder metallurgy, at 500 psi, mechanisms of, 25:58213 (ORNL-TM-3350)
Ta-base--W, mechanical properties at high temperatures, effects of oxygen doping on, 25:57658(R) (ORNL-4723)
ThO$_2$--W-base, particle morphology in, effects of deformation on, 25:58264

TUNGSTEN CARBIDES
crystal structure of systems of, electron microscopy and optical studies on relation of physical properties to, 25:58403
physicochemical properties of, effects of ionic heating during diffusion welding on surface, 25:58233
preparation of nonporous, by hot isostatic pressing, 25:58197
properties and uses of, newsletter on, 25:58206
solubility in sodium hydroxide--sodium nitrate solutions, 25:58177
use in production of hard metals, 25:58261
Co--WC, dynamic behavior of cemented, effects of defects on, (T), 25:58380
Co--WC, production and properties of, 25:58261
Co--WC, solubility in sodium hydroxide--sodium nitrate solutions, 25:58177

TUNGSTEN ISOTOPES W-181
content in off-site vegetation following Schooner Event, (E), 25:57574 (PNE-524)

TUNGSTEN ISOTOPES W-186
neutron reactions (n,2n) at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797

TUNGSTEN ISOTOPES W-187
content in off-site atmosphere, milk, and water supplies following Schooner event, (E), 25:57574 (PNE-524)
content of cows' milk following ingestion of hay contaminated with Plowshare debris, 25:57948 (SWRHL-85-r)

TUNGSTEN ORES
processing of, newsletter on, 25:58206

TUNGSTEN OXIDES
adhesion to (111) crystal surface of nickel, LEED study on, 25:58270
analysis for trace amounts of metals, effects of halide additives on direct spectrographic, 25:57335
preparation of thin-film targets of, using Zapon temporary backing, 25:59639 (CONF-711002-, pp 134-43)
proton and helium-ion scattering at 275 keV from amorphous, spectra of low-angle, (E/T), 25:58689
reduction to metal using hydrogen, effects of water vapor on, 25:58189
PuO$_2$--UO$_2$--WO$_3$, reduction to tungsten-modified carbide fuels, carbothermic, 25:58365 (AI-AEC-12983)

TURBINE BLADES
wear in, radioistope tracers method for measuring, 25:57663

TURBINES
design of direct cycle helium, for power reactors, 25:60145
flow control system for gas, description of, 25:60073(P)
thermal expansion of components in, use of radioisotope tracers for measuring, 25:57663

TURKEY POINT POWER REACTOR, UNIT 3
construction of, request for not suspending permit for, 25:59948 (DOCKET-50250-50)

TURKEY POINT POWER REACTOR, UNIT 4
construction of, request for not suspending permit for, 25:59948 (DOCKET-50250-50)

TZM (MOLYBDENUM ALLOY)
radiation effects on regular void array in high-purity, high-temperature 2-MeV nitrogen ion, 25:58340

U

UDIMET 700
etching by selective cavitation, method for, 25:58190

ULTRASONIC TESTING
method for detecting longitudinal defects in metal pipes and tubing, standard for, 25:57686
method for inspecting clad and plain steel plates, standard for straight-beam, 25:57695
method for inspecting welds, standard for contact, 25:57685
method for welded joints in reactors, 25:57680 (ORNL-TM-3561)

ULTRASOUND
effectiveness for diagnosis of tumors in human liver, 25:58044
effects on microflora of wine, additive effects of uv radiation on, 25:58158

ULTRAVIOLET ASTRONOMY
frequency range in, (E), 25:58445

ULTRAVIOLET RADIATION
absorption by nerve fibers, effects of wavelength on, 25:57942
effects on bacteriophages, protective effects of versene against, 25:58032
effects on chemical properties and ultrastructure of pigeon erythrocytes in vitro, effects of dose on, 25:58113
effects on cultured human cells following microbeam exposure of cytoplasm or nucleus, lethal, 25:58084
effects on dilute sulfuric acid solutions of gadolinium, terbium, or uranium, formation of hydrates of peroxides from, 25:57416
effects on distribution of nucleotides to photoproduct in excised fragments from Escherichia coli DNA, 25:57928
effects on DNA of Escherichia coli, enzymatic repair of, 25:57928
effects on DNA of mammalian cells, review of repair mechanisms for, 25:57943
effects on DNA of Micrococcus luteus, role of endonuclease and exonuclease in repair of, 25:57935
effects on DNA synthesis in Chlamydomonas, dark repair of, 25:57925
effects on DNA synthesis in polytene chromosomes of Drosophila, 25:57951 (COO-1747-6)

XUM

  effects on electrophysiological activity of nerve fibers, molecular basis of, 25:57942
  effects on Escherichia coli, effects of 5-bromouracil substitution of DNA on mutagenic, 25:57965
  effects on F-prime sex factors in Escherichia coli, induction of prophage lambda through conjugal transfer of, 25:57956
  effects on genetic repair and synthesis of nitrate reductase in Ustilago, 25:57955
  effects on growth and mitotic index of HeLa cells, effects of 5-fluorouracil on, 25:58082
  effects on isolated nerve fibers of crab, studies on role of nucleotides in excitability characteristics using, 25:57939
  effects on microflora of wine, additive effects of ultrasound on, 25:58158
  effects on Neurospora, effects of diepoxybutane on photoreactivation of mutagenic, 25:57954
  effects on silica and germania, ESR studies of defects induced in, 25:59174
  effects on single crystals or ammonium dioxovanadium(V) bisoxaltate dihydrate, ESR studies on vanadyl ions produced by, 25:57449
  effects on survival of KB cells, effects of cyclic AMP and hydrocortisone on, 25:58087
  effects on yeast, studies on genetic control of mutagenic, 25:57976
  emission from stars, (E), 25:58445
  heating of gases by, optical line spectra due to, (T), 25:58629
  interaction of solar extreme-, with interstellar hydrogen, effect on interstellar magnetic-field location, (T), 25:58631
  interpretation for cosmic background far-, (T), 25:58638
UNITED KINGDOM
  electric power production in, forecasts to year 2000, 25:57633
  radioisotope shipping through ports in, standards for safe, 25:57711
UNITED STATES
  fallout monitoring during 1970, 25:57980(R) (HASL-245)
  radioisotope content of drinking and surface waters during 1970, radium-226, strontium-90, and tritium, 25:57991
UNIVERSE
  dissipative processes in early, (T), 25:58669
  matter in, extreme regimes of pressure and temperature of, (T), 25:58520
URACIL
  radiolysis of aqueous solutions of, products from electron pulse, 25:57930
URACIL, 5-BROMO-
  effects on uv-radiosensitivity of Escherichia coli, 25:57965
URACIL, 5-FLUORO-
  effectiveness for treatment of radiodermatitis of man, 25:58037
  effects on growth and mitotic index of uv irradiated HeLa cells, 25:58082
  effects on uv radiosensitivity of HeLa cells, 25:58082
URANIUM
  abundance on surfaces of peculiar A stars, (E/T), 25:58462
  abundance variations in ocean sediments, 25:57588
  bonding aluminum fins to fuel tubes of, method for diffusion, 25:58207
  burnup in fast reactor fuels, effects of fuel cycle on, (T), 25:60095(R) (IAEA-R-742-F)
  complexes with p-hydroxybenzoic acid and phenylacetic acid, stability of, 25:57402
  compounds, dissolution in organic extraction reagents saturated with mineral acids, 25:57547
  compounds, preparation of π-allyl, 25:57408(P)
  content in manganese nodules, α-particle and induced fission track methods for measuring, 25:57570
  content in volcanic obsidian, geologic origin of, 25:57569
  deposition as oxide on instrument parts of stainless steel, electrolytic, 25:57440
  desorption and recrystallization in rocks during metamorphism, 25:57581
  determination in high-purity silicon dioxide by luminescence method, 25:57328
  determination in mixed oxide fuels, development of methods for, 25:58344(R) (LA-4693)
  determination in monazite sands by solvent extraction and polarography, 25:57334
  determination in presence of iron as carbonate complex, polarographic, 25:57321
  determination in rare earth oxides by TBP extraction and photometry, 25:57341
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  determination in thorium dioxide--uranium dioxide fuels by controlled potential coulometry, 25:57305
  determination in washing, processing, and waste waters by spectrophotometry, 25:57343
  determination of natural, in urine, methods used at CNEN for, 25:57347 (RT/PRCT-(71)9)
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  determination relative to plutonium in oxide fuels during fabrication, 25:57507(R) (ANL-7799)
  distribution as uranyl ion between solutions and carbonate precipitates, 25:57409
  distribution between marine calcareous skeletons and seawater, 25:57409
  distribution in granites from Central Kazakhstan, statistical analysis of, 25:57583
  effects on complexonometric determination of rare earths, 25:57317
  effects on spectrophotometric determination of calcium, 25:57304
  enrichment technology for, effects on development of nuclear power plants in Japan, 25:59904
  geochemistry in Gulf of Mexico, 25:57587
  oxidation potential for trivalent--tetravalent, 25:57437
  photochemistry of dilute sulfuric acid solutions of, formation of hydrates of peroxides in, 25:57416
  photon reactions with, secondary electron emission from, (E/T), 25:59107
  plasma of, spectroscopic diagnostics of, 25:59000
  preparation of radiation targets of, by argon ion sputtering, 25:59637 (CONF-711002-, pp 109-15)
  preparation of radiation targets of, methods for, 25:59634 (CONF-711002-, pp 59-69)
  preparation of standard thin-film layers of, by vacuum evaporation, 25:58182 (CONF-711002-, pp 122-33)
  preparation of thick samples of, by powder metallurgy, 25:58181 (CONF-711002-, pp 77-81)
  preparation of thin films of, by electrophoresis and electrospraying, 25:58183 (CONF-711002-, pp 160-5)
  production and uses of, review on factors affecting, 25:58191
  production by underground leaching of ores and treatment in ion exchange column, 25:57536
  purification of, obtained from reprocessing of thorium reactor fuel by Thorex two-stage process, 25:57541
  separation as uranyl from nitric acid solutions by solvent extraction using TBP, 25:57557
  separation from fast breeder fuels by Purex Process solvent extraction, 25:57518(T) (EURFNR-888)
  separation from fission products, properties of styrene--divinylbenzene polymers for chromatographic, 25:57527 (UJV-2557-Ch)
  separation from irradiated fuels in reprocessing of reactor fuels by solvent extraction method, 25:57534(P)
  separation from MSBR fuel by fluoride volatility process, flowsheet analysis for, 25:57522 (ORNL-4676, pp 234-71)
  separation from MSBR fuel by oxide precipitation, 25:57522 (ORNL-4676, pp 234-71)
  separation from other actinides by paper or thin-layer chromatography, 25:57553
  separation from overhead product from reprocessing of Rover Rocket fuels by burn-leach process, 25:57519 (IN-1484)
  separation from plutonium by solvent extraction using TBP, 25:57357
  separation from rare earths and thorium by solvent extraction using TBP, 25:57341
  separation from seawater by adsorption using titanic acid, 25:57337
  separation from sulfuric acid solutions by ion exchange, evaluation of fluoropolymer anion exchange materials for, 25:57555
  separation from thorium by ion exchange, 25:57342
  separation from thorium reactor fuel with high burnup by Thorex two-stage process, 25:57541
  separation from various compounds without preliminary dissolution in acid by solvent extraction, 25:57547
  toxic effects on rabbits and rats, additive effects of mercuric bichloride on, 25:58099
URANIUM ACETATES
  uranium-238 neutron capture in, chemical states of recoil uranium-239 from, 25:57488
URANIUM ALLOYS AND SYSTEMS
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  Al--U-235, criticality parameters of hollow cylinders in water, (E/T), 25:60212
  Bi--U, magnetic transition temperature of U_3Bi_4, 25:59190
  Ga--U, magnetic transition temperature of UGa_2, 25:59190
  Hf--U, liquidus and solidus curves for, calculations for, 25:58292
  O--Pu--U, phase studies of, 25:58409
  Th-base--U, fabrication of fuel elements of, for unclad metal breeder reactor, 25:58185 (ORNL-TM-3499)
  U--Zr, liquidus and solidus curves for, calculations for, 25:58292
URANIUM CARBIDES
  chlorination of, thermogravimetric study of, 25:57542
  radiation effects on fuels of, helium ion, 25:58163(R) (AI-AEC-12859)
  radioinduced swelling of niobium-clad fuels of, effects of tungsten doping on in-pile, 25:58163(R) (AI-AEC-12859)
  PuC--UC, hardness of fuels of, at 400 to 500°C, 25:58344(R) (LA-4693)
  PuC--UC, phase studies of, 25:58344(R) (LA-4693)

XUM

- PuC--UC, preparation of fuels of, method for, 25:58163(R) (AI-AEC-12859)
- PuC--UC, preparation of tungsten-modified, by carbothermic reduction of mixed component oxides, 25:58365 (AI-AEC-12983)
- PuC--UC, radiation effects on encapsulated fuels of, at high burnups, in-pile, 25:58344(R) (LA-4693)

URANIUM CHLORIDES UCl_4
- magnetic susceptibility of anhydrous, 25:57419
- preparation of anhydrous, by reaction of uranium dioxide with carbon tetrachloride vapor, 25:57419

URANIUM DEPOSITS
- description and occurrence of, in sedimentary rocks, 25:57584
- prospecting for, pulsed neutron well logging method for, 25:57560 (INP-732)

URANIUM FLUORIDES UF_4
- enthalpy at 298 to 1400°K, 25:57298 (ORNL-4676, pp 73-138)
- BeF_2--LiF--ThF_4--UF_4, heat transfer and thermophysical properties of, (E/T), 25:60015 (ORNL-4676, pp 21-72)
- TlF--UF_4, crystal structure of phases in, differential thermal analysis and x-ray crystallography studies on, 25:58418

URANIUM FLUORIDES UF_5
- disproportionation equilibrium of solutions of, 25:57298 (ORNL-4676, pp 73-138)

URANIUM FLUORIDES UF_6
- enrichment by chemical exchange, distillation, or exchange chromatography, 25:57528 (UR-3999-11)

URANIUM ISOTOPES
- cross section measurements of, nondestructive and destructive methods of analysis used in fabrication of targets for, 25:57345 (CONF-711002-, pp 293-306)

URANIUM ISOTOPES U-230
- energy levels from protactinium-230 beta decay, spin--parity assignments for, (E), 25:59800
- energy-level transitions from protactinium-230 beta decay, branching ratios and multipolarities for, (E), 25:59800

URANIUM ISOTOPES U-232
- energy levels from protactinium-232 beta decay, spin-parity assignments for, (E), 25:59798
- energy-level transitions from protactinium-232 beta decay, branching and mixing ratios, internal conversion coefficients, and multipolarities for, (E), 25:59798
- production by neutron irradiation of thorium-230 and thorium-232 mixtures, 25:57479 (EMBW-FBK-71-6)

URANIUM ISOTOPES U-233
- excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919
- neutron fission at thermal to 2 MeV energies, energy dependence of prompt neutron yield from, (E), 25:59810
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)

URANIUM ISOTOPES U-234
- content ratio to thorium-230 in East Pacific Rise sediments and iron deposits, 25:57585
- content ratio to uranium-238 in East Pacific Rise sediments and iron deposits, 25:57585
- excretion and retention time in man following acute or chronic intake, method for calculation of, 25:57919

URANIUM ISOTOPES U-235
- concentration in uranium hexafluoride by chemical exchange, distillation, or exchange chromatography, 25:57528 (UR-3999-11)
- critical mass of spherical assemblies of mixed natural uranium and, with water reflector and moderator, (T), 25:60220
- determination in urine, methods used at CNEN for, 25:57347 (RT/PROT-(71)9)
- neutron fission at thermal to 2 MeV energies, energy dependence of prompt neutron yield from, (E), 25:59810
- neutron fission of, production and study of bromine delayed neutron precursors from, 25:57504
- neutron scattering cross sections for, multilevel analysis of data for, (T), 25:59828 (COO-2022-10)
- photofission at 0.1 to 5 GeV, giant resonance and 300-MeV resonance in yields and integral cross sections for, (E), 25:59794
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)
- separation from uranium-238 by chemical exchange, distillation, or exchange chromatography as uranium hexafluoride, 25:57528 (UR-3999-11)

URANIUM ISOTOPES U-236
- fission of, prompt neutron yield and half-life for spontaneous, (E), 25:59806
- neutron fission at 0.8 to 6.7 MeV, energy dependence of prompt neutron yield from, (E), 25:59806

URANIUM ISOTOPES U-238
- content ratio to uranium-234 in East Pacific Rise sediments and iron deposits, 25:57585
- fission of, prompt neutron yield and half-life for spontaneous, (E), 25:59806
- neutron capture at 400 keV, compound-nucleus-model analysis of cross sections and gamma spectra from, (E/T), 25:59801
- neutron fission of, evaluation of average neutron yield from, 25:59775 (AWRE-O-44/71)
- photofission at 0.1 to 5 GeV, giant resonance and 300-MeV resonance in yields and integral cross sections for, (E), 25:59794
- preparation of aluminum-clad foils of, method for, 25:58180 (CONF-711002-, pp 70-6)
- separation from uranium-235 by chemical exchange, distillation, or exchange chromatography as uranium hexafluoride, 25:57528 (UR-3999-11)

URANIUM ISOTOPES U-239
- chemical states of recoil, from neutron capture by uranium-238 in uranium and uranyl acetates and sulfates, 25:57488

URANIUM MINERALS
- oxidation in uranium mines, use of bacterial activity for increasing, 25:57582

URANIUM NITRIDES
- magnetic specific heat and spin disorder resistivity of UN, (T), 25:59180

URANIUM ORES
- leaching of, research on improving efficiency of underground, 25:57536
- mining of, contribution of oxidizing bacterial activity to, 25:57582

URANIUM OXIDES
- dissolution in organic extraction reagents saturated with mineral acids, 25:57547
- effects on in vitro phagocytic response of cells from rat lungs, 25:57923

URANIUM OXIDES UO_2
- analysis for trace amounts of silicon by spectrophotometry using molybdenum blue method, 25:57340
- compaction of sol-gel powders of, performance of pneumatic vibrators in, 25:58364
- electric conductivity and thermoelectric power of superstoichiometric, at high temperatures, 25:59191
- electric conductivity of sintered, effects of grain size on, 25:59184
- etching of, mechanism studies on, 25:58244
- fission product retention by fuel particles of, effects of aluminum oxide and niobium oxide doping on, 25:58347 (JUL-730-RW)
- grain growth in sintered, effects of pore gas pressure at 1650 to 1850°C on, 25:58408
- mechanical properties of sintered powders of, at 25°C, relations with density, 25:58389(R) (SRO-552-8)
- microstructure of sintered powders of, effects of initial particle size on, 25:58389(R) (SRO-552-8)
- oxidation and dissolution in tributyl phosphate solutions saturated with nitric acid, 25:57548
- polishing of, method for attack, 25:58353
- preparation from uranyl nitrate, fluid-bed process for, 25:57507(R) (ANL-7799)
- preparation of aluminum oxide- and niobium oxide-doped fuel particles of, method for, 25:58347 (JUL-730-RW)
- preparation of thin irradiation samples of, abrasive blasting method for, 25:58411(R) (GEAP-12217)
- preparation of thin irradiation specimens of, ion milling method for, 25:58411(R) (GEAP-12217)
- radiation effects on elongation and pellet-clad interactions in fuel pins of, in-pile, 25:58414
- rare gas behavior in, review of stages of, 25:58413
- reactions with carbon tetrachloride vapor, preparation of anhydrous uranium tetrachloride by, 25:57419
- shipping of irradiated SPERT III fuels of, design of container for, 25:57703 (DPSPU-71-124-4A)
- stoichiometry in thorium dioxide--uranium dioxide fuels, coulometric studies on, 25:57305
- storage behavior of sintered, effects of grain boundaries, specific surface, and time on, 25:58371
- thermal conductivity of sintered powders of, effects of porosity on, 25:58389(R) (SRO-552-8)
- Mo--UO_2-base, preparation of dense homogeneous, method for, 25:58348 (LFEN-NI.-53-a)
- Nb--UO_2-base, preparation of dense homogeneous, method for, 25:58348 (LFEN-NI.-53-a)
- PuO_2--UO_2, analysis of fuels of, for plutonium and uranium, methods for, 25:58344(R) (LA-4693)
- PuO_2--UO_2, melting heat rating of, (E), 25:60243
- PuO_2--UO_2, microstructure of fuel pellets of, for fast flux irradiation studies, 25:58397
- PuO_2--UO_2, plutonium segregation in, neutron radiographic method for detection of, 25:57698
- PuO_2--UO_2, preparation of fuels from reprocessed, CNEN and SNAM methods for, 25:58351 (RT/ING-(70)30)
- PuO_2--UO_2, properties of stainless steel-clad fuel pins of, for 1000 MW(e) helium-cooled breeder reactor, mechanical and thermal, 25:58410 (BLG-456)
- PuO_2--UO_2, radiation effects on enthalpy of fuels of, in-pile, 25:58344(R) (LA-4693)
- PuO_2--UO_2, radioautography of irradiated fuel elements of, method for hot cell, 25:57693
- PuO_2--UO_2, radioinduced tritium production in, relations of burnup with fast neutron, 25:58344(R) (LA-4693)
- PuO_2--UO_2--WO_3, reduction to tungsten-modified carbide fuels, carbothermic, 25:58365 (AI-AEC-12983)
- ThO_2--UO_2, analysis for uranium and uranium dioxide stoichiometry, coulometric, 25:57305

URANIUM OXIDES UO_3
- production of highly enriched, by fluidized-bed denitration of uranyl nitrate at ICPP, 25:57397 (IN-1475)
- reactions of amorphous, with carbon monoxide, 25:57417

URANIUM OXIDES U_3O_8
  preparation of targets of, by vacuum evaporation, 25:59638 (CONF-711002-, pp 116-21)
URANIUM PHOSPHIDES
  magnetization of UP, anomalous temperature dependence of, (E/T), 25:59189
URANIUM SILICIDES
  polishing of, method for attack, 25:58353
  radioinduced swelling of U_3Si, 25:58209 (AECL-3992)
URANIUM SULFATES
  uranium-238 neutron capture in, chemical states of recoil uranium-239 from, 25:57488
URANYL ACETATES
  uranium-238 neutron capture in, chemical states of recoil uranium-239 from, 25:57488
URANYL CARBONATES
  complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)
  UO_2CO_3--UO_2SO_4, equilibrium distribution and solubility diagrams for aqueous solutions of, 25:57399 (NIM-1144)
URANYL CHLORIDES
  complexes with tetrakis(decyl)ammonium chloride, reactions with titanium chloride for reduction of uranyl ion, 25:57415
URANYL IONS
  reactions with silicic acid in aqueous solution, spectrophotometric study of, 25:57406
  symmetry of excited states of, in uranyl nitrate crystals, 25:58703
URANYL NITRATES
  denitration of enriched, ICPP fluidized-bed process for, 25:57397 (IN-1475)
  symmetry of excited states in crystals of, 25:58703
  $Pu(NO_3)_4$--$UO_2(NO_3)_2$, processing at West Valley Processing Plant, safety evaluations for, 25:57514 (DOCKET-50201-89)
URANYL SULFATES
  effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401
  uranium-238 neutron capture in, chemical states of recoil uranium-239 from, 25:57488
  $Fe_2(SO_4)_3$--UO_2SO_4, complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)
  UO_2CO_3--UO_2SO_4, equilibrium distribution and solubility diagrams for aqueous solutions of, 25:57399 (NIM-1144)
UREA
  radioprotective effects against chlorophyll mutations in barley, x, 25:57974
UREA, SELENO-
  radiosensitizing effects of, on Escherichia coli, effects of anoxia on x, 25:58155
UREA, THIO-
  effects on γ and x radioinduced mutations in bacteriophage phi X174, 25:57971
  radioprotective effects against chlorophyll mutations in barley, x, 25:57974
URINE
  analysis for α, β, and γ emitters, methods used at CNEN, 25:57347 (RT/PROT-(71)9)
  analysis for cesium-137 by radiochemical isolation and γ spectrometry or beta detection, 25:57355
UTERUS
  radiotherapy of cervical carcinomas of, effectiveness of intracavitary radium, super-high voltage x, and telecobalt γ, 25:58070
  radiotherapy of remnants of cervical tumors of human, following external γ or x radiotherapy, effectiveness of small radiation sources for, 25:58074

V

VAGINA
  radioinduced lesions of human, following therapy of gynecologic neoplasms, 25:58135
VALVES
  design characteristics of ball closure system, for coolant flow control in power reactor fuel channels, 25:60072(P)
  design of safety, for BWR-type power plants, 25:57637
  stability of MSRE FV105, evaluation of, 25:58168 (ORNL-4676, pp 139-233)
VAN ALLEN RADIATION BELTS
  boundary of, higher-rigidity particle occurrence at lower latitudes of, (E/T), 25:58907
  parameters of, relation to solar-wind, magnetic activity, and magnetotail electron-flux parameters, (E/T), 25:58852(T) (LA-tr-71-69)
  particle event of March 1970 in, observation of solar, (E), 25:58892
  plasma instabilities in, review of, 25:58895
  proton intensity in, satellite measurements of 0.25- to 1.65-MeV, (E), 25:58890
  zone above, existence of unstable, (E/T), 25:58906
VAN DE GRAAFF ACCELERATORS
  beam energy control and monitoring system for FN tandem, circuit design and performance for, 25:59653
VANADIUM
  activity in titanium--vanadium alloys, effects of hydrogenation on, 25:58220
  content of foods in Kiev region of Soviet Union, 25:57987
  determination in ferrovanadium and iron ore following ion exchange chromatographic separation, potentiometric, 25:57339
  determination of trace amounts of, in tungsten trioxide or zirconium dioxide, effects of halide additives on direct spectrographic, 25:57335
  effects on recovery of aluminum irradiated with fast neutrons, 25:58303
  production of monocrystalline high-purity, by zone melting, 25:58192
  radioinduced void formation in, electron microscopic study of fast neutron, 25:58309
  radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  solvent properties for nitrogen at high temperatures, 25:58249
VANADIUM ALLOYS AND SYSTEMS
  preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  Al--Sn--Ti-base--V, heat treatment of, using molten glass, 25:58199
  Al--Ti-base--V, bonding of, method for diffusion, 25:58207
  Al--Ti-base--V, drawing of, testing of lubricants for deep, 25:58195
  Al--Ti-base--V, extrusion of thin-walled tubes of, development of method for, 25:58199
  Al--Ti-base--V, rolling of sheets of, development of method for, 25:58199
  Co--V, structural transformations in molten, relations of vacancy mechanisms with eutectic--peritectic, 25:58281
  Cr--Ti--V-base, radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
  Fe--Ni--V, electric, magnetic, and mechanical properties of $Ni_3(Fe,V)$ solid solutions, 25:59188
  Fe--V, analysis for vanadium following ion exchange chromatographic separation, potentiometric, 25:57339
  Ga--V--Y, phase studies of, 25:58289
  H--V, hydride precipitation in, electron microscopy studies on, 25:58407
  Ni--V, oxidation in air at 1000°C, activation energy for, 25:58251
  O--Sc--V, phase studies at 1000 to 1500°C, 25:58401
  Ti--V, phase formation in, effects of temperature on omega, 25:58283
  Ti--V, radiation effects on deformation in, low-temperature neutron, 25:58339
  Ti--V, vanadium activity in, effects of hydrogenation on, 25:58220
  Ti--V-base, radiation effects on tensile properties of, alpha particle, 25:58163(R) (AI-AEC-12859)
  Ti--V-base, radioinduced void formation in, electron microscopic study of fast neutron, 25:58309
  Ti--V-base, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  V--VO, phase diagram of, proposed, 25:58406
  V--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
VANADIUM ISOTOPES V-46
  energy levels from titanium-46 (He-3,t) reactions, spin assignments for, (E), 25:57901
VANADIUM ISOTOPES V-47
  energy levels from titanium-46 (p,γ) reactions, isobaric analog, (E), 25:59752
VANADIUM ISOTOPES V-48
  beta decay of, β--γ circular polarization correlations and Coulomb and Fermi matrix elements in, (E), 25:59746
VANADIUM ISOTOPES V-51
  helium-3 elastic scattering at 29 to 35 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
VANADIUM OXIDES
  crystal growth of V/sub n/O/sub 2n-1/ single crystals for 3 less than or equal to n less than or equal to 8, 25:58369
  crystal structures of V/sub n/O/sub 2n-1/ single crystals for 3 less than or equal to n less than or equal to 8, 25:58393
  diffusion of oxygen through V_2O_5 layers, effects of electric field on, 25:58383
  electric properties of V/sub n/O/sub 2n-1/ for 3 less than or equal to n less than or equal to 8, 25:58369
  properties of V_2O_3 as electrode material for liquid iron, 25:57441
  structure of γ-$VO_{0.5}$, 25:58392
  V--VO, phase diagram of, proposed, 25:58406
VANADYL IONS
  radioinduced in single crystals of ammonium dioxovanadium(V) bisoxalate dihydrate, ESR studdies on uv or x, 25:57449
VEGETABLES
  lettuce, harvesting of head, gamma radiometric densimeter for selective, 25:57871(P)
  potatoes, radiation processing for inhibition of sprouting during storage, public health hazards from γ, 25:58159
VEHICLES
  design and operation of motor, for monitoring and decontaminating objects and persons, 25:57622(P)

XUM

VELA PROJECT
rocks near Project Dribble site in, sonic velocity of sedimentary, (E), 25:57595 (USGS-474-112)
site of Dribble Project in, core and logging data on Hydrologic Test Well 1 at, 25:57562 (USGS-474-110)
site of Dribble Project in, core and logging data on Hydrologic Test Well 2 at, 25:57563 (USGS-474-111)
site of Project Dribble in, stratigraphy of, 25:57596 (USGS-474-129)
VERMONT YANKEE POWER REACTOR
startup of, effects on regional power supply of delay in, 25:59956 (DOCKET-50271-63)
VESSELS
regulations for hazardous materials shipping, Dept. of Transportation, 25:57710
seals for rotatable covers of liquid metal cooled reactor core, 25:60021(P)
VIBRATIONS
analysis of torsional, computer program for, 25:60057 (AECL-3994)
effects of low frequency, on Drosophila, 25:57953
VINYL ALCOHOL POLYMERS
radioinduced disorientation of, gamma, 25:58417
VIRIAL COEFFICIENTS
relation of second, to S matrix, new derivation of, 25:59220
VIRUSES
effects on initiation of human umbilical cord leukocyte cell cultures, 25:57921
polyoma, effects on ultrastructure of cells in thymus gland of mice, 25:58114
VITAMIN A GROUP
radioprotective effects against ulceration in rabbit skin, x, 25:58036
VK-50 REACTOR
hydrodynamics of, design problems for, 25:60065

W

WATER
analysis for gold, selenium, and tellurium by neutron activation, 25:57370
analysis for iron-59 by polarography or scintillation γ spectrometry, 25:57346 (IFA-FR-82)
analysis for mercury by neutron activation and radiochemical separation, 25:57392
analysis for trace elements by neutron activation and γ spectrometry, 25:57395
analysis for uranium, spectrophotometric, 25:57343
analysis of JRR-1 coolant, for aluminum, 25:57320
analysis of reactor effluent, for radioisotopes, ion-exchange sampler for use in, 25:57351
boiling of subcooled, during free convection quenching of spheres, heat transfer for film and transition, (E), 25:57642
concentration device for radioactive waste, continuous, 25:57900(P)
electron reactions at 60 eV with, production of excited oxygen ions (O^+) in, (E), 25:58763
heat transfer crisis in boiling, flowing through fuel rod bundles, 25:57638 (IAE-2014)
neutron inelastic scattering at 0.04 to 0.632 eV at 27 to 270 C, differential cross sections for, (E/T), 25:59685
neutron reactions at 14 MeV, fast neutron spectra from pulsed, 25:59674
purification of water cooled reactor primary, analysis of distillation methods for, 25:60064
radiolysis of, effects of thallium sulfate on yields of hydrogen and hydrogen peroxide from γ, 25:57472
use in cooling casks and waste containers, 25:57706 (ORNL-TM-3545)
vibration spectra of, pulsed neutron-scattering of, 25:58384
air--H_2O, flow in vertical channels, gamma attenuation method for measuring void fraction in, 25:57648
Ar--H_2O, radiolysis of, charge exchange and transition reactions of hydrogen from electron, 25:57460
WATER-d_2
neutron scattering cross section for, computer code using Butler model for thermal, 25:59689
neutron scattering in, computer program for double differential cross sections, scattering matrix, and integrated cross sections for, (T), 25:59671 (IFA-DNBR-3)
production of, bibliography on industrial facilities and processes for, 25:57652 (DAISE-70-8)
purification from hydrogen and tritium by isotope exchange with deuterium gas, 25:57545(P)
separation of stable oxygen isotopes from, design and operation of columns for countercurrent, 25:57675
WATER-t
determination of, evaluation of 5 scintillators for use in, 25:57363
toxicity to different species of animals, comparison of, 25:57916
WATER-t_2
determination of, evaluation of 5 scintillators for use in, 25:57363
toxicity to different species of animals, comparison of, 25:57916
WATER SUPPLIES
fallout monitoring during 1970, 25:57980(R) (HASL-245)
radioisotope content of New York City, during 1970, cesium-137 and strontium-90, 25:57981(R) (HASL-245(App.))
radioisotope content of USA, during 1970, radium-226, strontium-90, and tritium, 25:57991
tritium content of off-site, following Schooner Event, (E), 25:57574 (PNE-524)
tungsten-187 content of off-site, following Schooner Event, (E), 25:57574 (PNE-524)
WATER VAPOR
effects on hydrogen reduction reactions with molybdenum trioxide and tungsten trioxide, 25:58189
electron reactions with, K--LL Auger spectra from, (E), 25:58736
WATERFORD POWER REACTOR, UNIT 3
design parameters of, revised and additional data on, 25:59996 (DOCKET-50382-11)
operations aspects of, revised and additional data on, 25:59996 (DOCKET-50382-11)
WATERFORD POWER REACTOR, UNIT 4
construction of, withdrawal of permit application for, 25:59997 (DOCKET-50382-12)
design parameters of, revised and additional data on, 25:59996 (DOCKET-50382-11)
operation of, withdrawal of license application for, 25:59997 (DOCKET-50382-12)
operations aspects of, revised and additional data on, 25:59996 (DOCKET-50382-11)
WEAR
control of railroad track, use of radioisotopes for, 25:57672
measurement of turbine blade, using radioisotope tracers, 25:57663
WEISWEILER POWER REACTOR
design parameters of, 25:60012 (JUL-775-RG)
physics measurements for, 25:60012 (JUL-775-RG)
WELDED JOINTS
inspection of reactor, methods for remote nondestructive, 25:57680 (ORNL-TM-3561)
WELDING
methods for fabrication of Grosswelzheim Superheat Reactor fuel elements, review on, 25:58205
methods for zirconium and zirconium alloy fuel cladding, description of electron beam and tungsten inert gas, 25:58188 (ZJE-110)
WELDS
inspection of metal, standard ultrasonic contact method for, 25:57685
inspection of thick, betatron radiography method for, 25:57678 (INR-1204)
WELL LOGGING
equipment for simultaneous electric resistivity and radioactive, design of, 25:57571(P)
method of pulsed neutron, for uranium prospecting, 25:57560 (INP-732)
WEST VALLEY PROCESSING PLANT
radioactive waste processing facility at, technical specifications for low-level, 25:57512 (DOCKET-50201-87)
safety analysis for, role of tornado missiles in, 25:57513 (DOCKET-50201-88)
safety evaluation for plutonium nitrate--uranyl nitrate transfer and processing in, 25:57514 (DOCKET-50201-89)
WHOLE-BODY COUNTERS
description of BNL, for neutron activation analysis in vivo, 25:57785
design and performance of Liege, 25:57764
efficiency and response of, calculation of, 25:57772
performance of various spectrometric, comparison of, 25:57823
WIND
effects of high-level cyclone-type, on radioactive fallout deposition on North America in Jan. 1964, 25:57572(R) (COO-1340-24)
effects on West Valley Processing Plant, safety analysis of, 25:57513 (DOCKET-50201-88)
WINDOWS
design and performance of radiation-shielding glass, for hot cells, 25:58421
WIRES
fabrication of superconducting composite, 25:58951
properties of superconducting composite, 25:58951
WOOD
analysis of pulp for trace amounts of bromine by neutron activation and γ spectrometry, 25:57383
impregnation and gamma irradiation of, computer control system for operating facility for, 25:57628

X

X RADIATION
detection of, sensitivity of semiconductor detectors for, 25:57766
dose planning in therapy, computer programs for, 25:58008
dose to brain during therapy of tinea capitis in children, use of Fricke dosimeter to measure absorbed, 25:58012

dose to gonads and head of patients during full-denture radiography, comparison for conventional and tomographic, 25:58022
dosimetry in human phantom, isodose curves for whole-body, 25:58004
dosimetry in therapy, computer programs for, 25:58020
dosimetry in therapy, computer programs for, 25:58021
dosimetry of, energy calibration of dosimeters for, 25:57859
dosimetry of, performance of Fricke dosimeter for, 25:57862
dosimetry of, standard for design of pocket ionization chamber for personnel, 25:57830
effectiveness for therapy of neoplasms in man, additive effects of electrons on, 25:58076
effectiveness of super-high voltage, for therapy of uterine cervical carcinomas, 25:58070
effects on ability of cells to participate in regeneration of salamander limb, 25:58103
effects on adult, neonatal, and weanling mice, protective effects of tibial shielding against, 25:58110
effects on aminotransferase activity in mitochondria of brain, liver, and heart of adrenalectomized rats, 25:57933
effects on appearance of pseudomicronuclei in progeny of Stylonychia, 25:58096
effects on bacteriophage phi X174, effects of oxygen, nitrogen, and thiourea on mutagenic, 25:57971
effects on barley, protective effects of cysteine, thiourea, and urea against mutagenic, 25:57974
effects on bromomethane, fragment distribution from, 25:57501
effects on carcinomas of human skin, therapeutic, 25:58068
effects on cell division in epidermis of human mammary tumors, 25:58146
effects on central nervous system of rats, effects of focal distance on, 25:58098
effects on cholinesterase and hexokinase activity in brain and heart of rats, effects of adrenal hormones on, 25:57929
effects on chromosomes in seed of Crepis capillaris, effects of time of onset of mitosis on frequency of aberrant, 25:57968
effects on chromosomes of medical personnel, effects of dose and dose fractionation on aberrant, 25:57972
effects on content and ratio of adenine nucleotides of different degrees of phosphorylation in rat liver and kidney, 25:57936
effects on cultured Chinese hamster and human liver cells, effects of incubation in conditioned medium on repair of lethal, 25:58081
effects on DNA and RNA synthesis in amphibian embryos, effects of dose on, 25:57944
effects on DNA of mammalian cells, review of repair mechanisms for, 25:57943
effects on DNA synthesis in polytene chromosomes of Drosophila, 25:57951 (CCC-1747-6)
effects on female gametes and survival of wheat, dose dependence of, 25:58152
effects on flucrine-18 kinetics in fractured bone, 25:58105
effects on formation of immunoglobulin-like proteins in bursectomized chickens, 25:57934
effects on gene and chromosome behavior in parthenogenetic wasps, 25:57962
effects on germ cells of adult, embryonic, and newborn male mice, comparison of frequency of mutagenic, 25:57967
effects on germination and survival of pure and hybrid forms of lupine, comparison of, 25:58149
effects on growth of transplanted sarcomas in mice, effects of dose on, 25:58083
effects on HeLa and melanoma cells, role of cytoplasmic inclusions in, 25:58085
effects on hematopoiesis in mice, effects of partial marrow shielding on, 25:58124
effects on hermaphrodite gonads of Asterina gibbosa, 25:58090
effects on human breast neoplasms, pre-surgical therapeutic, 25:58073
effects on human epithelium following therapy for cervical tumors in relation to recurrance incidence, cytological and histological studies on, 25:58140
effects on human skin following therapy, methods for treatment of ulcerogenic, 25:58038
effects on human tumor surrounding tissues during therapy, effects of body inhomogeneities on, 25:58141
effects on hybrid mice, studies on effects of hematopoietic cells on osteogenic precursor cell transplants using, 25:58121
effects on incidence of mutations for macromelanophores in xiphophorin fish, synergistic effects of hybridization on, 25:57957
effects on incidence of mutations in peas following seed exposure, comparison between neutron effects and, 25:57960
effects on initiation of human umbilical cord leukocyte cell cultures, 25:57921
effects on intestinal mucosa in mice, regeneration following pathological, 25:58111
effects on iodine-131 clearance rate in skin of man and rabbits, 25:58125
effects on life span of Drosophila following exposure of successive generations, effects of genotype on, 25:57961
effects on lungs of man and rabbits, heterotopic bone formation following, 25:58133
effects on macro- and micronuclei of Stylonychia, 25:58096
effects on mammalian cells, review of effects of LET on repair of, 25:58089
effects on mitotic activity in bone marrow cells of laboratory and wild rats, 25:58116
effects on mouse embryos, development of cleft palate and oligodactylia following in utero exposure, 25:58127
effects on neurosecretory cells in crickets, effects of nymph head exposure dose on, 25:58095
effects on neurosecretory cells in hypothalamus of dogs, acute whole-body, 25:58129
effects on numbers of cysteine-rich glial cells in rat brain following head exposure, effects of dose on, 25:58106
effects on orthodromic responses of rats following exposure of spinal cord, 25:58101
effects on phosphorus-32 uptake by bone marrow, liver, and spleen of rats, effects of bone marrow transplants on, 25:58123
effects on rat liver cells, mechanism for, 25:58130
effects on rat tibia, effects of dose on neoplastic and pathological, 25:58102
effects on rats, effects of age and sex on carcinogenic whole-body exposure, 25:58097(T) (ORNL-tr-2521)
effects on reimplantation of human mandible following surgical resection, 25:58132
effects on relation between total iron-59 uptake and uptake by heme and nonheme fractions of bone marrow and spleen of mice, 25:58119
effects on sensitivity of lymphoid cells of mouse bone marrow to antisera, 25:58120
effects on sensitivity of yeast cells to aminopterin, correlation of radiosensitivity with, 25:57927
effects on silica and germania, ESR studies of defects induced in, 25:59174
effects on single crystals or ammonium dioxovanadium(V) bisoxaltate dihydrate, ESR studies on vanadyl ions produced by, 25:57449
effects on skin of rabbits, protective effects of desoxycorticosterone acetate, methionine, and vitamin A against ulceration, 25:58036
effects on small competing populations of Drosophila following exposure of successive generations, 25:57961
effects on sodium chloride crystals, thermal aggregation of F centers in, 25:59152
effects on somatic crossing over in X chromosome of Drosophila, effects of oxygen on, 25:57959
effects on spleen weight in mice, effects of dose fractionation on whole-body, 25:58108
effects on spores of Actinomyces hygroscopicus, effects of hygromycin B and streptomycin on mutagenic, 25:57964
effects on sterility and survival of first and second generation granary and rice weevils, minimum dose for, 25:58161
effects on suppressor mutation induction in Drosophila, localization of chromosome site of, 25:57975
effects on survival of Escherichia coli, effects of anoxia on sensitizing effects of colloidal selenium and selenourea on, 25:58155
effects on survival of mice and rabbits, protective effects of tissue preparations against, 25:58033
effects on thymus of mice, role of bone marrow transplants in recovery from, 25:58115
effects on ultrastructure of cells in thymus gland of mice, 25:58114
effects on ultrastructure of liver cells in salamanders, effects of dose on, 25:58112
effects on yeast, studies on genetic control of mutagenic, 25:57976
emission bursts near plasmapause of 30 keV, correlation with discrete vlf emissions, (E/T), 25:58897
emission from color television receivers, estimation of genetically significant dose to population of USA from, 25:58011
emission from mixed plutonium isotopes, scintillation spectrometer measurement of, 25:57998 (NIRS-Pu-8)
emission from sun of soft, relation to solar activity at other wavelengths, (E), 25:58600
fluence and flux density measurement of low-energy, germanium detector for, 25:57768
intensity distribution of soft cosmic background, (E), 25:58548
production in copper by 12- to 30-keV electrons, depth distribution of, 25:58685
production of cosmic background, (T), 25:58565
scattering from suspensions and slurries, effects of particle size on Compton and Rayleigh, 25:59118
spectra and flux in deep atmosphere, effects of atmospheric scattering and absorption on auroral, (E), 25:58868
spectra of metagalactic, (T), 25:58830
spectra of solar, 25:58583
spectrum and galactic isotropy of cosmic background, (E),

XUM

  25:58650
  transmission through crystals, theory of anomalous, (T), 25:59228
  use for therapy of lung carcinomas, review of complications and effectiveness in sieve and super-high voltage, 25:58137

X-RAY ASTRONOMY
  radiation detection equipment on TD-1, HEOS-B, and COS-B, (E), 25:58829
  research between 1962 and 1970 in, (E), 25:58533
  research in, review of, (T), 25:58565

X-RAY CAMERAS
  development of multiple proportional detector, 25:57774

X-RAY FLUORESCENCE ANALYSIS
  equipment for low-energy, development and performance of lithium-drifted silicon detectors, 25:57816
  particle size effects on, 25:57300 (ORO-3847-2)

X-RAY SPECTROMETERS
  characteristics of silicon avalanche, 25:57771
  design and performance of Compton, for intense pulsed sources in high-level backgrounds, 25:57813
  development and performance of lithium-drifted silicon, for low-energy x rays, 25:57816
  preamplifiers for, application of pulsed feedback techniques to, 25:57812

X-RAY SPECTROSCOPY
  particle size effects on, 25:57300 (ORO-3847-2)

XENON
  determination of radioactive, released from fuel elements by gas chromatography and γ spectrometry, continuous, 25:57344 (CEA-R-4218)
  oscillations in large reactors, calculation of optimum control rod strategy for, (T), 25:60236
  solubility in sodium, 25:58387(R) (ANL-7823)

XENON IONS
  effects on benzene vapor at 60 keV, yields from, 25:57469

XENON ISOTOPES Xe-133
  evaluation for scintigraphy of human lung ventilation, 25:58040 (UCLA-12-834)
  production of gaseous, from neutron-irradiated uranium targets, 25:57485(P)
  use for scintigraphy of human brain for measurement of blood circulation time, 25:58058

Y

YTTERBIUM
  complexes with HEDTA, dissociation constants for, 25:57537
  desorption from tungsten filaments using electric field, 25:58230
  determination in silicate rocks by neutron activation, low-energy photon detector for, 25:57387
  energy levels of, identification of 4f/sup N-1/$6s^26p$ configurations in, 25:58706
  oxidation potential for trivalent--tetravalent, 25:57437
  sorption and desorption from carbonized tungsten, electron-emission study of, 25:58228

YTTERBIUM ISOTOPES Yb-171
  neutron capture by, γ spectra and Q-value for thermal, (E), 25:59825

YTTERBIUM ISOTOPES Yb-172
  energy-level scheme from ytterbium-171 thermal neutron capture, (E), 25:59825

YTTERBIUM ISOTOPES Yb-173
  neutron capture by, γ spectra and Q-value for thermal, (E), 25:59825

YTTERBIUM ISOTOPES Yb-174
  energy levels fom thulium-174 beta decay, spin--parity assignments for, (E), 25:59781 (KURRI-TR-76, pp 19-20)
  energy-level scheme from ytterbium-173 thermal neutron capture, (E), 25:59825

YTTERBIUM OXIDES
  effects on structure of γ-irradiated sodium oxide--tellurium oxide glasses, EPR spectral studies on, 25:57447

YTTRIUM
  determination in presence of scandium using Arsenazo M, spectrophotometric, 25:57318
  determination in rare earth concentrates by neutron activation, 25:57382
  determination in rare earth mixtures by extraction chromatography and emission spectroscopy or neutron activation, 25:57372
  diffusion at 900 to 1300°C, anisotropy in self-, 25:58240
  effects on periodic precipitation in silver--cadmium alloys, 25:58262
  separation from fission products by electromigration following complexing with nitrilotriacetic acid, 25:57558
  separation from strontium by colloid formation and filtration, 25:57352
  thermophysical properties at 20 to 400°C, 25:58225

YTTRIUM ALLOYS AND SYSTEMS
  Ce--Y-base, Kondo temperature and superconducting transition temperature of, effects of pressure on, 25:59195
  Dy--Ho--Y, phase studies of, 25:58274
  Ga--V--Y, phase studies of, 25:58289
  Mg-base--Y, oxide particle identification in, after heat treatment in air, 25:58293

YTTRIUM ISOTOPES Y-89
  deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  energy levels from strontium-88 (He-3,d) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:59750
  neutron inelastic scattering at 14.8 MeV, cross sections and gamma spectra from, (E), 25:59797
  neutron inelastic scattering at 2.69 to 18.07 MeV, statistical-model analysis of excitation function for, (E/T), 25:59768
  neutron reactions (n,2n) at 13.29 to 17.58 MeV, statistical-model analysis of excitation function for, (E/T), 25:59768
  nuclear charge distribution from electron elastic scattering, (E), 25:59791

YTTRIUM ISOTOPES Y-90
  production of multicurie amounts of, from strontium-90, colloid-filtration method for, 25:57352

YTTRIUM ISOTOPES Y-91
  chemical state in seawater, effects of iron on, 25:57410

YTTRIUM OXIDES
  CaO--Y_2O_3, electric properties of solid electrolytes, 25:59193

YTTRIUM SELENIDES
  dissociation energy of, 25:57435(R) (COO-1029-39)

YUGOSLAVIA
  nuclear power plants in, economics for, 25:60108

Z

ZINC
  determination by extraction using quinolinol melt and spectrography, 25:57312
  determination in pure rare earth oxides, polarographic, 25:57311
  determination of trace amounts of, in clay minerals and soils by resonance neutron activation and γ spectrometry, 25:57375
  determination using sodium azide as supporting electrolyte, polarographic, 25:57307
  diffusion of trace amounts of thallium in molten, thermal, 25:58267
  dislocation interactions in, basal--nonbasal, 25:60267 (CALT-767-P-3-18)
  dislocation mobility at 44°K in, 25:60265 (CALT-767-P-3-16)
  dislocations in, line energy of basal screw, 25:60266 (CALT-767-P-3-17)
  etching by selective cavitation, method for, 25:58190
  mechanical properties of, effects of fatigue on, 25:58223
  microstructure of, effects of fatigue on, 25:58223
  neutron capture at 10 to 80 keV, γ spectra from, (E), 25:59759

ZINC ALLOYS AND SYSTEMS
  Cu--Zn, welding to steel, deposition of intermediate layers for, 25:58204
  In-base--Zn, structure of eutectic of, conditions to produce broken lamellar, 25:58286

ZINC BROMIDES
  hexane--$ZnBr_2$, bromine-80m isomeric transition in, reactions of recoils from, 25:57494

ZINC IONS
  implantation in gallium arsenide at 400 KeV, luminescence study of damage from, (E/T), 25:59141

ZINC ISOTOPES Zn-64
  energy levels from copper-63 (p,γ) reactions, symmetry energy for collective electric dipole, (E), 25:59742
  helium-3 elastic scattering at 30 MeV, optical-model analysis of differential cross sections for, (E), 25:59769
  proton elastic scattering at 40 MeV, differential cross sections for, (E), 25:59739 (ORNL-TM-3591)

ZINC ISOTOPES Zn-65
  content in Columbia River sediments, (E), 25:57561 (TID-25786)
  energy levels and transitions from zinc neutron capture, (E), 25:59759

ZINC ISOTOPES Zn-67
  energy levels and transitions from zinc neutron capture, (E), 25:59759

ZINC ISOTOPES Zn-68
  deuteron elastic scattering at 80 MeV, optical-model analysis of angular distributions from, (E), 25:59754
  deuteron inelastic scattering at 82 MeV, DWBA analysis of angular distributions from, (E), 25:59754
  energy levels and transitions from zinc neutron capture, (E), 25:59759
  energy levels from inelastic scattering, deformation parameters for, (E), 25:59754

ZINC ISOTOPES Zn-69
  energy levels and transitions from zinc neutron capture, (E), 25:59759

ZINC ISOTOPES Zn-70
  neutron reactions (n,2n) at 14.7 MeV, isomer ratio in, (E), 25:59766

XUM

- ZINC OXIDES
  - reactions with silica to form zinc orthosilicate, ESR study of defect kinetics in, 25:59174
- ZINC SILICATES
  - preparation of Zn_2SiO_4 by zinc oxide--silica reaction, ESR study of defect kinetics in, 25:59174
- ZINC SULFATES
  - $CuSO_4$--$FeSO_4$--$Fe_2(SO_4)_3$--$ZnSO_4$, complex ion distribution in aqueous solutions of, 25:57398 (NIM-1093)
- ZION POWER REACTOR, UNIT 1
  - design parameters of, revised and additional data on, 25:59967 (DOCKET-50295-32)
  - operations aspects of, revised and additional data on, 25:59967 (DOCKET-50295-32)
- ZION POWER REACTOR, UNIT 2
  - design parameters of, revised and additional data on, 25:59967 (DOCKET-50295-32)
  - operations aspects of, revised and additional data on, 25:59967 (DOCKET-50295-32)
- ZIRCALOY
  - polishing of, method for attack, 25:58353
  - texture control in tubes of, effects of fabrication parameters on, 25:58186 (ORNL-TM-3500)
- ZIRCALOY-2
  - analysis for cadmium by extraction and photometry, 25:57326
  - fabrication of calandria and pressure tubes of, for Japanese reactors, 25:58194
  - properties for use in encapsulating californium-252, 25:58242
  - properties for use in light water reactors, data tabulations on, 25:58243
- ZIRCALOY-4
  - fabrication of coolant flow regulators of, for BWR systems, 25:58194
  - failure testing of tubes of, deformation and rupture behavior during transient temperature, (E), 25:60118 (ORNL-4727)
  - properties for use in light water reactors, data tabulations on, 25:58243
- ZIRCONIUM
  - analysis for trace amounts of impurities, nuclear reaction and scattering methods for, 25:57360
  - Debye--Waller factor of alpha-, temperature dependence of, (E), 25:59179
  - deposition on tungsten single crystals, field-emission microscopic study of surface structures from, 25:58229
  - determination by extraction using quinolinol melt and spectrography, 25:57312
  - determination by spectrography, elimination of effect of sample composition on, 25:57330
  - diffusion in graphite at 1860 to 2250°C, effects of graphite lattice parameters on, 25:58245
  - diffusion of oxygen in, Wagner's theory on, 25:58254
  - dislocations in alpha-, formation of hexagonal networks of, 25:58288
  - effects on creep strength of aluminum--copper alloys, 25:58239
  - oxidation at low oxygen pressures, thermogravimetry studies on kinetics of, 25:58175
  - oxidation of, Wagner's theory on, 25:58254
  - properties for use in light water reactors, data tabulations on, 25:58243
  - separation from oxalic and tartaric acids by solvent extraction using tributylamine, 25:57546
  - separation from plutonium by solvent extraction using TBP, 25:57357
  - separation from thorium by ion exchange, 25:57342
  - separation of berkelium from, by sorption on zirconium phosphate--silicate, 25:57530
  - surface nitridation of, effects of nitrogen purity on, 25:58173
- ZIRCONIUM ALLOYS AND SYSTEMS
  - analysis for niobium using magneson, photometric, 25:57315
  - development of high-temperature, use of diffusion coefficient as guide for, 25:58208 (AECL-3967)
  - mechanical properties of fuel cladding and pressure tubes of, 25:58209 (AECL-3992)
  - plastic instability of tubes of, 25:58209 (AECL-3992)
  - polishing of, method for attack, 25:58353
  - preparation of reference specimens of, methods for, 25:58179 (CONF-711002-, pp 47-58)
  - properties for use in heavy water reactors, 25:58217 (ZJE-107)
  - testing of fuel cladding of, closed-end burst, 25:58209 (AECL-3992)
  - testing of, in-reactor stress relaxation, 25:58209 (AECL-3992)
  - welding of, methods for, 25:58188 (ZJE-110)
  - C--Cr--Fe--Hf--Mo--Mn--Nb--Ni-base--Si--Ti--Zr, radiation effects on mechanical properties of, relations of composition with thermal neutron, 25:58168 (ORNL-4676, pp 139-233)
  - C--Mo--Zr, phase studies of, 25:58273
  - Co--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Cr--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Fe--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Hf--Zr, liquidus and solidus curves for, calculations for, 25:58292
  - Mn--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Mo--Nb-base--Zr, machining characteristics of, at high and low temperatures, 25:58198
  - Mo--Sn--Ti-base--Zr, tensile properties of Beta III, at room temperature, 25:58234
  - Mo-base--W--Zr, mechanical properties and recrystallization temperature of, effects of tungsten and zirconium contents on, 25:58248
  - Nb--Zr-base, fabrication of calandria and pressure tubes of, for Japanese reactors, 25:58194
  - Nb-base--Zr, radioinduced void formation in, neutron, 25:58300 (ORNL-TM-3496)
  - Ni--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Ti--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - U--Zr, liquidus and solidus curves for, calculations for, 25:58292
  - V--Zr-base, properties of dilute cast, electric and mechanical, 25:58258
  - Zr--ZrC-base, residual stresses in, effects of cyclic temperature changes on, 25:58381
- ZIRCONIUM BOROHYDRIDES
  - mass spectra of $Zr(BH_4)_4$, 25:58377
- ZIRCONIUM CARBIDES
  - crystallization following annealing at 1600 to 2000°C, mechanisms of, 25:58394
  - Zr--ZrC-base, residual stresses in, effects of cyclic temperature changes on, 25:58381
- ZIRCONIUM CHLORIDES
  - effects on nitrification by Nitrobacter agilis in soil suspension, 25:57401
- ZIRCONIUM HYDRIDES
  - crystal lattice phases in, relations with density, 25:58402
  - sorptive properties of delta-phase, for hydrogen at 650 to 800°C, kinetics of, 25:58373
  - vibration spectra of, pulsed neutron-scattering of, 25:58384
- ZIRCONIUM ISOTOPES Zr-90
  - nuclear charge distribution from electron elastic scattering, (E), 25:59791
  - proton inelastic scattering by, approximate G-matrix calculations for, (T), 25:59858
- ZIRCONIUM ORES
  - separation of hafnium from sulfate solutions from treatment of, by extraction with cyclohexanone solutions of thiocyanic acid, 25:57533
- ZIRCONIUM OXIDES
  - analysis for trace amounts of metals, effects of halide additives on direct spectrographic, 25:57335
  - diffusion of oxygen in, effects of pressure on, 25:58370
  - diffusion of oxygen in, Wagner's theory on, 25:58254
  - oxidation of, Wagner's theory on, 25:58254
  - performance as high-temperature heating elements in furnaces, 25:58357
  - vaporization of calcium oxide-stabilized, in air at 1900 to 2200°C, 25:58345
  - $AlPO_4$--ZrO_2, performance as protective coatings on metals exposed to high-temperature flowing gases, 25:58375
  - CaO--ZrO_2, electric properties of solid electrolytes, 25:59193

XUM

REPORT NUMBER INDEX

Reports, conference papers and proceedings, numbered translations, and patents are included in this index. Each item is listed by report number; this is followed by the abstract number and a brief notation regarding public availability. The index entries show which reports are on file in the institutions listed on the back of the front cover (Dep.), which reports have been published in open-literature journals (journal citation), and which reports can be purchased (source and price). Whenever a report is identified by more than one number, the availability is given under the primary number, and a cross reference is given under the secondary report number.

The report number codes apply to USAEC reports unless designated otherwise. Non-USAEC reports are identified by parenthetical notes after the report codes; e.g., (non-AEC), (British), (Canadian), (French). The note (Misc.) identifies the codes used for both USAEC and non-USAEC reports. Patents are listed under the heading "PATENTS"; the country of origin is included in parentheses.

A comprehensive list of both USAEC and non-USAEC report codes is contained in the latest revision of TID-85, *Report Number Series Used by the Division of Technical Information in Cataloging Reports.* This information is also included in the Cumulative Report Number Index (issued annually).

Availability of USAEC Reports

All USAEC Reports abstracted in *Nuclear Science Abstracts* are available through one or more of the following sources:

(1) University and public libraries in the United States. A list of these organizations appears on the inside front cover of each issue of *NSA*.

(2) NCR Microcard Editions in Microcard and micronegative form. Orders and inquiries should be sent to: Order Processing Department, 365 South Oak Street, West Salem, Wisconsin 54669.

(3) National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151.

(4) Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(5) Microsurance, Inc., P. O. Box 3522, Oak Ridge, Tenn. 37830, in micronegative form. Purchase details available on request.

Availability of Non-USAEC Reports

U. S. Reports. Reports of U. S. Government agencies are available to the public from the National Technical Information Service (NTIS). If specific availability is not shown, inquiries may be directed to NTIS.

Non-U. S. Reports. Reports of atomic energy organizations of other countries are available from NTIS for U. S. sale only. Specific availability in the country of origin is shown, when known, at the report number entry. Otherwise, inquiries should be made to the organizations listed below:

AUSTRALIA

Australian Atomic Energy Commission Research Establishment. Available upon request from the Library, Australian Atomic Research Establishment, Private Mail Bag, Sutherland, New South Wales, Australia.

BELGIUM

Centre d'Étude de l'Energie Nucléaire. Available upon request to individuals and organizations from the Centre d'Etude de l'Energie Nucléaire (C.E.N.), Studiecentrum voor Kernenergie (S.C.K.), Technical Information Dept., MOL-DONK (Belgium).

CERN

CERN European Organization for Nuclear Research. Available without charge from CERN European Organization for Nuclear Research, Geneva 23, Switzerland. Copies are deposited in libraries throughout the world.

FRANCE

Commissariat à l'Energie Atomique. Inquiries for reports numbered 1-2199 should be addressed to Service Central de Documentation du C.E.A., Centre d'Etudes Nucléaires de Saclay, Boîte postale n° 2, 91. GIF-sur-YVETTE, FRANCE. Reports numbered 2200 and above are available from La Documentation Française, 31 quai Voltaire, 75, PARIS (7e), FRANCE.

Service Central de Protection contre les Rayonnements Ionisants. Copies are available from Ministère de la Santé Publique, Service Central de Protection contre les Rayonnements Ionisants, B.P. n° 78 Le Vesinet (France) Telex 25667.

GERMANY

Deutsches Elektronen-Synchrotron DESY. Copies are available from Deutsches Elektronen-Synchrotron DESY, Dokumentation, 2000 Hamburg 52, Notkestieg 1, Germany.

Gesellschaft für Kernforschung mbH (KFK). Copies are available from Gesellschaft für Kernforschung mbH, 75 Karlsruhe, Postfach 947, Germany. Copies are also deposited in many national nuclear centers in the world.

Kernforschungsanlage. Copies may be ordered from Zentralbibliothek der Kernforschungsanlage Jülich, Jülich, Bundesrepublik Deutschland.

Hahn-Meitner-Institute für Kernforschung. Available without charge from Hahn-Meitner-Institute für Kernforschung Berlin, Bibliothek, Glienicker Strasse 100, 1 Berlin 39, Germany. Copies are deposited in many national nuclear centers in the world.

Johann-Wolfgang-Goethe Universität, Frankfurt Am Main, Institut für Kernphysik, (IKF). Copies are available from Gmelin Institut, 40–42 Varrentrappstrasse, Frankfurt (Main), West Germany.

ISRAEL

Israel Atomic Energy Commission. Available without charge from Israel Atomic Energy Commission, Soreq Nuclear Research Centre, Yavne, Israel.

ITALY

Centro Informazioni Studi Esperienze (CISE). For sale at CISE Press Office, Casella Postale 3986, Milano, Italy. Copies are deposited in the libraries of various nuclear centers in Italy and abroad.

Comitato Nazionale per l'Energia Nucleare. Copies are available from Comitato Nazionale per l'Energia Nucleare, Divisione Affari Internazionali e Studi Economici, Ufficio Pubblicazioni, Via Belisario, 15, Roma, Italy.

JAPAN

Japan Atomic Energy Research Institute (JAERI). Available from the Staff Supply Cooperative of Japan Atomic Energy Research Institute (JAERI), Tokai-mura, Naka-gun, Ibaraki-ken, Japan. Copies are deposited in depositories in Tokyo, Nagoya, and Osaka.

Nagoya University. Copies are available from Research Information Center, Institute of Plasma Physics, Nagoya University, Nagoya, Japan.

University of Tokyo. Available free of charge from Institute for Nuclear Study, University of Tokyo, Tanashi-Machi, Kitatama-gun, Tokyo, Japan.

NETHERLANDS

Reactor Centrum Nederland. For sale by Reactor Centrum Nederland, 112 Scheveningseweg, 's-Gravenhage, The Netherlands. Copies are deposited in university libraries in Holland and in many national nuclear centers in the world.

NEW ZEALAND

Institute of Nuclear Sciences. Copies are available from Librarian, N. Z. Institute of Nuclear Sciences, D.S.I.R., Private Bag, Lower Hutt, New Zealand. Copies are deposited in other countries.

PAKISTAN

Atomic Energy Center. Copies are available from Atomic Energy Center, P. O. Box 658, Lahore, (West Pakistan).

POLAND

Reports of the Polish nuclear institutes are published by the Nuclear Energy Information Center of the Government Commissioner for Use of Nuclear Energy. Copies are available free of charge from Nuclear Energy Information Center, Palace of Culture and Science, Warsaw, Poland.

SPAIN

Junta de Energia Nuclear. "JEN" reports are available without charge from Servicio de Documentation, Junta de Energia Nuclear, Ciudad Universitaria, Madrid (3), España.

SWITZERLAND

Eidgenössisches Institut für Reaktorforschung. "EIR" reports are available from Eidgenössisches Institut für Reaktorforschung, c/o Bibliothek, 5303 Würenlingen/Switzerland.

TURKEY

Turkish Atomic Energy Commission. Copies are available free of charge from T.A.E.C., Çekmece Nuclear Research Center, P. O. Box 1, Airport, Istanbul, Turkey.

Conferences

Published conference proceedings as well as individual unpublished papers from conferences are included in this index. A CONF number is assigned to the conference if published proceedings are received and also if only a single paper is received. The base number used is year-month-sequence. Thus, the number CONF-650101 indicates that the conference was held in 1965, in January, and that this was the first January 1965 conference so received. This number would be assigned to complete published proceedings. If individual papers are received, the base number is extended to include a paper number, e.g., CONF-650101-1. As additional papers are received, they will be assigned consecutive numbers in the series, CONF-650101-1, CONF-650101-2, etc. This numbering system ensures that all papers received from a conference will be associated with that conference in this index.

If published proceedings are received after the receipt of individual papers, the complete proceedings will be abstracted and the abstract number will appear in this index with the base CONF number.

Abbreviations Used in Availability Column

AECL	Reports of the Atomic Energy of Canada Limited are for sale by the Scientific Document Distribution Office, Atomic Energy of Canada Limited, Chalk River, Ontario, Canada.
CFSTI	See NTIS
DENM	Reports of the Atomic Energy Commission Research Establishment, Risö, are available on exchange from the Library, Danish Atomic Energy Commission, Risö, Roskilde, Denmark. Also for sale at the price shown from Jul. Gjellerup, Booksellers, 87 Sölvgade, Kobenhavn K., Denmark. Reports of Danatom are available on loan from Research Establishment, Risö, Roskilde, Denmark. Copies are available from Danatom, Aurehojvej 2, Hellerup, Denmark.
Dep.	AEC reports so designated are maintained in the organizations listed on the inside front cover of *NSA*. Prior to July 1, 1965, reports were deposited either in printed copy form or in microform. After that time, all reports have been in the form of micronegatives. Reports from other countries so designated are available in the United States at the organizations listed on the inside front cover of *NSA*.

DTIE	Available from the U. S. Atomic Energy Commission, Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830. (Conference papers are available on loan only.)
EM	Blueline prints of AEC engineering drawings are available from NTIS, U. S. Department of Commerce, Springfield, Virginia 22151. Current prices of the CAPE-packages may be obtained from this address. TID-4100, available from the Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830, contains information on all the CAPE-packages for sale.
EUR	For sale by Centrale de vente des publications des Communautés européennes 37, rue Glesener-Luxembourg.
GPO	For sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.
IAEA	Available from the International Atomic Energy Agency, Vienna, Austria, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each STI/DOC and STI/PUB publication.
INIS	Available on microfiche at $0.65 per document from INIS Section, International Atomic Energy Agency, P. O. Box 590 A-1011, Vienna, Austria
LMEC	Available *only to requesters within the United States* from the Liquid Metal Engineering Center, P. O. Box 1449, Canoga Park, CA 91304
NORW	Reports from Forsvarets Forskningsinstitutt are available from Norwegian Defense Research Establishment, Library, P. O. Box 25, Kjeller, Norway. "KR" reports are available on an exchange basis from the Library, Institutt for Atomenergi, Box 40, Kjeller, Norway. Reports of the Norwegian Reactor School are available from the Library, Institutt for Atomenergi, P. O. Box 40, Kjeller, Norway.
NRC	For sale by the National Research Council of Canada, Ottawa, Ontario, Canada.
NTIS	For sale by the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151 at the following prices for eye legible copy: 1–300 pages $3.00 301–600 pages $6.00 601–900 pages $9.00 Documents over 900 pages have special prices which may be obtained from NTIS. Microfiche copy of each separately bound document can be purchased for $0.95. Reports issued by organizations outside the United States will be sold by NTIS *only to purchasers within the United States.* Purchasers outside the United States may acquire such reports from the sources described elsewhere in these columns.
OECD	Available from O. E. C. D., Publications 2, rue, André-Pascal, 75 Paris 16^e, France, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each OECD publication.
RSO	Available *only to requesters within the United States* from the Reactor Standards Office, Oak Ridge National Laboratory, P. O. Box X, Oak Ridge, TN 37830
SWED	"AE" reports are for sale from Aktiebolaget Atomenergi, Library Section, Box 43041, Stockholm 43, Sweden. Microcopy of these reports is available from the International Documentation Center, Turnba, Sweden. Reports of the VDDIT-series may be obtained from Aktiebolaget Atomenergi, Information Office, Scientific and Technical Information, Box 43041, Stockholm 43, Sweden. Other series are not generally available to the public. Organizations in the Atomic Energy field may obtain copies from Aktiebolaget Atomenergi.
UK	United Kingdom Atomic Energy Authority reports generally may be purchased from Her Majesty's Stationery Office, P. O. Box 569, London S.E.1. Copies of many UKAEA reports (particularly earlier ones) may be purchased in microcopy form from Micro Methods Ltd., East Ardsley, Wakefield, Yorkshire, England. Copies of UKAEA reports are deposited with the National Lending Library for Science and Technology and 10 public libraries in England; with the USAEC and (through USAEC) with NTIS; and in most national nuclear centers throughout the world. In the USA, UKAEA reports are available on a subscription basis, by subject category, from UNIPUB, Inc., P. O. Box 433, New York, NY 10016, USA; and from Pendragon House, Inc., 1093 Charter Avenue, Redwood City, CA 94063, USA.
UN	Mail orders should be directed to the Sales Section, Room 1059, United Nations Headquarters, New York, New York 10017.
ZAED	Available from Zentralstelle für Atomkernenergie Dokumentation, 6000 Frankfurt/Main 90, P. O. Box 901069, Westendstr. 21, West Germany

STAFF OF NUCLEAR SCIENCE ABSTRACTS

John W. Norris
Managing Editor

Donald D. Davis
Assistant Managing Editor

David E. Bost
Production Manager

Sidney F. Lanier
Subject Heading Specialist

J. Paul Meredith
Descriptive Cataloging Specialist

Frederick E. Marsh, Jr.
Computer Index Coordinator

Clara L. Fox
Corporate Author Specialist

Helen W. White
Report Number Specialist

Section Editors

Everett J. Hoffman
Chemistry

Robert C. Kelly
Engineering; Earth Sciences; Metals, Ceramics, and Other Materials

Lee M. Thompson
General Physics

Charles E. Stuber
High Energy Physics; Instrumentation

Donald D. Davis
Life Sciences

Lawrence T. Whitehead
Nuclear Physics

James M. Jacobs
Reactor Technology

Evaluators

Thomas S. Chapman
John H. Mitchell
Mary H. Newman
Polly C. Summers

Abstractors

F. S. Armstrong*
Ellis R. Bedford
Jane G. Buchanan
D. Lamar Cason
Gloria M. Caton
David C. Cunningham
James R. Dulaney
Helga B. Gerstner

AEC SYMPOSIUM SERIES

Available from the National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151

1 **Progress in Medical Radioisotope Scanning** (TID-7673), Oak Ridge Institute of Nuclear Studies, 1963, $6.00
2 **Reactor Kinetics and Control** (TID-7662), The University of Arizona, 1964, $6.00
3 **Dynamic Clinical Studies with Radioisotopes** (TID-7678), Oak Ridge Institute of Nuclear Studies, 1964, $6.00
4 **Noise Analysis in Nuclear Systems** (TID-7679), University of Florida, 1964, $6.00
5 **Radioactive Fallout from Nuclear Weapons Tests** (CONF-765), U. S. Atomic Energy Commission, 1965, $6.00
6 **Radioactive Pharmaceuticals** (CONF-651111), Oak Ridge Institute of Nuclear Studies, 1966, $6.00
7 **Neutron Dynamics and Control** (CONF-650413), The University of Arizona, 1966, $6.00
8 **Luminescence Dosimetry** (CONF-650637), Stanford University, 1967, $6.00
9 **Neutron Noise, Waves, and Pulse Propagation** (CONF-660206), University of Florida, 1967, $6.00
10 **Use of Computers in Analysis of Experimental Data and the Control of Nuclear Facilities** (CONF-660527), Argonne National Laboratory, 1967, $6.00
11 **Compartments, Pools, and Spaces in Medical Physiology** (CONF-661010), Oak Ridge Associated Universities, 1967, $6.00
12 **Thorium Fuel Cycle** (CONF-660524), Oak Ridge National Laboratory, 1968, $6.00
13 **Radioisotopes in Medicine: In Vitro Studies** (CONF-671111), Oak Ridge Associated Universities, 1968, $6.00
14 **Abundant Nuclear Energy** (CONF-680810), Oak Ridge Associated Universities, 1969, $6.00
15 **Fast Burst Reactors** (CONF-690102), The University of New Mexico, 1969, $9.00
16 **Biological Implications of the Nuclear Age** (CONF-690303), Lawrence Radiation Laboratory, 1969, $6.00
17 **Radiation Biology of the Fetal and Juvenile Mammal** (CONF-690501), Pacific Northwest Laboratory, 1969, $9.00
18 **Inhalation Carcinogenesis** (CONF-691001), Oak Ridge National Laboratory, 1970, $6.00
19 **Myeloproliferative Disorders of Animals and Man** (CONF-680529), Pacific Northwest Laboratory, 1970, $9.00
20 **Medical Radionuclides: Radiation Dose and Effects** (CONF-691212), Oak Ridge Associated Universities, 1970, $6.00
21 **Morphology of Experimental Respiratory Carcinogenesis** (CONF-700501), Oak Ridge National Laboratory, 1970, $6.00
22 **Precipitation Scavenging (1970)** (CONF-700601), Pacific Northwest Laboratory, 1970, $6.00
23 **Neutron Standards and Flux Normalization** (CONF-701002), Argonne National Laboratory, 1971, $6.00
